on this showing, we shall be well advised also to reserve judgement on the Japanese statesmanship which carried out the Meiji Revolution of A.D. 1868. We have to reckon with the possibility that the tragic view of the Westernization of Russia which an alien observer in A.D. 1938 was constrained to take in the light of Russian history since A.D. 1825 might also be taken with regard to the Westernization of Japan by a Posterity as far removed in time from the year 1868 as our own generation is removed from the year 1689. (This point has been touched upon already in IV. C (ii) (b) 2, vol. iv, pp. 88–90, above.)

¹ See the present chapter, p. 285, above.

² While the Japanese universal state had been in existence for rather longer than two and a half centuries by the time of the Meiji Revolution, the Russian universal state had not been in existence for much longer than two centuries before the advent of Peter the Great (see IV. C (ii) (b) 2, vol. iv, p. 88, above).

³ The outer shell of the Tsardom was not, of course, broken until A.D. 1917, but the spirit had departed from the body at least half a century before that; and, if we wish to identify the end of the *Pax Muscoviana* with some conventional date, the assassination of the Tsar Alexander II in A.D. 1881 will come nearer the mark than the abdication of the Tsar Nicholas II in A.D. 1917. On the same principle the end of the *Pax Romana* is to be identified with the Goths' victory at Adrianople in A.D. 378 and not with their capture of Rome itself in A.D. 410; the end of the *Pax Hanica* with the palace revolutions that began *circa* A.D. 172 and not with the final eviction of the Posterior Han Dynasty from the Imperial Throne in A.D. 221; and the end of the T'ang régime with the great catastrophe of A.D. 878 (see IV. C (ii) (b) 2, vol. iv, pp. 87–8, above) and not with the official abdication of the last of the T'ang emperors in A.D. 907.

⁴ See I. C (i) (a), vol. i, p. 53, footnote 2; II. D (v), vol. ii, pp. 157 and 176; IV. C (ii) (b) 2, vol. iv, pp. 90 and 91–2; V. C (i) (c) 3, vol. v, p. 311, footnote 2; and V. C (ii) (a), in the present volume, p. 195, footnote 2, above.

Sceptre from the Prior to the Posterior Han¹ has a Russian parallel in the elevation of the parvenu Romanovs to an Imperial Throne left vacant by the extinction of the ancient House of Rurik.

Vestiges in Minoan History.

There is perhaps one other case in which our disintegration-pattern can be detected in the history of a universal state without being discernible in the foregoing 'Time of Troubles', and that is in the disintegration of the Minoan Society. In a field in which our evidence is still exclusively archaeological and also still only fragmentary—even in this unilluminating medium—our findings can only be tentative. Yet, while the history of the Minoan 'Time of Troubles' is far too obscure to warrant our venturing upon any analysis at all, we may perhaps provisionally interpret the archaeological strata in historical terms when we come to the following chapter. In other contexts² we have hazarded the conjecture that the Minoan Society, in the course of its disintegration, lived through a universal state that must have been founded after the first destruction of the Cretan palaces at the break between the two stratigraphically attested periods which our archaeologists have labelled 'Middle Minoan II' and 'Middle Minoan III'; and we have suspected that a violent overthrow of our supposed universal state may be the political event that is commemorated in the second destruction which overtook the same palaces, some centuries later, at the break between 'Late Minoan II' and 'Late Minoan III' circa 1400 B.C. If these two termini give the measure of the total span of the duration of 'the thalassocracy of Minos', does the dim light of the archaeologist-miner's lamp enable us to discern any intervening vestige of a beat of Rout-and-Rally? It is perhaps not altogether too fanciful to read a political punctuation into the change of technique and style which is the basis of the archaeologists' distinction between 'Late Minoan I' and 'Late Minoan II'.

Symptoms in Western History.

While a Minoan game of blind-man's-buff may not add much to our knowledge, its very uncertainty may serve to warn us that we are now approaching the limits of the field within which it is possible to pursue with any profit our empirical investigation into the occurrence of the disintegration-rhythm in its standard run of three and a half beats from beginning to end of the process. The results that we have obtained already suffice, however, to show that

¹ See the present chapter, p. 295, above.

² In I. C (i) (a), vol. i, pp. 92-3; IV. C (ii) (b) 1, vol. iv, pp. 64-5; and V. C (i) (c) 3, vol. v, p. 236, above.

the pattern which we have been studying does occur with a considerable frequency. And this conclusion leads us irresistibly to a final question. If our pattern has proved to be one of the regular features of the disintegration-process in the histories of those civilizations that have unquestionably made the dreadful transit from growth to decay, is it legitimate to argue in the inverse direction? Supposing that we are confronted with the history of a civilization which it is peculiarly difficult for us to see in perspective, shall we be warranted in pronouncing that this society is already in a state of disintegration on the strength of finding in its history the imprint of our now familiar disintegration-pattern?

Our problematical case is, of course, the history of the society into which we happen ourselves to have been born. At the beginning of this Study¹ we took note of the difficulty with which any Western observer will have to contend, *ex officio originis*, if he tries to take, *en voyage*, the bearings of the ship on board which the observer himself is sailing into the uncharted waters of an unknown Future. The position of our Western Society in our age cannot become known with any certainty of knowledge till the voyage has come to an end; and so long as the ship is under way the crew will have no notion whether she is going to founder in mid-ocean through springing a leak or be sent to the bottom by colliding with another vessel or run ashore on the rocks or glide smoothly into a port of which the crew will never have heard before they wake up one fine day to find their ship at rest in dock there. A sailor at sea cannot tell for which, if for any, of these ends the ship is heading as he watches her making headway during the brief period of his own spell of duty. To plot out her course and write up her log from start to finish is a task that can be performed only by observers who are able to wait until the voyage is over, since it will only be then that the unexplored Future, into which the ship is for ever sailing so long as she is in motion at all, will have been converted, without any dubious residue, into a traversed and recorded Past; and such observers must, *ex hypothesi*, be members of some other society that will still be alive when ours has ceased to exist, since their post of observation must, again *ex hypothesi*, lie not on board the ship, but somewhere outside of her gunwales. Yet, granting that the present position of our now still living and moving Western World cannot be ascertained in this accurate and comprehensive way by observers who are handicapped, as we are, by the fact of living and moving and having our being in the society that is the object of observation, may there not be some rough-and-ready means by which even we, here and now, can reckon,

¹ In I. B (iv), vol. i, pp. 36-7, above.

within a margin of error that will be not excessive for practical purposes, approximately where we stand? And may not a clue have been put into our hands by the acquaintance with the standard run of the disintegration-rhythm that we have gained in the present chapter through a comparative study of the histories of other civilizations than our own in which we have the advantage of knowing the whole story? Suppose that the pattern which we have now detected in the histories of so many disintegrating civilizations were to prove to be discernible in our own Western history too. Might that not be regarded as presumptive evidence that our own civilization has already been overtaken by a process of disintegration which is known for certain to have been the fate of so many other representatives of the species?

If we look into our Western history with eyes sharpened by the practice of the survey that we have just been making, do we in fact perceive, here too, the now familiar beats of the movement of Rout-and-Rally?

On this point there is one observation that we can make at once and have in fact made already:¹ our Western Society, whether it be already in disintegration or not, has at any rate certainly not yet arrived at the second rally in the disintegration-process; for this second rally is regularly marked by the establishment of a *Pax Oecumenica*; and a *Pax Oecumenica* is a state to which our Western Society has certainly not yet attained. Why is it, though, that we are—as undoubtedly we are—so acutely aware of this fact? The answer to that question is that, in our generation in the West, we are no longer content, as our forebears were so complacently, to see our society remain partitioned among a number of parochial sovereign states that are apt to assert their sovereignty by going to war with one another. Unlike our forebears, we in our generation feel from the depths of our hearts that a *Pax Oecumenica* is now a crying need. We live in daily dread of a catastrophe which, we fear, may overtake us if the problem of meeting this need is left unsolved much longer.² It would hardly be an exaggeration to say that the shadow of this fear that now lies athwart our future is hypnotizing us into a spiritual paralysis that is beginning to affect us even in the trivial avocations of our daily life.³ And, if we can screw up the courage to look this fear in the face, we shall not be rewarded by finding ourselves able to dismiss it with contempt as nothing but a panic phobia. The sting of this fear lies in the undeniable fact that it springs from a rational root. We are terribly

¹ In Part IV. A, vol. iv, p. 3, above.

² See IV. C (iii) (c) 2 (β), vol. iv, pp. 318-20 and 405-8, above.

³ Written in the autumn of 1937.

afraid of the immediate future because we have been through a horrible experience in the recent past. And the lesson which this experience has impressed upon our minds is indeed an appalling one. In our generation we have learnt, through suffering, two home truths. The first truth is that the institution of War is still in full force in our Western Society. The second truth is that, in the Western World under existing technical and social conditions, there can be no warfare that is not internecine. These truths have been driven home by our experience in the General War of A.D. 1914-18; but the most ominous thing about that war is that it was not an isolated or unprecedented calamity. It was one war in a series; and, when we envisage the whole series in a synoptic view, we discover that this is not only a series but also a progression. In our recent Western history war has been following war in an ascending order of intensity; and to-day it is already apparent that the War of 1914-18 was not the climax of this crescendo movement. If the series continues, the progression will indubitably be carried to ever higher terms, until this process of intensifying the horrors of war is one day brought to an end by the self-annihilation of the war-making society.

We may now remind ourselves that this progressive series of Western wars, of which the War of 1914-18 has been the latest but perhaps not the last, is one of two chapters of a story that we have already studied in another context.¹ We have observed that the history of our Western warfare in the so-called 'Modern Age' can be analysed into two bouts which are separated from one another chronologically by an intervening lull and are also distinguished from one another qualitatively by a difference in the object—or at any rate in the pretext—of the hostilities. The first bout consists of the Wars of Religion² which began in the sixteenth century and ceased in the seventeenth. The second bout consists of the Wars of Nationality, which began in the eighteenth century and are still the scourge of the twentieth. These ferocious Wars of Religion and ferocious Wars of Nationality have been separated by an interlude of moderate wars that were fought as 'the Sport of Kings'. This interlude manifestly did not begin on the Continent till after the end of the Thirty Years' War in A.D. 1648, and in Great Britain not till after the Restoration of the Monarchy in England in A.D. 1660; and it is equally manifest that the lull did not outlast the outbreak of the French Revolutionary War in A.D. 1792, even if we leave it an open question whether it survived the American

¹ In IV. C (iii) (b) 3 and 4, vol. iv, pp. 141-85, above.

² See V. C (i) (c) 2, vol. v, pp. 160-1, and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 668-72, above.

Revolutionary War of A.D. 1775-83.¹ On a narrower reckoning we might confine the Time-span of the 'Golden Age' of eighteenth-century moderation between the dates A.D. 1732 and A.D. 1755, if the eviction of a Protestant minority from the Catholic ecclesiastical principality of Salzburg in A.D. 1731-2 is to be taken as the last positive act of religious persecution in Western Europe, and the eviction of a French population from Acadia in A.D. 1755 as the first positive act of persecution for Nationality's sake in North America.² In any case the interlude is palpable; and, whatever dates we may choose to adopt as the props for a conventional scheme of chronological demarcation, the play will fall into the same three acts in the same sequence, and this sequence of acts will present the same plot. This underlying plot, and not the superficial time-table, is the feature that is of interest for our present purpose. And in the plot of this three-act play, with its couple of bouts of ferocious warfare and an interlude of moderate warfare in between them, can we not discern the familiar pattern of a couple of paroxysms, separated by a breathing-space, which we have learnt to recognize as the hall-mark of a 'Time of Troubles'? If we scrutinize in this light the picture that is presented by the modern history of our Western World, we shall find that the cap does at any rate fit to a nicety.

If the outbreak of the Wars of Religion in the sixteenth century is to be taken as a symptom of social breakdown, then the first rally of a since then disintegrating Western Society is to be seen in the movement in favour of religious toleration which gained the upper hand, and brought the Wars of Religion to an end, in the course of the seventeenth century. This victory of the Principle of Toleration in the religious sphere duly won for several succeeding generations that interlude of moderation which gave an ailing Western World a welcome breathing-space between a first and a second paroxysm of its deadly seizure. And the cap fits again when we observe the fact that the relief was only temporary and not permanent, and when we go on to inquire into the reason. For our empirical study of the rhythm of the disintegration-process has led us to expect to see a rally give way to a relapse; and it has also

¹ We have already observed (in IV. C (iii) (b) 3, vol. iv, pp. 147-9, and in IV. C (iii) (b) 4, vol. iv, pp. 163-4 and 165-7, above) that the testimony of the American Revolutionary War is self-contradictory and therefore ambiguous. When we consider the moderateness of the terms which a victorious France imposed upon a defeated Great Britain in A.D. 1783, we shall be inclined to pronounce that in that year Moderation was still reigning. On the other hand, when we consider the treatment of the defeated United Empire Loyalists by the victorious insurgents in the *ci-devant* British colonies in North America, we shall be no less inclined to pronounce that by that time the reign of a fanatical Nationalism had already set in.

² For these two acts of eighteenth-century persecution and their significance see IV. C (iii) (b) 4, vol. iv, pp. 164-5, above.

led us to expect to find that this monotonously repeated tale of failure can be explained in each case by some particular element of weakness by which the abortive rally has been vitiated. Are these expectations fulfilled in the Western case in point? We are bound to reply that, in this case too, the reason for the failure of the rally is as clear as the fact of it is conspicuous. Our modern Western Principle of Toleration has failed to bring salvation after all because (as we must confess) there has been no health in it.¹ The spirits that presided over its conception and birth were Disillusionment, Apprehension, and Cynicism, not Faith, Hope, and Charity; the impulse was negative, not positive; and the soil in which the seeds were sown was arid.

'Some fell upon stony places where they had not much earth, and forthwith they sprung up because they had no deepness of earth; and when the Sun was up they were scorched, and because they had no root they withered away.'²

A Principle of Toleration which unexpectedly clothed the stony heart of our modern Western Christendom in a sudden crop of fresh verdure when the fierce sun of religious fanaticism had burnt itself out into dust and ashes, has wilted—no less suddenly and no less unexpectedly—now that the fiercer sun of national fanaticism has burst blazing through the firmament. In the twentieth century we are seeing our seventeenth-century Toleration making an unconditional surrender to a masterful demon whose onslaught it has proved incapable of withstanding. And the cause of this disastrous impotence is manifest.

A Toleration that has no roots in Faith has failed to retain any hold upon the heart of *Homo Occidentalis* because human nature abhors a spiritual vacuum. If the house from which an unclean spirit has gone out is left empty, swept, and garnished, the momentarily banished possessor will sooner or later enter in again with a retinue of other spirits more wicked than himself, and the last state of that man will be worse than the first.³ The Wars of Nationalism are more wicked than the Wars of Religion because the object—or pretext—of the hostilities is less sublime and less ethereal. The moral is that hungry souls which have been given a stone when they have asked for bread⁴ cannot be restrained from seeking to satisfy their hunger by devouring the first piece of carrion that comes their way. They will not be deterred by a warning from the giver of the stone that the heaven-sent carrion is

¹ The ethos of this modern Western Principle of Toleration has been examined in IV. C (iii) (b) 3, vol. iv, pp. 142-3 and 150; in IV. C (iii) (b) 4, vol. iv, p. 184; in IV. C (iii) (b) 12, vol. iv, pp. 227-8; in IV. C (iii) (c) 3 (α), Annex, vol. iv, pp. 643-5; and in V. C (i) (d) 6 (δ), Annex, vol. v, pp. 669-71, above.

⁴ Matt. vii. 9; Luke xi. 11.

poisoned; and, even when the threatened agonies duly begin to wrack the miserable scavengers' entrails, they will persist in feasting upon the tainted meat with an unabated appetite until death extinguishes their greed—as once in Sicily a routed Athenian army that had gone mad with thirst as it walked through dry places, seeking rest and finding none, drank heedlessly of the waters of the River Asinarus while the enemy was shooting them down from the bank and the stream was running foully red with the blood of the dying drinkers' already slaughtered comrades.

There is yet another point in which our modern Western history conforms to the pattern of a disintegrating society's 'Time of Troubles'; and this is perhaps the most alarming of all these points of congruence. Our survey has shown us that, as a rule, the paroxysm which follows the intermediate breathing-space is more violent than the paroxysm which precedes it; and this rule is certainly exemplified in our Western case if the Wars of Nationality are to be taken as the second paroxysm of our seizure and the Wars of Religion as the first.

Our forebears who fought that earlier cycle of ferocious Western wars may not have been behindhand in the will to work havoc, but—fortunately for themselves and for their descendants—they lacked the means which we now have at our command unfortunately for our children and for ourselves. No doubt the Wars of Religion were much worse—and this in point both of rancour and of command of resources and of technical ability to turn these resources to account—than the Western warfare of previous ages in which our Western Christendom was still unquestionably in growth. The Wars of Religion had been anticipated by the invention of gunpowder and by voyages of discovery that, at least on the material plane,¹ had extended the range of the Western Society from one small corner of the Eurasian Continent to the hinterlands of all the navigable seas on the face of the planet. The bullion that had been accumulating in the treasuries at Tenochtitlan and Cuzco was ultimately expended on paying mercenaries to fight in the Wars of Religion on European battle-fields, after the discovery, conquest, and rifling of the Central American and Andean worlds by the Spanish *conquistadores*—just as, after the corresponding geographical expansion of the Hellenic World through the exploits of Alexander, the treasures piled up by Achaemenian policy at Ecbatana and Susa found their way into the hands of mercenaries who fought in the wars of Alexander's diadochi and epigoni on

¹ For the discrepancy which is apt to reveal itself between the respective extensions of any society, at any date, on different planes of social life, see I. B (iii), vol. i, pp. 27-36, and V. C (i) (c) 3, vol. v, pp. 199-202, above.

battle-fields in Greece.¹ And the professional soldiery that was maintained in a sixteenth-century and seventeenth-century Western World out of this sudden huge increase in the Western princes' supplies of the precious metals was not only more numerous than the old feudal militia of Transalpine Western Europe. It was also more formidably armed and, worse still, more ferociously enraged against an enemy who now, as a rule, was not only a military opponent but was also a religious miscreant in the eyes of his adversary. The unprecedented violence with which the Wars of Religion were imbued by the combined operation of these several causes would doubtless have shocked both Saint Louis and the Emperor Frederick II if they could have returned to life to witness the Western warfare of the sixteenth and seventeenth centuries. But we may also as confidently presume that the Duke of Alva and Gustavus Adolphus would have been shocked to an equal degree if they, in their turn, could have returned to life to witness the subsequent Wars of Nationality. This later cycle of ferocious Western wars which began in the eighteenth century, and which has not ceased in the twentieth, has been keyed up to an unprecedented degree of ferocity by the titanic driving-power of two demonic forces—Democracy and Industrialism—which have entered into the institution of War in our Western World² in these latter days when that world has now virtually completed its stupendous feat of incorporating the whole face of the Earth and the entire living generation of Mankind into its own body material. Our last state is worse than our first because, in this vastly expanded house, we are possessed to-day by devils more terrible than any that ever tormented even our seventeenth-century and sixteenth-century ancestors.

Are these devils to dwell in our empty and swept and garnished house till they have driven us to suicide? If the analogy between our Western Civilization's modern history and other civilizations' 'Times of Troubles' does extend to points of chronology, then a Western 'Time of Troubles' which appears to have begun sometime in the sixteenth century may be expected to find its end sometime in the twentieth century; and this prospect may well make us tremble; for in other cases the grand finale that has wound up a 'Time of Troubles' and ushered in a universal state has been a self-inflicted 'knock-out blow' from which the self-stricken society

¹ See IV. C (iii) (c) 3 (α), vol. iv, p. 485; V. C (i) (c) 2, vol. v, pp. 62-4; V. C (i) (d) 11, in the present volume, p. 155, footnote 3; and the present chapter, pp. 289-90, above.

² For this impact of Democracy and Industrialism upon War see IV. C (iii) (b) 3, vol. iv, pp. 141-55, above. For the advent of these two demonic forces see Part I. A, vol. i, pp. 1-2, above.

has never been able to recover. Must we, too, purchase our *Pax Oecumenica* at this deadly price? The question is one which our own lips cannot answer, since the destiny of a live civilization is necessarily as obscure to its living members as the fate of a dead civilization is to scholars when their only clues are undeciphered scripts or dumb artifacts. We cannot say for certain that our doom is at hand; and yet we have no warrant for assuming that it is not; for that would be to assume that we are not as other men are; and any such assumption would be at variance with everything that we know about human nature either by looking around us or by introspection.

This dark doubt is a challenge which we cannot evade; and our destiny depends on our response.

'I dreamed, and behold I saw a man clothed with rags, standing in a certain place, with his face from his own house, a book in his hand, and a great burden upon his back. I looked, and saw him open the book and read therein; and as he read he wept and trembled; and, not being able longer to contain, he broke out with a lamentable cry saying "What shall I do?"'

It was not without just cause that Christian was so greatly distressed.

'I am for certain informed [said he] that this our city will be burned with fire from Heaven—in which fearful overthrow both myself with thee my wife and you my sweet babes shall miserably come to ruine, except (the which yet I see not) some way of escape can be found, whereby we may be delivered.'

What response to this challenge is Christian going to make? Is he going to look this way and that way as if he would run, yet stand still because he cannot tell which way to go—until the fire from Heaven duly descends upon the City of Destruction and the wretched haverer perishes in a holocaust which he has so dismally foreboded without ever bringing himself to the point of fleeing from the wrath to come? Or will he begin to run—and run on crying 'Life! Life! Eternal Life!'—with his eye set on a shining light and his feet bound for a distant wicket-gate? If the answer to this question depended on nobody but Christian himself, our knowledge of the uniformity of human nature might incline us to predict that Christian's imminent destiny was Death and not Life. But in the classic version of the myth we are told that the human protagonist was not left entirely to his own resources in the hour that was decisive for his fate. According to John Bunyan, Christian was saved by his encounter with Evangelist. And, inasmuch as it cannot be supposed that God's nature is less constant than Man's,

we may and must pray that a reprieve which God has granted to our society once will not be refused if we ask for it again in a contrite spirit and with a broken heart.¹

(III) STANDARDIZATION THROUGH DISINTEGRATION

We have now arrived at the close of our inquiry into the process of the disintegrations of civilizations; but, before we take leave of this subject and turn our attention to other problems, there is one more manoeuvre to be performed if we are to carry our present operations to their completion. Now that we find ourselves at last at the end of a road on which we have been travelling for so long, we are in a position to look back with an eye to taking in, at one view, the whole of the ground that we have traversed; and such a retrospect will perhaps throw light on a question which at this stage we can hardly leave unasked. In making a journey that, at least in certain stages, may have seemed, while we were on the march, like an aimless wandering in the wilderness, have we perchance been following a single guiding thread? Now that we have surveyed the whole course of disintegration by going laboriously over the ground, does the process prove to be governed by any master-tendency?

If we address ourselves to this concluding question we may obtain a clue to the answer in the findings that we have reached already in the last chapter before this.² In studying the interaction between individuals in disintegrating civilizations we have been led into an examination of the rhythm of the disintegration-process, and in this rhythm we have detected an element of uniformity—a uniform run of three and a half standard beats of the movement of Rout-and-Rally—which is apparently so definite and so constant that, on the strength of its regularity, we have almost ventured to cast the horoscope of one civilization that is still alive and on the move. If, with this clue in our hands, we now cast our eyes backward, we shall find that this tendency towards uniformity is the key-note, not only of the last chapter, but of the whole of the present part of this Study. In that uniform rhythm the principle of uniformity is manifesting itself only in a superficial way. In earlier chapters we have already come across some more significant expressions of uniformity in the uniform schism of disintegrating societies into three sharply divided classes and in the uniform works of creation that are respectively produced by each of these. We have seen dominant minorities uniformly working out philosophies and setting up universal states; internal proletariats

¹ Pss. xxxiv. 18, li. 17.

² In V. C (ii) (b), above.

uniformly discovering 'higher religions' which aim at embodying themselves in universal churches; and external proletariats uniformly mustering war-bands which find vent in 'heroic ages'.¹ The uniformity with which these several institutions are generated in the body social of a disintegrating civilization is indeed so perfect that it is possible to display this aspect of the disintegration-process in tabular form.² But this is still not the most impressive of the ways in which the tendency towards uniformity declares itself in the histories of disintegrating civilizations. The uniformity of institutions that is revealed by a study of schism in the body social is not so illuminating as the uniformity of ways of behaviour, feeling, and life that is revealed by a study of schism in the Soul.³

The conclusion to which this retrospective reconnaissance brings us is that in the histories of civilizations standardization is the master-tendency of the process of disintegration—in antithesis to the differentiation which we have found, at an earlier point,⁴ to be the master-tendency of the process of growth. And this conclusion is only what we should expect *a priori*. For, if differentiation is the natural outcome of a succession of successful responses to a series of different challenges, standardization is no less manifestly the natural outcome of a succession of unsuccessful responses to a single challenge which monotonously continues to present itself so long as it thus remains unanswered.⁵

This fundamental difference between the processes of disintegration and of growth is brought home in the simple parable of Penelope's web.

ἐνθα καὶ ἡματίη μὲν ὑφαίνεσκεν μέγαν ἱστόν,
νύκτας δ' ἀλλύσκεν, ἐπεὶ δαΐδας παραβέιτο.⁶

When the faithful wife of the absent Odysseus had promised her importunate suitors that she would give herself in marriage to one of them so soon as she had finished weaving a winding-sheet for old Laertes, she used to weave away at her loom in the day-time day by day and then spend the night-watches night by night in unpicking her last day's work. If we look into the differences between the heroine's day-work and her night-work we shall perceive that the most obvious difference is not the only one. The most obvious difference is, of course, that in the day-time Penelope was making

¹ The three classes into which a disintegrating society splits up, and these classes' respective works, have been examined in V. C (i) (c), *passim*, above.

² See the tables of universal states, philosophies, higher religions, and barbarian war-bands at the end of this chapter, on pp. 327-31, below.

³ See V. C (i) (d), *passim*, above.

⁴ In III. C (iii), vol. iii, pp. 377-90, above.

⁵ On this point see Part V. B, vol. v, pp. 12-13, and V. C (ii) (b), in the present volume, pp. 280-1, above.

⁶ *Odyssey*, Book II, ll. 104-5.

something, whereas at night she was undoing what she had just made. But there is another difference, besides, which is more pertinent to our present purpose. When the webster set up her warp and began to weave her weft each morning she had at her command an unlimited choice of patterns. If she chose she could make it her practice never to weave the same pattern more than once; and she could have kept up this practice without flagging, even if she had succeeded in carrying on her surreptitious game not just for three years but for thirty. The number of possible patterns was infinite; and, since every different pattern would require from the webster a different set of movements of eye and hand and body, it was open to Penelope to allow herself an infinite variety in the execution of her daily task. But, when each night she had the torches brought in, and set to work to unpick what she had woven between morn and eve, her night-work was monotonously uniform; and from this monotony there was no escape; for, when it came to unravelling the web, the pattern made no difference. However complicated the particular set of movements that had been required for the weaving of the pattern of the day, one simple movement, and this one only, was allowed by the nature of the task of undoing the day's work. The simple movement of drawing the threads has an obligatory rhythm upon which it is inherently impossible to ring any changes at all.

For this inevitable monotony of her night-work poor Penelope is assuredly to be pitied. To have to work into the small hours is hard enough anyway; and the toil becomes excruciating if it is not only hard but dull. If its hardness and dullness led nowhere the drudgery would be quite unbearable. What was it, then, that nerved the heroine to endure this self-imposed penance year-in and year-out? What inspired her was a song in her soul that was the unfaltering accompaniment of her repetitive night-work no less than of her varied daily task; and that song was 'ilayhi marji':¹ 'With Him will I be reunited.' In drawing the threads by night after weaving them during the day Penelope was not blindly repeating a meaningless round of ineffectual labour. She was working and living in hope; and her hope was not disappointed; for those three years spent on a drudgery that kept the suitors at bay just enabled her to tide over the latter end of the decade of Odysseus' absence. The hero returned to find the heroine still his; and the *Odyssey* duly ends in the reunion of the devoted wife who has resisted the suitors' importunity with the devoted husband who has been proof against the blandishments of Calypso.²

¹ 'ilayhi marji'ukum': 'To Him is your return': Qur'ān x. 4, quoted in III. C (iii), vol. iii, p. 390, above.

² See II. D (i), vol. ii, pp. 23-4, above.

If, then, as it turns out, even Penelope has neither woven nor drawn her threads in vain, what of the mightier weaver whose work is our study and whose song our ears have caught already in an earlier part of this book?

In Lebensfluten, im Tatensturm
 Wall' ich auf und ab,
 Webe hin und her!
 Geburt und Grab
 Ein ewiges Meer,
 Ein wechselnd Weben,
 Ein glühend Leben,
 So schaff' ich am sausenden Webstuhl der Zeit
 Und wirke der Gottheit lebendiges Kleid.¹

The work of the Spirit of the Earth, as he weaves and draws his threads on the Loom of Time, is the temporal history of Man as this manifests itself in the geneses and growths and breakdowns and disintegrations of human societies; and in all this welter of life and this tempest of action we can hear the beat of an elemental rhythm whose variations we have learnt to know as Challenge-and-Response and Withdrawal-and-Return and Rout-and-Rally and Apparentation-and-Affiliation and Schism-and-Palingenesia. This elemental rhythm is the alternating beat of Yin and Yang;² and in listening to it we have recognized that, though strophe may be answered by antistrophe, victory by defeat, birth by death, creation by destruction, the movement that this rhythm beats out is neither the fluctuation of an indecisive battle nor the cycle of a treadmill.³ The perpetual turning of a wheel is not a vain repetition if, at each revolution, it is carrying a vehicle that much nearer to its goal; and, if 'palingenesia' signifies the birth of something new, and not just the rebirth of something that has lived and died any number of times already,⁴ then the Wheel of Existence is not just a devilish device for inflicting an everlasting torment on a damned Ixion. On this showing, the music that the rhythm of Yin and Yang beats out is the song of creation; and we shall not be misled into fancying ourselves mistaken because, as we give ear, we can catch the note of creation alternating with the note of destruction. So far from convicting the song of being a diabolic counterfeit, this doubleness of note is a warrant of authenticity. If we listen well we shall perceive that, when the two notes collide, they produce not a discord but a harmony. Creation would not be

⁴ See V. C (i) (b), vol. v, p. 27, footnote 2, and V. C (i) (e), in the present volume, pp. 172-5, above.

creative if it did not swallow up in itself all things in Heaven and Earth, including its own antithesis.

But what of the living garment that the Earth Spirit weaves? Is it laid up in Heaven as fast as it is woven, or can we, here on Earth, catch glimpses at any rate of patches of its etherial web? What are we to think of those tissues that we see lying at the foot of the loom when the weaver, in the course of his tempestuous activity, has been at work unravelling? In the disintegration of a civilization we have found that, though the pageant may have been insubstantial, it does not fade without leaving a rack behind. When civilizations pass from breakdown through disintegration into dissolution, they regularly leave behind them a deposit of universal states and universal churches and barbarian war-bands. What are we to make of these objects? Are they mere waste-products of the disintegration-process—a tangle of spoiled threads from a piece of tapestry which the weaver, on an impulse of his inscrutable caprice, has willed to unpick before it has been half completed? Or will these debris prove, if we pick them up, to be fresh master-pieces of the weaver's art which he has woven, by an unnoticed sleight of hand, on some more etherial instrument than the roaring loom that has ostensibly been occupying all his attention and energies?

If, with this new question in mind, we cast our thoughts back over the results of our previous inquiries, we shall find reason to believe that these three objects of study are something more than by-products of social disintegration; for we came across them first¹ as tokens of Apparentation-and-Affiliation; and this is a relation between one civilization and another. Evidently, therefore, these three institutions cannot be explained entirely in terms of the history of any single civilization; their existence involves a relation between one civilization and another; and, to this extent at any rate, they must be independent entities with a claim to be studied on their own merits. But how far does their independence carry them? In dealing with universal states² we have found already that the peace which they bring is as ephemeral as it is imposing; and in dealing with barbarian war-bands³ we have found, again, that these maggots in the carcass of a dead civilization cannot hope to live longer than it takes the putrefying corpse to dissolve into its clean elements. Yet, though the war-bands may be foredoomed to the premature death of Achilles, the barbarian hero's short life leaves at least an echo behind it in the poetry that commemorates

an 'heroic age'.¹ And what is the destiny of the universal church in which every higher religion seeks to embody itself?²

It will be seen that we are not in a position at present to answer our new question off-hand; and at the same time it is clear that we cannot afford to ignore it; for this question holds the key to the meaning of the weaver's work; and a yearning that *tantus labor non sit cassus* will not allow us to rest without trying to unlock the secret of this mystery. Our Study is not at an end; but we have arrived at the verge of the last of our fields of inquiry.

¹ See I. C (i) (a), vol. i, p. 62; II. D (iii), vol. ii, pp. 94-6; and V. C (i) (c) 3, vol. v, pp. 233-4, above.

² We have already asked ourselves this question, without having yet tried to answer it, in V. C (i) (c) 4, vol. v, pp. 371-6, above.

ANNEX TO V. C (i) (d) 7

THE HELLENIC CONCEPTION OF THE 'COSMOPOLIS'

THE Hellenic conception of the *Cosmopolis* may be illustrated by a cento of quotations from Latin and Greek authors. Of the four who are drawn upon below, the first, Cicero, lived on the eve of the foundation of a Roman Empire which provided the Hellenic World with a universal state and Hellenic minds with a terrestrial image of the constitution of the vaster commonwealth of the Universe. The other three—Seneca, Epictetus, and Marcus—lived and worked in the social environment of an established Roman Empire at dates which all fall within the first two centuries of the Roman Peace. Both Marcus and Seneca were called upon to govern the Empire; and they both of them drew from their ideal of the *Cosmopolis* the moral strength to perform a burdensome and thankless mundane task for the sake of which Marcus sacrificed his happiness and Seneca forfeited his life—though Seneca's death at Nero's hands was not so ironical a tragedy as Cicero's death at the hands of a Triumvirate which included the future Augustus.¹

The first concern of these Hellenic philosophers in their disquisitions on the *Cosmopolis* was to demonstrate its existence; and the following proofs, on closely parallel lines, are offered by Cicero and by Marcus. Cicero's argument runs thus:

'Man has a primary social bond with God in their common possession of Reason—seeing that there is nothing higher than Reason, and that this highest of all faculties is to be found in Man and in God alike. Those, however, who have Reason in common have Right Reason in common as well; and, since Right Reason is another name for Law (*lex*), we human beings must be regarded as being associated with the Gods through the bond of Law likewise. But those who share the same law are living under the same juridical dispensation (*ius*), and this implies that they are members of the same commonwealth. If, however, they are subject to the same authorities and powers, then they are also subject, *a fortiori*, to the heavenly ordinance and to the Divine Intelligence

¹ In retrospect Augustus seems to have recognized that the eloquent voice which he had allowed Mark Antony to silence with the sword had been one of the heralds of Augustus's own life-work. At any rate this seems a legitimate reading of the following anecdote in Plutarch's *Life of Cicero*, chap. 49:

'I have heard that, many years later, Augustus once came into a room where one of his grandchildren (a child of his daughter's) was sitting reading one of Cicero's works. The boy was horrified and tried to hide the book under his coat; but his grandfather saw what he was doing, took the book, started to read it, and stood there reading on and on until he had been through a considerable part of the volume. Then he handed it back to the child with the words: "A great writer, my boy, a great writer and a great patriot."

and to Almighty God. And so the whole of this Universe is to be regarded as one single commonwealth of gods and men.¹

Marcus's argument follows much the same course:

'If we have Intelligence in common, we must also have in common the Reason (*λόγος*) in virtue of which we are reasonable creatures; and from this it would follow that we have in common, again, the Reason that tells us what to do and to leave undone. From this it would follow that we have Law (*νόμος*) in common; from this that we are citizens; and from that, again, that we are members of some kind of polity (*πολίτευμα*). If so, the Universe is like a commonwealth (*πόλις*); for what other polity can any one think of which has a membership comprising the entire Human Race? And is not this all-embracing commonwealth the only conceivable source of the intelligent and reasonable and law-abiding veins in our own human nature?'²

The conception of the Universe as a commonwealth, at which Marcus and Cicero have arrived by this road, is worked out as follows by Epictetus:

'This Universe is one commonwealth, and the substance out of which it has been fashioned is likewise one; and there is in its economy an inevitable periodicity which makes things give place to one another—one thing dissolving as another comes on into existence, and some things remaining unmoved while others are in motion. And everything is full of friends: in the first place gods but also human beings, who are likewise natural friends because they have been designed by Nature for living as members of one human family. In the natural course of this family life some have to keep each other company and others have to part company; and while we may rejoice in the companionship we must not grieve at the separation.'³

One of the excellences of the constitution of the *Cosmopolis* is the harmonious solution of the problem of the distribution of allegiance between the cosmic commonwealth and the terrestrial parish—and this is a topic on which we shall obtain the clearest light from those Hellenic philosophers who were at the same time Roman citizens; since Rome, as we have seen,⁴ had been more successful than any other terrestrial community in the Hellenic World in reconciling Cicero the citizen of the municipality of Arpinum with Cicero the citizen of an oecumenical Roman State. The analogous reconciliation of allegiances on the cosmic scale is propounded as follows by Seneca:

'We have to envisage two commonwealths. There is a great one—

¹ Cicero: *De Legibus*, Book I, chap. 7.

² Marcus Aurelius Antoninus: *Meditations*, Book IV, chap. 4.

³ Epictetus: *Dissertationes*, Book III, chap. 24, §§ 10-11.

⁴ In III. C (ii) (b), Annex IV, vol. iii, p. 481; IV. C (iii) (b) 10, vol. iv, pp. 208-14; and IV. C (iii) (c) 2 (β), vol. iv, pp. 310-13, above. See also V. C (ii) (b), in the present volume, p. 291, above.

truly deserving of the name—which embraces both gods and men and in which we do not let our eyes dwell on some insignificant corner but include in the bounds of our polity all that is under the Sun. And then there is that other commonwealth in which we have been enrolled by the accident of birth—an Athens or a Carthage or some other state with a citizenship that is not oecumenical but is merely parochial. Some people work for both commonwealths—the greater and the lesser—simultaneously; others exclusively for the lesser; and others, again, exclusively for the greater. It is in our power to serve this greater commonwealth in retirement as well as in active life; and indeed I am inclined to think that in retirement we can actually serve it better.¹

The points here made by Seneca are put more pithily by Marcus:

'*Qua* Antoninus I have Rome for my commonwealth and country; *qua* human being I have the Universe. The public interest of these two commonwealths gives the whole measure of my own private good.'²

If an apparent conflict of duties does arise, the philosopher may take it for granted that his duty to the Universe takes precedence. As Seneca sees it,

'When we have given the sage a commonwealth that is worthy of him by giving him the Universe, he will not be cutting himself off from the common weal by going into retirement. On the contrary, he will perhaps be leaving a hole in the corner in order to pass out into a greater and more spacious life, and to realize—when he finds himself on the heights of Heaven—the lowliness of the seat on which he sat when he used to take the chair or mount the tribunal. Let it sink into your mind that the sage is never so active as when he has brought within his purview the sum of things human and divine.'³

The same answer is given to the same question by Epictetus in his dissertation on the perfect practitioner of the Cynic discipline:

'I suppose you want to ask me whether the Cynic sage will go into politics? You blockhead! What greater field of political activity do you propose to give him than the field in which he is actually at work? Is he to take the floor at Athens and make a speech on revenue or supply when his role is to address the whole World—Athens and Corinth and Rome in the same world-wide audience—and to take for his subject, not supply or revenue or peace or war, but the Soul's prosperity and adversity, good fortune and bad fortune, slavery and freedom? You see a man working in a field of political activity of that titanic scope, and you ask me whether he will be going into politics? Suppose you go on to ask me whether he will take office, and once more I shall say to you: You fool! What greater office could he conceivably hold than the office that he is exercising already?'⁴

¹ Seneca, L. A.: *Ad Serenum de Otio*, chap. 4.

² Marcus, op. cit., Book VI, chap. 44.

³ Seneca, L. A.: *Epistolae*, Book VII, Ep. lxviii, § 2.

⁴ Epictetus: *Dissertationes*, Book III, chap. 22, §§ 83-5.

In the last resort the Commonwealth of the Universe has a claim upon the sage's allegiance to which the parochial commonwealth must give way; for

'Man [is] a citizen of the supreme commonwealth, in which the other commonwealths are no more than houses;'¹

and this simile reappears in the Stoic philosopher-emperor's confession of faith:

'Everything that is in harmony for thee, O Universe, is harmonious for me likewise. Nothing that is in season for thee is for me either premature or tardy. All is fruit for me that is brought by thy seasons, O Nature. From thee all things proceed; in thee all things subsist; to thee all things return. The worldling says "O beloved City of Cecrops", and shalt *thou* not say "O beloved City of Zeus"?'²

The philosopher may even rise to a height at which the parochial commonwealth fades out of view and leaves the Soul free to live the life of the 'City of Zeus' without any other claim on her attention.

'If there is truth in what the philosophers say about the kinship between God and men, is not the moral of this, for us men, that one should do like Socrates and never say, when asked one's nationality, that one is an Athenian or a Corinthian, but always answer that one is a native of the Universe (*κόσμος*)? Why is it that you call yourself an Athenian, instead of calling yourself simply by the name of the corner in which your vile body happened to be deposited at birth? Isn't it obvious that you call yourself an Athenian or a Corinthian because the area that is denoted by the name of Athens or Corinth is intrinsically more important and at the same time comprehends not merely the corner in which you were actually born, but also the whole of your house and, in short, the roots of your family tree? Well, any one who has studied the economy of the Universe will have learnt that the greatest and most important and most comprehensive of all things is this combine of men and God (*σύστημα τὸ ἐξ ἀνθρώπων καὶ Θεοῦ*), and he will also have learnt that God has been the source of life not only for my father and for my grandfather, but for everything that comes to life and grows upon the face of the Earth, and particularly for creatures endowed with Reason, since these alone are capable of enjoying a true intercourse with God thanks to the links by which Reason binds them to Him. A man who has learnt this may properly be called a native of the Universe and a son of God.'³

These words of the philosopher-slave Epictetus are echoed by a fellow Stoic who had to reconcile his freedom of the City of

¹ Marcus, *op. cit.*, Book III, chap. 11, quoted already in V. C (i) (d) 11, p. 158, above.

² *Ibid.*, Book IV, chap. 23, quoted already in V. C (i) (d) 1, vol. v, pp. 384 and 395, above.

³ Epictetus: *Dissertationes*, Book I, chap. 9, §§ 1-6.

Zeus with the slavery of being the sovereign of the Roman Empire.

'Live as though you were on a mountain; for it makes no difference being here or there if, wherever one is, the Universe is one's commonwealth. . . . [And] if, when you find yourself approaching your end, you concentrate upon caring for nothing but your higher self and the spark of divinity that is in you . . . then you will be a man who is worthy of the Universe that has begotten you and at least you will no longer be a stranger in your own true native country.'¹

The Hellenic sage whose citizenship of the Universe thus swallowed up his citizenship of Rome or Athens did not make the mistake of imagining that he was thereby being translated from a harder to an easier state of existence.

'All this that you see—this sum of things human and divine—is a unity. It is a vast body of which we are the members. Nature brought us into the World already bound to one another by the ties of kinship, when she fashioned us from the same elements and placed us in the same environment. It was she who planted a mutual love in our hearts and made us social animals. It was she who created Right and Justice. It is by her enactment that it is more painful to inflict injury than to suffer it. Let us obey her command by holding out our hands to those who need our succour. Let us have on our lips and in our heart the line "I am a child of man and there is nothing human which does not touch me".² Let us hold in common what we have, for we have been born [to a common lot]. Our human society is like nothing so much as an arch—which would fall if the stones did not mutually support one another, whereas it actually remains in position just because they do.'³

This exhortation of Seneca's is capped by Epictetus:

'You are a citizen of the Universe and a member of it—and not one of the menial members either, but one of those in authority; for you have the intelligence to follow the divine economy and to work out its sequence. What, then, is the citizen's vocation? It is to have no private interests of his own and to take no action *in vacuo*, but rather to act as one's hand or foot would act if they were reasonable beings with the intelligence to follow the laws of Physiology—for we may be sure that, if they *were* endowed with Reason, these members would yield to no impulse and entertain no desire without reference to the welfare of the whole organism. On this showing, the philosophers are profoundly right in saying that if the man of honour could foresee the future he would be a consenting party to his own sickness and death and disablement, because he would perceive that his personal lot was an integral part of the order of the Universe, and that the whole was more important than the part, and the commonwealth than the citizen.'⁴

This duty of self-surrender to the operation of the laws of the

¹ Marcus, op. cit., Book X, chap. 15, and Book XII, chap. 1.

² This line has already been quoted in this Study in V. C (i) (d) 7, on p. 8, above.—A.J.T.

³ Seneca, L. A.: *Epistolae*, Book XV, Ep. xcv, §§ 52-3.

⁴ Epictetus: *Dissertationes*, Book II, chap. 9, §§ 3-5.

Commonwealth of the Universe has received a sublime expression in the following adjuration with which Marcus concludes his colloquy with himself:

'Man, you have enjoyed the franchise of this mighty commonwealth; what difference does it make to you whether your term has been five years or three? To be treated in accordance with the law is equitable treatment, however it may work out for the individual. So where is the hardship if you are removed from the commonwealth by the action, not of a tyrant or of an unjust judge, but of Nature herself by whom you were originally introduced. Isn't it just like the actor being given his dismissal from the stage by the public authority that has engaged him? —"But I haven't played my five acts; I have only played three of them!" —Quite true; but then Life happens to be a three-act play. And what constitutes a complete play is a matter for the decision of the power who was once the author of your composition and is now the author of your dissolution—and in neither of these events have *you* any say. So take your departure with a good grace; for he who dismisses you is gracious.'¹

In this passage the Stoic sovereign of the Roman Empire submits himself to the Olympian sovereign of the *Cosmopolis* with the absolute devotion that is doubtless due to the supreme authority in a truly 'totalitarian' state; yet there is an earlier passage in Marcus's meditations in which the philosopher's faith in the existence of a constitution of the Universe seems to falter and throw him back upon a bleak reliance on the self-respect of a self that can look for no support in the Macrocosm.

'The cyclic movements of the Universe repeat themselves, up and down, from aeon to aeon; and one of two alternatives must be the truth. Either the All-Pervading Intelligence takes a fresh initiative each time—and, if that is the truth, it is for you to acquiesce in it—or else It took one primal initiative once for all, and everything else is a consequence of that—in which case, why extenuate yourself? For this would imply a sort of unbroken continuum. It amounts to this, that if God exists all's well with the world, while, if the ultimate reality is something without rhyme or reason, that is no excuse for you to take this chaos for your own standard of behaviour.'²

In these tragic cries we seem to hear the voice of a devoted citizen of the *Cosmopolis* who has suddenly awoken to find that Zeus has absconded from his presidential post and has left his faithful servant to bear the burden of Atlas on his solitary human shoulders. Marcus himself could never have been guilty of such a betrayal. He bore the terrestrial burden of the Roman Principate till he dropped dead under its weight. But Marcus's Christian readers ought not to be too hard on Marcus's Zeus; for Zeus, after

¹ Marcus, *op. cit.*, Book XII, chap. 36.

² *Ibid.*, Book IX, chap. 28.

all, had never asked to be elected president of a cosmic republic; he had started life as the disreputable war-lord of a barbarian war-band; and all that we know about him goes to show that this was the life that he enjoyed. If a Zeus whom the philosophers had belatedly caught and caged was unable to endure an eternity of enforced respectability as the senior inmate of a Stoic reformatory, have we the heart to blame the poor old fellow for proving incorrigible?

NEW ERAS

ONE of the simplest and most natural ways of celebrating an attempt to make a breach with the Present by taking a flying leap into the Future is to inaugurate a 'new era'.

This may be done in formal terms, as when the authors of a new political régime decree that all documents and events are to be dated officially by their subjects as from the Year One of the reigning Government's accession to power. On the other hand a new era may obtain a wide currency, and exert a profound influence upon the *Weltanschauung* of people who have come to think in terms of it, through being adopted by a free consensus without the intervention of any political authority—as, for example, the new era of Hellenic history *post Alexandrum* came to be adopted as the principal landmark in the historical retrospect of most of the post-Alexandrine Greek historians.

Apart from this superficial distinction between an official and a spontaneous origin, new eras can be classified in a more significant way according to the nature of the breach which they commemorate. This breach may be merely the transition from one chapter to the next in the unbroken history of a single society; or it may be one of those sharper and deeper interruptions of continuity that are produced by the impact of one society upon another.¹ In this sphere the inauguration of a new era may celebrate either the experience of conversion to an alien civilization or the still greater spiritual travail of conversion to an alien religion. It may be convenient to consider each of these different kinds of new era separately in an ascending scale measured by the extent of the breach which they celebrate.

The most notorious Western example of the official inauguration of a new era to mark the advent of a new political régime is the substitution, in Revolutionary France, of Years of the Revolution for Years of Our Lord. In our own day this Revolutionary French conceit has been followed by the Fascist Régime in Italy, in curious contradiction with the Fascists' vociferous repudiation of 'the Ideas of 1789', and with an even more curious disregard for the obvious consideration that a French era which remained in currency for so short a span of time is an inauspicious precedent for an Italian régime which boasts itself to be building for Eternity. The experience of an independent nationhood which has not only maintained

¹ The Contact of Civilizations with one another is dealt with in Parts IX and X below.

itself for more than 150 years but has gone in the meantime from strength to strength would give a greater justification to the Government of the United States if it were to decide to-day to date its own official transactions from the year of the Declaration of Independence; and it is a not impossible *tour de force* for a North American historian to begin his unofficial story with the landing of the Pilgrim Fathers—or at any rate with the voyages of Cabot and Columbus—as an Alexandrian or an Antiochene historian, in his place and day, might have begun with the crossing of the Hellespont by Alexander. In Hellenic historiography the new era which starts from Alexander's passage into Asia and destruction of the Achaemenian Empire has its counterpart in another new era which starts from the foundation of a New Rome on the Bosphorus by the Emperor Constantine; and this latter-day Hellenic era *post Constantinopolim conditam*, which remained a landmark for the affiliated Orthodox Christian Society after the Hellenic Society itself had gone into dissolution, has its analogue in a latter-day Sumeric era, *post primam regum Babylonis dynastiam institutam*, which the affiliated Babylonian Society likewise continued to take as its chronological starting-point.

To return to our own society, we shall find that almost any modern Western economic historian—even if he has been born and brought up, not in the New World overseas, but in the European homeland of our civilization—is capable of producing in a medieval quadrangle and under the shadow of a Gothic spire a history purporting to record the economic achievements of Man which will begin with the Industrial Revolution and will ignore all that happened, either in the Western World or elsewhere, before the advent of the so-called 'Machine Age'.¹ In the same futurist spirit a student of the history of modern Western science—or even of modern Western philosophy—may sometimes yield to the temptation to start with the radiation of the North Italian culture into Transalpine Europe at the turn of the fifteenth and sixteenth centuries of the Christian Era.

The unofficial new era, starting *circa* A.D. 1500, which is commonly taken to mark the beginning of the so-called Modern Age of Western history, is on the borderline between the kind of new era which signalizes merely the beginning of a new chapter in the domestic history of a single society and the other, more profoundly 'epoch-making', kind which signalizes the impact of one civilization upon another. The conventionally accepted signal of the

¹ The contrary view that Man's greatest technical triumphs have been his earliest, and not his most recent, has been put forward in this Study in III. C (i) (b), vol. iii, pp. 158-9, above.

beginning of our Modern Age has affinities in two respects with the eras that signalize an impact. In the first place the North Italian culture which radiated out over the Transalpine parts of the Western World at that time was a variation of the Western culture which had differentiated itself on Italian ground—during a period of political insulation which had lasted for some two centuries—to a degree at which the Italians felt and called their Transalpine fellow Westerners ‘barbarians’, while the Transalpine peoples made a silent but eloquent acknowledgement of the Italians’ accomplished superiority in an imitation of Italian ways which in this case was unquestionably the sincerest form of flattery.¹ In the second place this Italian version of the Western culture, which had already surpassed the Transalpine version by its own efforts, was enriching itself still further, by the time when it was radiating abroad, by drawing upon the treasures of the Hellenic culture which had been brought within its reach by a renaissance of classical Latin and Greek letters.² Thus, for Italy herself, the *Quattrocento* introduced a new era which was marked by a contact in the Time-dimension with the defunct Hellenic Society, while, for Transalpine Western Europe, the *Cinquecento* introduced in its turn a new era in which this Italian contact in Time with Hellenism was transmitted to the Transalpine countries through the agency of a contact in the Space-dimension between this Transalpine ruck of Western Christendom and the now superior Western Civilization of contemporary Italy.

Another new era that is likewise on the borderline between a mere beginning of a new chapter of domestic history and a collision between two different civilizations is the Seleucid Era which runs from the October of the year 312 B.C. In the minds of the Seleucidae themselves this era simply commemorated the definitive establishment of the authority of the Dynasty through the triumphal re-entry of Seleucus Nicator into Babylon on the day that was taken as the initial date; and in this aspect the Seleucid Era is comparable to our modern Western eras of the French Revolution or of the Fascist Régime, while it is precisely analogous to the Gupta Era, running from the 26th February, A.D. 320,³ which commemorates the definitive inauguration of the authority of the Gupta Dynasty that eventually re-established the Indic universal state after an interlude of Hellenic and Nomadic intrusion which

¹ See I. B (i), vol. i, p. 19; III. C (ii) (b), vol. iii, pp. 299-305 and 341-57; and IV. C (iii) (c) 2 (α), vol. iv, pp. 274-5, above.

² For the correct usage and the popular misuse of the term ‘Renaissance’ see IV. C (iii) (c) 2 (α), vol. iv, p. 275, footnote 1, above.

³ See Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), p. 280.

had followed the premature fall of the Mauryas.¹ In the minds of the Hellenic contemporaries of the Seleucidae, both inside and beyond the frontiers of the Seleucid Empire, the official Seleucid Era probably stood for much the same thing as the unofficial era which ran from Alexander's passage of the Hellespont some twenty-two years before Seleucus Nicator's re-entry into Babylon. Alexander had destroyed the Achaemenian Empire; Seleucus had founded the principal Hellenic 'successor-state' of the Achaemenian Empire in Asia; and either event would serve to mark the sudden vast territorial expansion of the Hellenic World in that generation. For the Hellenes this expansion was a domestic event, though this an outstanding one, in their own Hellenic history. The expansion, however, had been achieved at the Syriac World's expense; and the sudden violent interruption of the continuity of Syriac history through the irruption of an alien Hellenism was the event for which the Seleucid Era stood in the minds of Syriac peoples who continued to reckon by it long after the Seleucid Dynasty itself had passed away.²

This diverse significance of the Seleucid Era in different eyes has an analogue in the history of the Far Eastern Civilization in Japan, where the Meiji Era, which runs from the year A.D. 1868 of the Christian Era, commemorates two events that are distinct from one another notwithstanding their close historical association. On the one hand the new Japanese Era commemorates the domestic event of the restoration of the Imperial Dynasty to a position of authority which it had certainly not enjoyed since A.D. 1192,³ and perhaps not since A.D. 858.⁴ On the other hand it commemorates the deliberate 'reception' of the alien civilization of the West—a landmark in the history of the contact between the Far Eastern and the Western culture which eclipses in importance the domestic Japanese political revolution that was one of its corollaries.

The corresponding 'reception' of the Western Civilization in the Russian province of the Orthodox Christian World at a date about

¹ For the role of the Guptas in Indic history see I. C (i) (b), vol. i, p. 85, above. The inaugural date of the Gupta Era anticipates the actual foundation of the Gupta Empire (as distinct from the embryonic Gupta principality) by about thirty years, and the expansion of this empire to the dimensions of a universal state by about seventy years (see V. C (ii) (a), pp. 189-90, above).

² The Seleucid Era was not only widely adopted but was also widely imitated by dynasties and commonwealths which, instead of taking over the Seleucid Era itself, preferred to institute rival eras of their own (see Meyer, E.: *Geschichte des Altertums*, vol. i, part (1), 4th ed. (Stuttgart and Berlin 1921, Cotta), p. 241; Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), p. 359).

³ The date of Yoritomo's formal appointment to the new office of Shogun after his substitution of a Minamoto for a Taira military ascendancy in the Revolution of A.D. 1183-5 and his simultaneous removal of the seat of the *de facto* government of Japan from Kyoto to Kamakura.

⁴ The date of the establishment of the ascendancy of the House of Fujiwara over the Imperial Government at Kyoto.

two centuries and three-quarters in advance of its 'reception' in Japan is not commemorated in any official era; yet the reign of the Emperor Meiji is not a more epoch-making period in the history of Japan than the reign of the Tsar Peter the Great in the history of Russia; and, if we wish to date the beginning of the new age of Westernization in Russia from some particular year, we have several choices at our disposal.¹ We can choose the year A.D. 1689, which is the date, not of the official beginning of Peter's reign, but of his actual advent to power; or we can choose the 16th May, 1703, which is the date of the beginning of the building of St. Petersburg. The foundation of St. Petersburg by Peter was a symbolic act of the same significance as the foundation of Constantinople by Constantine. The Roman Emperor who had made it his mission to convert the Hellenic World to Christianity built himself a new capital which was to be Christian from the start;² and a new capital which was to be Western from the start was built, in pursuance of corresponding considerations of statecraft, by the Muscovite Tsar who had made it his mission to westernize all the Russias.

The conversion of a society to an alien religion is the third type of epoch-making event that is apt to find expression in the inauguration of a new era. A new era commemorating the conversion of the Hellenic World to Christianity would most naturally be dated from some event in the career of Constantine the Great—though it might be difficult to select one single event for the purpose, since Constantine's establishment of Christianity as *the*—or *an*—official religion of the Roman state was (like the Emperor's own personal adoption of Christianity) a gradual and perhaps never quite completed process and not either an abrupt or a 'totalitarian' act.³ Constantine's career was indeed regarded, as Alexander's had been regarded, by later generations as a landmark in Hellenic history which virtually amounted to a new beginning. But this unofficial consensus of feeling was not given expression in the establishment of a Constantinian Era; and after the break-up of the Roman Empire and the concomitant dissolution of the Hellenic

¹ We should be less in doubt if we had to choose a date for the inauguration of the Communist régime under which, in our own day, the process of Westernization, begun by Peter the Great, is being carried forward with incomparably greater intensity in the territories inherited from the defunct Muscovite Empire by the Union of Soviet Socialist Republics. We should have little hesitation in dating our Bolshevik Era from the seizure of power in Petrograd by Peter's authentic successor Lenin on the 7th November (New Style, which is the 25th October, Old Style), 1917.

² On this point Constantine's purpose was only partially achieved; for the newly laid out city that was officially dedicated by its Imperial founder to Christ admitted into its precincts the pagan worship of the Goddess Tychê (see V. C (i) (d) 4, vol. v, p. 413, footnote 6, above).

³ This is clearly brought out by Professor N. H. Baynes in *Constantine the Great and the Christian Church* (London 1929, Milford).

Society the event that stood out the most prominently in retrospect to Christians belonging to new societies that were Christian from the start was not the conversion of the Hellenic World to Christianity in the reign of the Roman Emperor Constantine but the revelation of Christianity itself through the Incarnation of Christ. Accordingly, the era which gained currency in Western Christendom from the post-Hellenic interregnum onwards was an era which took for its initial date the supposed year of the birth of Jesus; but it is noteworthy that this practice of reckoning by years of the Christian Era has prevailed only in Western Christendom, where the evocation of a ghost of the Roman Empire has been a fiasco and the renaissance of Hellenic letters has been tardy. In Orthodox Christendom, where a ghost of the Roman Empire was effectively evoked and Hellenic learning effectively reborn in the eighth century of the Christian Era,¹ civil servants continued to date by fiscal 'Indictions'² and historians by 'Years of the World'. In the Orthodox and the other non-Western Christendoms the reckoning by Years of the Christian Era has eventually been introduced as an automatic—and ironical—consequence of their capitulation to the culture of a Western Society which has itself ceased to be intrinsically Christian³ without having taken the trouble to remove the traditional Christian imprint from its official calendar.

We have still to mention a new era which purports to signalize a greater new departure in the way of life on Earth than any of those that we have passed in review so far, and that is the Advent—or, in the Christian version of the belief, the Second Coming⁴—of a supernatural saviour who is to inaugurate a Millennium of life which will still be a life on this Earth and in the flesh, but a life to be lived under unprecedented and unimaginable conditions of righteousness and felicity. This belief, in which the beginning of the new age is not equated with some already accomplished events⁵

¹ For this momentous divergence between the respective courses of events in Western and in Orthodox Christendom from the eighth century onwards see IV. C (iii) (c) 2 (β), vol. iv, pp. 320–408, with Annexes II and III, above.

² i.e. periodical tax-assessments.

³ For the metamorphosis of a once Western Christian Society into a merely Western Society at the beginning of the Modern Age of our Western history see I. B (iii), vol. i, p. 34, above, and Part VII, below. The neutral word 'metamorphosis' can be interpreted to mean either purification or sterilization according to the interpreter's 'ideological' bias; but it can hardly be denied that the process has been, whether for better or for worse, some kind of 'boiling-down' or 'Bowdlerization' which has had the effect of turning thick soup into thin.

⁴ This concept of a Second Coming has been examined in III. C (ii) (b), Annex I, vol. iii, pp. 462–5, above.

⁵ In another context (V. C (i) (d) 9 (γ), in the present volume, pp. 129–32, above) it has been suggested that the expectation of a Millennium is apt, in the historical sequence of ideas, to arise as a middle term between the expectation of an entirely mundane futurist kingdom and the expectation of the *Civitas Dei*. In the history of Judaism, at a stage when Jewry was still tempted to follow the will-o'-the-wisp of a mundane Messiah, the year 142 B.C., in which the Hasmonaean anti-Seleucid insurgent Simon

but is discerned in the future by the eye of Faith, seems to be a Zoroastrian idea which Judaism has borrowed and handed on to Christianity.¹ We need not attempt to analyse it in this place, since we have examined it already in another context.²

Maccabaeus succeeded in establishing the ephemeral Hasmonaean 'successor-state' of the Seleucid Empire, was taken as the initial date for a new era in which Jewry was to reckon by the years of the Messianic Kingdom which the Hasmonaean principality was blindly assumed by its partisans to be (see von Gall, A.: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), pp. 388-9).

¹ See V. C (i) (d) 7, p. 43, footnote 4, above.

² In V. C (i) (d) 9 (γ), in the present volume, pp. 129-32, above.

ANNEX I TO V. C (i) (d) 11

‘ARISTOPHANES’ FANTASY OF CLOUDCUCKOOLAND’

IN the chapters¹ to which this Annex attaches, we have studied in succession four alternative ways of trying to escape from the Present which suggest themselves to souls that are being excruciated by the agonizing experience of living in a society that is in process of disintegration. In these chapters we have concerned ourselves mainly with the points of difference between these diverse inward reactions to a single supreme social challenge. We have observed the contrast between the two ways—Archaism and Futurism—which are attempts to escape from the Present without abandoning the plane of mundane life, and the other two—Detachment and Transfiguration—which recognize and act upon the truth that the only possibility of genuinely escaping from the Present lies in renouncing This World altogether and migrating into a different spiritual clime.² Again, we have observed the contrast between the three ways—Archaism, Futurism, and Detachment—which are so many variations upon an act of sheer withdrawal, and the fourth way—Transfiguration—which is an act of withdrawal-and-return.³ There is, however, one feature, common to all four ways, which we have so far taken for granted, and this is that all four are apt to be pursued (to judge by our survey up to this point) with a uniform earnestness which is as tragically intense as the challenge of social disintegration is pitilessly importunate. This last feature perhaps demands further consideration; for, as a matter of historical fact, the importunity of the challenge is not of one constant degree from beginning to end of the process. The long descent that leads from the first breakdown of a society to its final dissolution is not only gradual but is not even continuous; the routs are punctuated by rallies;⁴ and a spiritual pressure which in the end becomes intolerable is not imposed upon the Soul in its full force at the outset, but is the cumulative product of successive turns of a social screw. On this showing, we might expect *a priori* to find that the earnestness of the reaction which the pressure evokes in its victims takes time, like the pressure itself, to arrive at its maximum; and this expectation seems to be borne out by the actual history—which has been reserved for examination in this Annex—of one particular idea,

¹ V. C (i) (d) 8-11, above.

² For this contrast see V. C (i) (d) 1, vol. v, p. 394, and V. C (i) (e), in the present volume, pp. 169-70, above. ³ See V. C (i) (d) 11, p. 149, and V. C (i) (e), pp. 170-2, above.

⁴ The movement of Rout-and-Rally in the disintegrations of civilizations has been examined in V. C (ii) (b), *passim*, above.

expressing the will to escape, which eventually came to inspire a grimly earnest political movement and a raptly earnest religious one, but which made its first recorded appearance on the stage of history as a *jeu d'esprit*.

When Saint Paul exclaimed that the Christ Crucified whom he was preaching was foolishness in the sight of the Greeks who seek after wisdom,¹ he was almost certainly not aware of the literalness of the sense in which these words were true, for he was almost certainly unconscious of the historical chain of associated ideas which linked the Tarsian Apostle's own faith with a fantasy that had germinated in the fertile imagination of the Athenian dramatist Aristophanes more than four hundred and fifty years back—in the first generation of the Hellenic 'Time of Troubles'. The links of this chain hang together, nevertheless, without a break; for Christ Crucified is the King of the Kingdom of God; the Kingdom of God is more commonly known in the New Testament by the name of the Kingdom of Heaven; and the Kingdom of Heaven was introduced by Aristophanes to his Attic audience in the guise of 'Nephelococcygia' or 'Clouducuckooland'—a city of refuge in which the citizens are neither gods nor men but birds.

Aristophanes' *Birds* was produced at the Great Dionysia in the spring of the year 414 B.C.; and this was a critical moment in Hellenic history; for the breakdown of the Hellenic Civilization, which had been heralded by the outbreak of the Atheno-Peloponnesian War in 431 B.C., and had then seemed for a moment to have been averted after all by the patching-up of a peace in 421 B.C., had been made irretrievable by the sailing of an Athenian armada to Sicily in the summer of 415 B.C., just before the play was composed. The atmosphere in which the *Birds* was written and produced was therefore tense; and at the same time the tension was not yet of the agonizing degree to which it afterwards swiftly rose when the Peloponnesians occupied Decelea in the following spring and when the Athenian expeditionary force in Sicily was annihilated in the following autumn. In the spring of 414 B.C. the *malaise* in Athenian souls was already sufficiently uncomfortable to give topical interest to 'a play of escape', but not yet sufficiently disturbing to warrant any suggestion that there could be anything in this idea of an escape except an entertaining fantasy. The play appears to be innocent of any direct allusion to current military and political events;² but it is studded with words and phrases and

¹ 1 Cor. i. 22-3, quoted in V. C (i) (d) 11, p. 150, above.

² This feature of the *Birds* is commented upon as follows by a modern Western connoisseur of the Attic drama:

'It does seem strange that the poet should have had this successful pursuit of a great kingdom in the clouds staged just at the time when, as Thucydides and Plutarch tell us, Athens was going mad after a kingdom in the west almost as cloudy, and yet should have

incidents that have an historical significance and a consequent emotional timbre for latter-day readers which they cannot have had for a playwright and an audience who were deliberately playing the fool and who were able to enjoy themselves with an unfeigned light-heartedness in that spring of 414 B.C. because they were mercifully unaware of the calamities that were in store for their own generation next year and for succeeding generations throughout the next four centuries. In echoing down the steep of a Hellenic 'Time of Troubles' these incidents and phrases and words that were contrived and coined by Aristophanes and were received by his Athenian countrymen and contemporaries as a delectable piece of deliberate foolishness have called forth unintended and portentous reverberations; and, if we look and listen, we may hear Aristophanes' nonsensical phrases turn into political and religious watchwords, and see his farcical incidents reproduce themselves as acts of high tragedy played out on the stage of 'real life'.

If we wish to assist at a dramatic performance that lasted four or five hundred years instead of the few hours that it took to play the *Birds* in 414 B.C., we may find it convenient first to remind ourselves of Aristophanes' plot and then to follow out its traces along two of the historic lines of escape from the Hellenic 'Time of Troubles'—in one direction along the violent political line of Futurism, and in another direction along the non-political and non-violent line of approach to a spiritual Transfiguration of This World through its irradiation with the light of the Kingdom of God.

The plot of Aristophanes' play is the recapture by the Birds, under the leadership of a human being, of 'the Kingdom' of the Universe which had belonged to the Birds originally before the Gods usurped it.

The Birds' sharp-witted human leader in this brilliantly successful *coup d'état* is a truant citizen of Athens, Peithetaerus ('Mr. Plausible'); and the opening of the play discovers him, in the company of his compatriot Euelpides ('Mr. Hopefulson'), making

intended no particular political reference. Nevertheless it is impossible to discover any direct allusion, or even any clear attitude towards the schemes for the conquest of Sicily and Carthage. It cannot be an intentional encouragement of them, yet on the other hand it does not read like satire. It seems to be just an "escape" from worry and the sordidness of life, away into the land of sky and clouds and poetry. If people want a cloud empire, here is a better one! (Murray, Gilbert: *Aristophanes: A Study* (Oxford 1933, Clarendon Press), chap. 6: 'The Plays of Escape' (*Birds*), pp. 155-6).

In the Athenian mood of the year and the day (which was a holiday in a year of anxiety but not of disaster) a direct allusion to the hazardous military adventure on which Athens was at that moment staking her political fortunes might have been irritatingly unwelcome to Aristophanes' audience. And we may perhaps discern in the playwright's choice of subject for the Great Dionysia of 414 B.C. the same tact which he afterwards showed in taking the even more pointedly non-political theme of the *Frogs* for a play that was to be produced at the Lenaea of 405 B.C., on the gloomy morrow of Arginusae and eve of Aegospotami.

tracks from an Athens which is not that tragic City of Destruction from which Christian flees at the outset of the Pilgrim's Progress, but a ridiculous City of Botheration in which a fellow never has a moment's peace from summonses and demand-notes. The trek-ers are looking for a new home on some soft spot where they can be sure of a quiet life (ll. 27-48 and 121-2); they apply to the hoopoe on the chance that he may happen to know of such a place (ll. 114-22); and, when he fails to make any helpful suggestion, Peithetaerus himself is struck by a bright idea. Why should not the Birds exploit their air-power as the Athenians have exploited their sea-power? The Birds are masters of the clouds and heaven, and this area is the strategic key to the command of the Universe. If the Birds now found and fortify a city here they will have Mankind at their mercy—'like insects' (l. 185)—and will be able to 'do in' the Gods; for they will be able to intercept the sweet savour of sacrifice on its way from Earth to Olympus and so to starve the Olympians into surrender as the Melians had been starved out in 416 B.C. by an Athenian naval blockade (ll. 162-93 and 550-637). No sooner said than done. The heavenly city—for which Peithetaerus invents (ll. 809-25) the name of 'Cloucduckooland' ('Nephelococcygia')—is duly built (ll. 1122-63);¹ the air-lines along which the savour of sacrifice has been wont to ascend from Earth to Olympus are duly cut (ll. 1514-24); and the Gods are quickly forced into a capitulation by this hostile exercise of a veritable 'power of the air'.² In return for the raising of the aerial blockade they have to agree to hand back to the Birds the sceptre which Zeus has usurped, and also to hand over 'the Queen' (*Βασίλειᾶ*)³ to the Birds' *ci-devant* human leader Peithetaerus. In implementation of the terms Peithetaerus ascends to Olympus and returns to 'Cloucduckooland' with Zeus' thunderbolt in his hand and 'the Queen' on his arm in the shape of a buxom bride (ll. 1535-41 and 1713-14). The closing scene is a marriage-feast, and in the last two lines of the play the chorus hails the happy bridegroom as a conquering hero and a God of Gods.

Τῆνέλλα καλλίνικος, ὦ
δαιμόνων ὑπέρτατε.

'Who is the Queen?' Peithetaerus asks when Prometheus gives him the 'tip' to insist on the surrender not only of Zeus' sceptre but

¹ Unlike the never-to-be-completed lines of circumvallation with which an Athenian expeditionary force in Sicily was trying to cut the land-communications of Syracuse at the very moment when the *Birds* was being acted under the lee of the Acropolis of Athens.

² . . . τῆς ἐξουσίας τοῦ αἵρος—Eph. ii. 2.

³ *Sic* (as the scansion shows): *Βασίλειᾶ*, not *Βασιλείᾶ*, and therefore 'Queen', not 'Sovereignty' or 'Kingdom' (Sheppard, T. J., in *Fasciculus Joanni Willis Clark Dicatus* (Cambridge 1909, University Press), p. 532).

of 'the Queen' as well. Prometheus' answer is that she is 'a lovely girl who keeps in her store-cupboard Zeus' thunderbolt and the rest of his bag of tricks: statesmanship, law-and-order, discretion, naval bases, vituperation, tithe-collector, and dole' (ll. 1537-41). And, though this answer may leave us still guessing,¹ we can at any rate identify the kingdom over which this Queen from Heaven has come down to reign. This Aristophanic caricature is the first appearance in Hellenic dress of a kingdom that is not of This World. If we follow the fortunes of the idea through the subsequent chapters of the Hellenic 'Time of Troubles', we shall find it assuming two forms—one political and the other religious—which both agree in taking Aristophanes' jest in earnest but otherwise differ from one another *toto caelo*.

In the political line of evolution the first step—which took rather more than a century—was the metamorphosis of the 'Cloud-cuckooland' which had been a poet's conceit into a 'Kingdom of Heaven' which was the Utopia of a pair of scholars. One of these scholars, Euhemerus, was the protégé, and the other, Alexarchus, was the brother, of the post-Alexandrine war-lord Cassander (*in Macedonia dominabatur* 316-298 B.C.). Cassander's protégé had to be content with describing his Utopia in a book in which Heaven (Uranus) figured as the first founder of an oecumenical empire.² Cassander's brother was able to command the means of bringing the Kingdom of Heaven down to Earth by setting up in real life an oecumenical empire on a miniature scale. On a patch of ground, given to him by Cassander, at the neck of the Athos Peninsula,³ Alexarchus built and peopled—for all the world like Peithetaerus in the play—a model city-state which was to be a practical sample

¹ Mr. Sheppard, *op. cit.*, pp. 533-4, points out that the festival of the Great Dionysia, at which the *Birds* was produced, followed only a few weeks after the festival of the Anthesteria, in which the principal rite was a sacred marriage between the god Dionysus himself and a mortal woman who was 'the Queen' (in this case not *Βασίλισσα* but *Βασίλισσα*) in virtue of being the wife of the King Archon (a ghost of a long since vanished authentic kingship which lingered on to perform the ritual functions of a Rex Sacrifculus). Mr. Sheppard further points out that the Anthesteria, in their turn, were preceded by a festival in which the principal rite was a sacred marriage between Zeus and Hera. Thus, at the season of the Great Dionysia, sacred marriages were in the air. Mr. Sheppard's conclusion (*op. cit.*, p. 540) is that 'Peithetairos . . . recalls to the audience Zeus, with a touch of Dionysus. Basileia recalls the Basilissa, not without a touch of Hera. The whole scene is at once a reminder of two brilliant functions of Athenian ritual, and, in itself, to the superstitious an effectual ceremony for the prosperity of Athens and the fertilizing of the crops'.

² Tarn, W. W.: *Alexander the Great and the Unity of Mankind* (London 1933, Milford), p. 24.

³ The site bore traces of a ship-canal which had been dug, some two hundred years back, at the command of the Achaemenid Emperor Xerxes in order to give passage to his fleet in a campaign which was to make the Achaemenian Empire literally oecumenical by bringing the Hellenic World under the dominion to which the Syriac and Babylonian worlds and portions of the Egyptian and Indic worlds were already subject. In the immediate neighbourhood the tangle of sea-girt, tree-clad hills between the isthmus and the mountain was one day to harbour a confederation of Christian monasteries of the Basilian Order in which Alexarchus's experiment was to be practised upon the *Civitas Dei*.

of the ideal world-commonwealth; and he called this city 'Urano-polis' ('the Heavenly City') and its citizens 'Uranidae' ('the Children of Heaven').¹

Iam nova progenies caelo demittitur alto!²

The title which Alexarchus conferred upon himself in his role of ruler of this Heavenly City was not 'Heaven' but 'the Sun';³ and the constitution of the Solar City was set out—in a Utopia-on-Paper which became only less famous than Euhemerus's work—by Iambulus, a social theorist who may have been a younger contemporary of Euhemerus and Alexarchus, though we know no more than that he wrote at some date between 290 and 132 B.C.⁴ In Iambulus's hands the Kingdom-not-of-this-World was dragged out of the scholar's study into the arena of political controversy; for Iambulus's 'Heliopolis' was a Utopia that was classless and communistic.⁵ The last step was to translate this egalitarian ideal into real life; and the experiment was duly made. The reason why we know that Iambulus's book must have been written before the year 132 B.C. is that this was the date of the desperately serious attempt of Aristonicus of Pergamum to set up in Western Anatolia a revolutionary proletarian commonwealth which its would-be founder inaugurated under the name of 'Heliopolis' and doubtless intended to build up on the pattern of the imaginary Solar City of Iambulus.⁶ Thus the Heavenly Kingdom which had been staged as a joke by Aristophanes at Athens in 414 B.C. was fought for to the death in Asia, 282 years later, by the last of the Attalids. In Aristonicus's hands, however, blood and iron did not show themselves to be such efficacious materials for empire-building as they were one day to prove in Bismarck's; for in 132 B.C. the 'strong man armed' was quickly overcome by 'a stronger than he'.⁷ Aristonicus's callow Pergamene 'Heliopolis' succumbed to the overwhelming power of Rome;⁸ and that was the miserable end of 'Cloudeuckoo-land's' audacious descent into the arena of futurist politics.

¹ Tarn, op. cit., pp. 21–2. Alexarchus's experiment on the Athos Peninsula must have been a 'going concern' at the moment when it gave birth to a daughter city-state of the same name in Pamphylia (Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), p. 12).

² Virgil: *Eclogues*, No. IV, l. 7.

³ Tarn, *Alexander the Great and the Unity of Mankind*, pp. 22–3. According to Bidez, J.: *La Cité du Monde et la Cité du Soleil chez les Stoïciens* (Paris 1932, Les Belles Lettres), pp. 32–4, this role of the Sun-God was of Oriental provenance, and was imported into the Hellenic *Weltanschauung* by Zeno of Citium's disciple Cleanthes of Assos.

⁴ Tarn, op. cit., pp. 9–10.

⁵ See Tarn, op. cit., loc. cit.; Bidez, op. cit., pp. 37–9; and the present Study, V. C (i) (c) 2, vol. v, pp. 69, 70, 82, footnote 4, and 180; V. C (i) (d) 1, vol. v, p. 384; and V. C (i) (d) 6 (δ), Annex, vol. v, p. 692, footnote 2, above.

⁶ Tarn, op. cit., pp. 9–10. Tarn dates the outbreak of Aristonicus's insurrection 133 B.C., not 132 B.C.

⁷ Luke xi. 21–2.

⁸ See IV. C (iii) (c) 3 (β), vol. iv, p. 507; V. C (i) (c) 2, vol. v, pp. 69–70 and 179–82; V. C (i) (d) 1, vol. v, p. 384; V. C (i) (d) 6 (δ), Annex, vol. v, p. 692, footnote 2; and V. C (i) (d) 9 (γ), in the present volume, p. 126, above.

When we turn from Politics to Religion we shall be struck by certain correspondences between the *Birds* and the New Testament which are perhaps sufficiently numerous and remarkable to raise the question whether they are fortuitous assonances or the vestiges of a chain of literary tradition of which nothing now happens to survive except the beginning and the end.¹

The point of correspondence which we may do well to examine first, because it is the point which is of the greatest intrinsic importance, is the assertion—made in both these contexts—that a man is God. In the *Birds*, as we have seen,² this claim is made for Peithetaerus by the chorus; in the Gospels it is made for Jesus both by Peter³ and by Jesus himself;⁴ and, if Aristophanes gives this piece of ‘foolishness’ a place of honour as the crowning joke of his play, that is no doubt because his Attic audience agreed with the Jewish High Priest in feeling such a claim to be the last word in blasphemy.⁵ Thus the formal elements of the incident in the Gospels and in the *Birds* are the same—however profound the difference in spirit and meaning and outcome between the comic scene in the theatre at Athens, where the blasphemously deified protagonist is carried off the stage in mock triumph, and the tragic trial in the High Priest’s palace at Jerusalem, in which the prisoner who declares himself to be the Son of God is condemned to death and led away to execution.⁶

The imagery in which Jesus is represented in the Gospels as making his claim to divinity is taken, of course, from the thirteenth

¹ The possibility that such a tradition may have propagated itself—without being uninterruptedly conscious and uniformly deliberate—by allowing itself, at some stage, to drift, for part of its way, down the primitive mental stream of ‘folk-memory’, is examined in V. C (ii) (a), Annex II, pp. 438–64, below. Whatever the channel or the means of conveyance, it is at any rate certain that, somehow or other, the *motifs* of Attic works of literature written before the end of the fifth century B.C. did sometimes find their way, *post Alexandrum*, into works of Oriental literature and did thereby succeed in giving a new Hellenic turn to old Oriental tales. A conspicuous case in point is the infusion of the Hippolytus-and-Phaedra *motif* into the traditional Jewish story of Joseph and Potiphar’s wife as this is retold in *The Testaments of the Twelve Patriarchs* and in the *Antiquities* of Josephus (see Braun, Martin: *Griechischer Roman und Hellenistische Geschichtsschreibung* (Frankfurt a. M. 1934, Klostermann), pp. 23–117, and eundem: *History and Romance in Graeco-Oriental Literature* (Oxford 1938, Blackwell), pp. 44–95).

² See p. 349, above.

³ Matt. xvi. 16 = John vi. 69: ‘Thou art he/that Christ, the Son of the Living God.’ In the corresponding passages in the other two Gospels the claim is not to divinity but only to Messiahhood (Mark viii. 29 = Luke ix. 20); and, according to the orthodox Jewish belief, the concepts of Messiahhood and divinity are mutually exclusive (see V. C (i) (d) 9 (7), *passim*, and V. C (i) (d) 11, p. 163, footnote 1, above).

⁴ Matt. xxvi. 63–4 (anticipated in xxiv. 30, and in xvi. 28); Mark xiv. 61–2 (anticipated in xiii. 26, and in ix. 1); Luke xxii. 69–70 (anticipated in ix. 26–7).

⁵ At the time when the *Birds* was produced at Athens there were still ten more years (*sed quales!*) to run before Lysander (an unknown name in 414 B.C.) was to enjoy at Samos the distinction of being the first of the Hellenes to be given divine honours (see V. C (i) (d) 6 (8), Annex, vol. v, p. 648, above).

⁶ The *motif* of mock-acceptance of a claim which the mockery stigmatizes as preposterous does, of course, occur in the story of the Passion. But the claim which is burlesqued in the crown of thorns and the purple robe is not the claim to be God but the claim to be the Lord’s Anointed King.

and fourteenth verses of the seventh chapter of the Book of Daniel, in which the Zoroastrian conception of the coming of the Saošyant—the saviour whose superhuman yet also less than divine status is indicated in his title of ‘the Son of Man’¹—has been seized upon by a Jewish poet-publicist, writing *circa* 166–164 B.C., as a vehicle for the expression of Jewry’s hopes of mundane salvation in its desperate resistance to the high-handed Hellenism of Antiochus Epiphanes.² Yet, although the idea by which Jesus’s claim is inspired may thus be of Zoroastrian origin, the key words both of the imagery in the Book of Daniel and of the narrative in the Gospels are words which are also to be found in a cento of quotations from the *Birds*.

The passage in the Book of Daniel (vii. 13–14) runs as follows:

‘Behold, one like the Son of Man came with the clouds of heaven (ἐπὶ τῶν νεφελῶν τοῦ οὐρανοῦ) and came to the Ancient of Days, and they brought him near before him. And there was given him dominion (ἐξουσία).’

The passage in the Gospel according to Saint Mark (xiv. 61–4) runs as follows:

‘The High Priest asked him and said unto him: “Art thou the Christ, the Son of the Blessed?” And Jesus said: “I am—and ye shall see the Son of Man sitting on the right hand of power (τῆς δυνάμεως) and coming in the clouds of heaven (μετὰ τῶν νεφελῶν τοῦ οὐρανοῦ).” Then the High Priest rent his clothes and saith: “What need we any further witnesses? Ye have heard the blasphemy”.’³

The passages in the *Birds* which this passage in the Gospel calls to mind are the following:

Peithetaerus: ‘I spy a great *coup* which the Birds can bring off, and a way of getting power (δύναμιν), if only you do what I tell you.’ (ll. 162–3.)

Peithetaerus: ‘Did you see anything?’—*Hoopoe*: ‘Just the clouds and heaven (τὰς νεφέλας γὰρ καὶ τὸν οὐρανόν).’—*Peithetaerus*: ‘Well, isn’t that the fairway of the Birds?’ (ll. 178–9.)

Peithetaerus: ‘Well, what name shall we give our city then?’—*Chorus*: ‘Some utterly vacuous name which we will take from the clouds and from the supernal regions.’—*Peithetaerus*: ‘Will “Cloudcuckooland” do for you? . . . It is the same as the Phlegraean Plain—the place where the

¹ See V. C (i) (d) 9 (γ), pp. 126 and 130–1, and V. C (i) (d) 11, p. 163, footnote 1, above.

² For Antiochus Epiphanes’ policy of forcible Hellenization see V. C (i) (d) 9 (β), pp. 103–5, above.

³ In the corresponding passage according to Saint Matthew (xxvi. 63–5) the Marcan text is reproduced in substance (including, in particular, all the words that have been quoted above in the original Greek, except that the Marcan *μετὰ* is here replaced by the Danielic *ἐπὶ*). In the corresponding passage according to Saint Luke (xxii. 66–71) ‘the right hand of the power of God’ has been retained but the ‘coming in the clouds of heaven’ has been omitted.

Gods took on the Giants, and walked away from them, in a competition in false pretences.' (ll. 817-19 and 824-5.)

Chorus (to Peithetaerus): 'O God of Gods' (ll. 1764-5.)

If these correspondences are not to be dismissed as a fortuitous concourse of accidents, but are to be taken as evidence for some chain of literary reminiscence which runs (through however many missing links and altered meanings) from Aristophanes' *Birds* to the Book of Daniel and thence to the Gospels, then we may see in the change of connotation that has come over the word 'power' *en route*¹ an example of the working of the principle of 'etherialization'.² And this may recall a passage from the Gospel according to Saint Matthew (vi. 26) which we have quoted already in our examination of that principle at an earlier point in this Study.³

'Behold the fowls of the air: for they sow not, neither do they reap nor gather into barns (*ἀποθήκας*); yet your heavenly father feedeth them. Are ye not much better than they?'

The first of the three points that are made in this passage of the Gospel—namely, the point that a bird's life is happy in being care-free—is also made in the following passage of Aristophanes' play:

Euelpides: 'And what is life like here—this life that one leads among the Birds?'—*Hoopoe:* 'It is not without charm when you come to try it. Well, first you have to live without a purse.'—*Euelpides:* 'And that at one stroke takes half the falsity out of life.'—*Hoopoe:* 'And then we browse in gardens on white sesame-grains and myrtle-berries and poppy-seed and cress.'—*Euelpides:* 'You seem to live like a bridal pair on honeymoon.' (ll. 155-61.)

A comparison of the two passages shows that, while an identical idea is the theme of both of them, this idea is not expressed in identical words or even in identical illustrations; and in this case, as in the other which we have just examined, it is possible to point out passages of Jewish literature which are older than the Gospel—though not older than *Birds*⁴—from which the Gospel may have

¹ This change in the meaning of the Greek word *δύναμις* from the sense of 'military power' to that of 'divine power' is recorded not only in the vocabulary of Christianity but also in that of the abortive contemporary religion of the Samaritan Simon Magus (see V. C (i) (d) 6 (δ), Annex, vol. v, p. 685, footnote 3, above), of whom it was asserted by his worshippers that *οὗτός ἐστιν ἡ δύναμις τοῦ Θεοῦ ἡ μεγάλη* (Acts viii. 10).

² For this principle see III. C (i) (c), vol. iii, pp. 174-92, above.

³ In III. C (i) (c), vol. iii, p. 191. In that place the chapter of the Gospel has been wrongly cited as vii instead of vi.

⁴ The Book of Job is at any rate not older than the *Birds*, though its date of composition is on any hypothesis sufficiently early to make it unlikely that any Hellenic influences should have found their way into it. On the other hand, as far as the question of date goes, there would not be the same *a priori* unlikelihood of Hellenic influences being traceable in the Psalms.

been borrowing. The variant of the same parable in the Gospel according to Saint Luke (xii. 24) runs:

‘Consider the ravens; for they neither sow nor reap—which neither have storehouse (ταμείον) nor barn (ἀποθήκη); and God feedeth them. How much more are ye better than the fowls?’

And this version, in which the theme is enunciated with reference, not to birds in general, but to birds of one particular kind, has at least two antecedents in the Jewish scriptures:

‘He giveth to the beast his food, and to the young ravens which cry’ (Psalm cxlvii, verse 9);

and

‘Who provideth for the raven his food? When his young ones cry unto God, they wander for lack of meat’ (Job xxxviii. 41).

These two passages not only agree with the passage in Luke, and differ from the passage in the *Birds*, in speaking of ravens in particular and not of birds in general; they further differ from the *Birds*, while agreeing this time not only with Luke but with Matthew as well, in the point that they make. They do not remark, as both Aristophanes and the Gospels do, that the birds obtain their livelihood without having to practise the rational and provident but, by the same token, anxious economy which is Man’s characteristic way of earning his living; but they do declare, as the Gospels do but Aristophanes does not, that this enviable insouciance is practicable for the birds because their food is provided for them by God. On this showing, the passage in the Gospels can be at least partially accounted for as a derivative from Jewish sources; and, if this were all, the point of correspondence between the Gospels and the *Birds* which has no counterpart in the Old Testament might conceivably be dismissed as a freak of Chance. We have, however, to take into account another passage of pagan Hellenic literature which is unmistakably related to the passage in the Gospels by a literary kinship which is distinctly closer than that which links the Gospels in this instance to the Book of Job and to the Hundred and Forty-Seventh Psalm; and that is a passage from one of the works of Gaius Musonius Rufus, a Stoic philosopher who was a contemporary of the authors of the two Gospels here in question.¹

This passage of Musonius is a fragment of a dialogue between a Stoic sage and a lay inquirer. The layman is putting the difficulties

¹ On the assumption that the Gospels according to Saint Matthew and Saint Luke were written (as is argued by Eduard Meyer in his *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), p. 239) at some date after the destruction of Jerusalem in A.D. 70 and before the persecution of the Church, *imperante Domitiano*, in A.D. 95.

that deter him from responding to the philosopher's serious call to a detached and blissful life, and the philosopher is trying to resolve the layman's doubts.

Layman: 'That is all very well; but I am a poor man—financially destitute—and I have a swarm of children. Where am I going to find the means to bring them up?'—*Philosopher*: 'Well, how do these little birds that are much more destitute than you are—the swallows and nightingales and larks and blackbirds—manage to bring up *their* young? Homer, too, has something to say about that: "And as a bird proffers a morsel, when at last she gets one, to her unfledged young, though she is sore an hungred herself . . ."'¹ Are these creatures superior to Man in intelligence? The question can only be answered in the negative. Well, are they superior in physical strength? The answer is in the negative *a fortiori*. Well, do the birds store (*ἀποτίθεται*) food and hoard it?'²

It will be seen that, in contrast to Aristophanes, Musonius not only propounds the same theme as the Gospels, but also propounds it in the self-same words and images (e.g. Musonius's *ἀποτίθεται* corresponds to the *ἀποθήκη* of both Gospels, and his *φυλάσσει* to the *ταμείον* of the Gospel according to Saint Luke). And a still more striking proof of literary kinship is the fact that the text of Musonius contains two of the three points that are made in the Gospels, whereas the passage in the *Birds* and the pair of passages from the Book of Job and from the Hundred and Forty-Seventh Psalm only contain one of these points apiece. The three points are as follows: (α) the Birds manage to live without practising a human economy;³ (β) they manage this because their food is given them by God; (γ) if the birds can manage it, then we human beings, who are so much their superiors, can certainly manage it *a fortiori*. Of these three points, (α) is common to the Gospels and the *Birds* and Musonius; (β) is common to the Gospels and

¹ *Iliad*, Book IX, ll. 323-4.—A.J.T.

² This passage of Musonius will be found in *The Rendel Harris Papyri* of Woodbrooke College, Birmingham, edited by Powell, J. E. (Cambridge 1936, University Press), Part I, No. 1, pp. 4-5. Before the discovery of the papyrus containing this text, the whole of that portion of the fragment which has been quoted above, save for the opening words 'That is all very well', was unknown to modern Western scholarship; for these words were the last in the extract that had been handed down by a continuous literary tradition. The text of the fragment in this already known shorter form, in which the parable of the birds is not included, will be found in O. Hense's edition of Musonius (Leipzig 1905, Teubner), Fragment No. XVA, pp. 78-9. The identity of this already known fragment with the papyrus text, in which the name of the author was missing, was first pointed out by Mr. M. P. Charlesworth; and it was also he who drew the attention of the writer of this Study to the Jewish pedigree of the ravens in Luke xii. 24.

³ This point (α) is also made—apropos, not of the birds of the air, but of the beasts of the field—in Lucretius: *De Rerum Natura*, Book V, ll. 228-34; but the Epicurean poet uses this *locus communis* as an argument *against* points (β) and (γ) and *not* in favour of them. The ability of the animals to grow up and live their lives without apparatus, in contrast to the helplessness of the puling human babe, proves the thesis (enunciated *ibid.*, ll. 198-9):

nequaquam nobis divinitus esse paratam
naturam rerum: tanta stat praedita culpa.

the pair of passages from the Old Testament; (γ) is common to the Gospels and Musonius. Thus Musonius not only has one point in common with the Gospels that is not to be found in either Aristophanes or the Old Testament: he also has a second point in common with the Gospels which is not to be found in the Old Testament but *is* to be found in Aristophanes (though it is to be noticed that in this point Musonius comes less close to Aristophanes than he comes to the Gospels, since there is some community of imagery and vocabulary between him and the Gospels, but not between him and Aristophanes).

The exact literary relation between these several passages of Christian and Hellenic and Jewish literature is perhaps impossible to trace out with any certainty. Since Musonius and the authors of the Gospels appear to have been contemporaries, it is theoretically conceivable—in the absence of evidence for determining the exact dates of publication of their respective works—that Musonius may have borrowed direct from the Evangelists, and equally conceivable, vice versa, that the Evangelists may have borrowed from Musonius. But neither of these theoretical possibilities will seem very probable when we consider the greatness of the gulf which in that generation still divided the cultivated circles of the Hellenic dominant minority, to which Musonius belonged, from the Syriac section of the Hellenic internal proletariat which was the cradle of the Christian Church. On the whole it seems more probable that Musonius and the authors of the Gospels were each drawing independently on some common source to which Aristophanes and the Jewish scriptures had each made some contribution (though, as likely as not, an indirect one).¹

¹ There is a parallel to this rather baffling three-cornered literary relation between Aristophanes, the New Testament, and Musonius in another three-cornered relation between the New Testament and a pair of pagan authors of whom, in this second case likewise, one was pre-Christian while the other lived and wrote in the Christian Era. In this second case the piece of imagery in the Gospels that is matched by this pair of correspondences in pagan Greek literature is found in Matthew and Mark, and there is a vestige of it in Luke as well. The pre-Christian Greek author in this case is not Aristophanes but Aeschylus. The post-Christian author is Philostratus (*vivebat circa* A.D. 170-250).

The passage of Philostratus that is reminiscent of both Aeschylus and the Gospels occurs in Philostratus's work on the Hellenic philosopher-thaumaturge Apollonius of Tyana, whose long life was approximately coterminous with the first century of the Christian Era. Near the beginning of his own book Philostratus recounts the following story of Damis—a previous biographer of Apollonius who was his subject's contemporary and disciple.

'On one occasion he [Damis] was being harried by a critic with a loose tongue and a malicious mind who made the point that it was all very well for Damis to put on record important things like Apollonius's maxims and speculations, but that when he went on to pick up tiny trivialities he was doing like the dogs who feed on the scraps that fall from the feast. At this point Damis cut in with the retort that "If there are feasts of the Gods at which it is gods that are feeding, then as a matter of course there will be servants in attendance who will see to it that even the scraps shall not be lost—when these are scraps of ambrosial!"' (Philostratus: *Apollonius of Tyana*, Book I, chap. 19).

There is patently some literary connexion between this passage of Philostratus and

There are two more assonances between the *Birds* and the Gospels which perhaps deserve notice here—in spite of their both being trivial in themselves—for the possible bearing that they may have upon the more important correspondences that have been examined above. The Informer's plaintive question—'What else would you have me do? For I do not know how to dig'¹—is echoed in the Unjust Steward's discreet reflexion: 'What shall I do? For . . . I cannot dig.'² And Jesus's enigmatic saying that 'the Kingdom of Heaven suffereth violence, and the violent take it by force'³ is anticipated by Euelpides' satirical remark that at Athens 'aliens are pushing their way in by violence'⁴ at the very time when he and Peithetaerus, who are native-born Athenian citizens, are leaping out of their native land with both feet in the air. 'I cannot dig' sounds as though it must have been a proverbial apologia for the practice of any easy but discreditable trade; and, if it was a *mot* that passed from mouth to mouth wherever the Attic *κοινή* was spoken, it might find its way into works of literature at wide intervals of time and place without there being any literary kinship between the diverse works in which it made its appearance. On the other hand, the *motif* of outsiders making a forcible entry into a commonwealth which has won prestige abroad is perhaps too

Mark vii. 27–8 (with its counterpart in Matt. xv. 26–7, and its vestige in Luke xvi. 21, where 'crumbs falling from the table' are also mentioned in juxtaposition with 'dogs'), though in this context it is not the dogs that eat the crumbs, but the beggar Lazarus). If Philostratus has taken his story about Damis from Damis himself, who was a contemporary of the authors of the Synoptic Gospels, then the literary problem here is precisely parallel to that of the relation between the Gospels and Musonius. And the echo of Aristophanes in Musonius likewise has its parallel in an echo, in Philostratus, of Aeschylus's saying (quoted already in this Study in I. C (iii) (e), Annex, vol. i, p. 449, and in III. C (ii) (δ), vol. iii, p. 339, above) that his tragedies were 'slices from the great banquets of Homer (τεμάχη τῶν Ὁμήρου μεγάλων δεῖπνων)'. Philostratus's relation to Aeschylus would appear to be independent of his relation to the New Testament; for Damis's word 'feasts' (δαιτρες), as reported by Philostratus, comes nearer to Aeschylus's word 'banquets' (δεῖπνων), as reported by Athenaeus, than it comes to the word 'table' in Matthew, Mark, and Luke. On the other hand the Aeschylean epigram lacks the feature, which is common to Philostratus and the Gospels, of scraps of human food falling and being eaten by dogs; and it also stands in *vacuo*, whereas the corresponding sayings that are attributed to Damis and to the Syro-phenician woman are both introduced, in the contexts in which they respectively occur, as disarming retorts to a provocation. The points that are common to all the three contexts are: (α) some one gives an arrestingly humble estimate of his own worth in a simile taken from the dinner-table; (β) the parable consists in a depreciation of the part by comparison with the whole—whether the part be a crumb falling from the table or a slice carved from the joint.

We may also notice a correspondence between the Gospels and a passage in the work of a Stoic philosopher of a later generation than that of Musonius and Damis. 'Can I really fear somebody to whom I am able to abandon my body?' (Epictetus: *Dissertationes*, Book I, chap. 23, § 13) sounds to a Christian ear like an echo of Matt. x. 28, and Luke xii. 4, though the master whom Epictetus here believes himself to be following is not Jesus but Diogenes.

¹ τί γὰρ πάθω; σκάπτειν γὰρ οὐκ ἐπίσταμαι (*Birds*, l. 1432).

² τί ποιήσω, ὅτι . . . σκάπτειν οὐκ ἰσχύω (Luke xvi. 3).

³ ἡ βασιλεία τῶν οὐρανῶν βιάζεται, καὶ βιασται ἀρπάξουσιν αὐτήν (Matt. xi. 12; cf. Luke xvi. 16). For a further assonance between this pair of sayings in the Gospels and the *Birds* and a saying that is attributed to King Cleomenes III of Sparta see V. C (ii) (a), Annex II, p. 415, below.

⁴ ὁ μὲν γὰρ ὧν οὐκ ἄστος ἐσβιάζεται (*Birds*, l. 32).

complicated an image to pass, like 'I cannot dig', into popular currency; and, if this *motif* first appears in a context where it does explain itself, and then reappears—and this with a clear verbal echo¹—in a different context where its meaning is obscure, it would be a not unreasonable inference to suppose that the later context in which the *motif* occurs is related to the earlier by a literary tradition in which a *motif* that originally served a purpose has been mechanically preserved after it has ceased to have a point and even ceased to be intelligible.

There is one more question that may conveniently be discussed in this Annex because it arises out of topics that have just been examined in the present context; and this final question may be put in the following way. One of the most prominent of the *motifs* that are common to the *Birds* and the Gospels is a claim to divinity that is made either by or on behalf of beings who are not gods—at any rate not according to the current convention of the time and place at which the claim has been put forward. Whether this claim is treated as a joke (as it is by Aristophanes) or as a supremely serious and momentous revelation of ultimate truth (as it is in the Gospels), there is one common feature in the treatment of it in both contexts: in both it is treated as something unexpected to the point of being startling. Now the beings who are not gods in the ordinarily accepted sense, but in respect of whom this claim to divinity is nevertheless made, are beings of two different kinds. Some of them are men; some of them are birds. And our question is this: To Hellenic minds in 414 B.C., which claim to divinity would seem the more preposterous? A bird's claim or a man's? There is reason to believe that, in the mind of a Hellene of Aristophanes' day, it required a greater effort of imagination to deify a man than to deify a bird.

The ground for this opinion lies in the probability that, even off the comic stage, the birds of the air were invested with a certain aura of divinity in the eyes of the generation of Hellenes who were Aristophanes' contemporaries. Aristophanes himself has devoted an appreciable part of his play (e.g. ll. 467–538 and 685–736) to a presentation of the thesis that the Birds were the original and legitimate lords of the Universe; that the present lordship of the Gods is a usurpation at the Birds' expense; and that even now there are tell-tale traces of the Birds' lost status which the Gods have either neglected or failed to efface. There are two particular traces that the playwright calls in evidence. One is that some of the reigning gods who are represented by statues in human form are also regularly accompanied in Hellenic works of art by

¹ i.e. with *βιάζεται* echoing *ἐσβιάζεται*.

representations of birds that are regarded as being their respective familiars or emblems. Zeus, for example, has his eagle, Athena her owl,¹ Apollo his hawk (*Birds*, ll. 514-16). The second piece of evidence that Aristophanes cites is the role still played by birds in the magic arts of omen-taking and fortune-telling (*Birds*, ll. 716-22). This thesis that the Birds are *ci-devant* gods² is presented by Aristophanes in the tone of mock-earnestness that is proper to the Old Comedy; and, if the evidence that Aristophanes offers us were all that we had at our command, we might be at a loss to know whether it was to be taken at all seriously or whether it was to be written off, from alpha to omega, as a sheer prank of the poet's riotous imagination. Fortunately, however, we have, as it happens, a good deal of independent evidence; and the conclusion to which this leads us is that Aristophanes' thesis was not really such arrant nonsense as the author himself would ostensibly have us believe.

On the one hand we find the Birds figuring as quasi-supernatural beings—and this particularly in virtue of a supposed foreknowledge of impending events—in Modern Greek folklore; and on the other hand it seems (though here the evidence is scantier) that the Birds were objects of religious veneration in the Minoan World.³ If the birds of the air have had this divine, or at any rate semi-divine, status in the eyes of both the pre-Hellenic and the post-Hellenic inhabitants of the region which was Hellas in an intervening age, there would be a presumption in favour of the hypothesis of there being an historical connexion between two cults of birds which are so similar in character and which have been practised in one and the same area, albeit in two different ages that are separated from each other by a chronological gap. On this hypothesis we should expect to find our bird-cult in existence under the surface during the intervening reign of Hellenism—even though, in that age, the dominant religion were anthropomorphic and not theriomorphic. And this is, of course, what we do find; for Aristophanes' thesis that the Birds had a touch of divinity

¹ The owl was Athena's bird in the city that bore her name (or rather the plural name of the multitude of images of her that were to be found there). In the *Odyssey*, however, which was not written on Attic soil, there are two passages in which Athena is depicted, not as being merely accompanied by a bird, but as herself assuming the form of one; and this Homeric bird-shape of Athena is not an owl's in either case. In one passage (*Odyssey*, Book XXII, l. 240) the bird whose form Athena assumes is a swallow; in the other passage (*Odyssey*, Book I, l. 320) it is a sea-eagle, if that is really the meaning of the mysterious word ἀνοταία.

² This notion of *ci-devant* gods who have been deposed and suppressed was of course familiar to the Hellenic minds of Aristophanes' age in the legend of the Titans. The complementary conception of the reigning Olympians as usurpers who have won and kept their dominion by force is inherent in the picture of Zeus and his fellow divinities as a war-lord and his war-band (for this picture see I. C (i) (b), vol. i, pp. 96-7, and V. C (i) (c) 3, vol. v, pp. 231-3, above).

³ On this point see Murray, *op. cit.*, pp. 147-8.

about them in the eyes of the Hellenes of his own day is borne out by a wealth of other evidence that comes not only from literary but also from archaeological sources.

On this showing, Aristophanes has exercised the professional skill that we should have expected of him in taking the thesis of the Birds being gods as a theme for one of his dramatic *jeux d'esprit*. He has here put his hand upon a joke which, for an audience accustomed to the Hellenic *Weltanschauung* of the day, was preposterous enough to be amusing without being quite so preposterous as to defeat itself by altogether passing the bounds of imagination. The fantasy was not unimaginably fantastic and the blasphemy not scandalously blasphemous because the foolery had in it an ingredient which 'unto the Greeks' was not sheer 'foolishness', but was something that most of the people who were assembled in the theatre at Athens for the Great Dionysia of 414 B.C. would unconsciously take for granted and might even, if pressed, acknowledge to be truth¹—however difficult it might be to reconcile a traditional belief in the semi-divinity of birds with the 'wisdom' after which the Greeks were by this time already beginning to seek along the paths of Reason.²

In Aristophanes' catalogue of Olympian Gods who had birds for their familiars or their emblems³ there is one name which is conspicuous by its absence, and that is Aphrodite's; for the Olympian Goddess of Love was popularly associated with birds, and these of many kinds: the iynx, the swan, the swallow, the sparrow, the dove. None of these bird-familiars of Aphrodite is mentioned by Aristophanes in the play.⁴ The playwright himself, however, figures as a participant in one of Plato's imaginary dialogues—the

¹ For the alloy of 'fact' (whether actual or merely reputed) which is an indispensable ingredient in so-called 'works of fiction', see I C (iii) (e), Annex, vol. i, pp. 449-50, above.

² Has the poet likewise tempered, by another touch of the same deft art, his salutation of his human hero as 'God of Gods' (l. 1765, cited in this Annex on pp. 349, 352, and 354, above)? We have suggested (on pp. 352 and 359) that, in a generation of Hellenic rationalists who had not yet lived to see divine honours conferred upon Lysander, the deification of a man might appear even more preposterous than the deification of a bird to the minds of an Attic playwright's audience. In the growth-stage of the Hellenic Civilization the distinction between human and superhuman beings was clearly maintained as a rule. There was, however, one exception; for a human being who had successfully performed the supremely creative social act of founding a new city-state was customarily worshipped—not indeed as a god, but as a hero—by the community of which he had made himself the historical ἀρχηγέτης. Now Aristophanes, in the middle act of the *Birds*, almost goes out of his way to show us Peithetaerus painstakingly performing the ritual which would be incumbent upon a founder. He sets to work to inaugurate his aviary by solemnly giving it a name and then clinching the ceremony by offering sacrifice (ll. 809-11), and, in spite of successive interruptions, he succeeds in accomplishing both these duties (ll. 1118-20) before a messenger arrives to announce that the city has been constructed *de facto* (ll. 1122-67) besides having been inaugurated *de jure*. In the minds of Aristophanes' audience, would these transactions imply that Peithetaerus had now qualified himself to rank as an ἀρχηγέτης? And would this perhaps partially prepare them for a *finale* in which the cockney *in excelsis* is saluted not merely as a hero but as a god?

³ See pp. 359-60, above.

⁴ The pairing of the coot with Aphrodite in line 565 is shown by the context to imply that this was *not* a bird that was popularly associated with this goddess in current folklore.

Symposium—in which the topic of discussion is that faculty of Love which was recognized as being Aphrodite's province before it was revealed in a new light as the heart of Christianity; and in the *Symposium* itself a first step is taken on the long journey towards the Christian view of Love from the traditional Hellenic attitude towards it when one of the speakers declares that there is not one Aphrodite but two Aphrodites and therefore not one kind of Love but two likewise.¹ Besides Aphrodite the Vulgar (Pandêmus) there is an Aphrodite the Heavenly (Urania), says Plato's Pausanias.² And this Platonic clue may encourage us to look for traces of the passage of the Heavenly Love, of which this Heavenly Aphrodite was the Hellenic image, from the bleak spiritual clime of the Hellenic 'Time of Troubles' to a Christian haven. In the story told in the Gospels³ the supernatural designation of Jesus as the Son of God is not only proclaimed orally by a voice from Heaven but is also visually revealed by an opening of the Heavens and a descent of the Spirit upon Jesus in the shape of a dove; and on the strength of this incident in the New Testament the dove has become the emblem of the Holy Ghost in Christian art; but this is not the first case in which the dove has figured as an emblem of divinity; for in Hellenic art, as we have already noticed, the dove is an emblem of Aphrodite. May we venture to infer that the visual image in which the Spirit of God is depicted in the Gospels has been derived from a Hellenic source? Such imagery cannot be of native Jewish origin; for the second of the ten Commandments forbids the visual representation of any object whatsoever, and to portray God Himself in the shape of a living creature that was not even human would be the most shocking violation of the Second Commandment that a Jewish mind could conceive. But if it is thus evident that the image of a dove, even if it should prove to have been inherited by Christianity from Judaism, must previously have made its way into Judaea from elsewhere, then we must look for the nearest possible antecedent provenance; and, as soon as we look, we cannot fail to observe how short a flight it is to the banks of Jordan from the coasts of Paphos.

To return for the last time to the *Birds*, we may notice, in the present connexion, that the descent of a winged harbinger of peace is also one of the incidents in Aristophanes' play,⁴ and that the

¹ The distinction between the two kinds of Love which was thus drawn by Plato was afterwards emphasized, in the Greek vocabulary of the New Testament, by a difference of name. The new word *ἀγάπη* was coined to denote the etherial Love that, in Plato's terms, was the spirit of the Heavenly Aphrodite, in contrast to the grosser Love, patronized by Aphrodite Pandêmus, with which the word *Erôs* was too deeply compromised to be acceptable to a Christian ear.

² Pausanias in Plato's *Symposium*, 180 D-E.

⁴ Aristophanes: *Birds*, ll. 1196-1261.

Olympian goddess Iris, whom the Athenian playwright casts for this part, is described by him in an earlier passage¹—in language borrowed from a Homeric simile—as ‘like unto a gentle dove’.²

This brings us to the end of an argument which points to a paradoxical conclusion. If our argument has any force, the conclusion can only be that Aristophanes’ lightly uttered foolishness is somehow less remote than Zeno’s scrupulously pondered wisdom from a Gospel that, in Christian belief, is God’s revelation of His Truth. This verdict would no doubt have astonished the Athenian playwright as greatly as it would have incensed the Cypriot sage; and, if the English reader is inclined, in his turn, to exclaim, with Horatio, that ‘this is wondrous strange’, the writer must answer, with Hamlet, that

‘There are more things in Heaven and Earth, Horatio,
Than are dreamt of in your philosophy.’

In the comedy which the Muses moved Aristophanes to write for performance in the holy place of Dionysus on the flank of the Acropolis of Athens in the year 414 B.C., the goddesses seem to have been doing their best to exercise the second of two powers of which they had boasted, centuries before, to shepherds ‘abiding in the field’³ on the flank of holy Helicon:

ἴδμεν ψεύδεα πολλὰ λέγειν ἐτύμοισιν ὁμοῖα,
ἴδμεν δ’, εὖτ’ ἐθέλωμεν, ἀληθέα γηρύσασθαι.⁴

The monument of the Muses’ other boasted power—to wit, the knack of telling specious lies⁵—is presumably the theogony which they recited to one of those shepherds of Ascrea whom they had greeted with such an insulting form of address;⁶ but, when the time was to come for another theogony, which might prove to be the truth, to be announced to other shepherds,⁷ the scene of the

¹ I. 575.

² The simile is applied to Iris and Eileithyia in the Homeric Hymn to Apollo, l. 114, and to Hera and Athena in *Iliad*, Book V, l. 778.

³ The word used by Hesiod of himself and his fellow shepherds in *Theogony*, l. 26, is *ἀγραιοί*; the word used of the shepherds in Luke ii. 8, is *ἀγραυλοῦντες*. (This assonance was pointed out to the writer of this Study by Professor H. T. Wade-Gery.)

⁴ Hesiod: *Theogony*, ll. 27–8.

⁵ This knack is commended by Aristotle as one of the important weapons in a poet’s armoury (see I. C (iii) (e), Annex, vol. i, p. 450, footnote 1, above).

⁶ *καὶ ἐλέγχεα, γαστέρες οἶον* (Hesiod: *Theogony*, l. 26). It is curious to find a variation on this form of insult turning up in the Cretan prophet Epimenides’ poem *Minos* and being quoted with approbation by a missionary of Christianity (Titus i. 12); for the Cretan ‘lie’ against which Epimenides was inveighing was the belief that a god had died and risen again from the dead! (see I. C (i) (b), vol. i, p. 99, footnote 2, above).

⁷ Why are ‘shepherds abiding in the field’ chosen, out of all Mankind, to be the recipients of the theogonies? This trait is not only common to the Hellenic and the Christian Mythology: it is also one of the more striking of the details in which these two mythologies agree in painting the same mysterious picture. Some light is perhaps thrown on this particular point of agreement by a passage in the mythical colloquy between Solon and the Saite priest in Plato’s *Timaeus*. The gist of the passage (which has been quoted above in IV. C (i), vol. iv, pp. 24–5) is that Egypt has been exempted

revelation was to be the countryside of Judaea and not of Boeotia, and the glad tidings were to be delivered by the tongues, not of Muses, but of Angels. It would almost seem as though all that the Muses themselves were able to do by way of demonstrating their power to tell the truth when they chose, as well as to counterfeit it as a rule, was to instil here and there a darkly anticipatory meaning into some of the winged words of an *insouciant* Athenian poet on the brink of a Hellenic 'Time of Troubles' that was to close, after unspeakable tribulations, in the Angels' proclamation of 'glory to God in the highest and peace on Earth to men of good will'.¹

by Nature from the incidence of recurrent physical catastrophes which visit the rest of the Earth, including Hellas, and which account for the frequent breaches of continuity—everywhere save in Egypt—in the transmission of culture. When the oecumenical catastrophe takes the form of a deluge, 'the shepherds and herdsmen on the mountains survive, while the inhabitants of your towns in Hellas are swept away by the rivers'—and with them perishes, each time, their barely achieved sophistication. 'When the waters that are above the firmament descend upon you like a recurrent malady' they 'only permit the illiterate and uncultivated members of your society to survive, with the result that you become as little children and start again from the beginning with no knowledge whatever of Ancient History.' This drastic destruction of a cultural heritage is assumed by the Saïte priest to be a grievous loss; but the contrast between the respective states of the Egyptian and Hellenic worlds in either Solon's day or Plato's suggests that there may be another side to the story. The possession of old knowledge may be an impediment to the acquisition of new knowledge; and, if so, the heritage may be a burden from which it is a blessing to be even forcibly relieved. 'Except ye be converted and become as little children ye shall not enter into the Kingdom of Heaven' (Matt. xviii. 3). The guileless shepherds who have survived the flood have hearts that are ready to receive a new revelation.

¹ Luke ii. 14.

SAINT AUGUSTINE'S CONCEPTION OF THE RELATIONS BETWEEN THE MUNDANE AND THE SUPRA-MUNDANE COMMONWEALTH

THE problem of the relations between the Kingdom of God and the Society of This World—a society which, for Saint Augustine, is embodied in the oecumenical empire of Rome—is a thread that runs right through the texture of the *De Civitate Dei*; and it would be impossible even to attempt to follow out consecutively the course of Saint Augustine's thought on this question without being drawn into making a systematic analysis of his *magnum opus*. In this place we cannot do more than quote a few passages that illustrate certain crucial points.

One crucial point with which Saint Augustine deals is the question of what is the essential difference between the two commonwealths; and in making this spiritual assay Saint Augustine takes Love as his touchstone.

'The great distinction which differentiates the two commonwealths—the society of the religious and the society of the irreligious—is this: in the one the love of God comes first, in the other the love of Self. . . . Indeed, the two commonwealths have been created by the two loves—the earthly commonwealth by a love of Self that goes to the length of contemning God; the heavenly commonwealth by a love of God that goes to the length of contemning Self. The one glories in itself, the other in the Lord. The one seeks glory from men; the other finds its greatest glory in God as the witness to its own good conscience. The one lifts up its head in its own glory; the other says to its God: *My glory and the lifter up of mine head*.¹ The one is dominated by a thirst for domination in its princes and in the nations which it subdues; in the other those in authority and those under authority serve one another mutually and lovingly by taking counsel and by following it. The earthly commonwealth loves its own strength as displayed in its own mighty men; the heavenly commonwealth says to its God: *I will love thee, O Lord my strength*.² And so in the earthly commonwealth its wise men, living on the human level, pursued the interests of the body or the mind or both, while those among them who succeeded in knowing God *glorified Him not as God, neither were thankful, but became vain in their imaginations, and their foolish heart was darkened. Professing themselves to be wise (that is, extolling themselves for their own wisdom under the dominion of pride), they became fools and changed the glory of the uncorruptible God into an image made like to corruptible Man and to birds and four-footed beasts and creeping things* (for the leaders of the peoples, or their followers, were given over to the adoration of images of this kind) *and worshipped and served the creature more than the Creator, who is blessed for ever*.³ On the

¹ Ps. iii. 3.

² Ps. xviii. 1.

³ Rom. i. 21-3 and 25.

other hand, in the heavenly commonwealth there is no wisdom of Man save the devotion with which the True God is properly worshipped—a devotion which He expects to receive as His guerdon in a society of saints (not only human beings, but also angels), *that God may be all in all*.¹²

It may be noted that in this passage Saint Augustine starts from a premiss which is common to him and to the philosophers, but that he arrives at a conclusion which is the opposite of theirs. The philosophers, too, condemn and reject the love of mundane things; but they infer, from their unfavourable experience of Love when it is directed towards one particular kind of object, that Love itself is a spiritual infirmity which the sage must make up his mind to pluck out and cast from him—on the reckoning that it is profitable for him to be without the faculty of Love rather than to renounce the possibility of attaining that absolute Detachment which, in the judgement of a philosophically enlightened understanding, is the only complete cure for a spiritual malady that consists in the very fact of being alive. The philosopher arrives at this radical conclusion because he does not take the precaution, which Saint Augustine does take, of looking into his premiss before proceeding to argue from it; and the philosopher therefore overlooks the capital point that Love *in vacuo* is a logical abstraction which is morally neutral (*ἀδιάφορον* in the Stoic terminology), while the moral character of real Love in action is determined by the nature of the object towards which it is directed. On this criterion the condemnation of the love of the creature is a right moral judgement; but the correct inference from it is not that Love itself is bad, but that the proper object of Love is not the creature but the Creator.

Another crucial point that is discussed in the *De Civitate Dei* is the question of the attitude which the citizen of the supra-mundane commonwealth ought to take up, in his pilgrimage through This World, towards the institutions of the mundane commonwealth which he will find in force around him.

'It is written of Cain that he founded a commonwealth; but Abel—true to the type of the pilgrim and sojourner that he was—did not do the like. For the commonwealth of the Saints is not of This World, though it does give birth to citizens here in whose persons it performs its pilgrimage until the time of its kingdom shall come—the time when it will gather them all together. . . . And then the promised kingdom will be given to them, and they will reign there with their prince, the King of the Ages, world without end. . . .

'The household of those who do not live by faith seeks to win an earthly peace out of the properties and amenities of this temporal life;

¹ 1 Cor. xv. 28.

² Saint Augustine, *De Civitate Dei*, Book XIV, chaps. 13 and 28.

but the household of those who do live by faith awaits the blessings which are promised for an eternal future; and so it makes use of earthly and temporal things as a pilgrim would use them—as things which must not be allowed to captivate it and deflect it from its goal (which is God), but on which it may perhaps lean in order to ease and reduce to a minimum the burdens of a corruptible body that weighs upon the Soul. Accordingly, things necessary for this mortal life are made use of by both kinds of person and by both households alike; but, in using them, each has his own distinctive purpose, and these purposes differ profoundly. Even the earthly commonwealth, which does not live by faith, ensues an earthly peace and bases the social harmony of its citizens, in their relations as rulers and ruled, upon some kind of mutual adjustment of human wills in regard to the things that pertain to this mortal life. At the same time the heavenly commonwealth—or, rather, that part of it which is making its pilgrimage in this state of mortality, and which lives by faith—must perforce make use of that earthly peace until the state of mortality, for which that kind of peace is a necessity, has passed away; and on this account, so long as it is leading its pilgrim's life in this earthly commonwealth—and leading it in a virtual captivity, though it has already received the promise of redemption and the gift of the spirit as a pledge [of ultimate release]—it does not hesitate to submit to the laws of the earthly commonwealth by which this mortal life is regulated in the ways most conducive to its maintenance. Mortality itself being common to both commonwealths [in this temporal environment], it is desirable that, in things pertaining to this mortal state, a harmony should be preserved between the two. . . .

While the heavenly commonwealth is making its pilgrimage on Earth it recruits citizens from all the tribes of Man and gathers its society of pilgrims from people of every tongue—not minding the diversity of manners, laws, and institutions (the instruments by which the earthly peace is earned and secured), and not rescinding or destroying any of these institutions, but on the contrary preserving them and falling in with them, because, underlying this diversity of institutions in different nations, there is the single identic purpose of earthly peace. The sole limiting condition of this conformity is that it must not interfere with Religion—in the sense of the inculcation of the worship of the One Supreme True God. So the heavenly commonwealth too, in its pilgrimage here, makes use of the earthly peace; and (as far as may be possible without conflicting with the duties of Religion) it cherishes and ensues that mutual adjustment of human wills in regard to things pertaining to Man's mortal nature; but it orients this earthly peace towards the heavenly peace which really is peace—the only peace worthy of being regarded as such, and of being called by the name, for creatures endowed with Reason. This heavenly peace is a perfectly organized and perfectly harmonious common participation in the enjoyment of God and of one another in God.¹ And, when we reach that state, our life

¹ This definition is also given, in the same words, in the passage quoted in V. C (i) (d) 11, p. 166, above.—A.J.T.

will not be mortal, but will be unmistakably vital; and our body will not be an animal body that weighs down the soul as it decays, but will be a spiritual body that has no wants and that is wholly subject to the will. The earthly peace is possessed by the heavenly commonwealth while it is making its pilgrimage in faith; and by this faith it genuinely lives when it orients towards the winning of the heavenly peace whatever good actions it performs in relation to God and also in relation to human neighbours—the life of a commonwealth being a social life *ex hypothesi*. . . .

‘Thus the highest good of God’s commonwealth is a peace which is eternal and perfect—not just a peace for mortals to travel through between birth and death, but a peace for immortals to abide in without any shadow of adversity. If this be granted, who can deny that that life is blessedly happy, and who refuse to pronounce that, by comparison, this life which we lead here is wretchedly miserable—filled though it may be, to overflowing, with amenities mental, bodily, and external? Any one, however, who lives this earthly life in such a way as to orient his use of it towards an end which is the end of the heavenly life—loving the heavenly life ardently, and loyally hoping for it—any one who lives like that can without absurdity be called blessedly happy even now: happy in the heavenly hope rather than in the earthly reality. On the other hand this earthly reality, divorced from the heavenly hope, is a false happiness which is nothing but the deepest misery. It is false because it does not command the true treasures of the spirit. For wisdom is no true wisdom when it exercises its virtues of discernment, resoluteness, restraint, and justice without directing its intention, in all that it does, to that end where God will be all in all in an eternity that is sure and in a peace that is perfect.’¹

It will be seen that, in Saint Augustine’s view, the duty—and it is, of course, an obvious one—of avoiding the snares of This World can be conscientiously and effectively carried out by the pilgrim-citizen of the supra-mundane commonwealth without his being required to adopt the radical precautionary policy of non-co-operation and non-intercourse. There is a legitimate use which the pilgrim can make of the institutions of the mundane commonwealth as a matter of practical convenience. But Saint Augustine goes farther than that. He tells the pilgrim that he will find that the pagan heroes of the mundane commonwealth have moral lessons to teach which the pilgrim may profitably learn and take to heart for their bearing upon his own duty as a citizen of the *Civitas Dei*.

‘The [Christian] martyrs . . . outdid the Scaevolae and Curtii and Decii in bearing ordeals inflicted upon them, instead of inflicting ordeals upon themselves; and they also outdid them in that true religion which is true virtue—not to speak of their immense superiority in numbers. But the Roman heroes were citizens of the earthly commonwealth

¹ Saint Augustine, *De Civitate Dei*, Book XV, chap. 1, and Book XIX, chaps. 17 and 20.

(*terrenae civitatis*); and the object set before them in all the duties which they performed on their commonwealth's behalf was the security of that commonwealth and a dominion that was not in Heaven but on Earth—not in a life eternal, but in a perpetual decease of the dying and succession of generations born to die in their turn—and so what else was there for these Roman heroes to love except a glory through which they hoped to live, even after death, a life of sorts in the mouth of an applauding Posterity?

'To these Roman heroes God was not going to give eternal life with his holy angels in his heavenly commonwealth (*caelesti civitate*)—for that is a society to which the only entrance lies in the true religion which does not pay worship to any but the One True God—and so, if God had not granted to those Romans this earthly glory either (the glory of a magnificent empire), they would have been cheated of the reward that was due to their good qualities, or in other words to the virtues by which they were striving to attain this pinnacle of glory. For God himself has something to say of heroes such as these who perform fine actions with the evident motive of gaining glory among men. *Verily I say unto you, He says, They have their reward.*¹ And in fact those Romans spurned their own private interests for the sake of the common—that is to say, the public—good. . . . As eagerly as though they had been on the true road, they strove, with every faculty that they possessed, to win honours, power and glory; and they did win an honour which was almost world-wide, they succeeded in imposing upon many peoples the laws in which their empire expressed itself, and to-day they enjoy a literary and historical fame that is almost universal. Thus they have no case for impugning the justice of the Supreme and True God: *They have their reward.*

'Vastly different, even in This World, is the reward of the Saints who have to endure contumely for the sake of the truth of God—a truth which is hateful to those for whom This World is all in all. The Saints' commonwealth is everlasting: there, none comes into existence, because none dies; there we find that true and full felicity which is not a goddess but is a gift of God; from there we have received the pledge of faith for the duration of our pilgrimage, while we are longing for that heavenly commonwealth's beauty; there the *Sun* does not *rise on the evil and on the good*,² but the Sun of Justice protects the good alone. . . . And so God's purpose, in allowing the Roman Empire to expand to the extreme of human glory, has not been solely to render to earthly heroes their due reward; God has also meant to afford an example to the citizens of that eternal commonwealth during their pilgrimage here—an example to which He wills them to pay close and careful heed, in order that they may realize the greatness of the love which they manifestly owe to their heavenly country for the sake of the life eternal, if an earthly country has been so greatly loved by its citizens for the sake of glory among men.'³

ANNEX I TO V. C (ii) (a)

THE HELLENIC PORTRAIT OF THE SAVIOUR WITH THE SWORD

OUR presentment of the Saviour with the Sword in the diverse postures of a Hêraklês and a Zeus is one of the political common-places of the Imperial Age of the Hellenic Society from whose mythology these two types are taken; and the surviving records of that age of Hellenic history provide a wealth of illustrations of this piece of political imagery. The monuments that are instructive for our purpose are of several kinds. There are the unofficial and semi-official literary works of philosophers and publicists; and there are the official inscriptions on public buildings and legends on coins. The pair of types was given an explicitly official currency when the Emperor Diocletian proclaimed the fulfilment of his task of salvaging the Empire from the bout of anarchy that had preceded his own advent to power by taking the title 'Jovius' for himself and conferring the title 'Herculius' upon his comrade and colleague Maximian. But this was merely the last step in a gradual process of crystallizing the portrait of the Saviour with the Sword in this dual form. It may be convenient to take a glance at this process in the literary medium first, and then to scan the corresponding series of titles on coins and in inscriptions.

In the early days of 'the Indian Summer' of Hellenic history, which began with the accession of the Emperor Nerva in A.D. 96 and ended with the death of the Emperor Marcus Aurelius in A.D. 180,¹ we find the attributes of Hêraklês and Zeus in turn being ascribed to the Emperor Trajan, who had to complete the task of slaying the hydra of tyranny before he could inaugurate the new era of philanthropic government. Trajan was hailed as Hêraklês by the Greek publicist Dio Chrysostom (*vivebat circa* A.D. 45-115),² and as both Hercules and Juppiter in successive passages of a single laudatory address from the mouth of the Roman Senator Gaius Plinius the Younger (*vivebat circa* A.D. 60-110).³ And the activities of the Emperor which entitled him in Pliny's opinion to be regarded as Juppiter's vicegerent on Earth are described by the panegyrist in the following terms:

'These are cares worthy of a prince, and even of a god—to reconcile

¹ The view that this epoch of Hellenic history is to be regarded as an 'Indian Summer' rather than as a 'Golden Age' has been put forward in IV. C (ii) (b) 1, vol. iv, pp. 58-61, above.

² Dio Chrysostom: *Oratio* I, §§ 49-84 (cited again in V. C (ii) (a), Annex II, pp. 470, 471, and 478, below).

³ In Pliny's *Panegyricus* Trajan is praised in the similitude of Hercules in chaps. 14, § 5, and 15, § 4, and in the similitude of Juppiter in chap. 80.

rival cities and to restrain arrogant peoples by reason as much as by authority; to prevent unfairness on the part of magistrates; to reverse anything done amiss; and lastly like some swift star to visit all places, to hear all things, and wheresoever your aid is invoked to appear and stand by like a god.¹

This passage could be matched by many others in the same vein, but we must content ourselves here with a single quotation from a laudatory address to Rome which was delivered by another Greek publicist, Aelius Aristides (*vivebat circa* A.D. 120–80), at a time when the Hellenic 'Indian Summer' was verging towards its close. In reviewing Rome's gifts to the Hellenic World, Aristides extols, as one of the most signal of them, the institution of the Principate:

'In the last instance there is a supreme judge of appeal, whose eye for Justice nothing ever escapes; and at the bar of his tribunal there is the most complete and magnificent equality between the small and the great, the obscure and the distinguished, the poor and the rich, the low-born and the high-born. This emperor-judge is one who, in the words of Hesiod, *hath but to stretch forth his hand, and, lo, the weak receiveth strength and the strong man chastisement*.² He is a judge who suffers Justice to direct him like the wind in the sails of a ship—the wind which shows no favour to the rich man over the poor man in wafting him on his course, but bestows its beneficent service impartially on every man who comes in its way.³

These words were written in a generation when they still rang true; but the term of this 'Indian Summer', during which a Serene Majesty could rule the Hellenic World 'by reason as much as by authority', and could maintain the balance of justice by the touch of an outstretched finger, was shorter than a century. The sword that had been auspiciously returned to its sheath had to be ominously drawn again. While Trajan had been able to exchange the role of Hercules for that of Juppiter, Marcus found himself compelled to descend from his happier predecessors' Olympian throne in order to enter again upon the temporarily suspended round of Hercules' labours;⁴ and, in the age of anarchy that followed, this treadmill had to be trodden by a succession of

¹ Pliny: *Panegyricus*, chap. 80, translated by Charlesworth, M. P., in *The Virtues of a Roman Emperor* (London 1937, Milford), p. 15. The writer of this Study is also indebted to this lecture of Mr. Charlesworth's for the references in the two preceding footnotes.

² 'Ρέα μὲν γὰρ βριάει, ρέα δὲ βριάοντα χαλέπτει.—Hesiod: *Works and Days*, l. 5. In its original context the line refers to Zeus.—A.J.T.

³ Aristides, P. Aelius: *In Romam*, p. 363.

⁴ There is a bitter irony in the fact that this role of Hercules, which was reluctantly assumed by Marcus as a grievously burdensome duty, was lightly fancied as a frivolous pose by Marcus's son Commodus, who did his worst to undo his father's work and to provide urgent labours for a long series of Herculean emperors after him (for Commodus's pose as Hercules see V. C (i) (d) 6 (α), vol. v, pp. 454–5, above).

soldier-emperors—a Decius and a Claudius and an Aurelian and a Probus and a Carus—before it became possible for a Diocletian to slough off the role of Hercules on to a Maximian's uncouth shoulders and to reassume for himself the role of Jove.

If we now pass from the literary to the epigraphical and numismatic evidence¹ we shall find that the official titles and mottoes of the rulers of the Hellenic World in the Imperial Age are apt to strike an attitude which reproduces one or other of our two postures in some epigrammatic phrase—though the posture that an emperor elects to assume by no means necessarily corresponds to, and may even be deliberately intended to dissimulate, the part that has been forced upon him in fact by an inexorable march of events.

This last point is illustrated by the formulae that date from the recurrent 'Time of Troubles' through which the Hellenic World passed between the death of Marcus in A.D. 180 and the accession of Diocletian in A.D. 284.² There are some formulae of this age that breathe the authentic spirit of it. For example, the *Vota Orbis* on coins of Valerian and Gallienus vividly express the agonized suspense of a world that is hanging breathlessly on the issue of the struggle between a single-handed Hêraklês and a hydra

¹ The specimens, here cited, of titles and mottoes in inscriptions and on coins of the Hellenic World in the Imperial Age are taken from Vogt, J.: *Orbis Romanus* (Tübingen 1929, Mohr), pp. 18–22; from Hahn, L.: *Rom und Romanismus im Griechisch-Römischen Osten* (Leipzig 1906, Dieterich), p. 140, footnote 4; and from Homo, L.: *Essai sur le Règne de l'Empereur Aurélien (270–275)* (Paris 1904, Fontemoing), pp. 362–4.

² The cause of this terrible relapse into anarchy was analysed long beforehand, with a prophetic insight, by the Stoic sage and Roman statesman Seneca (*vivebat circa* 5 B.C.–A.D. 65) in a passage of his *De Clementia* (Book I, chap. 4, §§ 1–2) in which the author gives his view of the social function of a prince.

'He is the bond that holds the Commonwealth together; he is the breath of life that is breathed by subjects, in their thousands, who in themselves would be nothing but a burden and a prey if they were left to their own devices through the removal of a presence which is the soul of the Empire.

Their king is safe? One mind informs them all;
Lost? They break troth straightway.

'If this calamity [which Virgil (*Georgics*, IV, ll. 212–13) imagines as overtaking the bees] were to overtake us, it would be the destruction of the *Pax Romana* and the ruin of a great people. This people will be safe from that particular danger for just so long as it has the sense to put up with the curb; but, if ever it snaps the reins—or refuses to allow itself to be bridled again if the bridle has been accidentally shaken off—then the texture of this mighty empire will be rent, and its present unity will fly apart into a hundred shreds. Rome will cease to bear rule at the moment at which she ceases to render obedience.'

A foretaste of the fulfilment of this prophecy that had been made in a treatise addressed to the Emperor Nero was inflicted upon the Hellenic World in A.D. 69 as an immediate consequence of Nero's tyranny; but this touch of calamity acted as a stimulus. 'The Year of the Four Emperors' was followed by the principate of Vespasian; and, when the Neronian reign of terror was reinaugurated by the son of an emperor who had earned the title of 'Saviour and Benefactor of All Men', this tyranny of Domitian in its turn was followed by the philanthropic régime of a series of philosopher-emperors who succeeded one another without a break from Nerva to Marcus. It was only after the death of Marcus that the new 'Time of Troubles' set in; and even then the tyranny of Commodus was followed by the principate of Septimius Severus, who repeated Vespasian's work—albeit with a rougher hand. It was not till after the death of Alexander Severus that the storm broke with an uncontrollable and shattering violence.

with a hundred heads.¹ And there are other contemporary formulae which implicitly confess that the Roman Peace has been broken and the structure of the Hellenic universal state been destroyed—or at any rate gravely damaged. These unwelcome truths are admitted in the title *Pacator Orbis* which is taken by Septimius Severus and Caracalla and Valerian and Gallienus and Postumus and Aurelian and Tacitus and Florian and Probus and Numerian.² And the same admission is made in the title *Reparator Orbis* or *Restitutor Orbis*³ or *Restitutor Generis Humani* or *Restitutor Saeculi* which is taken by Gordianus III and the two Philips, by Otacilia Severa (the wife of the first Philip and the mother of the second), by Valerian, by Gallienus, by Postumus, by Claudius, by Aurelian, by Tacitus, by Probus, by Carus, by Carinus, and thereafter by Constantius II and by Julian. The common characteristic of these titles is their note of frankness. On the other hand it is the wish, and not the fact, that is father to the thought in the motto *Securitas Orbis* which is displayed on the coins, not of any emperor whose reign falls within the Hadrianic and Antonine 'Indian Summer', but of a series which begins with Commodus and continues through Caracalla and Geta and the first Philip and Philip's wife Otacilia Severa and Decius's wife Etruscilla and Gallienus and Probus until it closes in the generation of Diocletian with the great man himself and with his lieutenants Maximian and Galerius and with his opponent Carausius. This catalogue suggests that the men who were responsible for the welfare of the Empire did not find it necessary to boast of the performance of their elementary duty of keeping order except in times when the boast was unwarrantable.

There is another group of formulae which proclaim the metamorphosis of a Hercules into a Juppiter: for example, the specious *Pax Orbis Terrarum* which was a false claim on coins of Otho but a true one on coins of the Flavians; the well-earned *Fortuna*

¹ The *Vota Orbis et Urbis* on coins of Constantine the Great and Licinius perhaps express the recurrence of this anxious atmosphere during the further bout of anarchy between the abdication of Diocletian in A.D. 305 and the overthrow of Licinius by Constantine in A.D. 323.

² There is evidence in the legends on coins for the assumption of this title by all these ten emperors except Tacitus. In Tacitus's case the evidence is epigraphical—and there is also epigraphical as well as numismatical evidence in the case of Caracalla.

³ The evidence for *Restitutor Orbis* is both numismatical and epigraphical, while that for *Reparator Orbis* appears to be epigraphical only. It is noteworthy that the title *Restitutor Orbis Terrarum* appears to have been invented by Hadrian—an emperor who was able to sheathe the sword which Trajan had drawn and to rule thereafter without drawing it again (save for the suppression of Bar Kōkabā). Hadrian was not constrained to emulate Hēraklēs in his labours, though he chose to emulate him in his travels. The work which Hadrian made his special business was more aptly described in his other title of *Locupletator Orbis Terrarum*; for Hadrian was able to devote more of his energy to improving and completing what his predecessors had left unfinished than to merely repairing what they had wrecked or had allowed to fall into ruin.

Redux on coins of Aurelian¹ and *Gloria Orbis* on coins of Probus; the controversial *Liberator Orbis* on inscriptions of Constantine, Magnentius, and Julian; and the audacious *Toto Orbe Victor* which may pass muster in the inscriptions of a Constantius II and a Valentinian and a Theodosius, but which takes our breath away when we find the self-same title in the inscriptions of a Valens or an Arcadius.

Finally we may glance at the group of formulae in which the Saviour of Society displays himself—now serenely at rest, with sword no longer naked but in scabbard—in the posture of a Zeus with Olympus for his throne and with the prostrate Titans for his footstool. There are inscriptions in which Divus Julius is hailed as *Σωτὴρ τοῦ Κόσμου* and as *Σωτὴρ τῆς Οἰκουμένης*;² Augustus as *Custos Imperi Romani Totiusque Orbis Terrarum*; Tiberius as *Κοινὸς τῆς Οἰκουμένης Εὐεργέτης*; Claudius as *Σωτὴρ τῆς Οἰκουμένης*; Nero (I) as *Ὁ Ἀγαθὸς Δαίμων τῆς Οἰκουμένης*; Vespasian as *Ὁ Πάντων Ἀνθρώπων Σωτὴρ καὶ Εὐεργέτης*; Trajan as *Σωτὴρ τῆς Οἰκουμένης* and as *Conservator Generis Humani*.³ There are coins of

¹ Aurelian's *Fortuna Redux* may pass, but his *Felicitas Saeculi* and *Felicitas Temporum* must have drawn wry smiles from the faces of his subjects as they fingered the coins on which these two mottoes were displayed.

² Pauly-Wissowa: *Real-Encyclopädie der Klassischen Altertumswissenschaft*, 2nd ed., 2nd ser., Halbband v, col. 1214. The former of these two variants of a single title was affected by a number of Caesar's successors, especially by Hadrian; the latter was affected (see below) by Claudius and by Trajan. This title for a ruler of the Hellenic universal state has a remarkably close Andean parallel in the title 'Pachacutec' which was borne by the Inca who has the best claim to be regarded as the founder of the Andean universal state (see I. C (i) (b), vol. i, p. 121, and II. D (iv), vol. ii, p. 103, above). According to Baudin, L.: *L'Empire Socialiste des Inka* (Paris 1928, Institut d'Ethnologie), p. 114, 'Pachacutec' is a compound of the Quichuan substantive 'Pacha', meaning 'World', with a past participle passive 'cutec', meaning 'changed'—i.e., in this context, 'changed for the better'. The grammatical equivalent of 'Pachacutec' would thus be a motto which might appear on a Roman Imperial coin in some such Latin legend as *Orbis [in Statum Meliorem] Conversus*. If this Latin sentence had to be transposed into a Greek epithet, *Σωτὴρ τῆς Οἰκουμένης* would provide as good a translation as could be wished for; and, conversely, the statement, in a Greek inscription of 9-8 B.C. (O.G.I. 458, quoted in Gall, A. von: *Βασιλεῖα τοῦ Θεοῦ* (Heidelberg 1926, Winter), p. 453) that Augustus *ἐτέραν ἔδωκε παντὶ τῷ κόσμῳ ὅσιν* could be rendered as 'pacha cutec' in Quichuan.

³ For this Latin version of Trajan's title see Pauly-Wissowa, op. cit., col. 1219. Aurelian rings changes on it—*Conservator Orbis* and *Conservator Semper Vitae*—but it reappears in its original form in Arnobius: *Adversus Nationes*, Book II, chap. 64, where it is applied, not, of course, to Trajan, but to Christ. *Conservator* had come to be accepted as the regular Latin rendering of the Greek word *σωτήρ* in the pagan Latin usage of the Imperial Age (though Cicero had resorted to the periphrasis 'Is est . . . σωτήρ qui salutem dedit', on the plea that the Greek title meant something 'ita magnum ut Latine uno verbo exprimi non possit' (*In Verrem*, Actio II, Book II, chap. 63, § 154)). The Christian Latin rendering *Salvator* originated in a solecism, since it is based on a non-classical verb *salvare* which was coined in a Christian mint from the classical adjective *salvus* (Pauly-Wissowa, vol. cit., col. 1220). This solecism makes its first appearance in Latin literature in the works of the African Tertullian; and nearly two hundred years later a greater African father and man-of-letters still shows some discomfort in making use of it. 'Christus inquit, Iesus, id est Christus Salvator [Matt. i. 21] . . . nec quaerant grammatici quam sit Latinum, sed christiani quam verum . . . "salvare" et "salvator" non fuerunt haec Latina antequam veniret Salvator; quando ad Latinos venit, et haec Latina fecit' (Saint Augustine: *Sermo CCXCIX*, chap. 6). 'Verbum ["salvator"] Latina lingua antequam non habebat, sed habere poterat, sicut potuit, quando voluit' (idem: *De Trinitate*, Book XIII, chap. [10] 14).

Galba, Trajan, Commodus, and Caracalla which bear the motto *Salus Generis Humani*; and others on which Didius Julianus (!) and Septimius Severus and Caracalla and Constantine are depicted, holding the globe, with the legend *Rector Orbis*. And there are inscriptions, again, in which the title *Dominus Orbis* is given to Florian (!) and Diocletian and Julian.

In this array of Hellenic Imperial titles the truth is evidently blended with an alloy of make-believe. The debasement was not so gross as to prevent the coin from being accepted at its face value by contemporaries who managed to live through the collapse of the Empire without ever being aware of the tremendous event which they were witnessing and were perhaps even helping to bring to pass. But for our eyes, which can see it in perspective, this Hellenic portrait of the Saviour with the Sword brings out, with all the force of dramatic irony, the truth that mundane weapons, whether naked or sheathed, cannot be converted into effective instruments of even a mundane salvation.

ANNEX II TO V. C (ii) (a)

CHRISTUS PATIENS

The Problem

IN the chapter to which this annex attaches we have found that in a disintegrating society the creative genius assumes the role of a saviour; and an empirical survey of would-be saviours has led us to distinguish four types: the saviour with the sword, the saviour with 'the Time-Machine', the philosopher masked by a king, and the god incarnate in a man. Our purpose in making this tentative classification was to discover which of the alternative ways of seeking salvation is the true road and which are the aberrations; and accordingly, in following out the main thread of our argument, we have paid more attention to points of difference and contrast between our four types of saviour than to points of resemblance and connexion.¹ Yet, *ex hypothesi*, these different types have something in common, or it would have been impossible to apply the same name—'saviour'—to all of them. What is this common element? How far does it extend? And what is its significance?

Perhaps the most promising approach to these questions will be to look for the answer in a concrete case. If we concentrate upon the history of the Hellenic Society in the age of its disintegration, we shall become aware of certain correspondences between the accounts that have come down to us of divers saviours who arose in the Hellenic World in this chapter of its story; and we shall find that these correspondences override our classification of types; for the subjects of them are on the one hand Jesus—the saviour who made his epiphany as God incarnate in a man—and on the other hand a number of the pagan Hellenic saviours with the 'time-machine'. These partial counterparts of Jesus fall, for their part, into two sub-groups. Some of them—i.e. Aristonicus, Eunus, Salvius, Catiline—are leaders of the Hellenic internal proletariat who either were born into it, as Jesus was, or were adopted into it as deserters from the ranks of the Hellenic dominant minority. The saviours in this sub-group, both born proletarians and renegades, differ from Jesus in being futurists. The other sub-group—which includes the two Heracleidae, Agis and Cleomenes; the two Gracchi, Tiberius and Gaius; a companion of the Gracchi,

¹ One point of resemblance has, however, been touched upon in V. C (i) (d) 11, Annex I, p. 346, above.

Marcus Fulvius Flaccus; and also Cato Minor—consists entirely of members of the dominant minority who lived and died as archaists (though some of them came to be adopted, in the teeth of their own aims and desires, as heroes of an internal proletariat that was marching militantly along a futuristic war-path).¹ It will be evident at once that there is one fundamental difference in aim and outlook between Jesus and all these other saviours. The futurists and the archaists alike were seeking to establish a kingdom in This World, and their quest of Utopia was foredoomed to take to violence and to end in failure, whereas Jesus was seeking to establish a kingdom which was not of This World, he refused to take the sword, and in submitting, without resistance, to an unjust judgement and a painful death he accepted a material defeat which was in itself a supreme spiritual victory. This difference between Jesus and the pagan saviours who are his partial counterparts involves and expresses an element in Christianity which is of its essence, and, by comparison with this deep diversity, the correspondences with which we are now concerned are obviously superficial and trivial. Nevertheless they may still be worth examining for the light which they throw in the first place upon the passage of ideas and feelings across the gulf between the Hellenic dominant minority and the Hellenic internal proletariat, and in the second place upon the scope, and the limits, of the possibility of using old bottles to hold new wine.² If we keep our present *caveat* in mind throughout the following inquiry, we may perhaps be able to reap some of the fruits of what is called 'the Higher Criticism' without losing our sense of spiritual proportion. With this proviso let us now set out the correspondences between the accounts of these saviours of different kinds, and then see whether we can explain them.³

Correspondences between the story of Jesus and the Stories of certain Hellenic Saviours with the 'Time-Machine'

Since the story of Jesus enters into all the correspondences in question, it will be best to tabulate the points in the order in which they occur in the Gospels, after noticing several correspondences of a general nature which have no exact place in a chronological series.

¹ On this point see V. C (i) (a), pp. 236-41, above.

² Matt. ix. 17 = Mark ii. 22, quoted in IV. C (iii) (b) 1, vol. iv, p. 133, above.

³ The writer's purpose is, not to make a case for or against this or that explanation, but to put before his readers all the materials within the writer's knowledge that are relevant to a study of the problem. In the following survey he has therefore included many correspondences which, in his opinion, are certainly slight and almost certainly fortuitous, and has omitted only such as are demonstrably fortuitous (e.g. the example examined on pp. 418-19, below).

1. *There is a pair of heroes who are distinguished from one another by the double difference—of age and of éthos—between a gentle predecessor and a violent successor.*

Since Gentleness and Futurism are incompatible,¹ this correspondence is limited *a priori* to Jesus and the archaists. The double difference comes out most clearly in the contrast between Agis and Cleomenes, and it also appears in the relation between Tiberius and Gaius Gracchus. But in the Gracchan story Gaius does not play the role of the violent hero consistently. At the crisis—when the Government are trying to provoke him into resorting to force—he changes over from the violent to the gentle hero's part, while the part that he discards is taken on by Marcus Fulvius Flaccus, who in this last act of the tragedy plays Cleomenes to Gaius's Agis (see Plutarch: *Lives of the Gracchi*, chaps. 34–8).² At the corresponding crisis in the career of Jesus, Jesus himself reacts with the gentleness of Gaius, and Peter with the violence of Fulvius. But there are also traces in the Gospels (e.g. the description of Jesus's mission that is given in Matt. x. 34–9 = Luke xii. 49–53; the description of the nature of the contrast between the new and the old dispensation that is given in Matt. xi. 11–12 = Luke xvi. 16; the incident of the cleansing of the Temple (Matt. xxi. 12–13 = Mark xi. 15–17 = Luke xix. 45–6 = John ii. 13–17); and the hint, in Luke xxii. 35–8, of at least an impulse in Jesus's mind, on the eve of the Passion, to take to the sword) of a different distribution of roles in which Jesus plays the violent hero's part;³ and if, in the light of this, we ask ourselves who it is that plays Tiberius Gracchus to Jesus's Gaius, the answer will be: John the Baptist.⁴

2. *The hero is of royal lineage.*

Jesus is a son of David according to the Synoptic Gospels (e.g. Matt. ix. 27; xv. 22; xx. 30–1; Mark x. 47–8; Luke xviii. 38–9);⁵ Agis and Cleomenes are Heracleidae; Aristonicus is an Attalid. The Gracchi are not themselves of royal birth, though they are

¹ See V. C (i) (d) 1, vol. v, pp. 385–7, above.

² Plutarch's *Lives of the Gracchi* and *Lives of Agis and Cleomenes* are cited and quoted here from K. Ziegler's edition (Leipzig 1915, Teubner).

³ This vein of Violence also shows itself here and there in other parts of the New Testament: e.g. in James v. 1–6 (though a violent preamble is here followed by a gentle sequel) and, above all, in the Book of Revelation. See V. C (i) (c) 2, Annex III, vol. v, pp. 580–90, above.

⁴ The writer is indebted to Dr. Martin Braun for having pointed out to him that both Gaius Gracchus and Jesus appear in both the two roles, and that in both cases the violent role is played first, while the change over from Violence to Gentleness is made in the last act, in which the tragedy reaches its crisis. He also owes to the same scholar the equation Tiberius : Gaius = John the Baptist : Jesus.

⁵ On the other hand, John i. 43–51, and vii. 40–53, might be read as implicit rejections of a story that Jesus was of Davidic lineage.

aristocrats; but their mother moves in royal society (Plut., chap. 40) and has, in King Ptolemy, a royal wooer (Plut., chap. 1) who is a counterpart of Jesus's mother's royal husband;¹ and Tiberius is eventually assassinated by his enemies on the ground that he is asking for a crown (Plut., chap. 19).

3. *The hero's genealogy is recited.*

Jesus's genealogy in Matthew i. 1-17, and in Luke iii. 23-38;² Agis' genealogy in Plutarch, chap. 3.

4. *The hero's genealogy has a flaw in it.*

According to the 'conceptionist' (though not according to the 'adoptionist') version of Christianity, Jesus's claim to be a son of David is disputable, inasmuch as it is derived from a descendant of David who is the husband of Jesus's mother but who—in this version of the story—is not, himself, Jesus's father.³ There is a comparable doubt about Aristonicus's claim to be an Attalid (δοκῶν τοῦ γένους εἶναι τοῦ τῶν βασιλέων καὶ διανοούμενος εἰς ἑαυτὸν ποιῆσθαι τὴν ἀρχήν—Strabo: *Geographica*, Book XIV, chap. 38 = Kramer, p. 646); and, even if he is acknowledged to be King Eumenes' son, the legitimacy of his birth is contested ('Erat ex Eumene Aristonicus, non iusto matrimonio, sed ex paelice Ephesia, citharistae cuiusdam filia, genitus—qui post mortem Attali velut paternum regnum Asiam invasit.'—Justin, Book XXXVI, chap. 4, § 6).

5. *The hero's mother believes in him and encourages him.*

This is the attitude of Jesus's mother towards Jesus in the Gospel according to Saint John (e.g. in John ii. 3-5 and 12; xix. 25-7); and it is also the attitude of Cleomenes' mother towards Cleomenes (Plutarch: *Lives of Agis and Cleomenes*, chap. 27) and of the mother of the Gracchi towards both Tiberius (Plutarch: *Lives of the Gracchi*, chap. 8) and Gaius (chap. 34). Again, it is the eventual attitude of the mother of Agis towards her son (Plut., chap. 7).

N.B. On this point the Gospel according to Saint John is in

¹ This equation Joseph : Mary : Jesus = Ptolemy : Cornelia : the Gracchi holds good only for the 'conceptionist' Christianity according to which Jesus's claim to be a son of David is derived from a husband of the hero's mother who is not, himself, the hero's father. If we assume the, perhaps older, 'adoptionist' position, according to which Jesus is really Joseph's son, the analogy breaks down; for in the Roman story there is no possibility of a version in which the Gracchi turn out to have been really the sons of Ptolemy. Cornelia is not wooed by Ptolemy till after her children are born and the husband to whom she has borne them is dead; and then she does not accept Ptolemy, but rejects him! For the distinction between 'conceptionist' and 'adoptionist' Christianity see IV. C (iii) 2 (β), Annex III, vol. iv, and V. C (ii) (a), in the present volume, pp. 271-5, above.

² See *ibid.*, p. 273, footnote 4, above.

³ See the passage of Eduard Meyer that is quoted *ibid.*, pp. 268-9, and also the same chapter, p. 267, footnote 5, above.

apparently deliberate contradiction with the Synoptic Gospels. In all three of these it would appear to be implied that Jesus and his mother are out of sympathy with each other (Matt. xii. 46-50 = Mark iii. 31-5 = Luke viii. 19-21); and his mother is not mentioned among the women who are present at the Crucifixion (see Point 80, below). The two apparently contradictory accounts of the attitude of the hero's mother which are given in this apparently irreconcilable form in two different versions of the story of Jesus are reconciled in the story of Agis, in which the hero's mother starts as a sceptic but ends as a convert (Plut., chap. 7).

6. *The hero is recognized and accepted by a forerunner as the latter's successor and superior.*

Jesus by John the Baptist (Matt. iii. 11-17; Mark i. 7-11; Luke iii. 15-22; John i. 15-17 and 25-37, and iii. 22-36); Eunus by Cleon (Diodorus, Books XXXIV-XXXV, chap. 2, § 17); Salvius by Athenio (Diodorus, Book XXXVI, chap. 7, § 2).

7. *The hero inveighs against the powers that be, on the ground that they are usurpers who have driven out or slain without trial the legitimate authorities and have perverted the ancient law.*

Jesus's denunciations of the Scribes and Pharisees (e.g. Matt. xxiii, *passim*; Mark xii. 38-40; Luke xx. 45-7); Cleomenes' denunciation of the Ephors (Plut., chap. 31).

8. *The hero proclaims that the right of membership in the society that is the field of his mission is not a privilege of birth, but is a reward of merit.*¹

This is one of the principal *motifs* in the Gospels:² 'Many that are first shall be last, and the last shall be first' (Matt. xix. 30, and xx. 16 = Mark x. 31 = Luke xiii. 30); it is expressed in the miracle of the healing of the centurion's servant (Matt. viii. 5-13 = Luke vii. 1-10) and in the parables of the Wicked Husbandmen (Matt. xxi. 33-44 = Mark xii. 1-11 = Luke xx. 9-18), the Labourers in the Vineyard (Matt. xx. 1-16), the Father and his Two Sons (Matt. xxi. 28-32), the King's Son's Marriage (Matt. xxii. 1-14 = Luke xiv. 15-24), the Good Samaritan (Luke x. 25-37), Dives and Lazarus (Luke xvi. 19-31), the Pharisee and the Publican (Luke xviii. 9-14). Publicans and harlots who believe are

¹ This truth is, of course, one of the facts that account for the phenomenon of *Peripeteia* (see IV. C (iii) (c) 1, vol. iv, pp. 245-61, above).

² The clearest enunciation of it is: 'Think not to say within yourselves: "We have Abraham to our father"; for I say unto you that God is able of these stones to raise up children unto Abraham' (Matt. iii. 9). But this saying is attributed, not to Jesus himself, but to his forerunner John the Baptist. It is only in the Gospel according to Saint John (viii. 31-59) that it is put—in an elaborated version—into Jesus's mouth.

preferred to Scribes and Pharisees who do not repent (Matt. xxi. 31-2). Similarly, the enfranchisement of non-citizens who are worthy of the franchise is of the essence of the programme of the Spartan and Roman archaists: Agis and Cleomenes enfranchise not only select perioeci but also select aliens (Plut., chaps. 8-10 and 31-2).

9. *The hero denounces a state of affairs in which there are human beings who are so utterly destitute of any part or lot in the inheritance of the Earth that in this respect, at any rate, they are worse off than wild animals.*

Jesus makes this invidious comparison apropos of himself and his followers (Matt. viii. 19-20 = Luke ix. 57-8); Tiberius Gracchus makes it apropos of a *ci-devant* peasantry that has been turned into a landless proletariat (Plut., chap. 9);¹ Aristonicus makes it apropos of his followers implicitly in calling them 'Heliopolitae' (i.e. human beings who, if they can be held to possess civic rights in any commonwealth at all, are certainly not in enjoyment of these in any commonwealth that is to be found on the face of the Earth)² (Strabo: *Geographica*, Book XIV, chap. 38 = Kramer, p. 646).

10. *The hero calls on all who are within hearing to win the reward of merit for themselves by following him through an ordeal.*

Jesus calls to the Cross (Matt. x. 16-42, and xvi. 24-8 = Mark viii. 34-8 = Luke ix. 23-7, and xiv. 25-33); Cleomenes (Plut., chap. 58) and Aristonicus (Strabo: *Geographica*, Book XVI, chap. 38 = Kramer, p. 646) call to liberty. Cleomenes calls upon the people of Alexandria to take up arms and risk their lives under his leadership for the sake of winning their political liberty by overthrowing the autocratic government of the Ptolemies;³ Aristonicus calls upon the proletarian freemen and the slaves in Asia Minor to join his standard for the sake of winning their economic and social liberty by making 'Heliopolis', instead of Rome, into the heir of the Kingdom of the Attalids.

11. *The crowds that flock round the hero are so great that any one who is determined to approach him, or even to see or hear him, has to take extraordinary steps.*

In the picture given in the Gospels the multitude tread on one another as they surge round Jesus (Luke xii. 1); the four men

¹ This correspondence between a saying attributed to Tiberius Gracchus and a saying attributed to Jesus has been touched upon, by anticipation, in IV. C (iii) (c) 3 (β), vol. iv, pp. 508 and 510; in V. C (i) (c) 2, vol. v, pp. 70-1; and in V. C (i) (c) 1, Annex, vol. v, p. 574, above.

² For the implications of the term 'Heliopolitae' see V. C (iii) (c) 2, vol. v, pp. 69, 70, 82, footnote 4, and 180; V. C (i) (d) 1, vol. v, p. 384; V. C (i) (d) 6 (δ), Annex, vol. v, p. 692, footnote 2; and V. C (i) (d) 11, Annex I, in the present volume, p. 351, above.

³ See V. C (ii) (a), p. 217, above.

bearing the man sick of the palsy have to take the tiles off the roof of the house where Jesus is and then let the bed down through the hole, because it is impossible to get in by the door (Mark ii. 1-4); Zacchaeus has to climb a tree if he is to gain even a sight of Jesus (Luke xix. 1-6). When Gaius Gracchus is standing for election to the Tribune of the Plebs, the crowd that flocks to Rome to vote is so great that many fail to find lodgings, and on polling day they have to climb on to the roofs because the campus will not hold them all (Plut., chap. 24).

12. *The hero's programme obtains an extraordinary publicity.*

'That which ye have spoken in the ear in closets shall be proclaimed upon the house-tops' (Luke xii. 3).¹ The acclamations with which Gaius Gracchus was hailed on the campus 'were echoed from the roofs and the tiles' (Plut., chap. 24).

13. *In his domestic life the hero avoids ostentation by deliberately taking a middle course between asceticism and luxuriousness.*

Jesus's attitude towards the Sabbath (Matt. xii. 1-8 = Mark ii. 23-8 = Luke vi. 1-5); Cleomenes' attitude towards the 'Lycurgean' *agôgê* (Plut., chap. 34).²

14. *By his refusal to go to extremes of asceticism—which he combines with a readiness to keep company with people of all sorts and conditions—the hero causes scandal.*

Jesus's avoidance of an extreme asceticism scandalizes the disciples of John the Baptist (Matt. ix. 14-15 = Mark ii. 18-20 = Luke v. 33-5, and vii. 31-5); his keeping company with publicans and sinners scandalizes the Pharisees (Matt. ix. 10-13 = Mark ii. 14-17 = Luke v. 27-32; vii. 36-50; and xv. 1-2). Tiberius Gracchus was censured by Quintus Metellus for allowing himself to be lighted home at night by 'the most offensive and most poverty-stricken people in Rome'—in contrast to the behaviour of Tiberius's father, who had made his countrymen live in such awe of him that during his censorship, whenever he went home after dining out, the householders used to put out their lights for fear that he might think them immoderately addicted to parties and to drink (Plut., chap. 14).

N.B. Cleomenes, too, made himself accessible; but in his case this affability, so far from causing scandal, was decidedly popular (Plut., chap. 34).

¹ Cf. Luke iv. 14-15, quoted in this connexion on p. 471, below.

² This passage of Plutarch is evidently derived from Phylarchus *apud* Athenaeum: *Deipnosophistae*, Book IV, pp. 141 F-142 F (see the present Annex, p. 436, below).

15. *The hero makes a sensational claim to kingship, which he supports by the further claim that he has been commissioned by God (by a god or by certain gods or by the Gods).*

Jesus claims to be the Messiah: i.e. the saviour-king, anointed (i.e. commissioned) by God, whose advent is expected by Jewry (Matt. xvi. 13-20 = Mark viii. 27-30 = Luke ix. 18-21); correspondingly, three leaders of slave-insurrections in Sicily claim, on divine authority, that they are destined to win a victory which will be rewarded with a royal crown. Eunus declares, before he rises in insurrection, that the Dea Syra has appeared to him and has told him that he is to become a king (Diodorus, Books XXXIV-XXXV, chap. 2, §§ 5-7).¹ Salvius, who is elected king by the insurgents in the second Sicilian slave-insurrection, is an expert in divination by interpreting the meaning of the entrails of sacrificial victims, and he is also a devotee of 'the feminine gods' (Diodorus, Book XXXVI, chap. 4, § 4); Athenio is an expert in astromancy, and he maintains that the Gods have signified to him through the stars that he is destined to become king of the whole of Sicily (Diodorus, Book XXXVI, chap. 5, §§ 1 and 3).

N.B. According to the traditional Jewish conception of the Messiah's mission, the Messiah was to do for Jewry exactly what the Sicilian slave-kings did momentarily succeed in doing for their insurgent followers. By an act of human physical force which was to acquire an irresistible impetus from the divine auspices under which it was being put into action, the Messiah was to achieve, on the mundane plane of life, a reversal of political roles. The subject people of to-day was to be the imperial people of to-morrow; the Messiah was to transfer the sceptre to Jerusalem from Susa or Antioch or Rome, and, as a result of his victory, the Jews were to step into the shoes of the Persians or the Macedonians or the Romans.² In the Gospels, however, the accounts of Jesus's claim to be the Messiah are associated with a departure, in two important respects, from the traditional Jewish conception of the Messiah's mission and nature; and, on both counts, this departure diminishes the closeness of the correspondence between the claims to kingship that are made respectively by Jesus and by the Sicilian slave-leaders. In the first place Jesus perplexes his disciples' minds and devastates their hopes by telling them at once that his Messiahship spells, not military victory and political triumph, but being put to death (Matt. xvi. 21-3 = Mark viii. 31-3 = Luke

¹ See V. C (i) (d) 7, p. 34, footnote 5, and V. C (i) (d) 9 (γ), pp. 124-5, above.

² See IV. C (iii) (b) 12, vol. iv, pp. 224-5; V. C (i) (c) 2, vol. v, pp. 68-9; V. C (i) (d) 6 (δ), Annex, vol. v, pp. 657-9; and V. C (i) (d) 9 (γ), in the present volume, pp. 120-3, above.

ix. 22);¹ in the second place, according to Matthew (xvi. 16)²—though not according to Mark (viii. 29) or to Luke (ix. 20)—Peter hails Jesus as the Son of God as a corollary of his acknowledgement of Jesus's Messiahship—in contradiction with the traditional Jewish view, which expected the Messiah to be, not the divine Son of God, but a human son of David.³

N.B. In the Gospel according to Saint John the incident is transformed to a degree which makes its correspondence with the analogous Sicilian incidents barely recognizable. In this Gospel Peter's declaration—'We believe and are sure that thou art Christ, the Son of the living God' (John vi. 69)—is overshadowed by a preamble (John vi. 22–68) in which Jesus, instead of evoking an acknowledgement of his Messiahship by asking a question, propounds in his own words a claim to have been sent down from Heaven by God to perform, for all men who accept his claim, a service that is analogous to, though infinitely more valuable and more wonderful than, the service that is performed for Mankind by the Spirit of the Vegetation.⁴ The Vegetation Spirit provides material bread for a single year; Jesus is spiritual bread that confers eternal life.

16. *A tableau of a rider riding through the streets of a capital city on a mount which has been commandeered for him by his companions on the spur of the moment without opposition from the owner.*

Jesus riding into Jerusalem on an ass, accompanied by his followers on foot (Matt. xxi. 1–7 = Mark xi. 1–7 = Luke xix. 29–35 = John xii. 14–15); Hippitas, a lame companion of Cleomenes, riding through the streets of Alexandria on a horse—that has been commandeered from a passer-by—in company with Cleomenes himself and with the rest of the king's companions, who are all on foot (Plut., chap. 58).

17. *The hero in person forcibly clears a public place from trespassers who have unlawfully encroached upon it for their private profit.*

Jesus overthrows the tables of the money-changers and the seats of the poulterers (who are selling doves for sacrifice) in the precincts of the Temple at Jerusalem (Matt. xxi. 12–13 = Mark

¹ This new association of ideas has been touched upon in V. C (i) (d) 1, vol. v, pp. 392–3, above.

² Matt. xvi. 16 is echoed in John vi. 69, and xi. 27.

³ See V. C (i) (d) 11, p. 163, footnote 1, above. For the association between Jesus's claim to divinity and his premonition of his death see V. C (i) (c) 2, vol. v, p. 74; V. C (i) (d) 1, vol. v, pp. 392–3; and V. C (i) (d) 11, in the present volume, p. 165, above.

⁴ For the myth of the ἐνιαντὸς δαίμων see III. C (iii) (b), vol. iii, pp. 256–9, and V. C (ii) (a), in the present volume, pp. 276–7, above.

xi. 15-17 = Luke xix. 45-6 = John ii. 13-17); Gaius Gracchus pulls down the seats which his fellow magistrates, by an abuse of privilege, have erected round the Forum at Rome in order to let them, for money, to sightseers on the day of a show (Plut., chap. 33).

18. *The authorities want to compass the hero's ruin, but are at a loss how to proceed against him because of his popularity.*

Jesus at Jerusalem (Matt. xxi. 46, and xxvi. 3-5 = Mark xi. 18, and xiv. 1-2 = Luke xxii. 2); Cleomenes at Alexandria (Plut., chap. 54 = Polybius, Book V, chap. 35); Tiberius Gracchus at Rome (Plut., chap. 10).

19. *The authorities try to catch the hero out by asking him awkward questions, but his answers recoil upon the questioners.*

The Pharisees and Herodians ask Jesus whether it is lawful to pay tribute to Caesar; the Sadducees set him a trap over the doctrine of the Resurrection; and a doctor of the Law asks him which is the greatest of the Commandments (Matt. xxii. 15-40 = Mark xii. 13-34 = Luke xx. 20-40); but Jesus silences them all. Similarly, Agis silences Leonidas when he asks him whether Lycurgus had cancelled debts or enfranchised aliens, as Agis was proposing to do (Plut., chap. 10).

N.B. On the other hand Tiberius Gracchus is put out of countenance by a question from Titus Annius (Plut., chap. 14).

20. *At a meal the hero is offered a special luxury by an admirer (by admirers) from outside his most intimate circle.*

The alabaster box of precious ointment that is offered by a woman to Jesus in the house of Simon at Bethany (Matt. xxvi. 6-13 = Mark xiv. 3-9 = Luke vii. 37-50¹ = John xi. 2,² and xii. 1-8); the dinner and gifts that are sent in to Cleomenes, in the prison at Alexandria, by his friends outside (Plut., chap. 58).

21. *The authorities are at a loss how to proceed against the hero because he has a safe retreat.*

Jesus at Jerusalem spends only the daytime in the city and sleeps at night outside the walls at Bethany;³ Agis at Sparta takes sanctuary in the temple of Athena Chalcioecus (Plut., chap. 16);

¹ In this Gospel the incident is placed in a different context.

² In this verse the woman—who in the Synoptic Gospels is anonymous—is identified with Mary the sister of Lazarus.

³ This is recounted in all four Gospels, but in the Gospel according to Saint John the retreat at Bethany has a doublet in a retreat in Ephraim (John xi. 53-4).

Gaius Gracchus at Rome moves house from a fashionable quarter on the Palatine to a working-class quarter in the neighbourhood of the Forum (Plut., chap. 33).

22. *One of the hero's companions undertakes to betray him to the authorities by giving them an opportunity to arrest him at a moment when he is out of shelter.*

Judas undertakes to betray Jesus (Matt. xxvi. 14-16 = Mark xiv. 10-11 = Luke xxii. 3-6); Amphares undertakes to betray Agis (Plut., chap. 18).

23. *The traitor perpetrates his treachery for a trifling consideration.*

Judas for thirty pieces of silver (Matt. xxvi. 15); Amphares in the hope of being able to retain possession of some clothes and plate that he has recently borrowed from Agis' mother Agesistrata (Plut., chap. 18).

24. *The hero's Last Supper.*

Jesus's (Matt. xxvi. 17-29 = Mark xiv. 12-25 = Luke xxii. 7-38 = John xiii-xvii); Cleomenes' (Plut., chap. 58); Fulvius's (Plut., chap. 35); Cato Minor's (Plutarch: *Life of Cato Minor*, chap. 67).

N.B. The atmosphere at Fulvius's Last Supper is at the opposite extreme from the atmosphere at Cato's or Jesus's. In the stories of Jesus's and Cato's Passions the supper is eaten in a mood of sublime tension and with a sense of tragic foreboding, whereas Fulvius and his companions seek to drown care and banish any thought of the morrow by turning the meal into a drunken orgy. This scene of sordid debauchery serves as a foil to an agonizing vigil which, in the Roman story, is not subsequent to the supper but is contemporaneous with it and, by the same token, has a different protagonist. Fulvius and his companions carouse while Gaius Gracchus and his companions watch and pray (for Fulvius's role as the violent foil to Gaius Gracchus when Gaius himself is playing the gentle instead of the violent hero's part, see p. 378, above). Yet, although Fulvius's Last Supper may seem to present as great a contrast to Jesus's and Cato's Last Suppers as it does present, and is intended to present, to Gaius Gracchus's vigil, there is nevertheless a link between these two antithetical presentations of the Last Supper, and this is to be found in the account of Cleomenes' Last Supper. In this scene (Plut., chap. 58) the hero and his companions at table are really in the mood of Jesus and his disciples and of Cato and his circle; but they pretend to be in the mood of Fulvius and his companions in order to deceive the warders. In the scene in Cleomenes' prison, as in the scene in

Fulvius's house, there is a tableau of one (or some) of the carousers lying in a drunken sleep after the carouse is over (see Point 38, below); but, whereas in the Roman scene the drunken sleeper is the hero (in this case Fulvius) himself, in the Alexandrian scene it is the prison warders who are lying drunk and asleep; Cleomenes has deliberately reduced them to this condition in order to be able to effect his escape; and it has been in order to lure the warders into getting drunk that Cleomenes and his companions have pretended to be carousing, when really they have been steeling themselves for facing the ordeal of a forlorn hope.

25. *There are thirteen at table.*

At Jesus's last supper (Matt. xxvi. 20 = Mark xiv. 17 = Luke xxii. 14); at Cleomenes' Last Supper (Plut., chap. 58).

26. *The traitor is denounced (is suspected) at the supper.*

The denunciation of Judas (Matt. xxvi. 21-5 = Mark xiv. 18-21 = Luke xxii. 21-3 = John xiii. 18-22); the suspicion falling on Cleomenes' slave (Plut., chap. 58).

27. *The traitor goes (has gone) out.*

Judas (John xiii. 27-30); Cleomenes' slave (Plut., chap. 58).

28. *A tableau of a favourite companion lying on the hero's breast.*

John on Jesus's breast (John xiii. 23-6); Panteus on Cleomenes' breast (Plut., chap. 58); Philocrates on Gaius Gracchus's breast (Plut., chap. 38).

29. *A religious rite at which the hero gives the participants to eat of the flesh and drink of the blood of a human sacrificial victim.¹*

Jesus at his Last Supper institutes the Communion-Rite of the Christian Church by giving his companions bread to eat and wine to drink as symbols of a metaphorical eating of his own flesh and drinking of his own blood (Matt. xxvi. 26-9 = Mark xiv. 22-5 = Luke xxii. 15-20); Catiline, at the secret meeting which he has convened in order to broach his conspiracy, sacrificially kills a slave and gives this human victim's flesh to eat (Plutarch: *Life of Cicero*, chap. 10; Dio Cassius: *History of Rome*, Book XXXVII, chap. 30) and his blood—mixed with wine—to drink (Sallust: *De Coniuratione Catilinae*, chap. 22) to those present before taking them into his confidence.

N.B. Cleomenes and his companions in prison at Alexandria

¹ The writer owes this point to Dr. Martin Braun.

revolt at the idea of waiting while they are fattened for slaughter 'like sacrificial victims' (Plut., chap. 57).¹

30. *The hero declares to his companions at table his conviction that the death which now stares him in the face will prove a triumph.*

Jesus (John xiii. 31-2, and xvii); Cato Minor (Plutarch: *Life of Cato Minor*, chap. 67).

31. *The hero assures those at table who are his friends that in the hour of his triumph he will reward them for their friendship towards him.*

Jesus at his Last Supper (Luke xxii. 28-30; John xiv-xvi); Eunus at the supper-parties of his master Antigenes (Diodorus, Books XXXIV-XXXV, chap. 2, § 8).

32. *When the Last Supper is over, the hero calls for swords (for his sword).*

Jesus (Luke xxii. 35-8); Cato Minor (Plutarch: *Life of Cato Minor*, chap. 68). Fulvius and his companions equip themselves with arms that are hanging in Fulvius's house as spoils of war (Plut., chap. 36).

N.B. Tiberius Gracchus takes to wearing a dagger under his clothes when he finds, in the middle of his conflict with Octavius, that the Senatorial dominant minority are plotting to kill him (Plut., chap. 10); Gaius Gracchus orders all his companions to carry swords under their togas (Diodorus, Books XXXIV-XXXV, chap. 28^a).

33. *A tableau of the hero and his party going out into the open.*

Jesus and his companions going out on to the Mount of Olives (Matt. xxvi. 30 = Mark xiv. 26 = Luke xxii. 39 = John xviii. 1); Fulvius and his companions going out on to the Aventine (Plut., chap. 36); Cleomenes and his companions going out into the streets of Alexandria (Plut., chap. 58).

N.B. There is, however, a sharp discrepancy in respect of the time of day: Jesus and his companions go out at night (Matt. xxvi. 31 = Mark xiv. 27), Fulvius and his companions at dawn (Plut., chap. 36), Cleomenes and his companions at midday (Plut., chap. 58).

¹ Dr. Martin Braun brings into comparison the cock-and-bull story of the alleged Jewish practice of ritual murder, as recounted by Apion and quoted from this source by Josephus: *Contra Apionem*, Book II, §§ 91-6: 'The practice was repeated annually at a fixed season. They would kidnap a Greek foreigner, fatten him up for a year, and then convey him to a wood, where they slew him, sacrificed his body with their customary ritual, partook of his flesh, and, while immolating the Greek, swore an oath of hostility to the Greeks' (§ 95).

34. *An enthusiastic companion of the hero boasts that he will never desert his leader; but the hero disapproves of the boast and prophesies that it will not be lived up to when it comes to the point.*

Peter and Jesus (Matt. xxvi. 31-5 = Mark xiv. 27-31 = Luke xxii. 31-4 = John xiii. 36-8);¹ Statilius and Cato Minor (Plutarch: *Life of Cato Minor*, chaps. 55-6).

N.B. In the corresponding scene between Therycion and Cleomenes (Plut., chap. 52) Cleomenes disapproves of Therycion's proposal that the party of fugitives should commit suicide instead of leaving Laconian ground as refugees and seeking asylum in the dominions of Ptolemy; but in the sequel the parts are reversed. Therycion lives up to his proposal by duly committing suicide on the beach of Aegialia; Cleomenes does not follow his example on the spot, but does follow it at Alexandria after his disillusionment with his experience of exile (see further Points 54 and 84, below).

35. *The hero singles out three companions (one companion) for a task that demands special endurance.*

Jesus singles out Peter, James, and John to keep watch during his agony (Matt. xxvi. 37 = Mark xiv. 33); Cleomenes—having decided that he and his companions shall die by their own hands—singles out Panteus to wait till the last and make sure that all the rest are dead before putting an end to himself (Plut., chap. 58).

36. *A tableau of the hero in spiritual agony during the night before his dying day.*²

Jesus's agony of prayer to his Father at Gethsemane (Matt. xxvi. 36-46 = Mark xiv. 32-42 = Luke xxii. 40-6); Gaius Gracchus's agony of silent contemplation of his father's statue (Plut., chap. 35; cf. Diodorus, Books XXXIV-XXXV, chap. 28a).³

N.B. In the picture of Jesus's agony in the Gospel according to Saint Luke the visual correspondence with the picture of Gaius Gracchus's agony is accentuated by the introduction of a feature that does not appear in the other two Synoptic Gospels: according to Saint Luke, Jesus's prayer is answered by the vision of an angel. It may be noted, as a curious though perhaps trivial detail, that, in Mantegna's picture of the agony of Jesus, which follows Luke on this point, the figures of the angels are distinctly statuesque.

¹ In the Gospels according to Saint Matthew and Saint Mark this incident is placed after the exit, on the road to the Mount of Olives; in the Gospels according to Saint Luke and Saint John it is placed before the exit, as a sequel to the denunciation of Judas.

² The correspondence between Jesus's and Gaius Gracchus's foreboding of his fate is noticed by Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), p. 166.

³ In Diodorus's narrative Gaius's agony is placed immediately before the murder of Antullus, and not in the night after it.

37. *Tableaux of a bodyguard (α) keeping watch (β) asleep.*

Jesus takes three of the eleven—Peter, James, and John—and asks them to keep watch while he prays, but three times over they fall asleep (Matt. xxvi. 37-46 = Mark xiv. 33-42 = Luke xxii. 45-6);¹ a number of Gaius Gracchus's supporters, seeing him in agony at his father's statue, accompany him home and spend the night at the door, where they organize themselves into watches which are on and off duty by turns (Plut., chap. 35). Similarly, on the night before the death of Tiberius Gracchus, a number of his supporters camp round Tiberius's house and keep watch (Plut., chap. 16).

38. *A tableau of watchers caught asleep at the moment of crisis.*

In Jesus's Passion Peter, James, and John are caught asleep at the moment when the officers of the Sanhedrin, guided by Judas, take them by surprise (Matt. xxvi. 45-6 = Mark xiv. 41-2); in Cleomenes' Passion the prison warders are caught asleep at the moment when Cleomenes and his companions break out (Plut., chap. 58); in Gaius Gracchus's Passion Fulvius is caught asleep when the return of daylight exposes the Gracchans to the danger of being attacked at any moment by the Government forces (Plut., chap. 36).

39. *The traitor fulfils his undertaking to give the authorities an opportunity of arresting the hero when he is out of shelter.*

Judas guides the officers of the Sanhedrin to the spot where Jesus is praying in Gethsemane (Matt. xxvi. 47 = Mark xiv. 43 = Luke xxii. 47 = John xviii. 2-3); Amphares (aided by Damochares and Arcesilaus) kidnaps Agis on the road back from a bath-house, outside the precincts of Athena Chalcioecus, which Agis has been visiting according to his practice, and drags him off, with the help of accomplices, to a prison which Leonidas then surrounds with a cordon of foreign professional soldiers (Plut., chap. 19).

40. *The traitor tries to put the hero off his guard by a heartlessly deceitful show of affection.*

Judas betrays Jesus with a kiss (Matt. xxvi. 48-9 = Mark xiv. 44-5 = Luke xxii. 47-8); Amphares and his two confederates waylay Agis [on his way back from the bath-house], give him a cordial greeting, and then go along with him—keeping up all the

¹ The Gospel according to Saint Luke does not record that three out of the eleven were picked out to keep watch, and does not represent the disciples as having fallen asleep more than once.

time a patter of talk and chaff, as one would with a young fellow with whom one was on terms of familiarity (Plut., chap. 19).

41. *A tableau of a crowd in a hubbub, with lights.*

In the Passion of Jesus at the moment of the arrest (John xviii. 3); in the Passion of Agis between the passing of the death-sentence and its execution (Plut., chap. 19).

N.B. Whereas in the story of Jesus the crowd is hostile to the hero and intends to arrest him, in the story of Agis it is friendly to the hero and intends to rescue him.

42. *The men who take violent action against the hero and his companions are armed with staves.*

The officers of the Sanhedrin who arrest Jesus (Matt. xxvi. 47 = Mark xiv. 43); the Senators who assault Tiberius Gracchus (Plut., chap. 19).

N.B. In the Gospels according to Saint Matthew and Saint Mark the phrase is *μετὰ μαχαίρων καὶ ξύλων* (which is telescoped into *μετὰ . . . ὀπλων* in John xviii. 3); in Plutarch it runs *περὶ αὐτοῦς ῥόπαλα καὶ σκυτάλας ἐκόμιζον*. In the story of the killing of Tiberius Gracchus the point is made that, while there were more than 300 fatal casualties, not one of the victims was killed with cold steel. The casualties were all inflicted with sticks and stones. Gracchus himself was killed by being hit over the head with the leg of a broken chair.

43. *The officers of the law are overcome by a momentary psychological inhibition.*

The officers of the Sanhedrin flinch from arresting Jesus (John xviii. 6); the officers of the Ephors flinch from carrying out the order to put Agis to death—and so do Leonidas' foreign professional soldiers (Plut., chap. 19).

44. *The hero's party sheds blood.*

One of Jesus's disciples draws his sword and strikes off the ear of a servant of the High Priest (Matt. xxvi. 51 = Mark xiv. 47 = Luke xxii. 50 = John xviii. 10);¹ Cleomenes and his companions draw their swords, as they spring from table and rush into the street, and cut down King Ptolemy's minister Ptolemy son of Chrysermus and also another Ptolemy who is Chief of Police in Alexandria (Plut., chap. 58); Tiberius Gracchus's partisans blind

¹ In the three Synoptic Gospels both the swordsman and his victim are anonymous. It is only in the Gospel according to Saint John that the swordsman is identified with Peter, and the victim's name is given as Malchus.

a slave of Octavius (Plut., chap. 12); Fulvius's companions stab to death with stilettos an officer of the Consuls called Quintus Antullus (Plut., chap. 34).

45. *The hero commands his followers to cease fighting.*

Jesus (Matt. xxvi. 52 = Luke xxii. 51 = John xviii. 11); Cleomenes (Plut., chap. 58); Tiberius Gracchus (Plut., chap. 12); Gaius Gracchus (Plut., *Gracchi*, chap. 34, and *Comparison of Agis and Cleomenes with the Gracchi*, chap. 5).

46. *The hero himself refrains on principle from resorting to force.*

Jesus (Matt. xxvi. 52-4, and John xviii. 36); Agis, of whom his mother Agesistrata testifies, as she embraces his corpse: 'My child, it is your immense moderation and gentleness and humanity that have been your ruin—and ours' (Plut., chap. 20);¹ Tiberius Gracchus (Plut., *Gracchi*, chap. 19, and *Comparison*, chap. 4); Gaius Gracchus (Plut., *Gracchi*, chaps. 33, 34, and 36-8, and *Comparison*, chaps. 4 and 5).²

N.B. This gentleness of Jesus, Agis, and both the Gracchi is in contradiction with the violence that is exhibited by Cleomenes, by all the futurist heroes, and also by Jesus and Gaius Gracchus themselves in certain passages of their careers, before they arrive at the crisis (see Point 1, above). Plutarch (*Agis and Cleomenes*, chap. 22, and *Comparison*, chaps. 4-5) regretfully stigmatizes Cleomenes—in contrast to Agis and the two Gracchi—as a man of blood.

47. *The hero's companions take to flight and leave him to his fate.*

Jesus's (Matt. xxvi. 56 = Mark xiv. 50); Tiberius Gracchus's (Plut., chap. 19).

48. *A tableau of a young man in flight leaving a wrap, which is a badge of rank, in the clutches of (one of) his pursuers.*

In the flight of Jesus's companions an anonymous young man leaves in the hands of the officers of the Sanhedrin a wrap of fine linen (*συνδών*) and continues his flight naked (Mark xiv. 51-2); in the flight of Tiberius Gracchus's partisans Tiberius himself leaves

¹ Compare the same author: *Comparison of Agis and Cleomenes with the Gracchi* chap. 3: 'Rather than cause the death of a single one of his countrymen, Agis met his own death almost voluntarily.'

² According to Diodorus, Books XXXIV-XXXV, chap. 28^a, Gaius himself knocked Antullus down and told his followers to kill him; but this story is rejected by Plutarch (*Comparison*, chap. 5). According to Plutarch (*Gracchi*, chap. 34), the crime was committed by Fulvius's men, and Gracchus, so far from wanting it, was deeply upset by it and indignantly upbraided the perpetrators. Plutarch's version of the incident is supported by Apian (*Studies in Roman History: The Civil Wars*, Book I, chap. 25).

his toga in the hands of one of the assailants and continues his flight in his shirt (Plut., chap. 19).

49. *The hero is arrested and is then immediately brought to an impromptu trial during the night.*

Jesus is brought to trial in the High Priest's palace before the Chief Priests and the Sanhedrin (Matt. xxvi. 57 = Mark xiv. 53 = Luke xxii. 54 = John xviii. 13 and 24);¹ Agis is brought to trial in the prison before the Ephors and some members of the Gerusia (Plut., chap. 19).

50. *A true saying of the hero's is dishonestly twisted by his enemies into a misrepresentation which is extremely damaging to him.*

Jesus has said that the Temple at Jerusalem is going to be destroyed (Matt. xxiv. 1-2 = Mark xiii. 1-2 = Luke xxi. 5-6);² on an earlier occasion he has also said that he himself is greater than the Temple (Matt. xii. 6); at his trial the false witnesses represent him as having said that he is able to destroy (or will destroy) the Temple and is able to build (or will build) another in three days (without having to use the ordinary physical means of construction) (Matt. xxvi. 60-1 = Mark xiv. 57-8).³

Similarly Tiberius Gracchus, in a public apologia for his high-handed and unconstitutional act of deposing his colleague Octavius, argues that a Tribune of the Plebs is sacrosanct only in virtue of having been consecrated to the service of the Plebs, and that he therefore automatically deposes himself from office if he misuses his power in order to do the opposite of what is his proper function. 'A Tribune of the Plebs who demolished the Capitol and set fire to the naval dockyard would have to be left in office; for if he committed these crimes he would still be a Tribune of the Plebs, however bad a one; but, if he set out to bring the Plebs to ruin, then he would no longer be a Tribune. . . . Again, nothing can be so sacrosanct as votive offerings (*ἀναθήματα*)⁴ to the Gods; yet nobody has ever thought of estopping the Plebs from using and moving and transferring such offerings as it thinks fit. On this

¹ In the Gospel according to Saint John the impromptu trial is resolved into two hearings in different places and before different judges—the first before Annas and the second before Caiaphas.

² In Luke xix. 44 the same phrase is applied to the whole city of Jerusalem.

³ This alleged saying of Jesus that is placed in the mouths of the false witnesses at the trial in the Gospels according to Saint Matthew and Saint Mark is placed in Jesus's own mouth, in quite a different context, in the Gospel according to Saint John (ii. 18-22), where it is accepted as being authentic and is then interpreted as being metaphorical (i.e. as an enigmatic prophecy of the Resurrection).

⁴ Cf. Luke xxi. 5-6, *cit. supra*: 'And as some spake of the Temple, how it was adorned with goodly stones and gifts (*ἀναθήμασι*), he said: "As for these things which ye behold, the days will come in the which there shall not be left one stone upon another that shall not be thrown down."'

showing, the Plebs is entitled to transfer the Tribune of the Plebs—which is a votive offering to the Plebs itself—from one incumbent to another' (Plut., chap. 15). On the strength of this speech of Tiberius's, his companion Blossius, in a judicial examination before the Consuls to which he is subjected after Tiberius's death, is asked by Nasica: 'What would you have done if Tiberius had ordered you to set fire to the Capitol?'

Again, when Cleomenes' enemy Nicagoras of Messene wants to compromise Cleomenes in the eyes of King Ptolemy Philopator, he first reports to Ptolemy's minister Sosibius a satirical remark about the King which Cleomenes has really made to Nicagoras. Since, however, the genuine saying of Cleomenes is just personally offensive without being also politically treasonable, Sosibius persuades Nicagoras to write him a letter alleging—what is a sheer fabrication—that Cleomenes has made up his mind to seize Cyrene if Nicagoras will find him the necessary ships and men (Plut., chap. 56).

51. *The hero on trial is reproved by the authorities for contempt of court.*

Jesus is reproved by the High Priest for making no answer to the witnesses' charges against him (Matt. xxvi. 62-3 = Mark xiv. 60-1). Alternatively, he is struck by one of the officers of the court for replying to a question from Annas—not Caiaphas—about his disciples and his doctrine with the answer that all this is a matter of public knowledge (John xviii. 19-23).¹ Similarly Agis at his trial is reproved by Amphares for having burst out laughing at his judges' hypocrisy (Plut., chap. 19).

52. *When a question is put to the hero which offers him a possible line of retreat, the hero does not take the opening, but gives, instead, an answer that is calculated to exasperate the Court more than anything else that he could conceivably have said.*

When the High Priest asks Jesus whether he is (α) the Messiah (β) the Son of God, Jesus, instead of recanting, answers both questions in the affirmative in the most emphatic terms possible (Matt. xxvi. 63-4 = Mark xiv. 61-2 = Luke xxii. 66-70).² Simi-

¹ The saying that is presented in the Gospel according to Saint John as Jesus's answer to Annas is presented in the Synoptic Gospels (Matt. xxvi. 55 = Mark xiv. 48-9 = Luke xxiii. 52-3) as being said at Gethsemane to the officers of the Sanhedrin between the moment when, at Jesus's command, the disciples cease fighting, and the moment when the officers place Jesus under arrest.

² In the Gospels according to Saint Matthew and Saint Mark the two questions are telescoped into one and the two claims are treated as though they were synonymous. On the other hand in the Gospel according to Saint Luke the Court first asks Jesus whether he is the Messiah, and it is the terms of his answer to this question—an answer

larly, when one of the Ephors (not Amphares) asks Agis (α) whether he has been acting under pressure from Lysander and Agesilaus and (β) whether he repents of what he has done, Agis replies to the first question that he has been acting as an entirely free agent and that his source of inspiration has been Lycurgus, while to the second question he replies that he does not repent of what he has done because his policy has been the best that could be conceived (Plut., chap. 19).

53. *On the strength of the hero's answers to the two test questions the Court immediately passes sentence of death upon him.*

Upon Jesus (Matt. xxvi. 65-6 = Mark xiv. 63-4 = Luke xxii. 71);¹ upon Agis (Plut., chap. 19).

54. *The hero's prophecy regarding his enthusiastic companion's boast [see Point 34, above] is fulfilled by the failure of the boaster to live up to it when it comes to the point.*

Peter does not live up to his resolution never to desert Jesus (Matt. xxvi. 69-75 = Mark xiv. 66-72 = Luke xxii. 54-62 = John xviii. 15-18 and 25-7); Statilius does not live up to his resolution of following suit to Cato Minor in committing suicide (Plutarch: *Life of Cato Minor*, chap. 73). (See further Point 84, below.)

55. *The authorities seek to enlist the aid of a foreign potentate for the accomplishment of their purpose of bringing the hero to destruction.*

The Jews bring their fellow countryman Jesus before the Roman Procurator, Pontius Pilate, because the power of life and death is in his hands and not in theirs, so that the sentence of death which they have passed on Jesus cannot be executed unless Pilate endorses it (Matt. xxvii. 1-2 = Mark xv. 1 = Luke xxiii. 1 = John xviii. 28 and 31). The Achaeans make a military alliance against their fellow Peloponnesian, Cleomenes, with the Macedonian King Antigonus Dôson, because they realize that, without the support of Macedon, they will be unable to crush a Sparta which enjoys the support of Egypt.

in which Jesus claims to be the Son of Man (see V. C (i) (d) 11, vol. v, p. 163, footnote 1, above)—that then move the Court to ask, in horror and indignation, 'Art thou then the Son of God?' Of these two versions of the incident the Lucan account alone is in consonance with Jewish beliefs; for according to Jewish doctrine the Messiah is to be, not a son of God, but a son of David (see V. C (i) (d) 11, vol. v, p. 163, footnote 1, and V. C (ii) (a), in the present volume, p. 268, footnote 5, above); and the suggestion that God has any son at all—and *a fortiori* a son incarnate in a man—is the greatest conceivable blasphemy against God's unity and majesty. It is attributing to the One True God a *bessesse* that is attributed to the false gods of Olympus by the Hellenes.

¹ Cf. John xix. 7.

56. *The animus of the hero's enemies in his own household is so intense that they are willing to purchase the foreign potentate's aid at the price of sacrificing one of their own most cherished principles.*

In order to force Pilate to put Jesus to death, the Jews accuse Jesus of having committed high treason against the Roman Imperial Government by declaring himself to be a king—though this indictment involves the Jews themselves in an admission of the legality of the Roman jurisdiction (Luke xxiii. 2, and John xix. 12-15). In order to induce Antigonus to throw his weight into the scales against Cleomenes, the Achaeans submit again to the hegemony of Macedon—which they have made it their mission to throw off—and re-admit a Macedonian garrison into the Acrocorinthus, though this fortress is the strategic key to the military command of the Peloponnese, and the greatest achievement in the past career of the Achaeans' leader Aratus has been his feat of wresting the Acrocorinthus out of Macedonian clutches some twenty years back.

57. *The hero maintains his claim to kingship before the face of a foreign potentate in whose power he finds himself.*

Jesus before Pilate (Matt. xxvii. 11-14 = Mark xv. 2-5 = Luke xxiii. 3 = John xviii. 33-8);¹ Cleomenes before Ptolemy Euergetes (Plut., chap. 53); the Syrian slave Eunus before his Sicilian master Antigones (Diodorus, Books XXXIV-XXXV, chap. 2, § 8).

58. *The hero will not accept the good offices of the representative of a potentate who is all-powerful.*

Jesus will not accept Pilate's invitation to reply to the charges against him which the Jewish authorities have repeated in Pilate's presence (Matt. xxvii. 12-14 = Mark xv. 3-5); Cato Minor will not accept Lucius Caesar's offer to intercede on his behalf with Lucius's victorious kinsman Gaius (Plutarch: *Life of Cato Minor*, chap. 66).

59. *The impression which the hero makes on a foreign potentate is a favourable one.*

Pilate is favourably impressed by Jesus (Matt. xxvii. 23 = Mark xv. 14 = Luke xxiii. 22; Luke xxiii. 4 and 14-15 = John xviii. 38,

¹ The maintenance of the claim to kingship is implied in all four Gospels alike, but they differ from one another in their account of the way in which Jesus conveys his meaning. According to Saint Matthew and Saint Mark he conveys it by a bare assent to Pilate's proposition, followed by silence in face of the charges that are repeated against him, in Pilate's presence, by the Jewish authorities; according to Saint Luke by a bare assent to Pilate's proposition; according to Saint John by an exposition of the 'Other-worldly' nature of his kingdom.

and xix. 4 and 6); Ptolemy Euergetes is favourably impressed by Cleomenes (Plut., chap. 53).¹

60. *The hero's fate is affected by an official custom relating to the release of a prisoner.*

At Jerusalem there is a custom that, at the Feast of the Passover, the Roman procurator releases one prisoner, at the people's choice; but, when Pilate offers them the choice between Jesus and Barabbas, they choose Barabbas (Matt. xxvii. 15-26 = Mark xv. 6-15 = Luke xxiii. 16-25 = John xviii. 39-40). At Alexandria there is a custom that a dinner and gifts are sent on the King's behalf to a prisoner who is going to be released; and Cleomenes takes advantage of this custom in order to make his warders believe that his own release has been decreed (Plut., chap. 58).

61. *A potentate who has the hero's fate in his hands allows himself, out of cowardice, in consideration of an embarrassing incidental consequence of the hero's claim to kingship, to be persuaded, against his own conscience, into condemning the hero to an undeserved penalty.*

Pilate condemns Jesus to be crucified for fear that, if he acquits him, his claim to kingship—even though Pilate himself may be aware that the kingship claimed by Jesus is not of the literal mundane kind—may be represented by the Jews to the Emperor as a treasonable pretension which Pilate has culpably neglected to repress (John xviii. 28-40, and xix. 1-16; a hint of the consideration which has prevailed with Pilate is also given in Luke xxiii. 23, when this is read together with Luke xxiii. 2). Ptolemy Philopator condemns Cleomenes to be interned² because he fears that, if he lets him go, he may become a public danger to the Ptolemaic state owing to his popularity with the Peloponnesian mercenaries in the Ptolemaic service and his first-hand acquaintance with the weakness of the Ptolemaic régime (Plut., chaps. 54-6).

¹ Euergetes gave his admiration for Cleomenes the g *A History of Egypt under the erecting a statue of Cleomenes at Olympia* (see Bevan, E.: *Ptolemaic Dynasty* (London 1927, Methuen), p. 221).

² If internment be thought too mild a penalty to be compared with crucifixion, it may be recalled that, whereas Pilate had no obligation towards Jesus except that (on which he, like Philopator, defaulted) of doing justice, Cleomenes was Philopator's guest; that Cleomenes was, moreover, a political refugee towards whom the Ptolemaic Government had obligations of honour; that no formal charges had been brought against him; that, while the penalty of internment may have been mild in itself, its infliction did in fact bring about Cleomenes' death; and, last but not least, that Philopator's ministers had never intended to allow Cleomenes to come out of prison alive (see Plut., chap. 57), though they had not calculated upon getting rid of Cleomenes by way of the heroic and spectacular death which their prisoner succeeded in winning for himself in despite of their cat-and-mouse tactics.

62. *The potentate is subject to a feminine influence which inclines him to be superstitious.*

Pilate under the influence of his wife (Matt. xxvii. 19); Ptolemy Philopator under the influence of his mistress Agathoclea and her mother Oenanthe (Plut., chaps. 54 and 60).

63. *After having, out of cowardice, sent the hero to an undeserved death, the potentate attempts to salve the pricks of conscience by performing a ritual of purification.*

Pilate (Matt. xxvii. 24-5); Ptolemy Philopator (Plut., chap. 60).

64. *A tableau of a Roman ostentatiously washing his hands in public (immediately after he has been instrumental in bringing upon a fellow human being a death by protracted torture).¹*

Pilate washing his hands, in front of his own tribunal, after having sentenced Jesus to crucifixion (Matt. xxvii. 24); Catiline washing his hands, in front of Sulla's tribunal, in the holy water basin at the door of a temple of Apollo, after having brought to Sulla the head of Marcus Marius (Plutarch: *Life of Sulla*, chap. 32), upon whom Catiline has just inflicted 'the death of a thousand cuts' (Seneca: *De Ira*, Book III, chap. 18).

65. *The hero's claim to kingship is callously turned to ridicule.*

Jesus's claim is ridiculed, after Pilate has condemned him to death, by Pilate's soldiers (Matt. xxvii. 27-31 = Mark xv. 16-20), or, alternatively,² by Herod's soldiers before Pilate has condemned him to death (Luke xxiii. 11); Eunus's claim is ridiculed by the guests of his master Antigones: 'The thing [i.e. the slave Eunus's prophecy that one day he would be a king] was taken as a joke; and Antigones, who was entertained by the hocus-pocus, took to producing Eunus at his dinner-parties and cross-questioning him about his kingship.' Eunus's answers used to cause merriment among the guests (Diodorus, Books XXXIV-XXXV, chap. 2, § 8).

N.B. The Lucan story of the mocking of Jesus before the Crucifixion corresponds more closely than the alternative story with the episode in the history of Eunus: in the first place Herod, as tetrarch of Galilee, is in the political sense Jesus's master, and it is expressly on this account that Pilate remits Jesus to him (Luke xxiii. 5-7); in the second place Jesus is an object of curiosity as well as of amusement (Luke xxiii. 8); in the third place the way

¹ The writer owes this point to Dr. Martin Braun.

² The version according to Saint John (xix. 2-3) stands midway between the two main variants of the story. According to Saint John the mocking is done by Pilate's soldiers and not by Herod's, but this before, and not after, Pilate has passed the sentence of crucifixion.

in which Herod and his soldiers turn Jesus's claim to ridicule is heartless without being physically cruel (as the Roman soldiers' mockery is cruel in the alternative version of the story).

66. *A tableau of the hero being invested in private with a royal crown (diadem) and robe to which he is not entitled.*

Jesus (Matt. xxvii. 28-9 = Mark xv. 17-18 = Luke xxii. 11 = John xix. 2-3);¹ Tiberius Gracchus: 'Pompeius rose in the Senate in order to depose that he was a neighbour of Tiberius's and that in this way it had come to his knowledge that Tiberius had been presented with a diadem and a purple robe, belonging to the Pergamene regalia, by the Pergamene envoy Eudêmus, in anticipation of Tiberius's becoming King in Rome' (Plut., chap. 14).

67. *A tableau of the hero being exhibited in public as a claimant to kingship.*

'Pilate therefore went forth again and saith unto them: "Behold, I bring him forth to you that ye may know that I find no fault in him." Then came Jesus forth, wearing the crown of thorns and the purple robe. And Pilate saith unto them: "Behold the man!"' (John xix. 4-5). 'The people who were farther off were puzzled about what was going on and were trying to find out; so Tiberius touched his head with his hand as a visual signal—for the benefit of those to whom his voice did not carry—of the danger in which he found himself. When his enemies saw him do this they ran to the Senate to report that Tiberius was asking for a diadem and that this was the significance of his gesture of touching his head' (Plut., chap. 19).

68. *On the hero's way to his execution, people (a person) accompanying him are (is) in tears, whereupon the hero declares that, notwithstanding his present plight, his own lot is nevertheless relatively enviable.*

'And there followed him a great company of people and of women, which also bewailed and lamented him. But Jesus, turning unto them, said: "Daughters of Jerusalem, weep not for me, but weep for yourselves and for your children"' (Luke xxiii. 27-8). 'On his way to the gallows Agis saw one of the officers of the law

¹ In the Lucan story of the mockery of Jesus by Herod and his men, only the robe is mentioned, and not the crown. (N.B. This follows from the omission of the element of physical cruelty, since the crown in the alternative story is a crown of thorns.) In the Johannine version of the story of the mockery of Jesus by Pilate's soldiers the crown is mentioned as well as the robe, but there is no mention of the reed which figures in the Marcan and Matthaean versions of the same story. According to Mark (xv. 19) they smote him on the head with a reed; according to Matthew (xxvii. 29-30) they first put the reed into his right hand to simulate a sceptre; according to John (xix. 3) they smote him with their hands.

crying and showing other signs of deep distress, whereupon he said to him: "My friend, stop weeping for me. When I am being put to death as illegally and unjustly as I am, I have the moral advantage over my murderers" (Plut., chap. 20).

69. *The hero is crucified.*

Jesus (Matt. xxvii. 35 = Mark xv. 24 = Luke xxiii. 33 = John xix. 18); Cleomenes (Plut., chaps. 59 and 60).

N.B. Whereas Jesus is put to death by crucifixion, Cleomenes dies by his own hand (Plut., chap. 58), and it is only his corpse that is crucified. Agis—who, like Jesus, is put to death, instead of committing suicide like Cleomenes¹—is not crucified but is hanged (Plut., chaps. 19 and 20).

70. *Two other persons are put to death at the same time as the hero and in the same fashion.*

The two thieves are crucified with Jesus (Matt. xxvii. 38 = Mark xv. 27 = Luke xxiii. 32-3 = John xix. 18); Agis's grandmother Archidamia and his mother Agesistrata are hanged with Agis (Plut., chap. 20).

N.B. In the Spartan story the three victims are hanged, not on separate gallows side by side, but on the same gallows one after another; but the three corpses are brought out together (Plut., chap. 21).

71. *The shirt (χιτών) in which the hero has gone to his death is made of a single piece of stuff without a seam.*

Jesus's shirt (John xix. 23); Cleomenes' shirt (Plut., chap. 58).

N.B. The two shirts are, however, seamless for different reasons: Jesus's because it has been originally so woven; Cleomenes' because, at the moment before he rushes out into the street, he rips open the original seam down the right sleeve in order to give free play to his sword-arm.

72. *On an occasion on which the hero's claim to kingship is being turned to ridicule by most of those present, one person (some people) accords (accord) recognition to his claim and asks (ask) to be remembered by him when he enters into his kingdom. The hero grants his (their) petition by giving him (them) a dazzling reward for his (their) act of homage.*

While Jesus on the Cross is being mocked by the people, by the rulers, by the soldiers, and by the Impenitent Thief, the Penitent

¹ The suicide of Cleomenes and his companions in the streets of Alexandria has a correspondence in the suicide of the Sicilian insurgent-slave-leader Satyrus and his companions on the public altars in the amphitheatre at Rome (Diodorus, Book XXXVI, chap. 10, §§ 2-3).

Thief 'said unto Jesus: "Lord, remember me when thou comest into thy kingdom." And Jesus said unto him: "Verily I say unto thee, to-day shalt thou be with me in Paradise"' (Luke xxiii. 35-43).¹ When Eunus's master, at his dinner-parties, used to cross-question Eunus about his kingdom [see Point 65, above], one of the questions that he used to ask was 'how he would behave, when king, to each member of the present company. Eunus used to go through his story without turning a hair, explain how kind he would be to the masters, and in fact perform his hocus-pocus so extravagantly as to move the guests to laughter. Some of the guests used to take handsome portions from the table and present them to him with the request that he would remember the favour when he came into his kingdom—and actually, as it turned out, the hocus-pocus ended in Eunus's becoming king in truth and deed, and in his recompensing in sober earnest the favours that had been shown him by those who, at the dinner-parties, had paid him a mock-deference. . . . After his proclamation as king, Eunus put all [the slave-owners] to death with the sole exception of those who, under the *ancien régime*, had welcomed him at dinner-parties or at his spiritualist *séances* when he went out into society with his master, and who had shown their good will in presenting him with portions from the table. These old friends he now surreptitiously set at liberty' (Diodorus, Books XXXIV-XXXV, chap. 2, §§ 8-9 and 41).

73. *The hero's mother is supported in her ordeal by the hero's favourite companion (by the favourite companion's wife).*

Jesus's mother by John (John xix. 25-7); Cleomenes' mother by Panteus' wife (Plut., chap. 59).

74. *The end of an ordeal.*

'He said: "It is finished"; and he bowed his head and gave up the ghost' (John xix. 30). 'When it [i.e. Cleomenes' death-agony] was finished, he [Panteus] . . . slew himself' (Plut., chap. 58).

75. *The hero, hanging dead on the Cross, is hailed as the Son of God (a child of the Gods) under the impression of a portent that is witnessed by the soldiers on duty at the foot of the Cross.*

'Now when the centurion and they that were with him, watching Jesus, saw the earthquake and those things that were done, they feared greatly, saying: "Truly this was the Son of God"' (Matt.

¹ The mocking of Jesus on the Cross is narrated also in the two other Synoptic Gospels (though not in the Gospel according to Saint John); but according to both Saint Matthew (xxvii. 39-44) and Saint Mark (xv. 29-32) both the thieves that are being crucified with Jesus join in abusing him.

xxvii. 54).¹ 'The soldiers who were on guard by Cleomenes' crucified corpse saw a large snake wound round the head and covering the face,² with the result that no carrion-eating bird alighted on it. This portent threw the King into a state of superstitious fear—which gave his women an excuse for starting a fresh bout of purifications—in case the man whom he had put to death might have been peculiarly dear to God and not of any common clay. The populace of Alexandria went farther. They showed their respect by making pilgrimages to the spot and hailing Cleomenes as a hero³ and a child of the Gods' (Plut., chap. 60).

76. *After the hero's death there is a revulsion of public feeling in his favour.*

While Jesus was still hanging alive on the Cross, 'the people stood beholding, and the rulers also with them derided him' (Luke xxiii. 35); but, as soon as he had expired, 'all the people that came together to that sight, beholding the things that were done, smote their breasts and returned' (Luke xxiii. 48). Similarly the Alexandrians, who had not moved a foot to follow Cleomenes, or lifted a finger to help him, when he was calling to them, in their streets, to join him in a fight for freedom (Plut., chap. 58), afterwards paid his crucified corpse a semi-religious veneration (Plut., chap. 60, quoted under Point 75, above). And the Roman Plebs, after allowing the Gracchi to be done to death by the Senatorial dominant minority, afterwards demonstrated their love and their sorrow for them by paying them religious honours (Plut., chap. 39).⁴

¹ According to Saint Mark (xv. 39) the centurion utters the words attributed to him according to Saint Matthew, but here it is not stated that he is speaking under the impression of the experience of a miracle. According to Saint Luke the centurion is neither speaking under the impression of a miracle, nor does he hail Jesus as the Son of God ('Now when the centurion saw what was done, he glorified God, saying: "Certainly this was a righteous man"' (Luke xxiii. 47)).

² The same portent was related of Spartacus—not, however, after death, but in sleep, when his career still lay, unsuspected, before him—and his wife, who was a fortune-teller, interpreted the portent (as Ptolemy Philopator did when it happened to Cleomenes' corpse) as a sign of greatness ('It is said that, when he was first brought to Rome to be sold, a snake was seen wound round his face as he slept. His wife, who was of the same tribe and who had the gift of divination, besides being a Bacchanal, interpreted the portent as a sign that he was going to rise to something very great and formidable, but with an unlucky ending' (Plutarch: *Life of Crassus*, chap. 8, adopting Reiske's conjecture *δρυγής* for *εὐρυγής*). A similar portent was related of Bar Kōkabā. His corpse, in contrast to that of Jesus and that of Cleomenes, was not preserved intact (see Point 78, below), but was mutilated; and thereafter a snake was found coiled, not round his head, but round his severed privy parts (see Lagrange, M.-J.: *Le Messianisme chez les Juifs* (Paris 1909, Gabalda), p. 320). Again, Tiberius Gracchus took it as a bad omen when snakes hatched out their eggs in his helmet (Plutarch: *Gracchi*, chap. 17).—A.J.T.

³ In its original, and technical, Hellenic sense the word hero has a connotation which is a cross between those of our two Western words 'demigod' and 'saint'.—A.J.T.

⁴ The judicial murders of Agis and his mother and his grandmother likewise aroused indignation among the public at Sparta (Plut., chap. 21); but here the correspondence is imperfect, because in this case the public, so far from having been hostile or even indifferent, had made a move to rescue the hero, and this move had only been foiled by a *fait accompli* (Plut., chap. 19).

77. *The two other persons who are put to death at the same time as the hero do not die till after he is dead.*

The two thieves not till after Jesus (John xix. 32-3); Archidamia and Agesistrata not till after Agis (Plut., chap. 20).

78. *Contrary to what usually happens to a crucified corpse,¹ the hero's corpse remains physically intact.*

Jesus dies so unexpectedly soon (Mark xv. 44-5) that, when the soldiers come with the intention of breaking the legs of the bodies on the crosses in order to hasten their deaths, they find it unnecessary to break Jesus's legs, because he is already dead, so they only break the legs of the two thieves (John xix. 31-3). Cleomenes' corpse is protected from being eaten by carrion-birds through the portent of the snake that winds itself round the head and covers the face (see Point 75, above).

79. *When a soldier pricks the hero's body with the point of a weapon, in order to test whether life is completely extinct, the body gives an unexpected sign of life.*

When a Roman soldier pierces Jesus's side with a spear, blood flows (John xix. 34); when Panteus pricks Cleomenes' ankle with a dagger, Cleomenes' face twitches (Plut., chap. 58).

80. *While the hero is being put to death, some women, with whom he is in an intimate relation, are in the vicinity, though not actually on the spot.*

The Crucifixion of Jesus is witnessed from a distance by Galilaean women whose link with Jesus is not one of kinship but one of personal devotion, and who have shown this devotion by coming to Jerusalem in his entourage; among them are Mary Magdalene, Mary the mother of James and Joses, and the mother of Zebedee's children or (? *alias*) Salome (Matt. xxvii. 55-6 = Mark xv. 40-1 = Luke xxiii. 49).² While Agis is being hanged inside the building

¹ When Polycrates the despot of Samos received a tempting invitation from Oroetes the Achaemenian satrap of Sardis, he suspected a trap but felt inclined to take the risk. While he was still in two minds whether to accept or to refuse, his daughter had a dream in which she saw her father aloft in the air, being washed by Zeus and anointed by the Sun. In consideration of this dream, she begged her father not to go; and, when he did go all the same, her worst forebodings were fulfilled; for the invitation *was* a trap, and Oroetes, after putting Polycrates to death by tortures too horrible to describe, inflicted on his victim the last indignity of crucifying his corpse. 'So, hanging on the cross, Polycrates fulfilled every particular of his daughter's vision. He was washed by Zeus when it rained, and he was anointed by the Sun when the corpse itself exuded liquid matter' (Herodotus, Book III, chaps. 122-5, already quoted in IV. C (iii) (c) 1, vol. iv, pp. 252-3, above).

² Though the Gospel according to Saint Luke mentions no names, it agrees with the other two Synoptic Gospels in describing the women as Galilaean and stating that they witnessed the Crucifixion from a distance. On the other hand the Gospel according to Saint John (xix. 25), which does mention names, is in implicit, and perhaps deliberate,

called the Dechas, his mother Agesistrata and his grandmother Archidamia are outside, making an outcry (Plut., chap. 19-20).

81. *A tableau of the descent from the Cross (or gallows).*

The dead body of Jesus being lowered from the Cross by men who are being assisted by the women of Jesus's entourage (there is no text in the Gospels describing this event;¹ yet, all the same, the scene is one of the favourite subjects of the traditional iconography of the Christian Church); the dead body of Agis' grandmother, Archidamia, being lowered from the gallows by officers of the law who are being assisted by Agis' mother—who is Archidamia's daughter—Agesistrata (Plut., chap. 20).

82. *A tableau of the Pietà.*

The dead body of Jesus at the foot of the Cross being tended by Joseph of Arimathaea (with the women's assistance)² (Matt. xxvii. 59 = Mark xv. 46 = Luke xxiii. 53 = John xix. 39-40); the dead bodies of Agis and Archidamia, at the foot of the gallows, being tended by Agesistrata (Plut., chap. 20).

N.B. The dead body of Tiberius Gracchus is refused to the dead man's brother by the Government, even when he offers to bury it unobtrusively by night (Plut., chap. 20).

83. *The hero, after his death, comes to receive religious worship.*

Jesus from the Christian Church; the Gracchi from the Roman Plebs: 'They dedicated to them statues, which they erected in public places; they consecrated the spots that had been the scenes of their deaths; and they offered there the first-fruits of all the produce of the seasons, while many people actually made it a daily

contradiction with the Synoptic Gospels on two points. In the first place it names, as having been present, Mary Magdalene, Mary the wife of Cleophas (? *alias* Mary the mother of James and Joses) and—in place of the mother of Zebedee's children (? *alias* Salome)—Mary the mother of Jesus, whose name does not occur in the other Gospels in this context. In the second place the women are standing, according to Saint John, not at a distance, but close to the Cross (xix. 25), within speaking distance (xix. 26-7). In this second feature the version of the incident according to Saint John has a correspondence in the epilogue to the Passion of Cleomenes, in which (not the hero but) the hero's children are put to death in the immediate presence of the hero's mother (Plut., chap. 59).

¹ The only hint of it is to be found in the adverbial prefix 'down', which is attached to the verb 'take' in Luke xxiii. 53; but the Lucan word *καθελῶν* is manifestly an unwarrantable amplification of the Matthaean word *λαβῶν*. What is being recorded here is not the physical descent of the body from the Cross, but the legal delivery of it to Joseph of Arimathaea by Pilate.

² The participation of the women, which is given such prominence in the traditional treatment of the subject in the iconography of the Christian Church, is not mentioned in the Gospels. In the Gospel according to Saint John (xix. 39-40), which is the only Gospel in which Joseph of Arimathaea is represented as having assistance, he is assisted, not by the women, but by Nicodemus. In the Synoptic Gospels (Matt. xxvii. 61 = Mark xv. 47 = Luke xxiii. 55) the women are represented as following at a distance in order to mark the place where the body is being buried.

practice to visit these spots in order to offer sacrifice and to pay their devotions—just as if they were visiting temples of gods' (Plut., chap. 39).

84. *The hero's enthusiastic companion makes good, after the hero's death, the boast to which he has failed to live up during the hero's Passion [see Points 34 and 54, above].*

Peter in the Acts; Statilius at Philippi (Plutarch: *Life of Cato Minor*, chap. 73).

N.B. As between Therycion and Cleomenes, the parts are reversed (see Point 34, above). Therycion lives up to Spartan ideals by practising at once the suicide that he preaches, while it is Cleomenes who does belatedly at Alexandria what Therycion had done betimes at Aegialia.

85. *The villain perishes miserably.*

Judas commits suicide (Matt. xxvii. 3-10, and Acts i. 16-20); Nasica has to flee the country, and he dies a premature death abroad after roaming disconsolately (like Cain or the Wandering Jew) (Plut., chap. 21); Opimius is convicted of having taken bribes from Jugurtha, and he dies in disgrace (Plut., chap. 39).

86. *The most effective executor of the hero's purpose, after the hero's death, is a convert of a younger generation who has never been in personal relations with the hero, has been brought up as a fanatical opponent of his cause, and is indirectly tainted with the blood-guiltiness for the hero's death.*

Jesus's executor Paul; Agis' executor Cleomenes, who is the son of Agis' deadly enemy King Leonidas.

87. *The executor's conversion is partly due to the twofold influence of a martyr who is devoted to the dead hero's person and of a sage who is sympathetic to the dead hero's ideas.*

Paul is influenced by (α) his victim Stephen (Acts vii. 58-60, and viii. 1) and (β) his mentor Gamaliel (Paul's early studies under Gamaliel are mentioned in Acts xxii. 3, and Gamaliel's plea, in the Sanhedrin, for toleration of the Apostles is recorded in Acts v. 33-40). Cleomenes is influenced by (α) Agis' widow Agiatis, who has been forcibly married to the young Cleomenes through the tyranny of Cleomenes' father King Leonidas (Plut., chap. 22) and (β) his mentor Sphaerus of Borysthenes, under whom he has studied as a child (Plut., chap. 23).¹

¹ For the question whether Sphaerus had been Agis' mentor as well see V. C (ii) (a), p. 249, footnote 2, above.

A Synopsis of Results

Our survey of correspondences between the Gospels and the stories of certain pagan heroes of the Hellenic internal proletariat and dominant minority has now yielded us a considerable harvest; but in order to make some effective use of these abundant materials for study we must first sift them out and arrange them in order. Our first need is to make a concordance of the literary authorities from which our evidence has been drawn (Table I). This will give us a basis for submitting the correspondences to a numerical analysis (Tables II and III), and after that we shall find ourselves able to pass from a purely quantitative to a partly qualitative treatment of our materials by singling out, for separate study, several different kinds of common features which our set of correspondences will be found to display. The correspondences work themselves out into an identical drama which appears, at least in essence and outline, to underly the whole of this group of hero-stories, pagan and Christian alike. And this drama has certain common characters (Table IV) common scenes (Tables V and VI), common properties (Table VII), and even common words (Tables VIII and IX).

The synopsis has been reduced as far as possible to tabular form in order to enable the reader to take in at a glance its bearing upon what follows.

[*Tables I-IX, pp. 407-17.*]

* The letters of the Greek Alphabet in this column refer to the passages quoted at the foot of the present table.

† In the correspondences marked thus the corresponding words in *both* the New Testament *and* the pagan text occur, not in the narrative, but in the mouth of one or more of the characters, as a quotation either from a speech (α, β, γ, η) or from a dialogue (θ, κ, ν).

‡ In the correspondences marked thus the corresponding words are placed in Jesus's mouth (δ, ζ, λ) and in a centurion's mouth (μ) in the New Testament, but occur in the narrative in the pagan text.

§ In the correspondences (ε, ι) marked thus the corresponding words in *both* the New Testament *and* the pagan text occur in the narrative only, and not in the mouth of any of the characters.

(α) 'The foxes have holes (φωλεούς) and the birds of the air have nests (κατασκηνώσεις), but the Son of Man hath not where to lay his head' (Matt. viii. 20 = Luke ix. 58). 'The wild animals that range over Italy have a hole (φωλεόν), and each of them has its lair (κοιταῖον) and nest (κατάδυσσις), but the men who fight and die for Italy have no part or lot in anything but the air and the sunlight.¹ Without home or domicile, they wander over the face of the Earth with their children and their wives; and the generals are cheating them when they exhort them, in action, to fight for the sake of their cemeteries and sanctuaries. Of all these thousands of Romans not one has either an ancestral altar or a family tomb. It is for the sake of other men's wealth and luxury that these go to the wars and give their lives. They are called the lords of the World, and they have not a single clod of earth to call their own' (Plutarch: *Gracchi*, chap. 9).²

¹ In this passage of his speech Tiberius Gracchus is making the same point as Aristonicus makes by calling his followers 'Citizens of the City of the Sun' (see the references on p. 381, footnote 1, above).—A.J.T. ² Quoting from a speech by Tiberius Gracchus.

(β) 'The Kingdom of Heaven suffereth violence, and the violent take it by force' (ἡ βασιλεία τῶν οὐρανῶν βιάζεται, καὶ βιασταὶ ἀρπάζουσιν αὐτήν) (Matt. xi. 12); 'The Kingdom of God is preached, and every man presseth into it' (ἡ βασιλεία τοῦ Θεοῦ εὐαγγελίζεται, καὶ πᾶς εἰς αὐτήν βιάζεται) (Luke xvi. 16). 'To change a political régime without violence and intimidation is not easy' (πολιτείαν μεταβαλεῖν ἄνευ βίας καὶ φόβου χαλεπὸν ἔστιν) (Plutarch: *Agis and Cleomenes*, chap. 31).¹

(γ) 'Some of them ye shall kill and crucify' (ἐξ αὐτῶν ἀποκτενεῖτε καὶ σταυρώσετε) (Matt. xxiii. 34); 'Some of them they shall slay and persecute' (ἐξ αὐτῶν ἀποκτενοῦσι καὶ ἐκδιώξουσιν) (Luke xi. 49). 'To the point of persecuting some of them and slaying others' (ὥστε . . . τοὺς μὲν ἐξελαύνειν, τοὺς δ' ἀποκτινύνειν) (Plutarch: *Agis and Cleomenes*, chap. 31).²

(δ) 'That which ye have spoken in the ear in closets shall be proclaimed upon the housetops' (ὃ πρὸς τὸ οὖς ἐλάλησατε ἐν τοῖς ταμείοις, κηρυχθήσεται ἐπὶ τῶν δωμάτων) (Luke xii. 3). ' . . . that many failed to find lodgings, and the acclamations were echoed from the roofs and the tiles because the campus could not contain the multitude' (ὥς πολλοῖς μὲν οἰκήσεις ἐπιλιπεῖν, τοῦ δὲ πεδίου μὴ δεξαμένου τὸ πλῆθος ἀπὸ τῶν τεγῶν καὶ τῶν κεράμων τὰς φωνὰς συνεχεῖν) (Plutarch: *Gracchi*, chap. 24).

(ε) 'He . . . began to be sorrowful and very heavy' (ἤρξατο λυπεῖσθαι καὶ ἀδημονεῖν) (Matt. xxvi. 37); 'He . . . began to be sore amazed and to be very heavy' (ἤρξατο ἐκθαμβεῖσθαι καὶ ἀδημονεῖν) (Mark xiv. 33); 'Being in agony he prayed more earnestly; and his sweat was as it were great drops of blood falling down to the ground' (γενόμενος ἐν ἀγωνίᾳ ἐκτενέστερον προσήχετο· ἐγένετο δὲ ὁ ἰδρὼς αὐτοῦ ὡσεὶ θρόμβοι αἵματος καταβαίνοντες ἐπὶ τὴν γῆν) (Luke xxii. 44). 'Gaius Gracchus became more and more depressed and unaccountably upset until it ended in his falling into a sort of frenzy in which he was virtually out of his mind. . . . He went off . . . very heavy, like a man who is fey. In this state of mental excruciation. . . .' (αἰὲ καὶ μᾶλλον ταπεινούμενος καὶ παρὰ προσδοκίαν ἀποπίπτων εἰς λύτταν τινὰ καὶ μανιώδη διάθεσιν ἐνέπιπτε. . . . ἀπεχώρησεν . . . ἀδημονῶν καὶ ποινηλατούμενος. οὕτω δ' αὐτοῦ παροίστητος . . .) (Diodorus, Books xxxiv-xxxv, chap. 28^a); 'On his way back from the Forum, Gaius stopped in front of the statue of his father, gazed at it in silence a long while, and finally went off after bursting into tears and lamentations' (ὁ δὲ Γάϊος ἐκ τῆς ἀγορᾶς ἀπερχόμενος ἔστη κατὰ τὸν τοῦ πατρὸς ἀνδριάντα, καὶ πολὺν χρόνον

¹ Quoting from a speech by Cleomenes. In another context (V. C (i) (d) 11, Annex I, p. 358, above) it has already been noticed that there is also a correspondence between Matt. xi. 12 and Aristophanes: *Birds*, l. 32.

² Quoting from a speech by Cleomenes.

ἐμβλέψας εἰς αὐτὸν οὐδὲν ἐφθέγγετο, δακρύσας δὲ καὶ στενάξας ἀπῆει) (Plutarch: *Gracchi*, chap. 35).

(ζ) 'Sleep on now and take your rest' (καθεύδετε τὸ λοιπὸν καὶ ἀναπαύεσθε) (Matt. xxvi. 45 = Mark xiv. 41). 'They passed the time watching and taking their rest by turns' (ἐν μέρει φυλάττοντες καὶ ἀναπανόμενοι διήγον) (Plutarch: *Gracchi*, chap. 35).

(η) 'And as some spake of the Temple, how it was adorned with goodly stones and gifts (ἀναθήμασι), he said: "As for these things which ye behold, the days will come in the which there shall not be left one stone upon another that shall not be thrown down (καταλυθήσεται)"' ¹ (Luke xxi. 5-6). 'Nothing can be so sacrosanct as votive offerings (ἀναθήματα) to the Gods; yet nobody has ever thought of estopping the Plebs from using and moving (κινεῖν) and transferring (μεταφέρειν) such offerings as it thinks fit' (Plutarch: *Gracchi*, chap. 15).²

(θ) 'Weep not for me' (μὴ κλαίετε ἐπ' ἐμέ) (Luke xxiii. 28). 'Stop weeping for me' (παῦσαί με κλαίων) (Plutarch: *Agis and Cleomenes*, chap. 20).

(ι) 'The coat (shirt) was without seam' (ἦν δὲ ὁ χιτῶν ἄρραφος) (John xix. 23). 'He put on his coat (shirt) and ripped open the seam across the right shoulder' (ἐνδυσάμενος τὸν χιτῶνα καὶ τὴν ῥάφην ἐκ τοῦ δεξιοῦ παραλυσάμενος ὤμου) (Plutarch: *Agis and Cleomenes*, chap. 58).

(κ) 'Lord, remember me when thou comest into thy kingdom' (μνησθητί μου, κύριε, ὅταν ἔλθῃς ἐν τῇ βασιλείᾳ σου) (Luke xxiii. 42). 'With the request that he would remember the favour when he came into his kingdom' (ἐπιλέγοντες ὅπως, ὅταν γένηται βασιλεύς, τῆς χάριτος μνημονεύει) (Diodorus, Books xxxiv-xxxv, chap. 2, § 8).

(λ) 'It is finished' (τετέλεστο) (John xix. 30). 'When it was finished at last' (τέλος ἔχοντος ἥδη) (Plutarch: *Agis and Cleomenes*, chap. 58).

(μ) 'Truly this was the Son of God' (ἀληθῶς Θεοῦ Υἱὸς ἦν οὗτος) (Matt. xxvii. 54 = Mark xv. 39). '... hailing Cleomenes as a hero and a child of the Gods' (ἥρωα τὸν Κλεομένη καὶ Θεῶν παῖδα προσαγορεύοντες) (Plutarch: *Agis and Cleomenes*, chap. 60).

(ν) 'For none of us liveth to himself, and no man dieth to himself' (οὐδεὶς γὰρ ἑμῶν ἑαυτῷ ζῇ, καὶ οὐδεὶς ἑαυτῷ ἀποθνήσκει) (Saint Paul: *Epistle to the Romans*, xiv. 7). 'It is base for people to live to themselves, and base for them to die to themselves' (αἰσχρὸν γὰρ καὶ ζῆν μόνοις ἑαυτοῖς καὶ ἀποθνήσκειν) (Plutarch: *Agis and Cleomenes*, chap. 52).³

¹ In the corresponding passage, quoted below, from a speech by Tiberius Gracchus, this same verb (κατελύθη) occurs, a few sentences earlier, with reference to the fall of the monarchy at Rome.

² Quoting from a speech by Tiberius Gracchus.

³ Quoting from a dialogue between Cleomenes and Therycion.

Alternative Possible Explanations

How are our eighty-nine correspondences to be accounted for? Evidently there will be a number of alternative possible explanations; but it is equally evident that the first of these that should be taken into consideration is the play of chance. It is safe to assume *a priori* that at any rate some of these correspondences—it is idle to guess how many—are fortuitous; and there is at least one clear case (which, for this reason, has been excluded from our collection) in which the fortuitousness of the correspondence is demonstrable.

In all four Gospels (Matt. iii. 3 = Mark i. 3 = Luke iii. 4-5 = John i. 23) John the Baptist is quoted as saying, when he starts to preach:

‘The voice of one crying in the wilderness: “Prepare ye the way of the Lord; make his paths straight (εὐθείας). Every valley shall be filled (πάσα φάραγξ πληρωθήσεται), and every mountain and hill shall be brought low; and the crooked shall be made straight, and the rough ways shall be made smooth (λείας).” ’¹

This passage in the Gospels has a correspondence—which is particularly striking because it extends here and there to an actual identity of words—in the following passage in Plutarch’s *Lives of the Gracchi* (chap. 28):

‘[Gaius Gracchus] was especially keen on road-building, and in this work he had an eye for elegance and beauty as well as for sheer utility. His roads were carried through the countryside dead straight (εὐθείαι . . . ἀτρεμεῖς) . . . The hollows were filled (πιμπλαμένων) with embankments; the clefts carved by torrents or ravines (φάραγγες) were spanned with bridges; the road was graded to the same level on both sides; and as a result of all this care the work displayed a beautiful symmetry (ὁμαλήν καὶ καλὴν ὄψιν εἶχε) throughout its length.’

The closeness of this correspondence might seem at first sight to rule the hypothesis of accident out; and it might appear probable that in this case the Gospels (or their source) were drawing upon Plutarch (or his source), either directly or indirectly, rather than vice versa. We might conjecture that the Roman art and practice of road-building had made a profound impression on the minds of the Romans’ Oriental subjects; that these Oriental admirers of a Roman achievement had concentrated their admiration upon the figure of one of the first great road-builders in Roman history; and that the record of this Roman hero’s road-building

¹ This is according to Saint Luke. The Gospels according to Saint Matthew and Saint Mark give the first sentence only, without the second. The Gospel according to Saint John gives the first sentence only, and that in a paraphrase.

feats had been turned to allegorical account by a Jewish prophet who had grown up under the Roman régime without losing hold upon the Jewish tradition of seeing life in terms of the spirit rather than in terms of matter. Such a theory of the origin of this passage in the New Testament would be as pretty as the Ptolemaic theory of the movements of the heavenly bodies; but it would suffer from the same single but fatal defect of being demonstrably untrue. Its falsity can be verified at a glance; for in each of the four Gospels the passage is ascribed to the Prophet Isaiah; and the ascription is correct. If the Greek text of Luke iii. 4-5 is compared with the Septuagint Greek version of Isa. xl. 3-4, the quotation will be found to reproduce the original with only trifling inaccuracies which do not affect either the general sense of the passage or any of the verbal coincidences with the corresponding passage of Plutarch. The proof of the fortuitousness of the correspondence is decisive; for the Septuagint translation of the Old Testament into Greek was made *circa* 170-132 B.C.;¹ and that is not only long before the earliest possible date of the writing of Plutarch's *Lives of the Gracchi* or the composition of Plutarch's sources; it is, at latest, at least nine years before the earliest possible date at which Plutarch's hero Gaius Gracchus himself can have begun to build his roads after entering upon his first term of office as Tribune of the Plebs in 123 B.C.

On this showing, are we to dismiss as fortuitous every correspondence between the New Testament and pagan Greek literature in which the New Testament passage contains either a quotation (express or tacit) from the Old Testament or a reminiscence of it? It might be rash to accept so sweeping a generalization as that without examining on their merits the actual cases in point.

One instance of a feature in the New Testament which can be traced back to the Old Testament with almost as great a certainty as the passage quoted by John the Baptist from Isaiah is the figure given in Matt. xxvi. 15 for the price paid by the Chief Priests to Judas (Point 23). Matthew's 'thirty pieces of silver' can hardly be explained except as an echo of Zechariah's (xi. 12). In this case sheer accident is clearly a less probable explanation than plagiarism; and, while Matthew makes no express reference to Zechariah in this place, he does refer to the Old Testament—though he names the prophet incorrectly and misquotes the words²—when he gives the sequel to the story of the betrayal (in xxvii. 9-10). This instance, however, is hardly revelant, because the exact figure of the price of the betrayal is not the feature in our Point 23 in

¹ See Tarn, W. W.: *Hellenistic Civilization* (London 1927, Arnold), p. 178.

² On this see further the present Annex, p. 424, below.

which we have detected a correspondence between the respective stories of the betrayal of Jesus and the betrayal of Agis.

We may notice next a pair of cases in which a narrative that has been incorporated into the New Testament seems to have been cut to fit a passage from the Old Testament that is quoted with reference to it.

In the tableau of the rider riding through the streets of a city (Point 16), Mark (xi. 1-7) and Luke (xix. 29-35) mention *one* riding animal only—'a colt'—and make no reference to the Old Testament in connexion with it. John, again, mentions (xii. 12-15) one riding animal only, and quotes, in connexion with it, a passage from Zechariah—introduced anonymously as 'the prophet'—in a shortened form in which there can be no question of more than one animal being intended. The original (Zech. ix. 9) runs:

'Behold, thy king cometh unto thee . . . lowly and riding upon an ass, and upon a colt the foal of an ass.'

And, in the version of the incident in Matthew, Zechariah—introduced anonymously as 'the prophet' here too—is quoted in this fuller form (Matt. xxi. 5). In the Matthaean version of the incident in the story of Jesus on which the quotation from Zechariah bears, there are also two animals—'an ass, and a colt with her' (Matt. xxi. 2)—and *both* of these are brought by the disciples to Jesus and are saddled for his use. Now, since a rider cannot bestride two mounts at once, Matthew's divergence from the other three Gospels in the matter of the number of the animals introduces an anomaly into his account of the incident from which the other versions are free. And this may prompt us to conjecture that Matthew has altered the narrative—in defiance of the probabilities—in order to bring it into line with the full text of Zechariah, which Matthew appears to have read as referring to two animals, though it seems much more likely that only one animal is really intended, and that Zechariah is merely indulging in the conceit—which is one of the characteristic ornaments of Hebrew poetry—of saying the same thing twice over in different words.

In the second case (Point 71) in which a narrative incorporated into the New Testament seems to have been cut to fit a quotation from the Old Testament the probable explanation is the same: the literary artifice of repetition in periphrasis has been mistaken for a pair of references to two separate things. Ps. xxii. 18—'They part my garments among them, and cast lots upon my vesture'—is quoted in Matt. xxvii. 35, and in John xix. 24 (with respective references to 'the prophet' and to 'the scripture') in connexion with a statement—that is also made (though here without any reference to the Old

Testament) in Mark xv. 24, and in Luke xxiii. 34—that the soldiers ‘parted his garments, casting lots’. In the Synoptic Gospels, Matthew included, it is assumed that there was a single procedure in which lots were cast in order to determine how the clothes were to be distributed among the claimants. According to John (xix. 23–4), however, all the clothes except a seamless ‘coat’ or shirt (*χιτὼν ἄρραφος*) are parted without any casting of lots—presumably in the literal sense of pulling them to pieces at the seams—and the casting of the lots is a special device for dealing with the seamless coat, which the soldiers are loath to spoil by tearing it. We may conjecture that the writer of the Gospel according to Saint John has altered the narrative in order to bring it into line with the text of Ps. xxii. 18, and that he has been moved to make this alteration because he has interpreted the Psalm as describing, not one act, but two acts.

Again, the betrayal of Jesus by Judas with a kiss (Point 40) may be thought to have been suggested by the incident, narrated in 2 Sam. xx. 8–10, of Joab taking Amasa by the beard with his right hand to kiss him, in order to put him off his guard while he treacherously smites him in the fifth rib with his sword. And, if the incident, as it appears in the New Testament, is really a literary echo of this corresponding incident in the Old Testament (to which it does not make any reference), then we might have to dismiss as a mere effect of chance the correspondence which we have descried, in this point, between the betrayal of Jesus and the betrayal of Agis.

There are two other cases in which it is possible, though not convincingly probable, that a feature in the New Testament has been derived from a feature in the Old Testament to which the relevant passages of the New Testament make no reference. The silence of Jesus, first before the Sanhedrin (Point 51) and then before Pilate (Point 58), *may* have been derived from Isa. liii. 7. Similarly, the picture in the Synoptic Gospels of the women standing afar off to watch the Crucifixion (Point 80) *may* have been derived from Ps. xxxviii. 11.

There is an unmistakable, though again unacknowledged, quotation from Ps. xxii in the Matthaean and Marcan versions of the mocking of Jesus on the Cross (Point 72). Matt. xxvii. 39 and Mark xv. 29 both reproduce Ps. xxii. 7, and Matt. xxvii. 43 goes on to reproduce Ps. xxii. 8. Moreover in Matt. xxvii. 40 (= Mark xv. 29–30) and 43 there are almost certainly reminiscences of a passage in the Book of Wisdom.¹ Since it is hardly credible that

¹ Wisd. of Sol. ii. 12–20, quoted in this Annex on pp. 494–5, below. In this passage ‘the ungodly’ are represented as plotting to inflict a horrible death upon a righteous man who claims to be the Son of God, in order to see whether his Divine Father will deliver him in his extremity.

'in real life' the Jews would have chosen to quote or paraphrase, in mockery, passages of Scripture in which the sympathy is (as it is in both these contexts) on the side, not of the mockers, but of their victim, we may conjecture that these particular taunts in Matthew and Mark are merely echoes, in the evangelist's own mind, of the corresponding verses of the Book of Wisdom and the Twenty-second Psalm, and we might even go so far as to dismiss the whole of this incident in the New Testament as unhistorical on the same ground if it did not include other taunts—e.g. 'he saved others; himself he cannot save' (Matt. xxvii. 42 = Mark xv. 31; cf. Luke xxiii. 35)¹—which do not appear to be reminiscences of anything either in Ps. xxii or in the Book of Wisdom or in any other piece of the Old Testament.

Are we then to explain away, as a mere effect of chance, every correspondence between a point in the Gospels and a point in the story of some pagan Hellenic hero wherever the passage in the New Testament can be shown to contain some reminiscence of a passage in the Old Testament? Such a procedure can best be tested by observing how it works in another set of circumstances. The writer of this Study had an uncle, the late Dr. Paget Toynbee, who in the course of his life contributed a considerable number of letters to *The Times* quoting either Dante or else Horace Walpole with reference to some current piece of news in that newspaper. The subjects were extremely diverse and the quotations were usually apt; and, if one were to slip a file of these letters of Dr. Paget Toynbee's into the hands of a New Testament scholar when he was in an unguardedly 'higher critical' mood, one can imagine the unhappy victim of our practical joke being inveigled into fathering the theory that the passages from two ancient authors which Dr. Toynbee was in the habit of quoting were manifestly the sources of the old-wives' tales about current events which the Editor of *The Times* had palmed off upon his readers as authentic news. The theory is plausible because news is notoriously expensive. It means paying toll to telegraph companies and salaries to correspondents. A frugal editor might surely yield to the temptation to save his purse by coining counterfeit news out of passages of ancient authors with which an assiduous scholar was kind

¹ There are other taunts, again, which are manifestly not derived from the Old Testament, since they are echoes of statements or avowals which are attributed to Jesus in the New Testament itself in the preceding chapter of the story of the Passion: e.g. 'Thou that destroyest the Temple and buildest it in three days, save thyself' (Matt. xxvii. 40 = Mark xv. 29-30, echoing Matt. xxvi. 61 = Mark xiv. 58). Similarly, 'if he be the King of Israel, let him now come down from the cross, and we will believe him' (Matt. xxvii. 42 = Mark xv. 32) may be an echo of Matt. xxvi. 63-4 = Mark xiv. 61-2 = Luke xxii. 67-9. On this showing, the reminiscences of the Book of Wisdom in Matt. xxvii. 40 (= Mark xv. 29-30) and 43, may be at second hand, through Matt. xxvi. 63-4 (= Mark xiv. 61-2).

enough to supply him. The theory is so attractive that its present inventor could hardly have resisted adopting it himself if there were not one flaw in it that is fatal to it. This flaw is a chronological one—for investigation will show that Dr. Toynbee's letters containing the quotations from Dante and Horace Walpole never appeared in *The Times* in advance of the news with reference to which they purported to be written: they always appeared after an interval of at least twenty-four hours!

This imaginary parallel reveals the weak point in the argument with which we have been playing. The fact of an ancient work of literature being quoted, either expressly or tacitly, with reference to an alleged current event is, of course, no proof whatever that the alleged event is a piece of fiction which has been fabricated out of the quotation. The event need not be fictitious just because the quotation is apt. For, if the work that is quoted is of a certain size and has a certain variety of content, and if the scholar who quotes it has a retentive memory, then an appropriate quotation may spring to the scholar's mind in almost any conceivable circumstances. And, if our scholar is a *hāfiz* whose study is the Holy Writ of Islam or Jewry and who has learnt his Qur'ān or his Law and Prophets by heart, then the fact that his narrative of current events contains telling quotations from Scripture will throw little or no light upon the question whether the incidents to which these quotations refer are fictitious or authentic.

In the set of passages from the New Testament with which we are at present concerned there is at least one clear case of a quotation from the Old Testament which certainly cannot be the origin of the incident in the Gospels with reference to which it is quoted. This case occurs in the account of Judas' miserable end (Point 85).

We may begin by taking note of a correspondence between the Gospels and the story of Cleomenes which we have not included in our list. In both stories the question of the payment of the price of a field is introduced in connexion with the machinations of the villain who brings the hero to ruin. In Plutarch's *Lives of Agis and Cleomenes*, chap. 56, Nicagoras' animosity against Cleomenes is put down to his resentment at not having received payment for a field which Cleomenes has bought from him. In the story of Judas a field is bought—according to the Matthæan version (Matt. xxvii. 7) by the chief priests when the thirty pieces of silver have been flung back by Judas in their faces, and according to the Lucan version (Acts i. 18) by Judas himself—out of the blood-money. This particular correspondence is so tenuous that it would be prudent to ignore it in any case—as, in fact, we have ignored it in this Study—but in the present context we may take note

of it to the extent of observing that the question of its significance is not affected one way or the other by the fact that Matthew (xxvii. 9-10) hails the miserable end of Judas as the fulfilment of an Old Testament prophecy.

'Then was fulfilled that which was spoken by Jeremy the prophet, saying: "And they took the thirty pieces of silver, the price of him that was valued, whom they of the children of Israel did value, and gave them for the potter's field, as the Lord appointed me."'

This alleged fulfilment of scripture proves nothing, because in this case the *hāfiz's* memory has played its owner false. The prophet in question is really not Jeremiah but Zechariah, and the passage (Zech. xi. 13) is misquoted. According to the Septuagint it ought to run:

'And the Lord said unto me: "Drop them into the smelting-furnace (*χαυνεστήριον*) and see if it is genuine, in the manner in which my genuineness was tested on their behalf." And I took the thirty pieces of silver and cast them into the house of the Lord—into the smelting-furnace.'

How has the memory of the writer of the Gospel come to play on its owner the trick of substituting a 'potter's field' for the 'smelting-furnace' of the passage in the Old Testament which this *hāfiz*-caught-napping is trying to recall? The explanation is given, not by anything in Zechariah, but by the context in the New Testament. To the knowledge of the writer of the Gospel according to Saint Matthew there was, on the outskirts of Jerusalem, a burial-ground for strangers which went by the name of 'the Field of Blood' in the writer's (or his source's) own day, and which was remembered to have been a potter's field before it had been acquired for this other use by the Jewish public authorities. The context in the Gospel according to Saint Matthew informs us that, in the tradition of the Christian community at Jerusalem, the current name of 'the Field of Blood' had come to be associated with the last chapter in the story of the treachery of Judas; and for our present purpose we need not raise the question whether that story was an authentic piece of history of which the name of the field was a monument or whether the story was a legend that had arisen as an explanation of a name of which the true origin had been forgotten.¹ Whatever may lie behind the traditional association of the name of the field with Judas' end, it is apparent

¹ The hypothesis that the story of Judas' miserable end is an *aition* (in the technical sense in which that Greek word is used by Hellenic antiquaries) is perhaps favoured by the fact that the person from whose blood the field is alleged to have taken its name is not the same person in the Matthaean as in the Lucan version of the story. According to Matthew (xxvii. 3-8) the field has acquired its name because it has been bought by the chief priests with the blood-money paid to Judas for the betrayal of Jesus. According to the Lucan version (Acts i. 18-19) the blood is not Jesus's but Judas' own—the field having been the scene of Judas' miraculously horrible death.

that the subsidiary tradition of the field having been originally a potter's field has suggested, in the mind of the evangelist or his source, an echo of something in the Old Testament, and that in this case the *hāfiz*'s memory has been at fault. This rules out all possibility of the story of Judas' end being derived from the misquoted text of Zechariah; and our conclusion will be confirmed if we go on to compare the Matthaean version of the story of Judas' end with the Lucan; for in the Lucan version (Acts i. 18-19) there is no mention of 'the Field of Blood' having been originally a potter's field; and while, here too, the story is capped by a quotation from the Old Testament, the texts cited in this Lucan variant of the story (Acts i. 20) are not Zech. xi. 12-13, but Ps. lxxix. 25 and cix. 8, which have nothing in common with the passage from the prophet either in its authentic original form or in Matthew's misquotation of it. It is evident that the story associating 'the Field of Blood' with Judas' end cannot have arisen either out of the verses from Zechariah or out of the verses from the Book of Psalms which are respectively quoted in connexion with the story in Matthew and in the Acts, but which have no other connexion whatsoever with one another.

Even if there had not been the alternative—and incorrect—quotation from Zechariah in Matthew, the two verses quoted from the Psalms in the Acts could not in any case have been seriously supposed to be the origin of the story that has evoked the memory of them in the author's mind—and this for the simple reason that, though they are apposite as far as they go, their appositeness is only of the vaguest and most general order. There are at least three other reminiscences of the Old Testament in our present collection of passages from the New Testament which are in the same case.

One such reminiscence is the combination of a passage of Trito-Isaiah—'Mine house shall be called an house of prayer for all people' (Isa. lvi. 7)—with a passage of Jeremiah—'Is this house, which is called by my name, become a den of robbers in your eyes?' (Jer. vii. 11)—which is cited in all three Synoptic Gospels (Matt. xxi. 13 = Mark xi. 17 = Luke xix. 46) with reference to the incident of the cleansing of the Temple (Point 17). This combination of two passages from the Old Testament cannot have generated the incident with which it is associated in the New Testament; for the text of Isaiah, though not inapposite, is exceedingly vague in its application, while the text of Jeremiah refers, not to people who have had the effrontery to do unlawful business in the Temple, but to people who have had the effrontery to come and worship in the Temple after having done unlawful business

outside its precincts. We shall conclude that these two quotations from the Prophets have not generated, but have been evoked by, the incident in the story of Jesus to which they are attached in the Synoptic Gospels; and this conclusion will be confirmed when we observe that, in the Gospel according to Saint John (ii. 17), the same incident is capped by quite a different quotation—'The zeal of thine house hath eaten me up'—which comes from Ps. lxxix. 9.

The record of Jesus being crucified with a malefactor on either side of him is followed in the Gospel according to Saint Mark (xv. 28)—alone of the four—by the quotation of a verse from Deutero-Isaiah (referred to as 'the scripture'): 'And he was numbered with the transgressors' (Isa. liii. 12). This verse from the Old Testament can hardly be the origin of the incident in the New Testament with which it is associated in one Gospel out of four, since it does not itself comprise any of this incident's distinctive features. There is no mention in it of the transgressors being two in number; no hint of the 'numbering' taking the tragically practical form of being put to death together; and *a fortiori* no inkling of the three victims' simultaneous and identical death being a death by crucifixion. In fact, the bearing of the quotation upon the incident with which it is associated is so vague that we shall be inclined to dismiss it as a reminiscence which throws no light whatever on the incident's origin; and our last hesitation will disappear when we find the same verse of Isaiah being quoted in the Lucan account of the Passion (Luke xxii. 37) in quite a different place, namely in the story of the hero sending, after the Last Supper, for swords (i.e. in connexion with our Point 32 instead of with our Point 70).

Similarly, the text of Zechariah (xii. 10)—'and they shall look upon me whom they have pierced'—cannot seriously be supposed to be the origin of the incident of the piercing of Jesus's side with a spear (Point 79), in reference to which it is quoted (as 'another scripture') in John xix. 37.

The piercing of Jesus's side is related in the Gospel according to Saint John in connexion with the story (xix. 32-3) that the soldiers, after they had broken the legs of the two malefactors, refrained from breaking Jesus's legs because they saw that he was dead already; and with reference to this (Point 78) the evangelist (John xix. 36) quotes, or rather paraphrases, a pair of texts from the Old Testament—Exodus xii. 46 and Numbers ix. 12—in the form: 'A bone of him shall not be broken.' Now, in the two passages thus cited, the prescription refers to the paschal lamb; and the Crucifixion of Jesus was identified with the sacrifice of the paschal lamb at an early stage in the Christian tradition. In Saint Paul's First Epistle to the Corinthians, v. 7, for example, the identifica-

tion is made explicitly; and it is made tacitly in the Synoptic Gospels, inasmuch as they identify the Last Supper with the Passover meal. Are we to conclude that the same identification of Jesus with the paschal lamb has generated, in the Gospel according to Saint John, the story of Jesus's bones being preserved unbroken on the Cross?

The Fourth Gospel, in contradiction with all the other three, places the Crucifixion—and not the Last Supper—on the day of the preparation of the Passover (John xviii. 28 and xix. 14 and 31; cf. Matt. xxvii. 62);¹ and this was the day on which the Passover lamb was slain and eaten. But this difference of dating, which might seem at first sight to support the hypothesis of the story in John being derived from the identification of Jesus with the paschal lamb, in point of fact rules that hypothesis out of court; for in the Christian tradition the identification is proclaimed in the symbolic act of the consecration by Jesus, at the Passover meal, of bread and wine as his own body and blood; and the author of the Gospel according to Saint John has found himself unable to reconcile this vitally important point in the tradition with his own chronology—according to which, Jesus was already dead, and perhaps already in the tomb, by the hour on the day of preparation at which the Passover meal would have been eaten. Accordingly the author of the Fourth Gospel of necessity refrains from identifying the Last Supper with the Passover meal, and, consistently with this, he omits to mention the institution of the Holy Communion, which is recorded in this context in all the Synoptic Gospels. On this showing, it is evidently improbable that the author of the Fourth Gospel will have been so eager, after all, to identify Jesus with the paschal lamb that he will have invented for this purpose an epilogue of his own to the story of the Crucifixion. Whatever may be the origin of the incident of the soldiers refraining from breaking Jesus's legs, it seems probable that the reference to the ritual prescription concerning the paschal lamb has not generated the incident but has merely been evoked by it.

We shall arrive at a similar conclusion with regard to the relation between Matt. xxvii. 24 (Point 64) and Deut. xxi. 6-7. The correspondence which we have noted between Pilate's hand-washing and Catiline's may seem at first sight to be proved fortuitous when we observe, first, that the outwardly identical act is not inspired by an identical motive, and, secondly, that Pilate's motive has no known ground in Roman, while it has a clear ground in Jewish, religious custom and belief. Catiline washes his hands in order to

¹ For this question of dates see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), pp. 167-72.

cleanse them literally from the physical blood of a victim whom Catiline has just killed with his own hand; Pilate washes his in order to cleanse them ritually from blood-guiltiness for the death of a victim whom he has condemned to death but whose blood has not yet been shed. And in this procedure Pilate, as Origen points out,¹ 'Iudaico usus est more . . . faciens non secundum aliquam consuetudinem Romanorum'.² Though the relevant passage in Deuteronomy is not expressly cited in Matthew, there can be no doubt that it was in the evangelist's mind. Are we then to conclude that the incident of Pilate's hand-washing has been generated, not by the visually corresponding incident in the story of Catiline, but by a ritually corresponding prescription of the Jewish Law? This hypothesis may be attractive at first sight, but its probability dwindles as soon as we examine the relevant passage in the Book of Deuteronomy (xxi. 1-9). No doubt this passage has suggested both the *explanation* that is given of the act and the *words* that Pilate utters while he is performing it; but the differences between the two contexts are not less striking than the resemblances. In Deuteronomy the ritual of hand-washing is prescribed as an expiation for the death of a victim who, instead of being about to be slain, has been slain already, and the case envisaged is that of a person who, instead of having been publicly condemned to death, has been found slain without its being known who is the slayer. These circumstances are so different, and the differences touch the essence of the situation so closely, that we are led to the conclusion that the passage in Deuteronomy has merely coloured the incident in Matthew but has not generated it.

Finally we may ask whether the tableau of the fugitive leaving his wrap in the hands of his pursuers (Point 48) may have been derived from an at first sight analogous incident in the Old Testament story of Joseph and Potiphar's Wife (Gen. xxxix. 12), and may therefore, after all, bear no more than a fortuitous resemblance to the last scene in the Passion of Tiberius Gracchus. Here again we shall find that the superficial resemblance between the respective incidents in the New Testament and in the Old Testament will not stand the test of closer examination. The wrap which, in both the story of Jesus and the story of Tiberius Gracchus, is left in the hands of an unknown male pursuer, is left, in the story of Joseph, in the hands of a woman who is the villainess of the piece in which the fugitive is the hero. Moreover in the story of Joseph and Potiphar's Wife the incident of the seizure

¹ Origen: *In Mattheum Commentariorum Series, Vetus Interpretatio*, cap. 124, in Migne, J.-P.: *Patrologia Graeca*, vol. xiii, col. 1774.

² The writer's attention has been drawn to this passage of Origen by Dr. Martin Braun.

of the wrap is not isolated, as it is in both the other two contexts, but is merely the prelude to a more important incident in which the abandoned wrap is put by its captor to a fraudulent use as a piece of material evidence for lending apparent credibility to a false accusation of which the owner of the wrap is the victim. On this showing, we may hesitate to pronounce that Gen. xxxix. 12 has even coloured Mark xiv. 51-2.

The results of the foregoing examination of quotations from, and allusions to, and reminiscences of, the Old Testament in the collection of passages from the New Testament with which we are here concerned seem to indicate that while the play of chance may, and indeed must, be taken into consideration as one possible explanation of our correspondences between the Gospels and the stories of certain pagan Hellenic heroes, this explanation cannot be pressed to extremes and will not offer us a complete solution of our problem.

An alternative possible explanation is the production of identical results by identical causes.

One obvious general identical cause is the element of uniformity in human nature. Since every human being is brought into the World by a physical process of conception and birth, every hero, like every one else, is bound to have had a mother, and the hero's mother is as likely as anybody else's mother to play an important part in the life of her son. This would dispose of our Point 5. Again, every human being is eventually removed from the World by death; and therefore any enterprise which cannot be accomplished by a single hero in a single lifetime is bound—if it does not die prematurely by dying with its originator—to be handed on from a predecessor to a successor. This would dispose of one of the elements in our Points 1 and 1 A and 86 and 87. In the third place we may observe that, without possessing the intrinsic universality of the figures of a mother or a predecessor or a successor, the figures of a traitor¹ and a bosom friend and a boaster and a mocker—and perhaps even those of a false witness and a convert—are all of them stock characters in the tragi-comedy of human life. It will be seen that the principle of the uniformity of human nature suffices to account for a majority of the common characters set out above in Table IV.

A more precise identical cause which is likewise capable of producing identical results is to be found in a social environment which is the common setting of all the stories of all the heroes

¹ In the story of Dio, for instance (see V. C (ii) (a), pp. 248 and 253, above), Callippus plays Judas to Dio's Jesus, as is pointed out by Eduard Meyer: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), p. 173.

whom we have brought into comparison with one another in our present inquiry. Their lives are all lived in a society that is in course of disintegration; disintegration, as we have seen,¹ brings standardization in its train; and, if the disintegration-process produces a certain measure of uniformity as between the histories of different disintegrating civilizations, it may be expected to produce the same effect in a still higher degree as between the lives of individuals who are all of them children of one and the same disintegrating civilization. The naturalness of this expectation is pertinent to our present subject, since Jesus and the pagan heroes with whom we are bringing him into comparison are, all alike, children of the Hellenic Society in an age—beginning in the latter part of the Hellenic 'Time of Troubles' and running over into the early days of the Hellenic universal state—which is all comprised within a span of not more than three centuries from first to last. This identity of social environment would account, in Points 1 and 1 A, for the change from the predecessor's gentleness to the successor's violence, since we have seen² that both Archaism and Futurism—that is, two out of four alternative ways of life that are followed by would-be saviours in times of social disintegration—are doomed *a priori* to explode into violence sooner or later. The same cause would also account for the hero's addressing himself to the Proletariat and denouncing the Dominant Minority (Points 7–10), and likewise for his pretension to kingship (Point 15). In this connexion we may remind ourselves³ that, in this group of points, the superficial likeness is trivial by comparison with the profound dissimilarity between the respective attitudes and actions of our pagan heroes and of Jesus. While the people to whom they appeal and the people whom they denounce are respectively much the same, there is an extreme difference between the heroes' own respective responses to an identical challenge. The pagan heroes—even those who set out with the gentlest intentions—all end sooner or later by meeting force with force and by attempting to substitute a new mundane régime of their own for the existing mundane régime against which they are up in arms, whereas Jesus not only parts company with all his pagan counterparts but actually breaks right away from the Jewish tradition in which he has been brought up when he persists in retorting to violence with gentleness; in accepting death with resignation instead of with defiance; and in proclaiming that his kingdom is not of This World (Points 45 and 46).

It now looks as though the operation of identical causes and the

³ See V. C (i) (d) 9 (γ), pp. 128–32, and V. C (i) (d) 11, pp. 155–6, above.

play of chance were capable of accounting between them for a majority of our points of correspondence in those chapters of the story that precede the hero's Passion; but this conclusion does not take us very far on our road in search of explanations; for a glance at Table I will show that the points which fall within these earlier chapters amount to no more than 16¹ out of a total of 89,² so that the last chapter, of which the Passion is the theme, accounts for nearly five-sixths of the total number (i.e. for 73 points out of 89). No doubt, in this last chapter too the two causes which we have taken into consideration so far will account for an appreciable number of our correspondences; but in this chapter these correspondences come thronging in such numbers and are also in many cases so remarkably close that we cannot reasonably attribute them all either to the play of chance or to the operation of some identical cause. We must seek farther before we can conscientiously declare ourselves quit of the investigation that we have undertaken. We have still to examine a third possible alternative explanation; and that is the possibility of mimesis.

If mimesis has in fact played a part in producing the correspondences that we are seeking to explain, it is evident that this faculty may have been brought into play in either or both of two quite distinct sets of relations. On the one hand there is the possibility that some of the characters on our historical stage who have made their appearance there at a relatively early date have been taken as objects of mimesis by other characters who have made their appearance later. On the other hand there is the possibility that the mimesis may have been the work, not of our characters themselves, but of the authors who have recorded—and who, in recording, may perhaps have taken liberties with—the heroes' histories.

Is it likely that any of the later characters have modelled their lives and actions to any appreciable extent upon those of other characters that have anticipated them in making their appearance upon the stage of Hellenic history? There is certainly a strong *a priori* probability that the two Gracchi may have consciously and deliberately taken the two Heracleidae as their pattern. In the first place the Roman aristocracy as a whole had already, in the Post-Hannibalic Age, become so deeply imbued with Hellenic culture that the entire Hellenic heritage of memories and ideals had by this time come to be virtually an integral part of the Roman tradition. In the second place we know that the mother of the Gracchi, Cornelia—who was solely responsible for the upbringing of the two heroes, since their father died while they were both

¹ Reckoning 1 A as a separate point.

² Reckoning 1 A and 80 A as separate points.

still quite young¹—moved, with a markedly greater intimacy than most Roman aristocrats of her generation, in the Greek-speaking circles of Hellenic Society. Cornelia was intimate alike with Macedonian Greek royalties and with men-of-letters and philosophers of all Greek nationalities.²

'Gracchus's mother Cornelia saw to it that her son should receive a liberal Hellenic education, and should be thoroughly grounded in Greek literature, from boyhood (*Fuit Gracchus diligentia Corneliae matris a puero doctus et Graecis litteris eruditus*). He always had tutors from Greece who were picked men; and one of these—who had the teaching of Gracchus when he was on the verge of manhood—was Diophanes of Mitylene, who was the greatest master of language in his day in all Greece.'³

This Mitylenaeen rhetor Diophanes, as well as the Cumaeen philosopher Blossius,⁴ is said still to have been Tiberius Gracchus's mentor at the moment when he entered upon his term of office as Tribune of the Plebs and launched his social reforms.⁵ Blossius himself may be reckoned as a semi-Greek in nationality, since Cumae was an Italian city-state of Greek origin which had obtained its charter of Latinization from the Roman Government as recently as the year 180 B.C.⁶ To both Blossius and Diophanes, Agis and Cleomenes would be familiar figures; and their story would be bound to make a deep impression on Tiberius Gracchus as soon as his attention was drawn to it. As aristocrats, as archaists, and as reformers who had made it their first business to grapple with an acute agrarian problem, these two Spartan Heracleidae could hardly fail to suggest themselves to the young Roman statesman as patterns for him to follow.

There is also a certain *a priori* probability that the examples of the Heracleidae or of the Gracchi or of both the Spartan and the Roman pair of heroes may have influenced the leaders of the Hellenic internal proletariat whose stories we have embraced in our comparative view. We have seen⁷ that, in being driven willy-nilly out of the path of gentleness into the path of violence, the would-be archaist reformer is often driven into becoming, in spite of his original intentions, a champion of the Proletariat, and further that, if and when his almost inevitable quarrel with his own kin and kind comes to a climax at which they positively dis-

⁷ In V. C (ii) (a), pp. 236-41, above.

own him, he sometimes seeks and finds a new social habitation and a new political career by turning from an archaist into a futurist and putting himself at the Proletariat's head. One such social migrant is included among our present group of pagan heroes in the person of Catiline. It is evident that a Catiline might bring with him an admiration for a Gaius Gracchus which he might then transmit to the proletarian-born leaders of the Proletariat with whom he had now thrown in his lot.

On this showing, it seems reasonable to make a considerable allowance for the possibility of the direct imitation of one character by another in attempting to account for the correspondences between the stories of our pagan heroes; but this explanation does not carry us very much farther, as will be shown by a glance at Table III above; for, out of 89 instances of correspondences between the stories of one or other of the two Heracleidae and those of the rest of the heroes in our group, only 28 instances are contributed by the stories of other pagan heroes, while no less than 61 are contributed by the story of Jesus. It is these 61 instances from the story of Jesus, and not the 23 from the stories of the Gracchi or the one from the story of Cato Minor or the 4 from the stories of the futurists, that cry out for explanation; and the suggestion that Jesus may have been consciously following in the footsteps of the Heracleidae has only to be formulated in order to refute itself. The Gospels and Josephus alike make it clear that in the first century of the Christian Era the Jews and Hellenes who in that age were living cheek-by-jowl in Palestine lived lives as separate as the Arabs and the Jews are living in the same country to-day. It is improbable that Jesus of Nazareth had ever heard even of his fellow proletarian and fellow Syrian Eunus of Apamea, or of the two Cilician slave-kings, Cleon and Athenio; for, though Coele Syria, and even Cilicia, was not very far from Galilee, these three Oriental futurists only rose to fame in their distant place of exile overseas in Sicily. *A fortiori* it is improbable that Jesus had ever heard of the Gracchi or of Agis and Cleomenes. Accordingly, if we are to believe that the faculty of mimesis has played a part in producing any of the 89 correspondences between the story of Jesus and the stories of our eleven pagan Hellenic heroes, and if we want to discover the field in which mimesis has operated in this case, we must concentrate our attention, not upon the relations between the heroes themselves, but upon the relations between the literary authorities in whose works the heroes' respective stories have been recorded.

In setting out to discover, if we can, whether some of these literary authorities have been influenced by others, our first step

must be to ascertain, as nearly as possible, their respective dates; and our first findings will be—in chronological order—as follows:

Diodorus (*vivebat circa 70–1 B.C.*).

The Gospel according to Saint Mark (*scriptum circa A.D. 65*).¹

Plutarch (*vivebat circa A.D. 45–120*).

The Gospels according to Saint Matthew and Saint Luke (*scripta inter A.D. 70 et 95*).²

The Gospel according to Saint John (*scriptum circa A.D. 100*).³

It will be seen that, while Diodorus's *Library of Universal History* was written at least sixty-five years earlier than any of the other works here in question, the chronological relation of Plutarch's *Lives* to the Gospels cannot be ascertained precisely. We can only say that probably the *Lives* were published later than the Gospel according to Saint Mark, at about the same time as the other two Synoptic Gospels, and earlier than the Gospel according to Saint John.

These results, however, even as far as they go, still leave us on the threshold of our chronological problem; for these works of literature which we have just tentatively arranged in a chronological order all have pedigrees; and, if we now try to grope our way back from the works themselves to their sources, we shall arrive at a different chronological sequence.

To take the Gospels first: Matthew and Luke have one common source in the collection of sayings of Jesus which New Testament scholars call 'Q',⁴ and another common source in Mark; and, while the relative dates of Mark and 'Q' are matters of controversy between scholars, it seems to be generally agreed that both works must have been written before A.D. 70.⁵ The date of Mark is of particular importance for the purpose of our present inquiry, because Matthew, at any rate, is almost entirely dependent on Mark for his account of the Passion.⁶ And, if we proceed to an

¹ 'About half-way through the sixties' according to Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), p. 237; *circa A.D. 65* (i.e. after the Neronian persecution of the Christians, but before the destruction of the Temple at Jerusalem) according to Streeter, B. H.: *The Four Gospels* (London 1924, Macmillan), p. 495.

² Meyer, op. cit., vol. i, p. 239. Streeter dates Luke *circa A.D. 80* (op. cit., p. 540) and Matthew *circa A.D. 85* (op. cit., p. 524).

³ *Circa A.D. 100–20*, according to Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), p. 647. Streeter, on the other hand, dates John *circa A.D. 90–5* (op. cit., pp. 456–7).

⁴ For a tentative reconstruction of 'Q' see Streeter, op. cit., p. 291.

⁵ Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i, pp. 234–6, dates 'Q', on internal evidence, between A.D. 67 and A.D. 70, and therefore slightly later than Mark, which the same scholar, as we have seen (footnote 1, above), dates *circa A.D. 65*. Streeter, on the other hand, who dates Mark between A.D. 64 and A.D. 70, inclines (op. cit., pp. 150 and 191) to date 'Q' earlier than Mark—perhaps as early as A.D. 50.

⁶ Meyer, op. cit., vol. i, p. 212, holds that Luke's, as well as Matthew's, account of the Passion is mainly based on Mark. Streeter, on the other hand, op. cit., p. 202, holds 'that Luke is in the main reproducing an account of the Passion parallel to, but independent of, Mark, and enriching it with occasional insertions from Mark'.

analysis of Mark, we can distinguish one source—'the Twelve-source'—which must have been written later than the martyrdom of the son of Zebedee in A.D. 44, and another, embodying the recollections of Peter, which appears to be of an earlier date than 'the Twelve-source'.¹ *Ex hypothesi*, however, the very earliest sources of the Gospels cannot be anterior in date to the fourth decade of the first century of the Christian Era, and the sources of our pagan authorities for the stories of our pagan heroes can all be traced back to earlier dates than that. For example, the books of Diodorus's work that deal with the history of the Hellenic World during the half century beginning, where Polybius left off, in 146 B.C. are believed to reproduce a continuation of Polybius's history from the hand of Poseidonius (*vivebat circa* 135–51 B.C.).² Plutarch's *Lives of the Gracchi* appears to be derived immediately from a Greek source³ written from the point of view of the philosophic and aristocratic school of Roman republicans whose proto-martyr and fount of inspiration was Cato Minor.⁴ But this immediate source of Plutarch's work appears in turn to have been derived in large measure from Latin biographies of the Gracchi⁵ which were themselves derived from the *Annals* of Gaius Fannius—a statesman-historian who was approximately Tiberius Gracchus's contemporary.⁶ Fannius scaled the walls of Carthage at Gracchus's heels in 146 B.C.,⁷ and he was consul in 122 B.C., which was the year of Gaius Gracchus's second tribunate. We may take it that Fannius's life falls within the dates 166–96 B.C. In the third place Plutarch's *Lives of Agis and Cleomenes* appears to have been derived—again not immediately, but ultimately—in part from the history of Polybius (*vivebat circa* 206–128 B.C.), who must have been born rather less than half a century after Cleomenes himself, and in part from the works of two of Cleomenes' senior contemporaries: his political opponent Aratus of Sicyon (*vivebat* 271–213 B.C.) and his panegyrist Phylarchus (*vivebat circa* 270–210 B.C.).

¹ For the sources of Mark see Meyer, *op. cit.*, vol. i, pp. 236–7. For the grounds for supposing that John was put to death at the same time as James, see *ibid.*, vol. i, pp. 144–5, and vol. iii, pp. 174–7 and 420.

² It is to this source that we may trace the surprisingly humane and sympathetic attitude towards the insurgent slaves in Sicily which comes out in Diodorus's narrative. While Diodorus of Agyrium might perhaps have been inclined, for his own part, to see the story from the point of view of his own compatriots, Poseidonius of Apamea sees it through the eyes of the slaves from Syria and Cilicia who had started life, like Poseidonius himself, as subjects of the Seleucid Monarchy (Poseidonius and Eunus actually came from the same city).

⁴ For this school see V. C (i) (d) 1, vol. v, pp. 390 and 392; V. C (i) (d) 3, vol. v, p. 405; and V. C (ii) (a), in the present volume, p. 250, above.

⁵ Kornemann, *op. cit.*, p. 42.

⁶ For Fannius's work and life see Kornemann, *op. cit.*, pp. 20–37.

⁷ Fannius himself is cited as the authority for this anecdote in Plutarch: *Gracchi*, chap. 4.

What is Plutarch's relation to these literary authorities whose works were written perhaps 250 or even 300 years before Plutarch's own? So far from drawing directly upon these original sources, Plutarch seems to have been content to take over his stories in the shape which they had assumed as the result of a long and complicated literary history.

"The foundation of the narrative, which comes from the historians, the piecing together of this with the biographical matter which had to be imported from elsewhere, the arrangement of the whole round the person of the hero—all this was found by Plutarch ready made. . . . His authorities come from here, there, and everywhere. . . . This variegated tissue is part and parcel of the genre of literature of which Plutarch is for us the representative. . . . Plutarch does not dream of claiming to have woven it himself; his achievement is simply to have produced a work that has on it a sheen of newness. . . . Plutarch's *Lives* constitute, through their existence, a proof that, before Plutarch's day, there was a biographical literature of the Plutarchan kind with a history extending over many generations."¹

If Plutarch's work is so remote from the original sources as this, it would seem at first sight improbable that his text would reproduce the original texts at all closely; yet, surprising though this may be, we have evidence that, at least in one passage, Plutarch's *Lives of Agis and Cleomenes* does reproduce Phylarchus's *Histories*² with a closeness that here and there approximates to identity. This may be verified by comparing Plutarch's chap. 34 (our Point 13) with the passage that is expressly quoted from Phylarchus by Athenaeus in *Deipnosophistae*, Book IV, pp. 141 F–142 F.³ And the equally close verbal correspondence between a passage of Plutarch's chapter 50 and a passage of Book XXVIII, chap. 4, of Justin's epitome of Pompeius Trogus's *Historiae Philippicae* is probably to be explained likewise as an effect of the preservation, in both, of Phylarchus's *ipsissima verba*. When we further consider that the style, tone, and colour of these two passages in the *Lives of Agis and Cleomenes* also prevail through the greater part of this piece of Plutarch's work, and that they exactly tally⁴ with the account of Phylarchus's work that is given by Polybius,⁵ we may feel warranted in concluding that a substantial portion, and perhaps even the greater part, of Plutarch's text consists of *résumés* of the text

¹ Leo, F.: *Die Griechisch-Römische Biographie nach ihrer Literarischen Form* (Leipzig 1901, Teubner), p. 155. The whole of chapter 8, 'Plutarch', and chapter 9, 'Die Form der plutarchischen Biographie', is pertinent to our present inquiry.

² According to Suidas, Phylarchus's work covered the history of the Hellenic World from the death of Pyrrhus in 272 B.C. to the death of Cleomenes in 220 B.C.

³ See Bux, E.: 'Zwei sozialistische Novellen bei Plutarch' in *Klio*, vol. xix (1925), pp. 426–9. It is the latter part of this passage quoted in Athenaeus, i.e. 142 C–142 F, that actually overlaps with the chapter of Plutarch.

⁴ This point is made by Bux, op. cit., p. 428.

⁵ See pp. 457–9, below.

of Phylarchus¹ which survived, with remarkably little defacement, all their temporary lifts in the successive literary conveyances in which they made their long and broken journey from Phylarchus's manuscript to Plutarch's.

This excursion into the realm of *Quellenkritik* gives us the following chronological sequence for our original authorities,² in so far as we can identify these with any certainty:

Aratus (*vivebat* 271-213 B.C.).

Phylarchus (*vivebat circa* 270-210 B.C.).

Polybius (*vivebat circa* 206-128 B.C.).

Fannius (*vivebat circa* 166-96 B.C.).

Poseidonius (*vivebat circa* 135-51 B.C.).

Peter (*testimonium prompsit post* A.D. 30).

'The Twelve-source' (*scriptum post* A.D. 44).

A source peculiar to the Gospel according to Saint Luke³ (*scriptum prae* 'Q', if Meyer is right in dating 'Q' *post* A.D. 67).

'Q' (*scriptum inter* A.D. 67 *et* A.D. 70).

A source peculiar to the Gospel according to Saint Matthew (*scriptum post* 'Q').⁴

The Gospel according to Saint John (*scriptum post* A.D. 100).

Now that we have arrived at this sequence of the earliest authorities which we are able to identify in each case, what are we to make of it? How do our findings bear upon our problem of literary appresentation-and-affiliation? If we are to believe that some, at least, of our correspondences are to be credited to the account of a practice of literary mimesis, then the most obvious conclusion to draw would be that, wherever we have detected a point of

¹ Leo observes in *op. cit.*, p. 175, that Plutarch's '*Lives of Agis and Cleomenes* are reminiscent of his *Life of Aratus*, except that the *Aratus* has been constructed by working the historians into Aratus's *Memoirs*, while the *Agis and Cleomenes* has been constructed by working Aratus and Polybius into the narrative of Phylarchus'. This high estimate of Plutarch's debt to Phylarchus is not impugned by the fact that in the *Lives of Agis and Cleomenes* Phylarchus is cited by name only three times (in chaps. 9, 26, and 49). It is more pertinent to observe that Phylarchus is *not* cited as Plutarch's authority in either of the two passages (in chaps. 34 and 50) which are known, almost for certain, to be of Phylarchian origin. There is a far greater number of other passages in this particular piece of Plutarch's work that can be traced back with certainty to Polybius, and yet Plutarch here cites Polybius as an authority not even three times but only once (in chap. 48). It will be seen that, in Plutarch, the number of express references to an authority gives no indication whatsoever of the extent to which that authority has actually been drawn upon as a source.

² The sequence here given for the sources of the Gospels follows Meyer, *op. cit.*, vol. i, pp. 236-7.

³ See Meyer, *op. cit.*, vol. i, pp. 216-24. Streeter, *op. cit.*, p. 218, suggests that this document, which he calls 'L', was the work of Luke himself, and was written by him *circa* A.D. 60, during his two years' sojourn at Caesarea in attendance upon Saint Paul. He further suggests that Luke subsequently combined 'L', first with 'Q' into a 'Proto-Luke', and then, through this intermediate stage, with Mark, to make the Gospel according to Saint Luke as we now have it (*op. cit.*, p. 219).

⁴ See Meyer, *op. cit.*, vol. i, pp. 213-16, and Streeter, *op. cit.*, p. 231. Streeter, *op. cit.*, p. 150, dates 'M' *circa* A.D. 65. This would make 'M', as well as 'L', anterior to 'Q' if Meyer's date for 'Q' is right. On the other hand, 'Q' is anterior to both 'M' and 'L' if Streeter is right in dating 'Q' perhaps as early as A.D. 50 (see p. 434, footnote 5, above).

correspondence between one literary authority and another, the incident as recorded by the earlier or the earliest of two or more authorities is an authentic matter of fact, but that, when the same incident reappears in some later authority or authorities, it is in this context a piece of fiction which has been fraudulently fabricated out of the genuine fact which the earlier authority has honestly put on record. This conclusion may be obvious, but it involves at least three assumptions: first that the earlier authority in each case is reporting, if not the whole truth, at any rate nothing but the truth; second that the later authority has been guilty of a deliberate act of fabrication; and third that the point in common between the two or more authorities that are in question in any given case has ultimately been derived by the later authority or authorities from the earlier or the earliest, even if only at second or at tenth hand—to the exclusion of the alternative possible hypothesis that all the authorities in question, the earlier and the later alike, have derived the point which is common to them from some source that is not identical with any of them and that is earlier than them all. Not one of these three assumptions can properly be taken for granted; and to look into all three of them closely may be the most profitable step for us to take next.

Dichtung und Wahrheit

Is the apparent case of literary mimesis with which we are now concerned a clear case of plagiarism? The concept of plagiarism pre-supposes the existence of a series of works of literature which have been successively published at definite dates in a chronological sequence and which, each and all, can be attributed respectively to the pens of particular individual authors. In any sophisticated social milieu authorship is the normal way of literary creation, and in such milieux it eclipses every alternative way so completely that it becomes easy to forget that works of literature can be brought into existence in any other way than through being deliberately planned in the mind, and as deliberately written by the pen, of somebody who in consequence will be recognized on all hands as the sole and unquestionable author of 'his' book. Nevertheless this sophisticated way of literary creation ought not to be taken for granted, without inquiry, in any and every case; for, while every act of creation is, no doubt, the travail of some individual soul,¹ it does not follow that every creator will think of setting his stamp upon his handiwork in order to apprise the World that it has come from his workshop. This assertion of authorship implies

¹ On this point see III. C (ii) (a), vol. iii, pp. 230-1, above.

some touch of a self-consciousness and egotism which are ingrained on the seamy side of Civilization but which are conspicuous by their absence on the primitive level of human life; and in human history hitherto Civilization has been the exception and primitiveness the rule. In other contexts we have not only observed that the number of human societies of the primitive species that have come into existence up to date is vastly greater than the present muster-roll of civilizations:¹ we have also observed that within the bosom of any civilization of which we know—and this at any stage of its history in regard to which we have at our command the necessary evidence for making the observation—the individual ‘members’ of the society who still remain at or near the primitive level will always be found to outnumber, and this overwhelmingly, the handful of higher personalities who create and sustain the civilization by projecting a shadow of their own inner life into social institutions which govern the outward lives of the primitive majority of their fellows.² On this showing, it is evident that the primitive *êthos* does not cease to count just because it may have been pushed momentarily into the background; it has to be reckoned with always and everywhere; and this consideration applies to the study of literature no less than to that of any other human activity.

What, then, is the normal means of literary creation—and transmission—in a primitive social milieu? The question can be answered in negative terms which may have a bearing upon our present inquiry. On the primitive level there is no consciousness of authorship, no desire to claim copyright, and consequently no such thing as plagiarism. There is also, in such milieux, no sense of a distinction between ‘fact’ and ‘fiction’. In a primitive social circle the tale of life is taken, by teller and listener alike, in the way in which a child takes a fairy story.³ And in the telling of a fairy story everybody and everything is anonymous—‘the author’ as well as his audience, and the heroes and heroines as well as the author. Fairy-tales are, in fact, ‘folk-tales’ which have lingered on in the nursery after they have been swept out of the parlour; for the anonymity of the characters is the hall-mark which distinguishes ‘folk-tales’ from other forms of literature.⁴

Such anonymous ‘folk-tales’ are the native voice of a ‘folk-memory’ which is at work all the time behind the scenes even in those sophisticated theatres of life in which audience and actors

¹ See I. C (iii) (a), vol. i, pp. 147–8, above.

² See III. C (ii) (a), vol. iii, pp. 239–44, above.

³ See I. C (iii) (e), Annex, vol. i, p. 442, above.

⁴ See Chadwick, H. M.: *The Heroic Age* (Cambridge 1912, University Press), pp. 110–111.

virtually conspire to draw a veil over this telltale relic of a simpler past; and in primitive milieux this ancient way of distilling the quintessence of experience and transmitting the elixir from one generation to another holds the field without a rival. 'Folk-memory' performs, for people who are still content to rely on it, substantially the same service as is performed for the sophisticated by the writing and reading of books. It serves as a channel for the passage of a mental current from mind to mind in *saecula saeculorum*; but the waters that flow along this primitive bed have quite a different effect upon the mental works of Man according to whether these works themselves happen to be primitive or sophisticated. For the works of primitive minds the waters of this subterranean mental stream serve as waters of Memory; but on the works of sophisticated minds they act as waters of Lethe. It seems that this current cannot carry along with it the experiences that fall into its stream without reducing them, all alike, to an anonymity which is native to the works of primitive minds, but which for the works of sophisticated minds is tantamount to a loss of identity. As a literal torrent of water tools the rocks and pulps the tree-trunks that cross its path until at length it casts them up again, far down stream, high and dry in the unrecognizable shape of smooth-faced boulders and water-logged driftwood, so the mighty current of 'folk-memory' is perpetually engulfing foreign objects—fragments of historical events, glimpses of historical personages, and sometimes even scraps of sophisticated literature (where a primitive social milieu is in contact with a sophisticated one)—and the flotsam fares as hardly in the mental as in the physical stream. Here too it is battered out of all recognition before it is cast up again as jetsam on a distant strand.¹

In other contexts we have already watched the waters of Lethe at their work of weathering away the authentic original features of historical events and historical personages which have fallen into their bed. We have seen how some barbarian war-lord, whose historical career can be traced, and his historical importance assessed, from the archives of the civilization on which he has preyed, may, as a hero of epic, assume an importance and acquire a career in the realm of poetic imagination which bear little or no relation to his authentic standing in the realm of prosaic fact.² Nor is it only the External Proletariat that displays this imagina-

¹ For example, in the *Ahiqar Romance* the characters of Sennacherib and Esarhaddon have been transformed to a degree at which they no longer betray any recognizable affinity with their historical originals (Meyer, E.: *Der Papyrusfund von Elephantine*, 2nd ed. (Leipzig 1912, Hinrichs), pp. 120-1).

² See V. C (i) (c) 3, Annex III, 'Historical Fact and Heroic Tradition', in vol. v, pp. 607-14, above.

tive power of transmuting 'fact' into 'fiction' by an alchemy which is at once destructive and creative. We have also watched the history of Alexander the Great being transmuted into the Alexander Romance at the very time when an authentic record was being made, out of an ample dossier, by conscientious and scientific-minded Hellenic historians.¹ How came the figure of the Macedonian war-lord to be kidnapped and carried off bodily into Fairyland² in the broad daylight of Hellenic rationalism? And whose were the impudent hands that stole the body? The answer is that Alexander's body was snatched by Orientals whom the conqueror himself, in his historical career, had forcibly conscripted into the ranks of the Hellenic internal proletariat.³ And this sensational capture, which was effected almost on the morrow of Alexander's death, was the first successful stroke in an Oriental counter-attack which was to culminate, more than nine centuries later, in the eviction of Alexander's Roman successors from their last foothold on Oriental ground by the prowess of the Primitive Muslim Arabs. A millennial war of *revanche* which was carried to its conclusion on the military plane in the days of the Caliph 'Umar had been opened on the literary plane as early as the days of Alexander's own diadochi.

Why was it that the Orientals, in their long-drawn-out encounter with Hellenism, were able to score this precocious and premonitory success in the field of literature so long before they were able to follow it up in the fields of war and politics? The answer seems to be that, at the time when Alexander suddenly annexed the domain of the Achaemenian Empire to the Hellenic World by the superficial method of military conquest, the ground—or, rather, the river-bed—was already prepared for a rapid transmutation of an episode of Hellenic history into a theme of Oriental romance.

¹ See V. C (i) (c) 3, vol. v, p. 252, and V. C (i) (c) 3, Annex III, vol. v, p. 608, above. 'Pseudo-Callisthenes should be regarded as the narrator and formulator of an historical myth. . . . That he used historical sources is no argument against this, for in the era of Alexandrian scholarship even myths were built upon a foundation of scholarship, as "the Myth of the Twentieth Century" is based upon an interpretation of anthropology and history. It is from the dregs and lower strata of historiography that the Alexander Romance has drawn its "erudition"' (Braun, M.: *History and Romance in Graeco-Oriental Literature* (Oxford 1938, Blackwell), p. 32).

² 'One may be sure that the common people, to whom it belonged spiritually and socially, believed in the truth of the account as implicitly as a child believes a fairy-tale. . . . The Alexander Romance belongs spiritually and socially to the common people who cannot clearly and consciously differentiate between truth (*ἀλήθεια*), lies (*ψεύδος*), and literary fiction (*πλάσμα*) and therefore willingly accept the myth, especially the written myth, above all when this myth appeals to their wishes and ideals, as members of a particular social group. In the Alexander Romance truth and fiction are inextricably interwoven. The categories *ψεύδος* and *πλάσμα* cannot be applied at all to the mass of untrue and fantastic statements. To apply them would be unjust to the anonymous author and his readers, because the standards and categories of the historian are not applicable to their intellectual capacities' (ibid., pp. 33-4).

³ For this social effect of Alexander's conquests see III. C (i) (a), vol. iii, pp. 140 and 149-51; III. C (i) (d), vol. iii, pp. 197-9; and V. C (i) (c) 2, vol. v, pp. 64-5, above.

The 'sea-change' which the historical Hellenic figure of Alexander was now to undergo in the imagination of the Oriental subjects of the Achaemenian Empire's Macedonian 'successor-states' had already been undergone by other historical figures who once upon a time had played an authentic part in the histories of two non-Hellenic civilizations—the Babylonian and the Egyptian. By the time when Hellenism imposed itself, by force of Macedonian arms, upon the Syriac, Egyptian, Babylonian, and Indic worlds, the Babylonian and Egyptian worlds had already been subjugated, by force of Achaemenian arms, to the Syriac. In other contexts we have noticed how vehemently and persistently these two subjugated societies kicked against the pricks, and how warmly they welcomed Alexander as a deliverer from the Syriac yoke.¹ But, while they had been fighting a losing battle against the aggression which the Syriac Society was committing against them on the military and political plane in the shape of an Achaemenian imperialism, the Egyptian and Babylonian societies had all the time been taking their Syriac conquerors captive on the plane of 'folklore'. They had both of them succeeded in instilling a memorial of their own past greatness into the 'folk-memory' of their latter-day masters. And this memorial had taken the form of 'folk-tales' in which certain authentic characters and events of Egyptian and Babylonian history had been transmuted into subjects of romance. The past greatness of the Babylonian World had been embalmed in the romance of 'Ninus and Semiramis'; the past greatness of the Egyptian World in the romances of 'Sesostris' and 'Nectanebos'. And the historical materials out of which these three romances are woven can be identified. The name of the legendary Queen 'Semiramis of Babylon' is taken from that of an historical queen of Assyria, Sammu-ramat, who was the wife of King Shamshiadad V (*regnabat* 824–810 B.C.) and the mother of King Adadnirari III (*regnabat* 809–782 B.C.).² 'Ninus', who plays the hero to Semiramis' heroine, is an abstraction that stands for the prowess of all the kings that ever went forth to war from Nineveh.³ In a similar way 'Sesostris' seems to stand for the prowess of all the emperors of the Twelfth Egyptian Dynasty who were the life and soul of the Egyptian universal state,⁴ while Nectanebos stands for the prowess of all the patriot-kings who ever led Egyptian forlorn hopes against any of the Asiatic oppressors of the Egyptian World from the days of Esarhaddon to the days of Artaxerxes Ochus.⁵

¹ See IV. C (ii) (b) 2, vol. iv, p. 100, footnote 4; V. C (i) (c) 2, vol. v, pp. 94 and 123, with footnote 2; V. C (i) (c) 4, vol. v, pp. 347–8; and V. C (ii) (a), in the present volume, p. 203, above.

³ *Ibid.*, p. 8.

⁴ *Ibid.*, p. 13.

⁵ In these romances the Babylonian and Egyptian imagination found 'compensation'

Thus, by the time when the Hellenes broke in upon the Oriental scene, the Egyptian and Babylonian 'folk-tales' had already travelled far from the historical facts which had been their starting-point; and in this situation the Egyptian and Babylonian civilizations presented themselves for inspection by Hellenic eyes in two distinct guises.¹ In both societies there was a sophisticated upper stratum which wanted, and tried, to set before its Hellenic liberators the authentic history of the venerable civilization for which the constituents of this still surviving upper social stratum felt themselves to be trustees. The monuments of this effort are the learned works of the Egyptian scholar Manetho and the Babylonian scholar Berossus; and the fragments of the two works that have come down to us are enough to show that both these scholars were at pains to exclude all 'folk-lore' from treatises that were intended to be scientific. Manetho boycotts the legend of 'Sesostris', Berossus the legend of 'Semiramis'.² This scholarly conscientiousness, however, was ultimately of no avail; for the sophisticated Hellenic public to which these treatises were intended to appeal was inevitably a small one; and the picture of the Egyptian and Babylonian civilizations that eventually impressed itself on Hellenic minds was not the authentic portrait which the two scholars had presented: it was a fancy picture in the gorgeous colours of the legends which Manetho and Berossus had sought, without success, to suppress. In the matter of Nectanebos the extant literature enables us to catch a glimpse of the stages by which 'fiction' gained the upper hand over 'fact'.³ The historical tradition, in which the motives, as well as the actions, that are attributed to Nectanebos are soberly realistic, has been preserved in Diodorus's *Library of Universal History*.⁴ In the next stage—which appears to be represented by a story, preserved by Josephus, in which the hero's name has been changed from Nectanebos to Amenophis—the actions are still historical, but the motives are already fictitious.⁵ In the third and last stage, which is represented by the Nectanebos Prologue to the Alexander Romance,⁷ the actions as well as the motives have passed out of the realm of History into that of Legend.

It will be seen that, by the time when Alexander burst into view

(in the psycho-analyst's technical sense of the term) for the brute fact of Achaemenian supremacy. The apocryphal conquests of the legendary 'Sesostris' are carefully made to surpass those of the historical Achaemenidae: e.g. Sesostris succeeds where Cambyzes had failed when he conquers the Arabs and Ethiopians, and where Darius the Great had failed when he conquers the Scyths (*ibid.*, pp. 15-17).

¹ *Ibid.*, pp. 3-5.

³ See *ibid.*, pp. 19-25.

⁴ Diodorus, Book XVI, chap. 48, § 6; chap. 51, § 3 (see Braun, *op. cit.*, pp. 21-2).

⁷ *Ibid.*, pp. 21-2.

over the horizon of the Oriental World, the flood of Lethe was already flowing strong and the waters were waiting to swallow the audacious intruder up. *Patet immane et vasto respectat hiatus!*¹ The alchemy which had done such wonders with the historical Sammuramat and with the historical Nectanebos and with all the Senwosrets was promptly applied to Alexander in his turn. On the magic soil of Egypt the son of Philip became a son of Amon; his Hellenic human head sprouted his Egyptiac father's ram's-horns;² and, in this shape of Dhu'l-Qarnayn, Alexander soon went the way of Nectanebos.³ The Alexander Romance is presented from an Egyptiac standpoint.⁴ It pictures the Egyptiac and Hellenic worlds as in league with one another against the Syriac World.⁵ We may infer that the Alexander Romance was conceived in the womb of a Graeco-Egyptian underworld in the purlieu of the City of Alexandria;⁶ for this Alexandrian fraction of a now vastly expanded Hellenic internal proletariat was the sole remaining beneficiary of Alexander's vision of a universal human fellowship⁷ in an Egyptiac World in which Alexander's Lagid successors had elsewhere substituted a cold-blooded policy of exploitation⁸ for Alexander's own generous dream of fraternization.⁹

Here we see Hellenic history being transmuted into Oriental 'folk-lore'; but this process of transmutation was not a 'one-way' movement. We can also see Oriental 'folk-tales' being transmuted—not, of course, into authentic history but into the sophisticated, instead of the primitive, kind of literature, through being suffused with Hellenic *motifs* that are palpably alien from the native Oriental *êthos*. For example, the Hellenic *motif* of eroticism has made its way into a piece of Jewish literature—*The Testaments of the Twelve Patriarchs*—which appears to have been written towards the end of the second century B.C.;¹⁰ for in *The Testament of Joseph* the Old Testament story of Potiphar's Wife has demonstrably been recast under the influence of the Hellenic story of Phaedra.¹¹ There

¹⁰ *Ibid.*, p. 46.

¹¹ For the influence of the Hellenic story of Phaedra and Hippolytus upon the Jewish story of Potiphar's Wife and Joseph see *ibid.*, pp. 46-95, and eundem: *Griechischer Roman und Hellenistische Geschichtschreibung* (Frankfurt am Main 1934, Klostermann), pp. 23-117. Dr. Braun's thesis is summed up in the last paragraph on p. 114 of the latter monograph. For what follows on this subject in the present Study the writer is wholly indebted to the results of Dr. Braun's researches.

is even a verbal correspondence between *The Testament of Joseph*, v, 2, and Euripides' *Hippolytus*, ll. 656-8.¹ And we can observe how the cumulative effect of the Hellenic influence upon Jewish literature told during the two hundred years or so that elapsed between the lifetime of the author of *The Testaments of the Twelve Patriarchs* and the lifetime of Josephus (*vivebat circa* A.D. 38-108). *The Testament of Joseph* has adopted the *motif* of the Hellenic story of Phaedra without abandoning the native Jewish style, spirit, or ethical standards; and 'the Haggadoth narrator judaizes alien elements' in the same fashion. On the other hand 'Josephus hellenizes Biblical and Haggadic tales, so that they become something completely new and different'.²

In Josephus's sophisticated pages the Hebrew patriarch Joseph has been disguised out of all recognition by being dressed up in the Hellenic habiliments of an invulnerable Stoic sage who is *τύχη δοῦλος, φύσει ἐλεύθερος*.³ In this Josephan Hellenized version of the story of Joseph and Potiphar's Wife there are a number of points of correspondence not only with the story of Hippolytus and Phaedra, but also with the story of Lucretia, as these two Hellenic stories are recounted in the works of five different Greek and Latin authors;⁴ and some of the correspondences between Josephus's *Antiquities* and Seneca's *Phaedra* extend to an identity of words.⁵ How are these correspondences to be explained? It seems unlikely that Josephus has been borrowing directly from the Hellenic authors in whose works the points of correspondence are to be found. Three out of the five—Livy, Ovid, and Seneca—write in Latin; and it seems most improbable that Latin literature was an open book to Josephus, considering the imperfectness of his mastery even of Greek. Of the two Greek authors—Dionysius of Halicarnassus and Heliodorus of Emesa—Dionysius, again, seems unlikely to have been studied by Josephus, while Heliodorus is ruled out of account by the fact that he was Josephus's junior by perhaps not less than 200 years. We are left with the alternative of explaining the correspondences between Josephus and the five pagan Hellenic authors here in question on the hypothesis that they have all of them been borrowing—though not necessarily any of them at first hand—from some common source;

¹ Braun, *History and Romance*, p. 57.

² *Ibid.*, p. 93. Compare *Roman und Geschichtschreibung*, pp. 41 and 113.

³ *Ibid.*, pp. 30-4.

⁴ See the table of nine correspondences between Josephus, on the one hand, and Dionysius, Heliodorus, Livy, Ovid, and Seneca, on the other hand, *ibid.*, p. 96.

⁵ e.g. Josephus: *Antiquities*, Book II, § 43 (Joseph's first speech) || Seneca: *Phaedra*, ll. 131-5 (Braun: *Roman und Geschichtschreibung*, pp. 41-2); Josephus: *Antiquities*, Book II, §§ 51-2 (Joseph's second speech) || Seneca: *Phaedra*, ll. 145-64 (Braun, *op. cit.*, pp. 82-7). The second of these two verbal correspondences also extends to a passage of Philo (*ibid.*, pp. 82-4).

and the scholar who has brought this set of correspondences to light has put his finger on a possible common source for them all in the shape of a no longer extant first version of Euripides' *Hippolytus*.¹

Thus, by the time of Josephus, who was an approximate contemporary of Plutarch's, the volatile waters of Lethe had made considerable play with the Hellenic and Oriental flotsam that had been jostling in the current since the time, by then some four hundred years back, when Alexander had troubled the waters in his momentous act of crossing the Hellespont. On the one hand the historical figure of the Hellenic conqueror had been transmuted into the legendary figure of a hero of Egyptian romance; and on the other hand the mythical figure of the Syriac patriarch Joseph—who was the eponym of a pair of Israelitish tribes—had been dressed up in an outfit of Hellenic stage properties borrowed partly from Euripides and partly from Zeno.

These proven facts of Hellenico-Oriental literary history during the first four centuries *post Alexandrum* throw at least three beams of light on the problem which we are studying in this Annex. In the first place these facts make it clear that 'folk-memory' is a highly conductive medium within the limits of its operation. We have observed above that these limits are narrowly drawn. A large part—perhaps the greater part—of the conventional furniture of sophisticated minds will not float in these waters at all; and a piece of this precious furniture that falls into the river is apt to sink like a stone to the bottom of the river-bed, where it may remain stuck in the mud for good and all, without any prospect of being rolled along with the current and so eventually being cast up again on shore. On the other hand we can see now that any foreign bodies that the current of 'folk-memory' is capable of carrying along with it have a prospect of travelling far and fast; and in the second place we can read the secret of this mobility. The characters and events that travel in Lethe's stream become mobile thanks to becoming anonymous. In reducing them to anonymity the alchemy of these waters fines them down to a degree of tenuity at which they are almost capable of passing through a needle's eye.² In this medium

¹ For this possible common source see Braun: *Roman und Geschichtschreibung*, pp. 87 and 97; *History and Romance*, pp. 49–50. On this point Professor Gilbert Murray observes: 'I have always had a difficulty about the First Hippolytus. Normally a second version outbids the first, but here the first goes beyond the second, and the second has more sophrosyne. I think the explanation is that Euripides was putting on the stage a story, an Egyptian 'novelle', and first made the mistake of putting the incidents of the story straight on to the stage: e.g. Phaedra's appeal to Hippolytus. Afterwards he made the technical improvements required for the stage.'

² e.g., 'concepts and figures belonging to the religion of Zarathustra found their way [into Judaism] above all in the lower strata of the [Jewish] people—even though those concerned were perhaps entirely unaware that these elements were of foreign origin'

of 'folk-memory' 'what is associated with the story of one figure is soon attributed to another'.¹ In the third place—and this point is of particular importance for our main inquiry—we can see that, in the shape of 'folk-lore', elements native to one culture can make their way into the life of another culture even at times when, on the sophisticated surface of life, the two cultures which are thus in effective communication with one another at a lower level are consciously antipathetic and are even each doing their utmost to hold the other at arm's length. The 'folk-tales' of 'Ninus and Semiramis' and 'Sesostris' and 'Nectanebos' made their way into the Syriac culture out of the Babylonian and Egyptian cultures at a time when the upper social stratum of the two transmitting societies was in revolt against the recipient society. The *motif* of the Hellenic story of Hippolytus and Phaedra began to make its way into the Jewish story of Joseph and Potiphar's Wife after the breach between Jewry and Hellenism in the second quarter of the second century B.C.;² and this literary commerce reached its climax, about two hundred years later, in a generation which also saw the climax of the conflict between Jewry and Hellenism on every plane of conscious life. It looks as though the stream of 'folk-memory' flows at some level in the psyche at which the consciousness of cultural and national differences does not interfere with the primitive sense of a common humanity. And here we have an underground channel of intercourse between one culture and another which cannot easily be blocked by conscious and deliberate mental inhibitions. When once a piece of mental furniture that is the product of one culture has succeeded—at whatever price in the way of transmutation and attenuation—in keeping afloat in the stream of 'folk-memory', it will have acquired—at this price—a prospect of being carried past obstacles, and under barriers, which would almost certainly have availed to prevent its passage from one culture to another if it had been travelling in its original form on the sophisticated surface of life instead of having sunk to the primitive depths and there changed almost out of recognition.

These lights from other examples of literary intercourse across, or underneath, the superficial barriers between mutually hostile cultures prompt us to ask whether 'folk-memory' may be perchance the medium through which the story of Jesus and those

(Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), p. 95). If for 'even though' (*auch wenn*) we were to substitute 'just because' (*gerade weil*), we might be approaching nearer to the truth.

¹ Braun: *History and Romance*, p. 4.

² See V. C (i) (c) 2, vol. v, p. 68, and V. C (i) (d) 9 (β), in the present volume, pp. 103-5, above.

stories of pagan Hellenic heroes with which it displays our 89 points of correspondence have come into contact with one another. If the answer to this question is found to be in the affirmative, we shall still have to inquire whether this contact has been direct or whether—as seems the more probable explanation of the correspondences between the story of Joseph and the story of Hippolytus—the two stories, or sets of stories, have acquired their common features through having respectively and independently come into contact with some older piece of jetsam which has been travelling in the stream of Lethe side by side with both of them. It is idle, however, to enter upon these other inquiries until we have answered the prior question whether the story of Jesus on the one hand, and the stories of our eleven pagan Hellenic heroes on the other hand, do contain any elements of ‘folk-lore’. A physiographer can tell, by the evidence of shape and patina, that a boulder or a log has at some stage of its history been water-borne. It may perhaps be practicable for a student of history to tell by analogous signs that a character or event which lies embedded to-day in some work of sophisticated or semi-sophisticated literature has travelled in the stream of ‘folk-memory’ once upon a time.

In the Gospels—to take them first—we shall not be surprised to find elements of this sort; for the Gospels can be properly described as the epic cycle of the Hellenic internal proletariat;¹ and epic poetry is a kind of *Zwischenreich* between the two mental realms of ‘folk-lore’ and history.

We have already taken note² of one piece of ‘folk-lore’ which the Gospel according to Saint Luke has in common with a work of the pagan Hellenic poet Hesiod. Shepherds abiding in the field are startled by an epiphany of the Heavenly Host, who have singled them out to be the recipients of the announcement of a theogony. We may now observe that not only the song of the Heavenly Host (Luke ii. 8–14) but also the song of the seer Simeon, which comes in the same chapter of Luke (ii. 25–35), has a counterpart in one of the Pāli scriptures of the Hinayanian Buddhist school of philosophy (Suttanipāta III, ii, 679–700) in the vision and the song of the seer Asita. This Indic seer has a vision of the Gods singing and dancing for joy, and is told that they are rejoicing over the birth of the Buddha in the form of a man child in the village of the Sakyas. Thereupon Asita goes to Kapilavastu, takes the infant Gautama in his arms, and prophesies his future greatness, with the further prophecy that the seer himself will not live to witness it. On this last point Asita’s feeling is different from Simeon’s;

¹ For this description of them see I. C (iii) (e), Annex, vol. i, p. 449, above.

² In V. C (i) (e), pp. 174–5, and in V. C (i) (d) 11, Annex I, pp. 363–4, above.

instead of being content to depart in peace after one glimpse of the saviour in his infancy, he regrets that he will not live long enough to hear the doctrine that the saviour will preach when he has grown to manhood; but this single point of difference is outweighed by the several points of similarity between the respective passages of the Suttanipāṭa and the Gospel according to Saint Luke; and these resemblances are cumulatively too close to be dismissed as fortuitous.¹

¹ This correspondence between a point in the Gospels and a point in the legend of the Buddha is taken—as are also all the other correspondences between the Gospels and the legend of the Buddha that are cited in the following pages—from Aufhauser, J. B.: *Buddha und Jesus in ihren Paralleltexen* (Bonn 1926, Weber).

How are we to account for the presence of these common elements, which all bear the marks of having either originated in, or travelled down, the stream of 'folk-lore', in the stories of an Indic saviour who lived in Bihar and a Syriac saviour who lived in Palestine? The common source may, of course, be some stratum of 'folk-lore' that was so ancient and widespread that it was inherited by both the Indic and the Syriac culture, independently of one another, from the cultural common stock of Primitive Mankind. This explanation is simple, but it is not very convincing, considering that neither the Indic nor the Syriac Society was one of those primary civilizations that arose directly out of primitive life, and also considering the closeness of the correspondences even in points of detail. It seems unlikely that these correspondences would have remained as close as this if the legends had been travelling down two separate streams of 'folk-memory' since, at latest, the fourth millennium B.C. It seems more probable that these common elements in the stories of Jesus and Gautama have originated either in a specifically Syriac or in a specifically Indic cycle of 'folk-lore' and that they have travelled from the Syriac to the Indic World, or alternatively from the Indic World to the Syriac, at some date not long anterior to that of the latest, and perhaps considerably posterior to that of the earliest, of the Christian and Buddhist scriptures in which they are now embedded.

While the Gospels all appear to date from the second half of the first century of the Christian Era, the Buddhist scriptures here in question have a much wider chronological range. The Suttanipāṭa appears to have been written *circa* 300 B.C., while the date of the Padhānasutta and Samyutta-Nikāya appears to be at any rate anterior to the beginning of the Christian Era (*ibid.*, p. 7); but on the Buddhist side the correspondences are not confined to these relatively early Pāli scriptures of the Hinayanian Buddhist philosophy. Some of them occur in the scriptures of the Mahayanian Buddhist Church which are younger—and this in some cases perhaps by several centuries—than the Christian Gospels, though their sources may be almost as old as the Pāli scriptures of the Hinayāna (*ibid.*, loc. cit.). The correspondences between the Gospels and these Mahayanian scriptures may, of course, be due to elements in the latter which only found their way into them in the latest phase of their literary history; and in that case these particular correspondences might be explicable as the result of an infiltration of Syriac 'folk-tales', which had already made their way into the Gospels, into the Mahayanian legend of the Buddha in an age (*circa* A.D. 78–123, in the reign of the Kushan King Kanishka) when the Mahāyāna was the prevailing religion in a Kushan Empire which bestrode the Hindu Kush and embraced the north-eastern corner of the Syriac World as well as the north-western corner of the Indic World (see II. D (vii), vol. ii, pp. 372–3, and V. C (i) (c) 2, vol. v, pp. 132–6 and 139–40, above). This explanation, however, would not in any case cover the correspondences between the Gospels and the Pāli scriptures which are anterior to the Christian Era; and these will have to be accounted for in one or other of two possible ways. If the common elements are of Syriac origin, we must suppose that they found their way out of the Syriac into the Indic World during the period—beginning before the close of the sixth century B.C. and ending at some date unknown before the invasion of India by Alexander the Great—when the Indus Valley was politically united with the Syriac World under the aegis of a common *Pax Achaemena*. On the other hand, if the common elements are of Indic origin, we must suppose that they found their way from India to Palestine, at some date between Alexander's incursion into Northern India and the middle of the first century of the Christian Era, either by the overland route from Pataliputra via Seleucia-on-Tigris and Antioch-on-Orontes or by the maritime route from the South Indian ports to Egypt. The overland route seems to have been opened after the approximately simultaneous establishment of the Mauryan Empire in India and the Seleucid Empire in South-Western Asia; the trade along this route received a great stimulus from the conquest of the now

We have also already come across another unmistakable deposit of 'folk-lore' in the Matthaean and Lucan prologues to the Gospel story of Jesus's life and preaching; and this tale of the conception and birth of a child who is not the son of his mother's husband is told, as we have seen, not only of Jesus but also of several pagan Hellenic men of mark—Plato, Alexander, Scipio Africanus Major, Augustus—who all of them likewise in some sense played the part of saviours, besides being told of several pagan Hellenic demigods or heroes: Ion, Perseus, Hēraklēs.¹ Another story which hangs together with the miraculous-birth story, and which is found in the Gospels in the same context, is that of the miraculous—or, at any rate, extraordinary—escape of the child from a mortal danger which threatens him in his infancy. In another context² we have already noticed one widespread version of this story in which the babe is a foundling; and in this connexion we have observed that the Lucan account of the infancy of Jesus preserves at least one vestige of the foundling *motif* in representing the new-born babe as being laid in a manger. We may now observe that the Matthaean account preserves a variation on this theme which is also credited in the legend of one of those pagan men of mark who are credited with a divine paternity. In the legend of the infancy of Augustus,³ as in the prologue to the Gospel according to Saint Matthew, the villain does not confine his villainy—as he does in the more usual

derelict domain of the Mauryan Empire by the Euthydemid Bactrian Greek prince Demetrius in the second decade of the second century B.C.; it survived the collapse of the Euthydemid and Seleucid Empires; and it revived in the last century B.C., when Pompey imposed a *Pax Romana* upon Syria and when the Palmyrenes (see II. D (i), vol. ii, p. 11, above) opened up a short cut from Dura to Damascus across the northern corner of the North Arabian Desert (see Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), pp. 61-2, 260-1, 361-3, 366-7). As for the maritime route, the trade along it was commanded by South Arabian middlemen until the first through-voyage from Egypt to India was made by Eudoxus of Cyzicus *circa* 120 B.C. Eudoxus's Greek successors gradually shortened the voyage—which in Eudoxus's day was still made coastwise all the way—by cutting more and more adventurously across the open sea with the aid of the monsoons; and this process of shortening, which began *circa* 100-80 B.C., was completed *circa* A.D. 40-50 (i.e. on the eve of the precipitation of the story of Jesus in the Gospels), when the Greek navigators of the Indian Ocean ventured at last to sail straight across the open sea from the Somali coast to the southern tip of India, without approaching Arabia at all. As a result of this Greek conquest of the Indian Ocean, pepper was obtainable in abundance at Athens in 88 B.C., and a Buddhist gravestone, erected before the end of the Ptolemaic Age, has been discovered by Sir Flinders Petrie at Alexandria (Tarn, *op. cit.*, pp. 367-75, superseding eudem: *Hellenistic Civilisation* (London 1927, Arnold), pp. 196-9). It will be seen that the means of communication between India and the Levant steadily improved in the course of the three and a half centuries between the writing of the Suttanipāta in India *circa* 300 B.C. and the writing of the Gospels in the Levant in the second half of the first century of the Christian Era.

¹ See IV. C (iii) (c) 2 (α), vol. iv, p. 263, and V. C (ii) (a), in the present volume, pp. 266-9, above. ² In III. C (ii) (b), vol. iii, pp. 259-61, above.

³ Recounted, on the authority of one of Augustus's freedmen, Julius Marathus, by Suetonius: *Life of Augustus*, chap. 94 (see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), pp. 57-8). A massacre of innocents, as an expiation for the appearance of a comet, is also ascribed to Nero (Suetonius: *Life of Nero*, chap. 36), but in this case it is not suggested that the villain's motive is a fear that one of his victims may be destined to supplant him on his throne.

version of the tale¹—to an attempt upon the life of a single babe who (he fears) may be destined to supplant him; in order to make sure that his destined supplanter shall not survive, he gives orders for the destruction of all the infant life of an entire community. Herod, made aware by the Magi that a Messiah has been born in Jewry, and informed by the doctors of the Jewish Law that the Messiah's birth-place is to be Bethlehem, decrees the slaughter of all children in Bethlehem from two years old and under.² The Senate, being warned by a prodigy that Nature is pregnant with the future King of the Roman People, decrees that no child born in that year is to be reared.³

If we pass from the Matthaean and Lucan accounts of Jesus's birth and infancy and childhood to the episode of the Baptism in Jordan by John and the simultaneous Designation of Jesus as the Son of God, we may remind ourselves that, in another context,⁴ we have found Hellenic affinities for the figure of a dove as an emblem and emissary of a godhead. And if we pass on from the Designation to the Temptation, which is placed immediately after it in all three Synoptic Gospels⁵ and is recounted in detail in both Matthew and Luke, we shall observe that the Tempter's invitation to Jesus to cast himself down from a pinnacle of the Temple⁶ is one version of a 'folk-tale' which makes its appearance in pagan Hellenic literature in the forms of the challenge to Theseus to cast himself overboard into 'his father's house' in the depths of the sea,⁷ and the invitation to Psyche to cast herself down from the brow of a crag into the arms of Zephyr.⁸

An analogous Temptation of Gautama by Māra (the Indic

¹ e.g. in the legends of Oedipus, Perseus, Jason, Orestes, Zeus, Horus, Cyrus (a single babe), and in the legend of Romulus and Remus (twins).

² Matt. ii. 1-18.

³ The tale, in Exod. i-ii, of Pharaoh's instruction to the midwives to kill all the male children borne by the Hebrew women agrees with the Matthaean and Marathan tale in representing the villain as making an attempt upon the lives of all the (male) children of a community, and not merely upon the life of a single child; but the motive ascribed to Pharaoh is not the same as that ascribed to Herod and to the Senate. In the Matthaean and Marathan tale the villain's reason for deciding to massacre the children wholesale is not because he wishes to exterminate an entire generation, but simply to make sure that a single child, whom he cannot identify, shall not escape. On the other hand Pharaoh's design against the lives of all the (male) children of the Hebrews is not incidental to another aim, but is an end in itself. What Pharaoh fears is not that some particular Hebrew child is going to usurp Pharaoh's throne, but that the Hebrew community as a whole is going to become more than a match for the Egyptian Society as a whole. In this matter of motive the Matthaean and Marathan tale follows, not the tale of Pharaoh's atrocity in Exodus, but the myths of Uranus's and Cronos' atrocities in the *Theogony* of Hesiod. Uranus buries *all* (his own) children alive (ll. 154-60) and Cronos swallows *all* (his own) children (ll. 459-67), for fear (implicitly in the case of Uranus and explicitly in the case of Cronos) of being supplanted one day by *one* of them.

⁴ In V. C (i) (d) 11, Annex I, pp. 361-2, above.

⁵ Matt. iv. 1-11; Mark i. 12-13; Luke iv. 1-13.

⁶ Matt. iv. 5-6 = Luke iv. 9-11.

⁷ This parallel in Bacchylides, *Dithyramb* xvi [xvii] (F. Blass' edition (Leipzig 1898, Teubner), pp. 121-33), has been pointed out to the writer of this Study by Professor Gilbert Murray.

⁸ This parallel has been pointed out by Braun, *History and Romance*, pp. 66-70. The

counterpart of Ahriman and Satan) is a theme which occurs in several passages in the Pāli scriptures of the Hinayanian Buddhist school of Indic philosophy. In a passage of the Padhānasutta Māra exhorts Gautama not to push his self-mortification to the point of severing the last thread that still binds the philosopher-ascetic to physical life on Earth; in a passage of the Samyutta-Nikāya Māra exhorts Gautama to assume the sovereignty of a mundane kingdom; and these two incidents look like counterparts in the one case of the Devil's suggestion to Jesus to turn stones into bread and in the other case of his suggestion to him to accept a mundane oecumenical sovereignty. The hypothesis of a fortuitous coincidence between these respective legends of the Temptation of Gautama and the Temptation of Jesus would appear to be ruled out by the fact that, in each of the two correspondences here cited, certain details that are to be found in the Gospels are likewise to be found in the Pāli scriptures, though this not in exactly the same relation to the incident as a whole. For instance, the conceit of a superficial resemblance between a stone and a piece of food, which in the Gospels is crystallized into a suggestion for turning a stone into a loaf of bread, turns up in the corresponding passage of the Padhānasutta as a simile of Gautama's impregnability to Māra's assaults. 'A crow,' says Māra, 'was once disappointed at finding that an object which looked like a lump of fat was only a stone after all. The crow had to fly away hungry; and now I, Māra, have to give up Gautama as a bad job—as the crow gave up the stone!' Similarly, in the Samyutta-Nikāya, Māra exhorts Gautama to turn, not a stone into bread, but a mountain into gold as a sequel to his exhortation to him to assume sovereignty over a mundane kingdom. The mountain which Māra names is the Himalaya—and we are left wondering whether, in some common source of the Buddhist and the Christian Temptation-story, this may not have been the 'exceeding high mountain' from the summit of which the Devil showed Jesus all the kingdoms of the World.¹

We may next notice two miracles—the Walking on the Water (Matt. xiv. 22-33 = Mark vi. 45-51 = John vi. 15-21) and the Feeding of the Multitudes (Matt. xiv. 15-21 = Mark vi. 35-44 = Luke ix. 12-17 = John vi. 5-13, and Matt. xv. 32-8 = Mark viii. 1-9)—which are embedded not only in the Gospels but also in

challenge which in the Gospels is represented as a temptation that Jesus resists is represented in the stories of Theseus and Psyche as a test of faith from which the hero (heroine) does not flinch. But the ordeal (and also the tableau in which it is visualized) is the same in all three stories; and in all three, again, the hero (heroine) responds to this identical challenge victoriously, though in the one case the victory is won by a refusal and in the other two cases by an acceptance.

¹ Matt. iv. 8 = Luke iv. 5. Compare the setting of Lucian's dialogue between Hermes and Charon, from which a passage has been quoted in V. C (i) (d) 10, pp. 133-4, above.

Mahayanian Buddhist scriptures (the Jātaka and the still younger Vimalakīrtinirdeśasūtra)¹ which, at least in their present form, are all of them considerably later than the Gospels in date. Again, there is a tale—‘the Widow’s Mite’—which is found not only in the Gospels according to Saint Mark (xii. 41–4) and Saint Luke (xxi. 1–4) but also in the Sutrālamkāra, IV, 22, which is a work from the pen of one of the early fathers of the Mahayanian Buddhist Church, Aśvaghōṣa (*floruit circa* A.D. 100).² And there are two similes—‘the Birds of the Air’ and ‘Dogs and Crumbs’—which, as we have already observed in another context,³ are each of them to be found on the one hand in the Gospels and on the other hand in two pieces of pagan Hellenic literature, one of which appears to be approximately contemporary with the Gospels, while the other is at least five hundred years older. There is another simile of two roads—representing respectively the ways of Vice and Virtue—which is to be found not only in the Gospel according to Saint Matthew (vii. 13–14) but also in Xenophon’s *Memorabilia* (Book II, chap. 1, § 21)⁴ and in Hesiod’s *Works and Days* (ll. 287–92). There is also a ‘folk-tale’—recounting the disappointment that is the inevitable consequence of looking for figs out of season—which can be detected as the common source of the incident of the Cursing of the Barren Fig Tree (Matt. xxi. 18–19 = Mark xi. 12–14) and of a passage in one of the lectures of the Stoic philosopher Epictetus (*Dissertationes*, Book III, chap. 24, §§ 85–8) which we have quoted already⁵ in another connexion. We may also here recall two apparently proverbial sayings—‘I cannot dig’ and ‘the city is being taken by storm’—which are to be found on the one hand in the Gospels and on the other hand in Aristophanes’ *Birds*,⁶ and add another saying of the same character—‘Many are called, but few are chosen’—which is to be found on the one hand in the Gospel according to Saint Matthew⁷ and on the other hand in the scriptures of the Orphic Church.⁸

¹ The Walking on the Water is to be found in the introduction to Jātaka 190; the Feeding of the Multitudes in the introduction to Jātaka 78, and in Vimalakīrtinirdeśasūtra, chap. 10 (a Chinese translation of a Sanskrit scripture of the Mahayanian Church). It will be noticed that in the Mahayanian Buddhist scriptures the two miracles occur in quite different contexts, whereas they are placed in immediate juxtaposition with one another in the Gospels.

² Aśvaghōṣa appears to have been a contemporary of the Kushan King Kanishka, who reigned *circa* A.D. 78–123 (see Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), pp. 260–1; Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. ii, pp. 82–4).

⁴ See p. 470, below.

⁵ In V. C (i) (d) 10, p. 147, footnote 1, above.

⁶ See V. C (i) (d) 11, Annex I, p. 358, above.

⁷ Πολλοὶ γὰρ εἰσι κλητοί, ὀλίγοι δὲ ἐκλεκτοί (Matt. xxii. 14).

⁸ Πολλοὶ μὲν νερθηκοφόροι, παῦροι δὲ τε βάκχοι (*Orphicorum Fragmenta*, Collegit Otto Kern (Berlin 1922, Weidmann), fragments 5 and 235, preserved by Plato in *Phaedo* 69 c).

Most of the topics that we have cited up to this point—as examples of what appears to be the jetsam of ‘folk-lore’ which has been washed up on to the shores of the river of ‘folk-memory’ and has there come to be imbedded in more or less sophisticated works of literature—are topics which not only bear marks of having drifted, at some stage of their literary history, in the current of Lethe’s stream, but which, to all appearance, are native to these waters and display no trace of ever having known any other mental environment than this before they finally came to rest in their present literary context. Miracles and parables and similes and proverbs are the very stuff of which ‘folk-lore’ consists; and if, when we find specimens of any of these primitive genres incongruously embedded in sophisticated works of literature, we can legitimately account for them as being the jetsam of ‘folk-lore’, we need seek no farther than that for an explanation of their origin. There is, however, one set of verbal correspondences¹ between an incident in the Gospels and a cento of passages from the *Birds* which may be explicable on the hypothesis of a subterranean contact on the level of psychic life at which the waters of ‘folk-memory’ flow, but which at the same time cannot be interpreted as a seepage, into the *Birds* on the one hand and into the Gospels on the other, of an element which has not merely travelled for a season in the current of ‘folk-memory’ but has also actually originated at this primitive level of psychic life. The Aristophanic phrases here in question bear no obvious marks of an extraneous origin in ‘folk-lore’; there is no reason to doubt that they are the original work of the Attic playwright himself; and, if so, then in this case we are confronted with a process that is different from, and more complex than, the process that we have been studying so far. We are here apparently in the presence of a group of mental images or ideas which have started life on the plane of sophisticated literature; have percolated down from this starting place to the level of ‘folk-lore’; have travelled at this level from Attica to Palestine in the subterranean stream of ‘folk-memory’; and, after having eventually been washed ashore in a barely recognizable shape, have become embedded in a semi-sophisticated work of literature, the Gospels.² This reconstruction of the literary history of these Aristophanic phrases is supported by the unquestionable occurrence of Menandrian phrases in the New Testament; for we need have no hesitation in accepting as the original work of Aristophanes’ fellow countryman and successor Menander one fragment from this later Attic playwright’s lost plays which recurs *verbatim* in one of Saint Paul’s

¹ See V. C (i) (d) 11, Annex I, pp. 353–4, above.

² This is perhaps also the history of the proverbial saying about ‘the city being taken by storm’ (see V. C (i) (d) 11, Annex I, pp. 358–9, above).

Epistles,¹ and another fragment which juxtaposes two *motifs* that both recur in the Gospels, though here in different contexts.² The common source of the manifestly kindred pictures of the Primitive Christian and the Primitive Pythagorean communal life, in the Acts of the Apostles and in Iamblichus's *Life of Pythagoras*,³ can also hardly have been other than a sophisticated piece of literature; and there are two passages in the New Testament—one in the Epistle to Titus⁴ and the other in the speech on the Areopagus which is placed in the mouth of Saint Paul by the author of the Acts⁵—in which a tag of Greek poetry not only reappears *verbatim* but is quoted by the Christian writer with an express acknowledgement of the pagan Hellenic literary source.

We have, indeed, already had occasion to observe that the jetsam on the strand of the stream of 'folk-memory' by no means exclusively consists of matter that has originated in those waters, and that some of the objects which the current deposits high and dry are flotsam which has stood on dry land already once before, at an earlier stage of its existence, before ever it was engulfed by the stream which has now disgorged it. We have noticed, for example, a number of heroes and heroines of romance—'Ninus' and 'Semiramis' and 'Sesostris', 'Nectanebos' and 'Dhu'l-Qarnayn'—whose 'fictitious' shapes have been fashioned out of the authentic portraits of historical personages. And this phenomenon can perhaps also be illustrated from the Gospels. Is it conceivable, for instance, that the parable of the husbandmen who did the dastardly deed of putting to death the son of the owner of the vineyard when his father had sent him to them as his emissary (Matt. xxi. 33–41 = Mark xii. 1–9 = Luke xx. 9–16) is an echo of the historic crime of Opimius, who arrested and executed Fulvius's son when the boy was sent across no-man's-land, under flag of truce, to parley with his father's adversaries (Plutarch: *Gracchi*, chaps. 37–8)? And is it conceivable, again, that the episode of the

⁴ Titus i. 12, quoting Epimenides' poem *Minos* (see I. C (i) (b), vol. i, p. 99, footnote 2, and V. C (i) (d) 11, Annex I, in the present volume, p. 363, footnote 6, above).

⁵ See V. C (i) (d) 7, p. 11, footnote 2, above.

pilgrimage of the Magi, which is recounted in the Matthaean prologue (chap. ii) to the Gospels, has been precipitated by an impact which may have been made on the imagination of the internal proletariat of the Hellenic World by an historic visit of a party of Magi, not to the infant Jesus at Bethlehem, but to the adult Emperor Nero at Rome, in the suite of Tiridates, when the Arsacid King of Armenia came to pay his respects to his Roman suzerain in A.D. 66 (Pliny: *Historia Naturalis*, Book XXX, chap. 2; cf. Suetonius: *Life of Nero*, chap. 13)?

Whatever judgement we may pass on these two last-suggested possibilities,¹ we shall probably agree that historical events and literary phrases are not the only kinds of foreign matter that can find their way into the stream of 'folk-memory'. How, for example, are we to account for a striking correspondence between two passages in the exordium of the Gospel according to Saint John (i. 16 and 18)—'And of his fullness have we all received' (καὶ ἐκ τοῦ πληρώματος αὐτοῦ ἡμεῖς πάντες ἐλάβομεν); and 'No man hath seen God at any time; the only begotten Son, which is in the bosom of the Father, he hath declared him' (Θεὸν οὐδεὶς ἑώρακε πώποτε· ὁ μονογενὴς υἱός, ὁ ὢν εἰς τὸν κόλπον τοῦ πατρὸς, ἐκεῖνος ἐξηγήσατο)—and the last words of Plato's *Timaeus* (92 C): 'Having thus received, and been filled full with, living creatures, mortal and immortal, the Cosmos—a living creature that contains the things that are seen, being such a thing itself, a god that is a sensible image of the intelligible [godhead]—has become superlatively great and good and beautiful and perfect, being this unique and only begotten Heaven' (Θνητὰ γὰρ καὶ ἀθάνατα ζῶα λαβὼν καὶ συμπληρωθεὶς ὁδὲ ὁ κόσμος οὕτω, ζῶον ὁρατὸν τὰ ὁρατὰ περιέχον, εἰκὼν τοῦ νοητοῦ θεὸς αἰσθητός, μέγιστος καὶ ἄριστος κάλλιστός τε καὶ τελεώτατος γέγονεν εἰς οὐρανὸς ὁδὲ μονογενὴς ὢν)? Does it not seem probable that the stream of 'folk-memory' has provided a channel along which the imagery, and even the vocabulary, of the *Timaeus* has flowed into a semi-philosophical work of Christian literature which, in all probability, was composed not much less than five hundred years after the last sentence of the *Timaeus* had taken shape in Plato's mind?

'In Christianity there are echoes of Stoic or Platonic ideas; but in saying this we do not mean to imply that the Apostles, and certainly not that Jesus Himself, had frequented the schools of the philosophers or had read their books. It is true that the Logos in the opening sentences of the Gospel according to Saint John can be traced back with certainty

¹ Eduard Meyer (*Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), p. 59, footnote 1) rejects, as unconvincing, this explanation of the appearance of the Magi in the Gospel according to Saint Matthew. For another possible source of the episode of the Magi see p. 524, footnote 2, below.

to Philo; and nothing stands in the way of the supposition that the author of the Gospel may have been acquainted with some of Philo's writings or even have been in personal contact with Philo himself. These, however, are isolated exceptions; and in general the New Testament is very remote from the cultivated life, and, by the same token, from the philosophy, of the age. Yet in similar conditions to-day one often hears people in a humble walk of life reproducing ideas originally put into currency by Schopenhauer or Darwin, although the plagiarist has never read one word of these thinkers' works. The fact is that ideas which suit the times spread rapidly from mouth to mouth, and sometimes turn up in different places simultaneously, without their exponents being necessarily dependent on one another. Whether Christianity is really indebted for its Platonic or Stoic content to the disciples of Plato and Zeno, or whether it is merely a case of the same ideas being evoked in Christianity too by the same *Zeitgeist*, is thus a question which cannot be answered with certainty in any particular instance. The one point that is impregably established is that the teachings of Christianity are not entirely new and original, but are for the most part rooted in the spiritual life of the age.¹

From the foregoing survey it would appear that the Gospels contain, embedded in them, a considerable number and variety of elements which have been conveyed to them by the stream of 'folk-memory', and which have originated partly in these waters but partly also on stretches of once dry ground which the shifting subterranean currents of a perennially flowing primitive psychic life have subsequently undermined and swept away. On this showing, it would seem that the Gospels contain elements which are not 'historical' in the conventional usage of that word. We shall find, however, if we carry our inquiry farther, that in this respect the Gospels are not unique among the works of literature which are our sources for the hero-stories of which we are here trying to make a comparative study. For example, if we now apply to the work of the pagan Hellenic historian Phylarchus the analytical treatment that we have just been applying to the Gospels, we shall see the 'historicity' of this sophisticated Hellenic author's narrative dissolve, almost melodramatically, before our eyes. We have only to turn to the masterly and devastating analysis that has already been made by a genuinely scientific Hellenic historian of the post-Phylarchan generation: to wit, Polybius (Book II, chap. 56, §§ 1-6 and 7-12):

'Among the historians who are Aratus's contemporaries, Phylarchus is one who enjoys a high reputation in some circles; and, as Phylarchus is perpetually breaking out into polemics against Aratus and into con-

¹ Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd ed. (Stuttgart 1921, Metzler), pp. 203-4, referred to, by anticipation, in V. C (i) (d) 6 (a), vol. v, p. 456, footnote 1, above.

traditions of what Aratus says, it would seem useful, or rather unavoidable, for the present writer, who has deliberately elected to follow Aratus in his account of Cleomenes and all that pertains to him, to take up this issue. If we were to pass it over without looking into it, we might be exposing ourselves to the reproach of leaving Falsehood to take her stand in the field of historiography on a footing of equality with Truth.

'We may begin with the general criticism that the whole of this historian's treatment of his subject bristles with examples of carelessness and slovenliness. In the present place, however, we may perhaps allow ourselves to confine our censure on points of detail to that portion of Phylarchus's work that overlaps with our own: that is to say, the part that deals with the Cleomenic War. This much of his work we cannot avoid subjecting to the lens of criticism. And that will certainly be sufficient to bring to light the *penchant* and the *forte* that Phylarchus displays in his treatment of the whole of his subject. . . .

'In his eagerness to move his readers to pity and to win their sympathy for his story he introduces scenes of women locked in one another's arms, with hair dishevelled and breasts exposed, and throws in, as further ingredients, the tears and lamentations of persons of both sexes, all cluttered up with aged parents and tiny children, on their way to the gallows. He plays this game all through his history, and his perpetual aim in every episode is always to give a visual impression of the horrors. His vein is an ignoble and effeminate one; but we may let that pass and may proceed to examine his work from the standpoint of what is strictly relevant and useful for the professional historian. From this standpoint we may lay it down that the business of a writer of history is not to use his subject as an instrument for making a shattering impression on his public by hocus-pocus (*τεραπευόμενον*),¹ and not to invent oratory that may be appropriate to the occasion or to elaborate the subsidiary details that may be implicit in the facts.² These are the tricks of the playwrights.³ The historian's business is to give an exact record of

¹ N.B.—This is the word that is used of the conjuring tricks that were performed by Eunus (Points 65 and 72).—A.J.T.

² Polybius lives up to these principles when his own turn comes for recording Cleomenes' end. Phylarchus's excruciatingly circumstantial account of the suicide of the hero and his twelve companions (if we may take this to be substantially reproduced in Plutarch, chap. 58, §§ 13–16) is replaced in Polybius's narrative (Book V, chap. 39, § 5) by the unadorned statement: 'They took their own lives with a characteristically Spartan fortitude' (*προσπνεύσαν αὐτοῖς τὰς χεῖρας εὐψύχως πάνυ καὶ λακωνικῶς*).—A.J.T.

³ While Polybius has manifestly kept his own work free from Phylarchus's vice of draping his narrative of historical events in the trappings of melodrama, he has been accused of, no doubt unintentionally, falsifying the true history of at least one episode by mistakenly dramatizing, not the details of the story, but the plot itself. The episode in question is that of the unhappy last phase of the life and reign of King Philip V of Macedon. According to Walbank, F. W.: 'Φίλιππος Τραγωδούμενος: A Polybian Experiment' in *The Journal of Hellenic Studies*, vol. lviii, 1938, part 1, pp. 55–68, 'The tragic version in Polybius is of his own construction and does not spring from the uncritical use of tragedies or historical novels (if indeed such a thing as an historical novel existed in the Greek literature of Polybius's time). Polybius's strictures on Phylarchus make it at least extremely unlikely that he could have fallen into such a crude error in a matter of source-selection. . . . Polybius's mistake—either his own or perhaps one prompted by his Macedonian informant, who may have retailed popular gossip and superstition then current in Macedon—was to interpret Philip's last years as a career of infatuation induced by Tyche and showing itself in an unreasoned programme of planned aggression against Rome' (p. 67).—A.J.T.

the things that were actually done and the words that were actually uttered, even if these happen to be rather tame. The purposes of History and of the Drama are not identical: they are antithetical. The dramatist's business is momentarily to make a shattering impression on his audience and to carry them away by putting into the mouths of his characters whatever words will make the strongest appeal. The historian's business is for all eternity to instruct and convince scholars by presenting them with the truth, both of act and of word. On the stage, where the object is to take the audience in, the first necessity is to say what will appeal, no matter whether it be a falsehood; in the writing of history, where the object is to be of service to scholars, the first necessity is to tell the truth.'

This Polybian criticism of Phylarchus's manner and method exactly applies to Plutarch's *Lives of Agis and Cleomenes*, in which (as we have seen reason to believe)¹ long *résumés* of Phylarchus's history are reproduced with a closeness that in places approximates to identity. Indeed, if we may take Plutarch, in this piece of his work, as being tantamount to Phylarchus himself, there are indications that Phylarchus positively gloried in the vices that Polybius attributes to him. The opening sentence of his peroration, for instance, runs (Plutarch, chap. 60):

'Thus Lacedaemon staged a female drama which could hold its own against the male drama that had preceded it. In her last hour of life Sparta showed the World that hers was a virtue that was proof against all the slings and arrows of outrageous Fortune.'

And in an earlier passage (chap. 24) he writes of Xenares as 'reciting the myth' (*μυθολογῶν*) of Agis to Cleomenes, as a way of saying that he told him the story of Agis' life. In fact, it looks as though in Phylarchus's imagination the authentic history of his heroes has already undergone a histrionic and sentimental transmutation which has carried it a long distance away from the original. In other words, Phylarchus's treatment of the lives of Agis and Cleomenes is another example of that mental process which has spun the stuff of romance out of the originally authentic histories of a likewise Hellenic Alexander the Great, as well as an Egyptiac Nectanebos and a Babylonian Sammu-ramat; and this clue, which Polybius's strictures on Phylarchus have placed in our hands, has been followed out to its logical conclusion by a modern Western scholar.²

'There can be no doubt that in both these two of Plutarch's lives there is a workmanship which, for short, we can describe as being "artistic". The mere material is about all that this method of work has in common with the strict laws of our science of historical research; and I can see no

¹ See pp. 435-7, above.

² Bux, E.: 'Zwei Sozialistische Novellen bei Plutarch' in *Klio*, vol. xix (1925).

ground for our continuing to count it as serious history. . . . It would be far better to describe these lives, without beating about the bush, as historical novels, in which everything is centred round the hero himself.¹

Now that we have followed the story of Agis and Cleomenes out of the realm of history into that of romance, can we carry our pursuit of it into the domain of 'folk-lore'? If a piece of sophisticated literature is to win its way into 'folk-lore', the first necessity is that it should have achieved popularity; and the popularity of Phylarchus's treatment of his subject is attested by the first sentence in the passage which we have quoted from Polybius.² This general presumption is supported by at least one piece of positive evidence. In the Plutarchan reproduction of the Phylarchan romance the Passion of Cleomenes is followed by an epilogue which Polybius boycotts as completely as he boycotts the Phylarchan embroideries on the episode of Cleomenes' death; and this epilogue has a heroine who is brought on to the stage at this late hour in the day in the role of Panteus' wife, but who incongruously preserves that anonymity which, as we have seen,³ is the hall-mark of a character in a 'folk-tale'.

In this anonymous heroine of the Cleomenes Romance a modern Western scholar⁴ detects the lineaments of a heroine who appears—at first anonymously, and later under the name of Pantheia⁵—in Xenophon's romance, the *Cyropaedia*, in the role of the wife of Abradatas. Like Panteus' wife, Abradatas' wife is separated from her husband by a military disaster that overtakes a cause to which the husband has devoted himself. Like Panteus' wife, she never rests till she has secured a reunion. Like Panteus' wife, she achieves this reunion with her husband only to suffer a second separation which is worse than the first, since this time the barrier which interposes itself between man and wife is not just an ordinary sea or continent but is the river of Death. And, like Panteus' wife, she reunites herself with her lost husband for the second time by the only means now left to her: that is to say, by committing suicide. In this last scene the two tragedies coincide even in

¹ Bux, op. cit., p. 423. This verdict is based by its author (pp. 417–22) upon certain episodes in particular: e.g. upon Chilonis' intercession with her father Leonidas for her husband Cleombrotus (Plutarch, chaps. 17–18); the Passion of Agis (Plutarch, chaps. 18–21); and the post-Sellasian act of the tragedy of Cleomenes (Plutarch, chaps. 49–60).

² This point is made by Bux in op. cit., p. 430.

³ On p. 439, above.

⁴ Dr. Martin Braun, in a letter to the writer of this Study.

⁵ The tale of Pantheia is told, in instalments that are separated from one another by other matter, in Xenophon: *Cyropaedia*, IV. 6, § 11; V. 1, §§ 1–18; VI. 1, §§ 31–49; VI. 4, §§ 2–11; VII. 3, §§ 2–16. It is not till VI. 1, § 41, that she is called by her name. In the preceding passages she is referred to as 'the woman from Susa who is said to have been the loveliest woman in Asia'; 'the wife of Abradatas of Susa'; 'the lovely woman'. Similarly, in the epilogue to the Cleomenes Romance, the heroine is introduced as 'the wife of Panteus, a woman with a most lovely and noble presence' (Plutarch, chap. 59).

detail. As Panteus' wife, when she is on the point of taking her life, makes all spectators withdraw with the sole exception of the sheriff's officer (Plutarch, chap. 59), so Abradatas' wife makes all spectators withdraw except her old nurse (Xenophon vii. 3, § 14). In this last gesture, it is true, Phylarchus's heroine goes one degree farther than her Xenophontean precursor; for, whereas Abradatas' wife instructs the nurse to drape her corpse and her husband's in one and the same pall, Panteus' wife has 'need of none to lay her body out or drape it in a pall after she is dead'. But this variation is explained by the fact that in the Phylarchan romance the heroine does not slay herself over her husband's dead body; and this antecedent variation is explained in its turn by the fact that in the Phylarchan romance the 'business' (in the theatrical meaning of the term) which in the Xenophontean romance is assigned to the wife alone is distributed between wife and husband.

In the Xenophontean romance Abradatas' wife, when she has struck herself her death-stroke, 'lays her head on her husband's breast and dies in this posture'. In the Phylarchan romance this tableau is not omitted (it constitutes our Point of Correspondence No. 28 between the stories of certain pagan Hellenic heroes and the story of Jesus), but the figure that leans on the hero's breast is not that of a woman but that of a bosom friend who is of the hero's own sex, and the man who is cast by Phylarchus for this part in the last scene of the main drama is the man who figures posthumously as the husband of the anonymous heroine of the epilogue. Nor is this the only tableau belonging to the Xenophontean romance which Phylarchus has thus transferred from his epilogue to his main drama. At the opening of the last act of the tragedy of Pantheia in the *Cyropaedia*, Pantheia is discovered (VII, 3, §§ 5 and 8) with her dead husband's head on her knees in the posture of the *Pietà* (our Point 82);¹ and in the Phylarchan romance this tableau likewise is, not omitted, but lifted out of the epilogue to the Passion of Cleomenes in order to provide an epilogue for the Passion of Agis.

This transference of theatrical 'business' from Panteus' anony-

¹ The resemblance between this Xenophontean *Pietà* and the traditional Christian representation of the same tableau is very close; for, while Pantheia and her attendants are the counterparts of the women in the Christian tableau, Cyrus, who enters after the curtain has risen, corresponds to Joseph of Arimathea. Like Joseph, Cyrus (by proxy through Gadatas and Gobryas) brings costly materials for laying out the corpse. The same tableau, followed by an entry of male characters, constitutes the second scene of the first act of Heliodorus's melodramatic romance, the *Aethiopica* (Book I). A lovely girl (Chariclea) is discovered by pirates sitting motionless on a rock and gazing at the motionless body of a youth (Theagenes). Happily the young man is not dead and the young woman does not commit suicide. In these capital points Heliodorus is bound to part company with Xenophon, because otherwise—since he has introduced the *Pietà* in his first act—his melodrama would be brought to an abrupt and premature end at the outset.

mous wife in the likeness of Xenophon's Pantheia to Panteus himself perhaps offers a clue for finding the answer to the at first sight puzzling question of why the Pantheia-motif should have been dragged into the Cleomenes Romance at all. May we venture upon the guess that Panteus annexed to himself certain appropriate incidents from the Pantheia Romance on the strength of an accidental and superficial resemblance between the two proper names?¹ And that Phylarchus, having first plundered the Pantheia Romance of everything in it that was conveniently transferable to the male deuteragonist in his own melodrama,² packed the rest of the booty into an epilogue because he could not bear not to make some use of such admirable material?

On this showing, Xenophon's heroine has provided Phylarchus with the whole substance for one character that is perhaps entirely

¹ 'Panteus' has a look of being the masculine counterpart of the feminine name 'Pantheia', but this appearance is, of course, deceptive. The correct counterpart of 'Pantheia' is 'Pantheios' and, while this masculine form might perhaps legitimately be contracted by substituting the termination '-eus' for as large a portion as possible of the second member of the compound word, the result, even then, would be not 'Panteus' but 'Pantheus'. The actual form 'Panteus' may itself, no doubt, be a contraction of a compound word; but, if so, then the original form will have been of the order, not of 'Pan-[th-]', but of 'Panta-[]' or 'Panto-[]' (e.g. 'Pantactēs', 'Pantaenus', 'Pantaleon', 'Pantauchus').

² If we were in an aggressively 'higher critical' mood and had confined our attention to Plutarch's *Lives of Agis and Cleomenes* without taking the precaution of comparing this reproduction of Phylarchus's romance with the overlapping portions of the historical narrative of Polybius, we might be tempted into hazarding the further conjecture that the Panteus who plays his part as Cleomenes' bosom friend is not in fact an historical personage who has been posthumously decked out by Phylarchus in borrowed plumes of romance that have been plucked out of Xenophon's *Cyropaedia*. We might go the length of suggesting that 'Panteus' is a fictitious character through and through, with no substance in him whatsoever beyond the spoils which a third-century Greek historical novelist has pillaged from the work of a fourth-century predecessor. Is 'Panteus' really nothing but Pantheia transformed from a woman into a man? We might seem to have here in our grasp a second anonymous character that has drifted into Phylarchus's romance out of the stream of 'folk-lore'. But we shall abandon this particular path of exploration if we happen to open our copy of Polybius at Book V, chap. 37, § 8; for here we shall find Polybius (whose veracity is above suspicion) showing us a snapshot of Cleomenes prowling up and down the quayside at Alexandria attended by—Panteus and Hippitas! So Panteus turns out after all to be a man of flesh and blood, and likewise Hippitas into the bargain. Polybius has done us a good turn in pulling us up short; for, if, in our 'higher critical' mood, we had taken a synoptic view of this pair of proper names, the comparison might have clinched our conviction that we were here in the presence of the stuff of 'folk-lore'. Hippitas means 'the horseman'; and, when we come to the Plutarchan (i.e. Phylarchan) account of Cleomenes' last sortie at the head of his twelve companions, we find, sure enough, that 'Hippitas' is put up on horseback! If we did not know from Polybius that Hippitas was an historical personage who genuinely bore that name, we might have let ourselves be inveigled into imagining that 'the horseman' in the last scene was an anonymous character from a folk-tale whose 'business' in a scene in which he plays a conspicuous part has been laid under contribution in order to furnish him with a proper name when he is being lifted out of the sump of 'folk-lore' and being interpolated into a chapter of authentic history. The testimony of Polybius proves that, as a matter of fact, we should have no warrant at all for rejecting either Hippitas' or Panteus' claim to historicity on the ground that their respective names were too exquisitely appropriate to be accepted as genuine. On the same line of argument we should be compelled to disbelieve that, a hundred years before Hippitas' and Panteus' day, the cause of Athenian democracy was really upheld against the assaults of Macedonian autocracy by a man bearing the name of Demosthenes! These awful warnings throw horrifying spots of light upon the pitfalls that everywhere beset an inquiry of the present kind.

fictitious and with some heavy embroideries for another character that demonstrably cloaks a genuinely historical personage under these adventitious trappings. There is a wealth of romance in the figure of Pantheia from which Phylarchus has known how to draw profit; and the spectacle of these riches naturally whets our curiosity. By whose hands has Pantheia been endowed with them? Has Xenophon created his heroine *de toutes pièces*? Or has Xenophon anticipated Phylarchus in plundering somebody else's treasure-house? Who is Pantheia? Is she a new woman, or is she one whose countenance is familiar to us already? In the opinion of one modern Western scholar,¹

'Behind the form of Xenophon's Pantheia I suspect a presence which is none other than that of Semiramis. Both women, Pantheia and Semiramis, are "the loveliest in Asia" (Xenophon: *Cyropaedia*, IV, 6, § 11, and V, 1, § 7; Diodorus, Book II, chap. 4, § 1); both of them are desired by a number of different men; both of them are as heroic as they are lovely. Again, both of them are married to a vassal of the King of Assyria (Xenophon: *Cyropaedia*, V, 1, § 3; Diodorus, Book II, chap. 5, §§ 1-2), and in both cases the King desires the woman for himself and wants to take her away from his vassal (Xenophon: *Cyropaedia*, VI, 1, § 45; Diodorus, Book II, chap. 6, §§ 9-10). The husbands of both women are abroad temporarily—but this at a critical moment—in Bactria (Xenophon: *Cyropaedia*, V, 1, § 3; Diodorus, Book II, chap. 6, § 5). The one substantial difference is that Xenophon's Pantheia—and in this she is a forerunner of the heroines of later [Hellenic] romance—has been purged of the "non-moral" elements, proper to Ishtar, which still inhere in the Oriental figure of Semiramis.²

Perhaps we have now followed out our immediate line of investigation far enough to have convinced ourselves that the *soi-disant* 'history' of Phylarchus, as well as the fourfold picture of the life and preaching of Jesus that is presented in the Gospels, does in fact reveal in itself the presence of elements which have all the appearance of being the jetsam of 'folk-lore' that has become embedded in a stratum of sophisticated or semi-sophisticated literature without having lost the characteristic marks that bear witness to its passage through the waters of 'folk-memory' at some stage before it came to rest in its present setting. We are perhaps

¹ Dr. Martin Braun, in a letter to the writer of this Study.

² Semiramis, in one of her adventures, masquerades in a costume which makes it impossible to tell her sex (Diodorus, chap. 6, § 6). If Pantheia is an emanation of Semiramis, this masquerade perhaps throws light on the process by which tableaux that originally depicted the heroine's exploits have apparently come to be attributed to a character of the other sex (see p. 461, above). In Xenophon's romance (*Cyropaedia*, VI, 4, § 2) Pantheia equips her husband with effeminate accoutrements, including just such a dress as Semiramis dons according to Diodorus (in loc. cit. supra). This anecdote of Semiramis' masquerade would appear, from the context in the passage of Diodorus, to be an *aition* to account for the origin of the so-called Median, but originally Assyrian, male costume, which was effeminate in Hellenic eyes.

also warranted in coming to the further conclusion that the quantity of the foreign bodies, bearing marks of this history, in the works of literature that we have been scrutinizing, is abundant enough to justify us in adopting the view that the medium of 'folk-memory'—which we have found to be a highly conductive one—has in fact been one medium of communication between these works. And this conclusion leads on to yet another. We may conclude that this medium of 'folk-memory' has been instrumental in producing that residue of our observed correspondences which has to be attributed to the operation of mimesis after we have made all possible allowance for the several effects of a common social environment and of the uniformity of human nature and of the play of chance. If mimesis has indeed also played its part, then it seems probable that its principal channel of operation has been the 'folk-memory', and that the practice of plagiarism, in the sense of a conscious and deliberate spoliation of one 'author' by another, has been a minor factor.¹ If we are able to accept these results of our inquiry up to this point, we shall now be in a position to address ourselves to the ulterior question which we have raised, by anticipation, already,² and that is: In which of two alternative possible ways has this operation of mimesis through the channel of the 'folk-memory' taken place? Has the stream of 'folk-memory' carried certain elements out of the pages of Phylarchus (or out of those of any of the other pagan Hellenic authors here in question) into the pages of the Gospels? Or has it carried these same elements into the pages of Phylarchus and of the Gospels alike out of some other piece or province of literature which is independent of, and anterior to, both of them? Let us first try to take a survey of possible common sources, before we proceed to examine the possibility of a direct conveyance into the Gospels of elements from those older books that set forth the stories of our eleven pagan Hellenic heroes.

¹ 'The resemblances [between Philostratus's *Apollonius of Tyana* and the Gospels] have evoked the hypothesis that Apollonius's biographer Philostratus has been seeking to create, in his *Apollonius*, a counterpart of Christ, and, with this in mind, has freely invented many of the details of his biography. Yet any one who reads Philostratus's work with an open mind will reject this hypothesis unhesitatingly; for there is nothing that points to the author's having had any close acquaintance with Christianity. The common features can, no doubt, be detected by a scholar versed in the comparative method of research, but they do not by any means force themselves upon the attention of the casual reader. The explanation of them lies simply in the fact that the Gospels, as well as the sources used by Philostratus, have painted the portrait of the immaculate God-Man in the typical form in which this was conceived by the imagination of that age, and have each invested their own hero with this God-Man's characteristic traits, whether these traits were actually to be found [in the historical hero] or not.'—Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii., 2nd ed. (Stuttgart 1921, Metzler), pp. 184–5. (For the emergence of the figure of the God-Man, to which Seeck alludes in this passage, see Bieler, L.: *Θεῖος Ἄνθρωπος: Das Bild des 'Göttlichen Menschen' in Spätantike und Frühchristentum* (Vienna 1935–6, Höfel, 2 vols.))

² On p. 448, above.

The Legend of Hêraklêś

There is one obvious possible common source from which the stories of our pagan historical heroes on the one hand and the story of Jesus on the other hand may have acquired independently of one another—along two distinct channels of the stream of 'folk-memory'—at least some of those common features which can only be accounted for on the hypothesis that they are in some sense the consequence of mimesis; and this source is the legend of Hêraklêś.

The picture in Hellenic minds of the life and character of this Hellenic demigod would presumably have, *a priori*, a better opportunity than any other piece of Hellenic mythology for colouring the traditional portraits of eminent representatives of Hêraklêś' reputed offspring, the historical Heracleidae of Sparta. At the same time the Hêraklêś Legend would have at any rate as good an opportunity of affecting the story of Jesus as the Phaedra Legend would have of affecting the story of Joseph; and there is evidence, as we have seen,¹ that, in this latter case, a Jewish story has in fact been perceptibly influenced by a Hellenic myth. If Phaedra has thus found her way into one province of the domain of Jewish literature, there is no reason *a priori* why, in another province, Phaedra's fellow Hellene Hêraklêś should not have gained at least as much ground—especially considering that in the Oriental World *post Alexandrum* Hêraklêś had acquired a number of local *points d'appui*, while Phaedra, so far as we know, never possessed *in partibus Orientalium* any foothold of this kind to assist her in the dissemination of her legend.

When a veneer of Hellenic culture was imposed upon the surface of Oriental life as a consequence of the military triumph of Macedonian over Achaemenian arms, one of the formal means by which the Orientals symbolically signified their deliberate 'reception' of the Hellenic way of life consisted in the official identification of their own gods with approximately equivalent members of the Hellenic Pantheon; and in this expansion of the Hellenic divinities' respective spheres of influence² Hêraklêś was one of the principal beneficiaries. At Tarsus, for example, Hêraklêś now lent his name to the ancient *genius loci* Sandan, and at Tyre to the ancient *genius loci* Melkart.³ In the first chapter of the story of the contact between Hellenism and the four non-Hellenic cultures which were

¹ On pp. 444-6, above.

² For this expansion in this way see the passage quoted from Turgot in V. C (i) (d) 7, p. 32, footnote 1, above.

³ The identification of Melkart of Tyre with Hêraklêś did not have to wait for Alexander's destructive passage in 332 B.C. It was already an accomplished fact in the time of Herodotus, whom it confronted with some difficult problems of both theology and chronology (see Herodotus, Book II, chap. 42).

brought into collision with it through the destruction of the Achaemenian Empire by Alexander, these identifications of Oriental with Hellenic divinities were merely nominal; but with the passage of time a contact which had begun as a mere collision began to grow into an interpenetration; and one of the ways in which this fruitful change took place was through a progressive fusion of the cults and the myths of those Oriental and Hellenic divinities who, to begin with, had been identified with one another in name only. In this second chapter of the story the native Oriental worships, as they pursued their competition with one another for the allegiance of Mankind,¹ would tend to radiate out not only their own native elements but also some of the elements of the Hellenic worships with which they had come respectively to be identified; and by this means Hêraklês, among other Hellenic divinities, would come to exert by proxy—here in virtue of his identification with Melkart, and there in virtue of his identification with Sandan—an influence upon Oriental hearts and minds which might have remained for ever beyond his power if he had presented himself in his alien Hellenic shape and not in the familiar forms of his numerous Oriental ‘opposite numbers’. Conversely, the once purely Hellenic legend of Hêraklês, in the course of its transmission from its Hellenic homeland into Oriental hinterlands through the prowess of a Hêraklês-Sandan and a Hêraklês-Melkart, would gradually acquire an alloy of Oriental gold to ennoble its native Hellenic metal.

As a matter of fact, it is hardly credible that Hêraklês, of all Hellenic figures, would have been chosen out so frequently for identification with well-established and deeply revered Oriental divinities if, at and after the time of Alexander, the native Hellenic idea of him had still been the gross traditional portrait that is caricatured in the figure of fun—compounded of glutton and blockhead—which Aristophanes brought on to the stage of the Dionysiac Theatre at Athens in 414 B.C. in the penultimate scene of the *Birds*.

This year was indeed perhaps the latest date at which it was still possible to present Hêraklês to a Hellenic public in this light-hearted vein; for the swiftly following disaster to Athenian arms in Sicily and the consequent resumption of the Atheno-Peloponnesian War made the breakdown of the Hellenic Civilization unmistakably plain; this vision of material disaster precipitated a spiritual crisis which affected every element in the Hellenic cul-

¹ For the expansion of the field of the various Oriental divinities’ operation from a parochial to an oecumenical range in the Achaemenian and Post-Achaemenian Age see V. C (i) (d) 7, pp. 29-33, above.

tural tradition; and one particularly striking effect was the transfiguration, at this late hour of the Hellenic day, of an invincible peasant-demigod who had obstinately declined either to put on the armour of a warrior in 'the Heroic Age' or to enrol himself, in the next chapter of Hellenic history, as the citizen of a city-state.¹ Hêraklês was now confronted with a choice of allowing himself either to be shown up as a monster or to be 'made over' into a saint; and both these alternative ways of dealing with an uncouth traditional figure which could no longer be taken for granted had been tried already, before the production of the *Birds*, by Attic tragedians who were Aristophanes' contemporaries. Euripides had done his best to salvage the peasant-demigod by putting a touch of something heroic into the character in his *Alcestis* (*actum* 438 B.C.) and afterwards raising it to a completely heroic stature in the last act of his *Hercules Furens* (*actum circa* 423 B.C.),² whereas Sophocles had done his best to jettison Hêraklês by presenting the traditional figure in the *Trachiniae* as the brute that this Hêraklês must be felt to be by the sensibilities of any contemporary Athenian who was willing to let the scales of traditional acquiescence be stripped away from his eyes.³ In the end the Euripidean solution of this Hêraklês-problem prevailed because the Hellenes could not bring themselves, after all, to jettison a figure which by this time had made so deep a mark upon the Hellenic imagination; and, finding that they could not do without their Hêraklês, they went the necessary lengths in idealizing him.

Hêraklês' choice was decided for him by Prodicus in a fable⁴ in which the bastard son of Zeus was exposed to the competing solicitations of Virtue and Vice, and was firmly guided, by the Cean wit who had taken the rustic demigod's education in hand, into reversing the Judgement of Paris. Thereafter Antisthenes shaped Hêraklês into a prototype of the future Cynic sage;⁵ and the boor's education was virtually finished by Diogenes.⁶ When Diogenes in his boyhood had expressed a wish to attend Antisthenes' lectures and had thereby drawn down upon himself an inquiry into his own purpose in life, he had replied that he intended 'to restamp the coinage' (*παραχάραττειν τὸ νόμισμα*); and this

¹ These points are made by Professor Gilbert Murray in an unpublished paper entitled *Ἀριστος Ἄνδρῶν*, sheet 6.

² *Ibid.*, sheet 8.

³ Murray, *ibid.*, sheets 11-12, points out that, in their respective treatments of the traditional character of Hêraklês, Euripides and Sophocles have each tried his hand at the other's usual *modus operandi*.

⁴ See the résumé in Xenophon: *Memorabilia*, Book II, chap. i, §§ 21-34.

⁵ See Pfister, Fr.: 'Hêraklês und Christus' in *Archiv für Religionswissenschaft*, vol. xxxiv, Heft 1/2 (Leipzig 1937, Teubner), p. 43.

⁶ Diogenes, and not his forerunner Antisthenes, was the founder of the Cynic school of Hellenic philosophy (Tarn, W. W.: 'Alexander, Cynics and Stoics' in *American Journal of Philology*, vol. lx, 1, Whole Number 237 (Baltimore, January 1939, Johns Hopkins University Press), pp. 47-8).

audacity (for which the truculent boy's father happened at that time to be serving a sentence in jail) was duly perpetrated by the son in his turn as soon as he came of age¹—though the currency on which Diogenes practised was not of the metallic but of the mental kind, and the house of correction—to which the criminal this time condemned himself—was not the conventional jail but a sensational tub. Hêraklês was one of the mental coins that Diogenes re-stamped; and this process of 'recharacterization', which Prodicus had begun and which Diogenes thus completed, has been summed up in one sentence by a modern Western scholar:

'The Hêraklês Saga is one of the crudest of all Greek myths, and perhaps for that very reason became in the hands of allegorizing philosophers, from Herodorus in the fifth century on to the Stoics and Neoplatonists, the most ideal and edifying of all.'²

The unrecognizable shape in which the antique peasant-demi-god was at length allowed to rest from his thirteenth and greatest labour of metamorphosis is sharply printed in the opening words of the article on Hêraklês in an encyclopaedia of Hellenic culture from the hand of one of the pioneers of a renaissance of Hellenism in Orthodox Christendom:³

'Hêraklês: the son of Alcmena: History reveals him as a philosopher. . . .'

This retrospective glimpse of a *Hercules Philosophus* shows how well the Hellenic genius succeeded, before its own eclipse, in solving the awkward Hêraklês-problem with which it had been plagued in the tragic generation of Sophocles and Euripides and Aristophanes and Prodicus. How keep in circulation a treasured mental coin on which the image and the superscription no longer seemed to tally? That was the problem of an image which was Caliban's and a superscription which read ἀριστος ἀνδρῶν—'the finest specimen of manhood'. Sophocles had proposed to remove a no longer tolerable contradiction by sharpening the image and chiselling the superscription off. Diogenes had eventually removed it by the contrary device of retaining the superscription and restamping the image to suit a new idea—revealed by insight won from suffering—of what the traditional legend ought to imply.⁴ And it was the coin as it came from Diogenes' masterful hands that set the standard for a Hêraklês-type which began *post Alexan-*

¹ The story is told by Murray in op. cit., sheet 1. According to Dudley, D. R.: *A History of Cynicism* (London 1937, Methuen), pp. 20-1 and 54-5, following C. T. Seltman, *παπαγαπάρειν* means, not 'restamp', but 'deface', and there is numismatic evidence that Diogenes' father did, in fact, as the magistrate responsible for the mint of Sinope, deface, in order to put out of circulation, imitations of the Sinopic coinage that had been counterfeited by a neighbouring satrap.

² Ibid., sheet 5.

³ Suidas, s.v. *Hêraklês*, quoted by Murray, op. cit., sheet 29.

⁴ Murray, op. cit., sheets 29-30.

drum to pass into circulation in the Oriental World and to be accepted there as interchangeable with the familiar local types of the Melkarts and the Sandans.

Let us scrutinize the portrait of *Hercules Philosophus* which thus gained currency in the former domain of the Achaemenian Empire after having been repainted by the Hellenic genius in the throes of a 'Time of Troubles'. We shall find in it a number of points which correspond with the portrait of Jesus in the Gospels; and we shall also find that many of these correspondences between Jesus and Hêraklês coincide with points of correspondence, that have been noted in this inquiry already, between Jesus and some of those historical pagan Hellenic heroes with whose stories we have been attempting to bring the Gospels into comparison.

(α) *There is a pair of heroes who are distinguished from one another by a double difference of age and of êthos* (= Point 1).

Hêraklês has a half-brother, Îphiklês, who plays Tiberius Gracchus to Hêraklês' Gaius. The contrast of character between the two brothers comes out when Hera sends the snakes to destroy the infant Hêraklês in his cradle (see Point (δ) below). While Hêraklês strangles the snakes, Îphiklês runs away (Apollodorus: *Bibliotheca*, Book II, chap. 62, on the authority of Pherecydes).

(β) *The hero is of royal lineage* (= Point 2).

Hêraklês' reputed father Amphitryon is a son of the Perseid King Alcaeus of Tiryns.

(γ) *The hero's genealogy has a flaw in it* (= Point 4).

Hêraklês' claim to be a scion of the Perseid royal house of Tiryns is disputable, inasmuch as it is derived from a Tirynthian Perseid who is the husband of Hêraklês' mother but who is not, himself, Hêraklês' father.¹

N.B. Hêraklês' claim to be of the royal Perseid blood is, however, salvaged thanks to the fact that his mother Alcmena is a Perseid as well as his reputed father Amphitryon. Alcmena is the daughter of the Perseid King Electryon of Mycenae, who is Amphitryon's uncle. It is noteworthy that one of the means by which the Christian commentators on the Gospels have sought to reconcile Jesus's claim to descent from David with his claim to be the Son of God to the exclusion of his being a son of Joseph has

¹ This correspondence of the birth-stories of Hêraklês and Jesus, not only with one another but also with those of a number of other Hellenic heroes, some legendary and others historical, has been noticed already in V. C (ii) (a), p. 269, footnote 1, above. While Hêraklês is a son of Alcmena by Zeus, his half-brother Îphiklês (see Point (α) above), who is his junior by one night, is a son of Alcmena by her husband Amphitryon—as Jesus's half-brothers are sons of Mary by Joseph.

been by supposing that Mary was related to Joseph as Alcmene was related to Amphitryon.

(δ) *The hero has a miraculous escape from a mortal danger which threatens him in infancy.*¹

Hera plays towards Hêraklês the persecutor's part that Herod plays towards Jesus. The babe is placed in hiding (Diodorus, Book IV, chap. 9, § 6),² as Jesus (Matt. ii. 13-21) is taken by Joseph to Egypt, in order to save his life from Hera's murderous designs (compare the stories of Jason, Orestes, Zeus, Zagreus, Horus, Moses, Cyrus).³ Hera afterwards sends a pair of snakes to kill the babe in his cradle; but Hêraklês strangles the creatures by a miraculously precocious exertion of his superhuman physical strength (Diodorus, Book IV, chap. 10, § 1).

(ε) *The Temptation in the Wilderness* (= the correspondence between the Temptations of Jesus and of Gautama which has been examined in this Annex on pp. 451-2, above).

On reaching the age of discretion at which the young become masters of their own fate and give an indication whether they are going to take the path of virtue or the path of vice as their approach to adult life, Hêraklês goes out to a quiet spot and sits debating within himself which path to take;⁴ and then and there Virtue and Vice make their epiphany to him in the form of two women who compete for his affections (Xenophon: *Memorabilia*, Book II, chap. i, §§ 21-34).⁵ This fable of Hêraklês' choice has a later variant, according to which the hero is led into the wilderness by Hermes, acting under Zeus' orders, and is taken up by his divine guide into an exceeding high mountain with two peaks, on one of which Kingship is enthroned and on the other Despotism. Hêraklês, of course, makes the appropriate choice between the two (Dio Chrysostom: *Oratio* I, §§ 58-84).⁶

(ζ) *The hero's career is an ordeal* (|| Point 10).

'Hêraklês who has borne so much' (Euripides: *Hercules Furens*, l. 1250). 'When thou hast worked thy way through labours such as these, then, Hêraklês, thou child of worthy parents, the possession of the most blissful felicity is within thy grasp' (*Virtus loquitur apud Prodicum, referente Xenophonte: Memorabilia*, Book II, chap. i, § 33). 'Who, save Hêraklês the son of Zeus, would have been willing, when he was of divine origin, to toil through such peri-

¹ For this *motif* see the present Annex, pp. 450-1, above.

² See Pfister, *op. cit.*, p. 47.

³ See III. C (ii) (b), vol. iii, p. 260, above.

⁴ For this simile of the two roads see p. 453, above.

⁵ Pfister, *op. cit.*, p. 43.

⁶ *Ibid.*, p. 48 (the passage from Dio has been cited already in V. C (ii) (a), Annex I, p. 370, above).

lous and grievous and painful labours?' (Plutarch: *De Alexandri Fortitudine*, ii. 11).¹

(η) *The hero's work obtains an extraordinary publicity* (= Point 12).

'The affair became celebrated through all Hellas (καθ' ἁπλὴν τὴν Ἑλλάδα) and all were amazed at the extraordinariness of it' (πάντων θαυμαζόντων τὸ παράδοξον) (Diodorus, Book IV, chap. 10, § 6). 'And there went out a fame of him through all the region round about (καθ' ὅλης τῆς περιχώρου), and he taught in their synagogues, being glorified of all' (δοξαζόμενος ὑπὸ πάντων) (Luke iv. 14-15).²

(θ) *The hero is commissioned by God to exercise a beneficent royal authority over all Mankind* (|| Point 15).

'Zeus commissioned him to reign over the whole human race . . . and . . . to be the saviour of the whole Earth and of all Mankind' (Dio Chrysostom: *Oratio* I, § 84).³ 'Thou sayest that I am a king' (John xviii. 37). 'The Father sent the Son to be the saviour of the World' (1 John iv. 14). 'Zeus sent (Ζεὺς μὲν ἀπέστειλε) orders to him to work for Eurystheus' (Diodorus, Book IV, chap. 10, § 7). 'I must preach the Kingdom of God to other cities also; for therefore am I sent' (εἰς τοῦτο ἀπέσταλμαι) (Luke iv. 43).⁴

(ι) *A tableau of the hero in spiritual agony in face of a supreme challenge* (= Point 36).⁵

Hēraklēs made a journey to Delphi and questioned the god [about the orders that he had received from Zeus to work for Eurystheus]. He received an oracle signifying that it was the will of the Gods that he should accomplish (τελέσαι)⁶ twelve labours at the bidding of Eurystheus, and that in reward he should gain immortality. Thereupon Hēraklēs fell into an extraordinary despondency (ἐνέπεσεν εἰς ἀθυμίαν οὐ τὴν τυχοῦσαν). On the one hand he considered it quite unworthy of his own prowess to serve some one of less distinction,⁷ and on the other hand it seemed to him unsuitable, and indeed impossible, not to obey a Zeus who was at the same time his own father.⁸ This threw him into a distressing spiritual quandary (εἰς πολλὴν οὖν ἀμηχανίαν ἐμπίπτοντος αὐτοῦ) in which Hera seized the opportunity of casting a frenzy upon him ('*Ἥρα μὲν ἐπεμψεν αὐτῷ λύτταν*). Hēraklēs became so sick

¹ Ibid., p. 50.

² Ibid., pp. 48-9.

³ Ibid., p. 45.

⁴ Ibid., p. 49.

⁵ See also Table VIII—Common Words: (ε), on pp. 414 and 415-16, above.

⁶ See Point 74 above = Table VIII—Common Words: (λ) = Point (ξ) below in the present series relating to Hēraklēs.

⁷ Compare: 'The servant is not greater than his lord, neither he that is sent greater than him that sent him' (John xiii. 16).

⁸ Nevertheless, not as I will but as thou wilt' (Matt. xxvi. 39 = Mark xiv. 36 = Luke xxii. 42 (cf. John v. 30, and vi. 38).

in soul that he went out of his mind (ὁ δὲ τῇ ψυχῇ δυσφορῶν εἰς μανίαν ἐνέπεσε); and the malady grew upon him to a point at which he took leave of his senses and . . . ' (Diodorus, Book IV, chap. 10, § 7, and chap. 11, § 1).¹

(κ) *The hero resigns himself to the will of his heavenly father.*

'On the other hand it seemed to him unsuitable, and indeed impossible, not to obey a Zeus who was at the same time his own father' (Diodorus, loc. cit. in (ι), above). 'Nevertheless, not as I will but as thou wilt' (the Gospels, locc. citt. in footnote 7 on p. 471, above).²

(λ) *A shirt (χιτῶν) in which the hero goes to his death* (|| Point 71).

The shirt plays, of course, a far more important part in the Passion of Hēraklēs than in the Passion of Jesus; for the death of Hēraklēs is actually caused by his putting on the poisoned shirt of Nessus.

(μ) *When other passers-by refuse to perform a friendly office for the hero, one person responds to his request and receives a notable reward for his act of friendship* (|| Point 72).

'Hēraklēs went to the pyre and then began to beg everybody who approached, one after another, to set light to it. No one ventured to do his bidding until at last Philoctetes agreed. He received as a reward for his services the gift of Hēraklēs' bow and arrows' (Diodorus, Book IV, chap. 38, § 4).

(ν) *The hero's mother is supported in her ordeal by a young man of the hero's entourage* (= Points 73 and 80A).

Alcmena is present at the Passion of Hēraklēs (according to Seneca in his *Hercules Oetaeus*, though not according to Sophocles in his *Trachiniae*). The part of the favourite companion is played by Philoctetes, who is described as ἐρώμενος Ἡρακλέους in the scholia to Apollonius Rhodius: *Argonautica*, Book I, l. 1207; but the young man who supports Alcmena (according to the Senecan version of the passion-play) is not Philoctetes but Hyllus, who is Hēraklēs' son and therefore Alcmena's own grandson.³

N.B. Philoctetes' friendly office to Hēraklēs (see Point (μ)),

¹ Pfister, op. cit., p. 49. In the legend of Hēraklēs according to Diodorus the hero's spiritual agony discharges itself in a murderous assault upon the hero's faithful companion Iolaus and upon the hero's own children. This was, of course, the common form of this chapter of the Hēraklēs Story. May we infer that the attraction exercised by it is responsible for the Diodoran version of the corresponding chapter in the story of Gaius Gracchus, in which the guilt for the murder of Antullus is laid upon Gaius Gracchus and not upon Marcus Fulvius, and the murder itself is placed after Gaius's agony and not before it? (See p. 389, footnote 3, and p. 392, footnote 2, above.)

² Ibid., p. 49.

³ Ibid., p. 53.

above) corresponds to Panteus' friendly office to Cleomenes (see Point 79).

(ξ) *The end of an ordeal* (= Point 74).¹

'It is finished' (*peractum est*) (Seneca: *Hercules Oetaeus*, ll. 1340, 1457, 1472).²

N.B. The same phrase is repeated twice in the Gospel according to Saint John (xix. 28 and 30).

(ο) *The hero commends his spirit to his heavenly father.*

'Quacumque parte prospicis natum, pater, . . . spiritum admitte hunc, precor, in astra' (Seneca: *Hercules Oetaeus*, ll. 1696 and 1703-4).

'Father, into thy hands I commend my spirit' (Luke xxiii. 46).³

(π) *Three portents* (|| Point 75).

Hercules prays to the Sun to cease to shine on this day of the hero's death (Seneca: *Hercules Oetaeus*, ll. 1131-4). He prays to his father Juppiter to rend the Earth from pole to pole (ll. 1134-6). He prophesies that the buried giants will break out from under the mountains that cover them, and that Pluto will throw open the gates of Hades (ll. 1138-43). All these three portents are mentioned in the Gospels as having occurred at the time of Jesus's death: the darkness in all three Synoptic Gospels (Matt. xxvii. 45 = Mark xv. 33 = Luke xxiii. 44); the earthquake and the opening of the graves in Matt. xxvii. 51-3.

N.B. According to Diodorus, Book IV, chap. 38, § 4, Hêraklês' pyre is miraculously consumed by incendiary thunderbolts. A portent of thunder is mentioned by Apollodorus: *Bibliotheca*, Book II, chap. 160; a portent of darkness by Festus: *De Verborum Significatu*, Book VIII, s.v. *Hercules*.⁴

(ρ) *When the hero is being burnt to death, Iolaus and other intimate companions of his are in the vicinity, though not actually on the spot* (= Point 80).

'Iolaus and the rest waited beholding from a distance to see what would happen' (ἐκ διαστήματος ἀποθεωρούντων τὸ ἀποβησόμενον) (Diodorus, Book IV, chap. 38, § 4). 'And many women were there beholding afar off' (ἀπὸ μακρόθεν θεωροῦσαι) (Matt. xxvii. 55 = Mark xv. 40; cf. Luke xxiii. 49).

¹ See also Table VIII—Common Words: (λ), on pp. 414 and 416, above.

² Pfister, op. cit., pag. cit.

³ Ibid.

⁴ Ibid., pp. 53-4. According to Festus: 'Hercules astrologus dictus quod eo die se flammis iniecit quo futura erat obscuratio Solis.' For the association of the Hêraklês motif of an eclipse with the death of Caesar, as well as with the death of Jesus, see Virgil: *Georgics*, I, ll. 467-8, quoted in V. C (i) (d) 5, vol. v, p. 436, above.

N.B. In the tableau of the Crucifixion of Jesus these onlookers from a distance are a chorus of Galilaean women corresponding to the chorus of Trachinian women who are present at the cremation of Hêraklê's in Sophocles' play. In Seneca's play Iolaus and the rest have followed Hêraklê's from his and their home in Trachis to the scene of his death on Oeta, just as the Galilaean women have followed Jesus from his and their home in Galilee to the scene of his death at Jerusalem.

(σ) *The hero, after his death, comes to receive religious worship* (= Point 83).

Diodorus, Book IV, chap. 39, § 1.

(τ) *The villain perishes miserably* (= Point 85).

'Deïaneira was prostrated at the greatness of the disaster that had befallen Hêraklê's, and, being conscience-stricken by the conviction that the sin was hers, she put an end to her life by hanging herself' (συνειδυία ἐαυτῇ τὴν ἁμαρτίαν, ἀγχόνῃ τὸν βίον κατέστρεψεν) (Diodorus, Book IV, chap. 38, § 3). 'Then Judas . . . , when he saw that he was condemned, repented himself (μεταμεληθεὶς) . . . saying "I have sinned (ἥμαρτον) . . ." . . . and went and hanged himself' (καὶ ἀπελθὼν ἀπήγγεστο) (Matt. xxvii. 3-5).¹

N.B. Deïaneira's tragedy resembles Judas' in the further point that she, too, has been a tool in hands more villainous than her own.

(υ) *The disappearance of the hero's mortal remains.*

'After [the miraculous conflagration of the pyre by thunderbolts] Iolaus and the rest went to collect the bones; but not one bone was to be found—from which they inferred that, in accordance with the oracles, Hêraklê's had been translated from the world of men to the world of the Gods' (Diodorus, Book IV, chap. 38, § 5). After the burial of Jesus, when the women return to visit the Sepulchre, they find it open and empty (Matt. xxviii. 1-8 = Mark xvi. 1-8 = Luke xxiv. 1-9 = John xx. 1); and their extraordinary discovery is confirmed by Peter (Luke xxiv. 10-12) or by John and Peter (John xx. 2-10).²

(φ) *The hero has conquered Death and harrowed Hell.*

Hêraklê's twelfth labour is a descent into Hades to seize and bring back Cerberus. He successfully accomplishes this task, and on another occasion—and this time, too, with success—he

¹ Pfister, op. cit., p. 53.

² Ibid., p. 55.

descends into Hades to rescue and bring back Alcestis. (Compare Seneca: *Hercules Furens*, ll. 604-12 and 889-93, and *Hercules Oetaeus*, ll. 1943-62, with Rom. vi. 9, and 2 Tim. i. 10.)¹

(χ) *The hero, after his death, appears to one (or to two) of the women of his entourage.*

Hēraklēs appears to his mother Alcmena (Seneca: *Hercules Oetaeus*, ll. 1940-82); Jesus appears to Mary Magdalene and 'the other Mary'² (Matt. xxviii. 9) or to Mary Magdalene alone (Mark xvi. 9-11 and John xx. 11-18).³

(ψ) *The hero's disciples return to his and their home.*

Iolaus and his companions from Oeta to Trachis (Diodorus, Book IV, chap. 39, § 1); Peter and his companions from Jerusalem to Galilee (Matt. xxviii. 10 and 16; John xxi).

(ω) *The hero ascends to Heaven in a cloud.*

Hēraklēs (Apollodorus: *Bibliotheca*, Book II, chap. 160); Jesus (Acts i. 9).

This completes our survey of correspondences between the legend of Hēraklēs on the one hand and the stories of Jesus, and of the pagan historical heroes whom we have brought into comparison with Jesus, on the other hand. If we glance at the analysis of our results which is set out in Table X we shall see that the correspondences that we have observed are not only numerous but are also representative of the several different kinds of elements that are common to the Gospels and to the stories of the pagan historical heroes. This finding suggests that the legend of Hēraklēs may be an important common source from which the story of Jesus on the one side and the stories of the pagan historical heroes on the other side may have derived some of their common features, independently of one another, through separate channels of the stream of 'folk-memory'.⁴

¹ Ibid., p. 51.

² i.e. Mary the mother of James and Joses (Matt. xxvii. 56), not Mary the mother of Jesus.

³ Jesus's salutation to Mary Magdalene at the Sepulchre—'Woman, why weepest thou?' (John xx. 15)—has a correspondence in Hēraklēs' adjuration *post mortem* to his mother Alcmena: 'Quid me . . . planctu iubes/sentire fatum?' (Seneca: *Hercules Oetaeus*, ll. 1940-2). There is a closer verbal coincidence in l. 1507: 'Parce iam lacrimis, parens' (Pflster, op. cit., p. 55); but these words are spoken by the hero before his death and not after it. The next line (1508) of Seneca's play—'Superba matres inter Argolicas eris'—corresponds verbally with the salutation—'Blessed art thou among women'—with which Mary the mother of Jesus is greeted first by Gabriel (Luke i. 28) and then by Elisabeth (Luke i. 42).

⁴ This suggestion has already been made apropos of the birth-stories in V. C (ii) (a), p. 269, footnote 1, above.

The Ritual Murder of an Incarnate God

Legend, however, is not the only kind of foreign matter that may fall into Lethe's stream and be carried along by it. According to the anthropologists a myth usually proves, when we are able to trace its history back to its origins, to be the verbal echo of some ritual act;¹ and the deed is anterior to the word² logically as well as historically; for a society that performs some act for its own sake without being moved to seek for any explanation is manifestly in a more primitive mental state than one which is led by a disinterested curiosity into trying to explain the reason for what is

¹ In an aesthetically gifted primitive society or nascent civilization the ritual act is apt to blossom into a religious drama and the myth into Epic or Saga (see II. D (iii), vol. ii, pp. 92-6, above).

² 'Im Anfang war die Tat.'—Goethe: *Faust*, I. 1237.

done when this indulgence of the speculative intellect cannot be supposed to add in any way to the practical efficacy of the customary magical or religious performance. If, therefore, we have found evidence which suggests that a myth may make its way into the stream of 'folk-memory' and may be deposited by these waters in fields of sophisticated literature that happen to adjoin the river banks, then we may expect *a priori* to see pieces of ritual being carried along the same channels to the same eventual resting-places; and, to verify this hypothesis, we need not for the moment look beyond the figure of the demigod who has been engaging our attention in the immediately preceding pages.

We have already come to the conclusion that the legend of Hêraklês would have been unlikely—even in the etherialized form to which it had been refined by the cumulative labours of three successive generations of Hellenic philosophers—to make the headway that it did make in the Oriental World *post Alexandrum* if the Hellenic demigod himself had not first been officially identified with local divinities who were ancient, familiar, and popular. And, if we now look into the reasons why Hêraklês was taken to be the Hellenic equivalent of this or that Oriental god, we shall find that the decisive factor was apt to be some striking point of similarity, not in myth, but in ritual. Sandan the god of Tarsus, for example, was identified with Hêraklês because an effigy—inanimate or living—of the Tarsian god was annually cremated on a pyre.¹ This explanation of Hêraklês-Sandan is hardly open to doubt; and it would likewise seem probable that the Tyrian god Melkart was identified with Hêraklês because the Tyrians celebrated an annual festival of the resurrection of Melkart which recalled to Hellenic minds the triumph of Hêraklês over Death. This Tyrian festival is referred to as that of 'the Resurrection of Hêraklês' (*Ἡρακλέους ἔγερσις*) in a Greek work from the pen of a half-Hellenized Jewish scholar who lived and wrote in the first century of the Christian Era.² Did the Tyrians, we may wonder, look eastward, when the season of this festival came round, to catch sight of, and salute, their lord god as he rose, with the Sun, above the mountains of Galilee? And did some such lingering local custom also direct the steps of certain sons of 'Galilee of the

¹ See Frazer, J. G.: *The Scapegoat = The Golden Bough*, 3rd ed., Part VI (London 1913, Macmillan), pp. 388–90.

² Josephus: *Antiquities*, Book VIII, chap. 5, § 3, cited by Pfister, *op. cit.*, pp. 58–9. The foundation of this festival of the Resurrection of Hêraklês in the month of Peritius is attributed to Solomon's Tyrian contemporary King Hiram by Josephus, *loc. cit.*, on the authority of 'Menander the translator of the archives of Tyre out of the original Phoenician into Greek'. Peritius was the fourth month of a Macedonian calendar which took the autumnal equinox for its New Year's Day, so that, if the Tyrian festival of the Resurrection of Hêraklês was celebrated on the *first* day of the month, its date would be identical with that of the Birthday of the Sun and Christmas Day.

Gentiles'¹—whose grandfathers had been numbered among the heathen before Alexander Jannaeus (*regnabat* 102–76 B.C.) converted them to Judaism by the sword—when, in their agony of sorrow and despair on the morrow of their Master's death, they 'went away into Galilee, into a mountain where Jesus had appointed them', and 'worshipped him when they saw him'?² In an equally speculative vein we may ask ourselves whether the annual ritual at Tarsus, in which Hêrâklês-Sandan died a cruel death in order to enjoy a glorious resurrection, may not have made on the imagination and emotions of Saint Paul as a boy an impression which we can trace in the grown man's Christology.³ The Hêrâklês who was the universally acknowledged saviour (σωτήρ) of all Mankind⁴ was also, at Tarsus, the local prince (ἀρχηγός) of a community that worshipped him as Hêrâklês-Sandan.⁵ Is it sheer chance that the same two titles of 'prince' and 'saviour' are applied to Jesus in a passage of the Acts of the Apostles in virtue of the prodigy of a resurrection⁶ which is ascribed to Jesus as well as to Hêrâklês-Melkart?

'The God of our fathers raised up (ἤγειρεν) Jesus, whom ye slew and hanged on a tree. Him hath God exalted with his right hand to be a prince (ἀρχηγόν) and a saviour (σωτήρα).'⁷

Does it not seem probable that these three almost technical terms have been inherited by Christianity from the Tyrian worship of Hêrâklês-Melkart and from the Tarsian worship of Hêrâklês-Sandan? And, if this probability is entertained, does it not seem also probable that ritual, rather than myth, was the vehicle in which the three terms were conveyed from one religion to another?

The likelihood that ritual, as well as myth, may have contributed to the production of the correspondences between the story of Jesus and the stories of our eleven pagan historical heroes will not appear less when we remind ourselves that Jesus was not the only

¹ Matt. iv. 15, quoted already in II. D (iii), vol. ii, p. 73, above. See further the present Annex, in the present volume, p. 499, below.

² Matt. xxviii. 16–17.

³ In later years Paul still spoke of his Tarsian birth with pride ('I am a man which am a Jew of Tarsus, a city in Cilicia, a citizen of no mean city.'—Acts xxi. 39). If Tarsus retained this lasting hold over Paul's affections, it seems likely that the impressions of his childhood in Tarsus will likewise have made a lasting imprint upon his imagination. These suppositions are quite compatible with Paul's own account of the next stage of his life, when he was receiving an education in the Jewish Law at Jerusalem ('My manner of life from my youth (ἐκ νεότητος, not ἐκ παιδός), which was at the first among mine own nation at Jerusalem, know all the Jews—which knew me from the beginning, if they would testify, that after the most straitest sect of our religion I lived a Pharisee.'—Acts xxvi. 4–5).

⁴ See the phrase quoted on p. 471, above, from Dio Chrysostom: *Oratio* I, § 84.

⁵ 'Your prince Hêrâklês' (ὁ ἀρχηγός ὑμῶν Ἡρακλῆς).—Dio Chrysostom: *Oratio* XXXIII (*Tarsica Prior*), § 47.

⁶ The ritual of the cremation of Hêrâklês-Sandan is similarly mentioned, in association with his title of 'prince', by Dio Chrysostom in loc. cit.

⁷ Acts v. 30–1. The three verbal correspondences are pointed out by Pfister, op. cit., p. 59.

one of these twelve to become a recipient of worship after his death. The Gracchi, as we have seen (Point 83), are reported by Plutarch's authorities to have been worshipped—and this with a regular ritual which was comparable to the services in the temples of the Gods—at the spots that had been hallowed by these two Roman heroes' deaths. And at Alexandria the spot where the crucified corpse of Cleomenes had been miraculously preserved intact (Points 75, 76, and 78) became a place of pilgrimage where the dead Spartan exile was hailed 'as a hero and a child of the Gods' by the populace of Alexandria.

In the same passage (*Lives of Agis and Cleomenes*, chap. 60, *ad fin.*) Plutarch (or is it really Phylarchus?) goes on, it is true, to narrate how this nascent worship of Cleomenes was nipped in the bud by the intervention of 'educated people' (οἱ σοφώτεροι), who threw cold water on the rising religious ardour of the Alexandrians by explaining to them that the apparently miraculous portent which had made such an impression on their hearts via their intellects was scientifically explicable as a commonplace effect of certain wholly natural causes. If there is any truth in this tale, it is easy to guess that these zealous rationalists were not exerting themselves *proprio motu*. Behind their propaganda we can discern the policy of the Ministers of King Ptolemy Philopator. While Cleomenes was still alive, the Ptolemaic Government had been seriously concerned at the alarming evidences of their Spartan guest's popularity among King Ptolemy's soldiers and subjects. It was on this account that they had taken the precaution of interning him; and now the romantic fool had turned the tables on these prudent statesmen by managing, in their despite, to die a heroic death and to cap it with a sensational miracle to the credit of his dead body. It was not to be borne that the tiresome fellow should defeat their calculations by now making himself even more popular as a naturalized ghost than he had ever been as a living alien refugee. The blossoming worship of Cleomenes must be sterilized at once by vigorous counter-measures; and we may well believe that, partly by propaganda and partly by intimidation, Sosibius and his colleagues did succeed in driving this pestilent worship of Cleomenes underground. But who shall say what the fortunes of the cult may have been after it had gone to earth? Not even the Ptolemaic security police could certify that this *Schwärmerei* was completely extinct; and not even the Ptolemaic customs cordon could prevent it, if it did manage to survive in an Alexandrian underworld, from being shipped far and wide out of a port which in that age was the central mart and clearing-house of three continents and five civilizations.

The possible social means of conveyance by which a never quite extinguished worship of Cleomenes might have been carried from Alexandria to the Palestinian glaxis of the Ptolemaic Empire are examined at a later point in this Annex.¹ In the present context we may pass on to observe that, while the survival of the worship of Cleomenes is non-proven, and while the institution of a worship of the Gracchi is only vouched for by the unsupported testimony of one of Plutarch's sources, there is no doubt at all about the worship of three other historical Hellenic heroes—Plato, Alexander, and Augustus—who have come into the purview of our present inquiry because they are credited with the divine paternity and the miraculous birth that are likewise attributed to Jesus in the Matthaean and Lucan prologues to the story of the Gospels.²

We may also presume that in cases such as these, in which a religious worship came to be paid to the *manes* of mortal men, the ritual with which these were honoured would be modelled, with a minimum of innovation, on some familiar traditional ritual which was in current use in the worship of superhuman heroes and gods. In Plutarch's source, for example, the Gracchi are visualized in the likeness of the Dioscuri.³ And we may hazard the guess that the pair of historical Roman heroes were thus thought of as counterparts of the pair of Lacedaemonian demigods because the modern statues of them that were dedicated and erected in a conspicuous place⁴ were carved in something like the traditional shapes of Castor and Pollux and were honoured with something like the observances to which these statues of Castor and Pollux had a traditional claim. There is, however, no reason to suppose that the rituals in vogue in the worships of the Dioscuri and of Hêraklês were the only pieces of existing religious or magical practice that were laid under contribution in the process of instituting the worships and shaping the legends of Plato and Alexander and Cleomenes and the Gracchi and Augustus and Jesus. There is no obvious limit to the extent of the field of traditional observance from which some common element may, here and there, have found its way independently into the worships, and thence into the legends, of some or all of the historical heroes whose stories reveal those correspondences that we are seeking to trace back to their origins; and, if we make a reconnaissance into some of the tracts that Sir James Frazer has mapped out in the relevant parts of his vast survey,⁵ we shall come across at least two rites which

look as though they may have been the ultimate sources of certain of the correspondences between the stories of our pagan historical heroes and the story of the Gospels.

(α) '*The Ride of the Beardless One.*'¹

There is a Persian rite in which a naked rider, mounted on a horse, ass, or mule, rides through the city at the head of a cortège (Point 16)—apparently for the magical purpose of bringing warmth back to the Earth in spring.² As his reward for playing the part, this human impersonator of the power that annually rejuvenates the face of Nature is allowed to levy contributions on the shop-keepers; and, if they are hesitant about complying with his demands, he is entitled to confiscate the whole of their stock (Point 17). Is this Persian rite the ultimate source of two of our common scenes? The conjecture may be fortified by two apparently corroborative pieces of evidence. On the one hand the rite appears to have precipitated itself, in the shape of a myth, in the incident of Mordecai's ride in the Book of Esther³—a post-exilic work of Jewish literature which was undoubtedly generated by a desire to account retrospectively for the origin of the annual festival of Purim,⁴ which the Jews had adopted, or at any rate adapted, from the practice of the heathen among whom they had been constrained to dwell during their Babylonish captivity. On the other hand the same spring-rite would seem to have played some part in suggesting the idea of an historical piece of horse-play.

(β) '*The Reign of the Mock King.*'

The Jewish Hellenist scholar Philo of Alexandria (*vivebat circa* 20 B.C.—A.D. 50) records⁵ that at Alexandria in A.D. 38, when Herod Agrippa I, the grandson of Herod the Great, was passing through the city on his way home to Palestine from Rome—where he had just been raised to royal rank and been invested with his uncle Philip's former appanage by the Emperor Caligula—the Alexandrian populace, who in this age were violently Anti-Semitic,⁶ gave

¹ See Frazer: *The Scapegoat*, pp. 402-5.

² This interpretation of the rite depends on a combination of points—the season at which it is performed, the nakedness of the rider, and the bystanders' practice of douching him with hot water—which are irrelevant for our present purpose.

³ Esther vi. 7-11.

⁴ At the feast of Purim the Jews—even in Western Europe in the Modern Age—used to act a play which had for its subject the story that is told as a tale in the Book of Esther (see Frazer, *op. cit.*, pp. 414-16).

⁵ Philo: *In Flaccum*, chap. (6), §§ 36-9 (in *Philonis Alexandrini Opera quae supersunt*, edited by Cohn, L., and Wendland, P., vol. vi, edited by Cohn, L., and Reiter, S. (Berlin 1915, Reimer), p. 127), cited by Frazer, *op. cit.*, p. 418, following Wendland, P.: 'Jesus als Saturnalienkönig' (= *Hermes*, vol. xxxiii (1898), pp. 175-9).

⁶ For this Alexandrian Anti-Semitism and its causes see V. C (ii) (a), pp. 217-19, above.

expression to their chagrin at the aggrandizement of a Jewish prince by burlesquing Agrippa's investiture in a kind of charade, which they improvised in the streets of Alexandria while their unwelcome royal guest was in their midst. To show what they thought of a Jewish kingship of Roman manufacture, the Alexandrians, according to Philo's story, rounded up a naked beggar named Carabas; chevied him into the public gymnasium; set a papyrus-leaf crown on his head, a rug robe on his shoulders, and a papyrus-stalk sceptre in his hand; paid him mock court (Points 65¹ and 66); and exhibited him in these burlesque regalia to the crowd (Point 67), who hailed him with satirical acclamations of 'Marin! Marin!'²

In this elaborately offensive piece of fooling³ the Alexandrians appear to have combined a vague parody of 'the Ride of the Beardless One' with a close parody of another rite which has, perhaps, a certain affinity with 'the Ride' in respect of its magical purpose and which may also, perhaps, have been combined with 'the Ride' in practice when the two rites were being performed in earnest.⁴ The sceptre and robe and crown with which the historical victim

¹ It will be seen that Philo's story comes closer to the Lucan account of the mocking of Jesus by Herod Agrippa's uncle and brother-in-law Herod Antipas and his men than it comes to the Matthaean and Marcan account of the mocking of Jesus by Pilate's Roman soldiers.

² 'Marin! Marin!' seems to be a garbled version of the Hebrew 'Marna! Marna!' ('Our Lord! Our Lord!'). Compare Matt. xxi. 9 = Mark xi. 9-10 = Luke xix. 38 = John xii. 13.

³ The elaborateness of it will be apparent in the following translation of the whole passage of Philo from Cohn and Reiter's Greek text:

'There was a madman called Carabas whose madness was not of the savage ferocious kind—a kind which shows no more consideration [reading *ἀσκεπτος* for the *ἀσκητος* of the MSS.] for those who come within range than for those who are possessed by it [cf. Matt. viii. 28 = Mark v. 3-4 = Luke viii. 29]—but was of the kind that is relaxed and milder. This man lived all day long, and all night long as well [Mark v. 5], stark naked [Luke viii. 27] in the streets, exposing himself heedlessly to extremes of heat and cold and to the pranks that were played on him by infants and children who had nothing better to do. They [i.e. the Alexandrian mob] chevied this poor creature to the public gymnasium; stood him on a platform where he would be visible to all eyes; flattened out a papyrus-leaf and set it on his head to do for a diadem, and draped the rest of his body in a rug to do for a robe [*χλαμύς*, which is the word used in Matt. xxvii. 28], while, to do for a sceptre, some one handed up a short section of papyrus-stalk (the native Egyptian plant) which he had seen lying in the street where it had been thrown away. When Carabas had thus received the insignia of royalty and been tricked out as a king with all the parade of a pantomime, some young fellows took their stand on either side of him with sloped rods, to do for sloped pikes, like a burlesque bodyguard; and then other people made their approach—some as though they were going to pay him their respects, some as though they were going to lay a suit before him, and some as though they were going to consult him on public affairs. And then, from the crowd standing round in a circle, there thundered out the strange cry of 'Marin', which is said to be the Syrian for 'Lord'—for they knew that Agrippa was a Syrian by race and that a large slice of Syria constituted his [newly conferred] kingdom.'

⁴ The combination of 'the Ride of the Beardless One' with 'the Reign of the Mock King' may have been an established practice in the realm of serious observance before the two rites were combined in the Alexandrian burlesque of A.D. 38. This possibility is suggested by the fact that Philo's account of this Alexandrian practical joke is not the only context in which we find the two rites associated with one another. There are also traces of both of them in the myth of Esther and Mordecai, which has been precipitated by the ritual of the post-exilic Jewish festival of Purim.

of a heartless practical joke was tricked out at Alexandria in A.D. 38 are properties which seem to have belonged, not to 'the Ride of the Beardless One', but to the different rite of 'the Reign of the Mock King',¹ which was apparently intended, not to conjure back the warmth of spring, but to fulfil the antecedent purpose of ushering the Old Year out and the New Year in.

The main features of this second rite present themselves with an astonishing uniformity² in the Babylonian festival of the Sacaea³ and in the Roman festival of the Saturnalia.⁴ In the first place the turn of the calendar year was celebrated in this festival by a temporary abrogation of the workaday social system. At both Babylon and Rome⁵ the masters and the slaves temporarily exchanged their usual roles; and the deliberate topsy-turvyness of this brief holiday régime was symbolized in the enthronement of a mock king who was honoured and pampered, for the period of his burlesque reign, as though he were a king in very deed. He was dressed up in the proper regalia (Points 65, 66, and 67) and was allowed to exercise a far-reaching royal licence.⁶ But—in some, at any rate, of the many variant versions of the rite—this short-lived pomp and indulgence⁷ had to be paid for by the mock king with his life as soon as his ephemeral reign was over.⁸ After

¹ A survey of diverse local variants of a rite which was in vogue, at the time of the disintegration of the Hellenic Society, over an area that embraced both Babylonia and Roman Italy, will be found in Frazer, op. cit., chap. 8: 'The Saturnalia and Kindred Festivals' (= *The Golden Bough*, 3rd ed., Part VI, pp. 306-411).

² We may conjecture that the rite was of Babylonian, or perhaps rather of Sumerian, origin, and that it was gradually propagated from the Land of Shinar into the regions round about. If we ask who brought it from the western shores of Asia to the western shores of Italy, it is tempting to answer: 'The Etruscans'.

³ See Frazer, op. cit., cap. cit., § 5 (= vol. cit., pp. 354-407).

⁴ Ibid., § 1 (= vol. cit., pp. 306-12).

⁵ Frazer, vol. cit., p. 355.

⁶ This first act in the ritual drama of 'the Reign of the Mock King' appears to have precipitated itself, in the shape of a myth, in the tableau (Point 67) of Mordecai coming out of the King's palace into the city arrayed in royal apparel, including a crown and a purple robe (Esther viii. 15).

⁷ The reign of the Roman Saturnalia-king lasted thirty days (Frazer, vol. cit., pp. 414-16), and that of the Babylonian Sacaea-king five days according to the account of the Sacaea in Athenaeus: *Deipnosophistae*, Book XIV, chap. 44, p. 639 c (Athenaeus's authority is Berossus).

⁸ The putting to death of the mock king as soon as his reign is over is mentioned as an integral part of the rite by Dio Chrysostom (*vivebat circa* A.D. 45-115) in his account of the Sacaea (*Oratio*, IV, § 67). In the Saturnalia, as celebrated in Rome and in Roman Italy, the mock king was not put to death in any period in regard to which we have any historical record of the nature of the celebrations; and our authorities do not even give us any hint that the Saturnalia-king had been customarily put to death once upon a time in ages past. We have, however, one apparently authentic account of a celebration of the Saturnalia by the troops of a Roman garrison on a remote frontier of the Empire at a late date in which the rite includes the eventual putting to death, as well as the preliminary honouring and pampering, of the mock king, and is thus in conformity with the Sacaea in all respects. At Durostorum in Lower Moesia on the 20th November, A.D. 303, a Christian Roman soldier named Dasius was beheaded as a penalty for having refused to play the part of Saturnalia-king when this had fallen to him by lot; and in this context it is mentioned that, after his brief burlesque reign, Dasius's life would have been forfeit to the god if he had accepted his allotted role of the mock kingship instead of rejecting it. The Greek text of Dasius's *acta* has been published by Cumont, Franz: 'Les Actes de Saint Dasius' in *Analecta Bollandiana*, vol. xvi (1897), pp. 5-16. The bones of Saint

having honoured him and pampered him (Points 65, 66, and 67) 'they stripped him and scourged him and crucified (or hanged) him' (μετὰ δὲ ταῦτα ἀποδύσαντες καὶ μαστιγώσαντες ἐκρέμασαν).¹ Crucifixion or hanging is, as we have seen, the common fate of Jesus and the two Heracleidae (Point 70),² while the preliminary stripping³ and scourging⁴ are also mentioned in the Gospels, though not in the account of the Passion of either of the Spartan heroes. The correspondence between the extant narratives of these historical Passions and the surviving accounts of the annual celebration of 'the Reign of the Mock King' in the Babylonian festival of the Sacaea is so close that it can hardly be fortuitous.⁵ In what direction are we to look for an explanation of it?

Are we to suppose that Jesus was crucified in the role of the mock king? And, if we entertain that supposition, towards which of two possible alternative variants of it are we to incline? Is it likely that Jesus was cast for the role in earnest, and was literally the victim of a ritual murder at one of the annual celebrations of the rite in one or other of its diverse regional forms?⁶ Or is it more

Dasius now repose under the High Altar of the Church of Saint Pellegrino at Ancona, and the white marble sarcophagus in which they once rested is to be seen in the crypt of the Cathedral of the same Italian city (see Frazer, vol. cit., pp. 308-12). The rite celebrated at Durostorum at the beginning of the fourth century of the Christian Era may, of course, have been called Saturnalia by analogy, without having been derived from the genuine Roman Saturnalia as a matter of historical fact.

¹ Dio Chrysostom, op. cit., loc. cit., with reference to the Sacaea. The Greek word ἐκρέμασαν is ambiguous, since it might equally well mean either 'crucified' or 'hanged'. This murderous last act in the ritual of the Sacaea appears to have precipitated itself, in the shape of a myth, in the incident of the hanging of Haman in the Book of Esther.

² Agis is hanged; Cleomenes' corpse is crucified.

³ Matt. xxvii. 31 = Mark xv. 20 (ἐξέδυσαν).

⁴ Matt. xxvii. 26 = Mark xv. 15 (φραγελλώσας παρέδωκεν ἰνα σταυρωθῇ).

⁵ We may notice a further point of correspondence which is not recorded in our extant accounts of the ritual of the Sacaea, but which comes out in the myth of Esther and Mordecai. In the tragedy of Haman, as in the tragedies of Jesus and Cleomenes, the protagonist partakes of a banquet immediately before he meets his violent death (Esther v-vii).

⁶ The conjecture that Jesus may have been the victim of a ritual murder at some celebration of the rite of 'the Reign of the Mock King' is considered by Frazer in a note on 'the Crucifixion of Christ' in vol. cit., pp. 412-23; and the suggestion is not impugned, but is rather fortified, by the fact—of which there can be no question—that Jesus was condemned to death on religious and political grounds which, in themselves, had nothing to do with any such traditional observance. Dio Chrysostom (*Oratio* IV, § 67) tells us that, at the celebration of the Sacaea, they took, for Mock King, some prisoner who had been condemned to death already; and it is indeed evident that the doom of being conscripted to play a part that was to end so grimly in so near a future could not easily be made to fall on any man whose life was not already forfeit. In this connexion Frazer suggests (loc. cit., pp. 418-20) that the word 'Carabas', which according to Philo was the name of the gentle madman who was paraded as Mock King in the Alexandrian charade of A.D. 38, is a corruption of 'Barabbas', and that 'Barabbas' is not a name but a title. This suggestion is philologically attractive, since 'Carabas' is neither Greek nor Hebrew nor Aramaic, whereas 'Barabbas' means in Hebrew 'the Son of the Father'. On this showing, the 'Barabbas' of the Gospels (Matt. xxvii. 16 = Mark xv. 7 = Luke xxiii. 18-19 = John xviii. 40) would be a criminal of unknown name who, having already been convicted and sentenced to death, had subsequently been cast to play the ritual role of 'the Son of the Father' which, on this hypothesis, would be the traditional title of the annually sacrificed Mock King. (Frazer suggests that this title is a relic of an earlier phase in the history of the ritual in which the human victim was, not a condemned criminal, but the first-born son of the authentic king of the land, who sacrificed

probable that, if Jesus was really robed and crowned and stripped and scourged and crucified in accordance with the customary ritual of 'the Reign of the Mock King', this was not a genuine celebration of the rite but merely a parody of it, like the robing and crowning of the victim of the practical joke at Alexandria in A.D. 38?¹ Or are we to reject altogether the supposition that any of our historical heroes were authentically put to death—or crucified posthumously²—in the role of the Mock King, either in earnest or in burlesque, and to explain the apparent correspondences between the narratives of the historical Passions and the accounts of the ritual of the Sacaea by the hypothesis that the rite has precipitated itself in the shape of a myth (as, for example, in the Book of Esther) and that this myth has made its way into the narratives of the historical Passions at some stage in the literary history of these narratives when they were floating, in a plastically receptive state, in the solvent waters of the stream of 'folk-memory'?³ It will be seen that the problem is not a simple one; and in the present state of our knowledge it would be rash to attempt

his offspring to the god as a ransom for himself until a change of custom—which is perhaps commemorated in the myth of the substitution of the ram for Isaac (Gen. xxii)—reprieved the authentic king's son by substituting a less precious victim; alternatively, the title might mean 'the Son of [God] the Father', and this alternative rendering is perhaps favoured by Points 52 and 75.) According to Frazer's theory the Jews prevailed upon Pilate to release the criminal of unknown name who had thus already been cast for the part of the 'Barabbas' in the forthcoming celebration of an annual ritual murder, and to condemn Jesus to play the part in the reprieved malefactor's stead. If Jesus did die in this role, that would explain the exclamation that is attributed to the centurion in the Gospels according to Saint Matthew and Saint Mark (Point 75).

In a critique of Frazer's theory Monsieur Salomon Reinach has pointed out (*Cultes, Mythes et Religions*, vol. i (Paris 1905, Leroux), Essay xxviii, 'Le Roi Suppliqué', pp. 339-40) that in the Armenian, the Syriac, and some of the cursive Greek versions of the Gospels 'Jesus Barabbas' appears instead of 'Barabbas' in the text of Matt. xxvii. 16-17. If this reading (which was already known to Origen) is a survival and not a corruption of the original text, it seems to hint at a vanished variant of the Gospel story in which Jesus was condemned to be put to death as 'the Barabbas' without there being any question of his being substituted for another prisoner who had previously been cast for the part.

¹ One ground for supposing that, if Jesus was put to death in the role of the Mock King, this was done in parody and not in earnest, lies in the date of the Crucifixion; for the Crucifixion took place at the time of the Jewish feast of the Passover, which is celebrated in the spring; and the date of the Passover does not coincide with that of either the Jewish or the Roman celebration of 'the Reign of the Mock King'. If Jesus was mocked by the soldiers of Herod (see Point 65), he was presumably cast by them for the role of Mock King in the Jewish festival of Purim, which falls a month earlier than the Passover (Frazer, loc. cit., pp. 414-16). On the other hand, if the mocking was perpetrated by the soldiers of Pilate (see Point 65), then Jesus was presumably cast for the role of Mock King in the Roman festival of the Saturnalia; and the Saturnalia had been celebrated in December (Frazer, loc. cit., p. 413) since the shifting of the Roman New Year's day from the 1st March to the 1st January in the year 45 B.C. The dates thus tell in favour of the view that the treatment to which Jesus was subjected after his condemnation to death was not part of a genuine celebration of 'the Reign of the Mock King', but was a parody of a familiar ritual which the soldiers improvised, on the spur of the moment, as a sinister practical joke, in allusion to the fact that the offence for which Jesus had been condemned to death by the Jewish ecclesiastical court was his claim—to which he had pleaded guilty (Point 52)—to be the Son of God. It will be seen that in this variant of Frazer's theory there is nothing that is inconsistent with the story of the Passion as this is told in the Gospels.

² As was done with the corpse of Cleomenes.

³ 'This third alternative seems the most likely.'—Professor Gilbert Murray.

to decide between the several alternative possible solutions of it. In this place we may be content with a general conclusion that has a bearing upon our present inquiry; and this is that ritual, as well as myth, is in all probability one of the common sources from which identical elements have flowed, along separate channels of 'folk-memory', into the story of Jesus on the one hand and the stories of our pagan historical heroes on the other.

The Life and Death of Socrates

Ritual and myth would appear to embrace, between them, almost all the possible common sources of which we have to take account. And, if we have thus disposed of the first of our two categories of explanation, we may now turn to the other. We have still to consider whether at least some residue of the correspondences that we are studying may be traceable, not to the influence of some common mythical or ritual source upon each and all of the stories in which our correspondences appear, but rather to the influence of one story upon another.

Is the hypothesis that the story of one historical hero may have influenced the story of another a promising explanation *a priori*? This question appears to be answered in the affirmative by the presence, in the story of Jesus, of a number of elements that wear the appearance of being derived from the story of Socrates; for our extant accounts of the life and death of the Athenian sage are the work of Athenian men-of-letters who were Socrates' contemporaries and associates; they were written from first-hand acquaintance by sophisticated authors at a time and in a place and about a person that were all clearly lit up by the dry light of a mental atmosphere of rationalism; and although, no doubt, it might be imprudent to accept as authentic, *a priori*, all the acts, and *a fortiori* all the words, that are attributed to Socrates by Xenophon and Plato, it would on the other hand be reasonable to suppose that the element of fiction—if such there should prove to be—in the Platonic and Xenophontean picture of the two Athenian writers' common Master is the personal invention of the artists by whom the picture has been painted, and is not a deposit of traditional myth or ritual which might have found its way into the picture of Jesus likewise along some independent channel. If, therefore, certain features of the Platonic and Xenophontean picture of Socrates do reappear in the Gospels, we may reasonably infer that the portrait painted in Attica in the fifth century B.C. is the original which, in these points, has inspired the portrait painted in Palestine in the first century of the Christian Era.

This inference will not, of course, commit us to making the

highly improbable assumption that the authors of the Gospels were copying directly either from Plato or Xenophon themselves or from any later works of Hellenic literature in which the original contemporary Athenian picture of Socrates may have been reproduced at second hand. While the authors of the Gospels were manifestly familiar with the Jewish Scriptures, there is no evidence that any of them were acquainted with the pagan literature of the circumambient Hellenic World; and, when Socratic or other pagan Hellenic literary *motifs* do make their appearance in the Evangelists' work, we must suppose that these have not been copied direct from any literary source but have seeped in through the subterranean channel of 'folk-lore' after having first percolated down from the sophisticated upper mental stratum of the Dominant Minority to the more primitive lower mental level of the Proletariat. In other words, any historical extraneous elements that may have found their way into the Gospels are likely to have come in through the same door as any extraneous elements of a ritual or mythical origin, though this common entrance may be the only thing in common between these different kinds of intrusive foreign matter.¹

Let us try to make a survey of the features in the portrait of Jesus that also appear in the portrait of Socrates, before attempting to estimate whether some, at least, of the correspondences between the portrait of Jesus and the portraits of our eleven Spartan and Roman and futurist heroes may be attributable—as the Socratic elements in the Gospels would appear to be—to the influence of the story of one historical hero upon the story of another historical hero of a later date.

(α) *Before reaching the age of manhood the hero wins his spurs in a disputation with some of the foremost living wits of an older generation.*

Socrates' disputation with Parmenides and Zeno (Plato: *Parmenides*), like Jesus's disputation with the doctors of the Jewish Law in the Temple at Jerusalem (Luke ii. 40-52), gives a foretaste of the hero's future spiritual prowess. Socrates is described (Plato: *Parmenides*, 127 c) as being 'extremely young' (σφόδρα νέον) at the time, and Jesus as being twelve years old (Luke ii. 42). Parmenides

¹ There is a certain *a priori* probability that the story of Jesus may have attracted to itself elements of 'folk-lore' that have been derived from the story of Socrates, because there is a real and deep affinity between the respective roles of Socrates and Jesus in the spiritual history of the Hellenic World, so that Socratic traits would readily harmonize with the character of the protagonist in the drama of the Gospels. The parallelism between the spiritual movements that were originated by Socrates and by Jesus respectively is strikingly displayed in tabular form by P. E. More in *The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C.-451 A.D.*, vol. iv: *Christ the Word* (Princeton 1927, University Press), p. 138.

and Zeno are represented (Plato: *Parmenides*, 130 A) as being delighted at Socrates' intellectual eagerness, as Jesus's interlocutors in the Temple are represented as being 'astonished at his understanding and answers' (Luke ii. 47).¹

(β) *The hero is recognized and accepted by a forerunner as the latter's successor and superior* (= Point 6).

The recognition of Jesus by John the Baptist has a Socratic analogue in the recognition of Socrates by Protagoras. 'There is something about you', says Protagoras to Socrates, 'that I have mentioned to quite a number of people. I have told them that, of all the people whom I come across, I admire you far the most and far and away the most among the people of your own age. And I go farther than that. I tell them that I should not be surprised if you were to become one of the World's famous sages' (Plato: *Protagoras*, 361 E; compare *Parmenides*, 130 A and 135 D).

(γ) *The hero is proclaimed by the voice of God to be unique among Mankind.*

The designation of Jesus as the Son of God by a voice from Heaven immediately after his baptism by John (Matt. iii. 17 =

¹ Dr. Martin Braun has drawn the writer's attention to the fact that this Socratic trait of an intellectual precocity which is instantly recognized, and generously acknowledged, by the intellectual leaders of the older generation reappears not only in the Gospel according to Saint Luke but also in Josephus's *Autobiography*, §§ 8-9. 'I made great and fruitful progress in my education and gained a reputation for pre-eminence in power of memory and in understanding [*συνέεσις*, the word applied in Luke ii. 47 to the boy Jesus, and in Josephus's own *Ancient History of the Jewish People*, Book II, § 230, to the boy Moses]. While I was still only an adolescent (*ἀρτίμας*), about fourteen years old, I was praised by everybody for my devotion to sound learning, and the chief priests and notables of the city were constantly meeting to consult me on some fine point of the Law.'

Dr. Braun goes on to point out two other correspondences between Josephus's *Autobiography* and the story of the Gospels:

The hero's genealogy is recited [= Point 3] with intent to vindicate for the hero a royal lineage [= Point 2] (*Autobiography*, §§ 1-6).

The hero goes into temporary retreat in the Wilderness, as the disciple of an ascetic anchorite who seeks purity through ablutions of cold water [|| Point 6, with the part played by John the Baptist towards Jesus being played towards Josephus by Baunus] (*Autobiography*, § 11, cited in this Study already in III. C (ii) (b), vol. iii, p. 294, footnote 3, above; see further Rasp, H.: 'Josephus und die jüdischen Religionsparteien' in *Zeitschrift für die neutestamentliche Wissenschaft*, vol. xxiii (1924), pp. 34-5).

In regard to these three correspondences between the story of Jesus and the *Autobiography* of Josephus, Dr. Braun observes: 'Josephus was born at about the time of Jesus's death. His *Autobiography*—that is to say, his 'auto-myth'—thus falls within the period in which the Jesus-myth of the primitive Christian community crystallized. It is a striking fact that the Jesus-biography (or myth) coincides with the Josephus-biography in certain characteristic features. This points to a common pattern (*Grundmodell*), either in the psychological or in the literary sense, to which the 'genius' of the religious, or of any other, order had to conform. Two, at any rate, out of the three points of correspondence here in question [i.e. the encounter with the doctors when the hero is still a boy, and the visit to the anchorite when he is on the threshold of maturity] belong to the realm of romance, legend, myth. It is highly significant that the underlying motif of [the 'precocity' point of correspondence between the story of Jesus and the *Autobiography* of Josephus] should also make its appearance again in the Josephan legend of Moses.'

Mark i. 11 = Luke iii. 22) has a Socratic analogue in the Pythia's answer in the negative to Chaerephon's question whether there is anybody who is wiser than Socrates¹ (Plato: *Apology*, 21 A; Xenophon: *Apology*, §§ 14-15).

N.B. According to Xenophon, loc. cit., Socrates, when he told the story of Chaerephon's question and the Pythia's answer in court, did not fail to point out that the Delphic Apollo was reputed to have paid a much higher tribute to Lycurgus. 'As Lycurgus was entering the temple, the god is said to have addressed him with the words: "I am wondering whether to call you god or man", whereas he did not liken *me* to a god, though he did single me out as being head and shoulders above my fellow men.' For a fuller version of the story of Apollo and Lycurgus, in which the oracle is rendered in verse, see Herodotus, Book I, chap. 65.

(δ) *The hero inveighs against the powers that be* (= Point 7).

Jesus's denunciations of the Scribes and Pharisees have a Socratic analogue in Socrates' exposure of the sophistry of the Sophists.

(ε) *In his domestic life the hero takes hardship and good cheer as they come, and shows himself capable of standing extremes of either of them without turning a hair* (|| Point 13).

During the Athenian siege of Potidaea, Socrates goes barefoot in the frost and snow of a Thracian winter (Plato: *Symposium*, 219 E-220 D); at Agathon's drinking-party he sits the night out and keeps a clear head, after every one else—including the host and even Aristophanes—has succumbed (Plato: *Symposium*, 223 B-D).

(ζ) *By his refusal to go to extremes of asceticism—which he combines with a readiness to keep company with people of all sorts and conditions—the hero causes scandal* (= Point 14).

As Jesus scandalizes the Pharisees by keeping company with Publicans and Sinners, so Socrates scandalizes the Democrats by having kept company with Oligarchs: that is to say, with well-connected or well-to-do young men who have eventually come out as Oligarchs when the débâcle of Athens at the end of the Atheno-Peloponnesian War of 431-404 B.C. has opened the way for the establishment of the terroristic régime of 'the Thirty Tyrants'.

¹ The parliamentary formula—'the answer is in the negative'—in which the Pythia's response is couched according to Plato, has been transposed into a positive form and been put into verse—*ἀνδρῶν ἀπάντων Σωκράτης σοφώτατος*—in the later version of the story as this appears in Diogenes Laertius: *De Vitis Philosophorum*, Book II, § 37. This versification of the oracle is also found in the expanded form:

σοφὸς Σοφοκλῆς, σοφώτερος δ' Εὐριπίδης,
ἀνδρῶν δὲ παντῶν Σωκράτης σοφώτατος.

(η) *The hero is publicly declared by one of his disciples to have within him something divine* (= Point 15).

Peter's acclamation of Jesus as the Son of the Living God (Matt. xvi. 16, echoed in John vi. 69, and xi. 27) has a Socratic analogue in Alcibiades' acclamation of Socrates:

'You may take it from me that not one of you knows Socrates, so I am going to reveal him to you. . . . Doesn't he look like a regular Silenus? Of course he is the very image of one; but that is the outer shell, just as it is with your Silenus when he is a work of the sculptor's art. Open this Socrates-Silenus and look inside, and you will find that he is packed with saintliness (σωφροσύνη). . . . He regards all mundane values as valueless and ourselves—let me tell you—as naught. In his intercourse with his fellow men he wears this perpetual mask of simplicity and whimsicality (εἰρωνευόμενος καὶ παίζων . . . διατελεῖ). But sometimes he turns serious and comes open; and I wonder if any of you have seen the figures [of the Gods] inside him which become visible then. I *have* had some glimpses of them, and the effulgence of their divine glory was so amazingly beautiful that I found—to put it in a word—that I had to do just whatever Socrates told me' (Plato: *Symposium*, 216 D-E).

(θ) *The hero claims to be divinely inspired.*

The 'inner voice' which Socrates attributes to a supernatural mentor (δαίμόνιον) is comparable to the Holy Spirit with which Jesus is possessed (Matt. iv. 1 = Mark i. 12 = Luke iv. 1).

(ι) *The hero refrains on principle from trying to evade the operation of the Law of the Land* (= Point 46).¹

As Jesus refrains from attempting to resist arrest, so Socrates declines to make his escape from prison by flight (Plato: *Crito*, *passim*; cf. Xenophon: *Apology*, § 23), or from life by suicide (Plato: *Phaedo*, 61 C-62 E).

(κ) *The hero is brought to trial* (= Point 49).

Socrates is brought to trial before a regular Athenian jury, Jesus before an improvised Jewish ecclesiastical court.

(λ) *A true saying of the hero's is dishonestly twisted by his enemies into a misrepresentation which is extremely damaging to him* (= Point 50).

Socrates has averred that a god's voice speaks to him and signifies to him what he ought to do (θεοῦ μοι φωνὴ φαίνεται σημαίνουσα ὅ τι χρὴ ποιεῖν); Melētus indicts Socrates on a charge of being guilty of not recognizing the gods that are recognized by the

¹ See also V. C (i) (d) 3, vol. v, p. 404, above.

state while introducing new-fangled divinities and corrupting the younger generation (ὥς οὐς μὲν ἡ πόλις νομίζει θεοὺς οὐ νομῶσι, ἕτερα δὲ καὶνὰ δαιμόνια εἰσφέρει καὶ τοὺς νεοὺς διαφθείρει) (Xenophon: *Apology*, §§ 10-13; compare Plato: *Apology*, 24 B-27 E).

(μ) *The hero on trial is reproved by the jurors for contempt of court* (= Point 51).¹

In one passage of his defence Socrates tells the jury that he intends to obey the dictates of his conscience even at the cost of his life, and that, if they were to offer to acquit him on condition that he should renounce the pursuit of philosophy, he would answer, with all respect, that he proposed to obey God rather than them² and that he would never give his philosophy up so long as any life and strength were left in him. 'Gentlemen of the jury,' he would say, 'you may do what you will. You may find in favour of Anytus or against him; you may acquit me or convict me; but you may as well know that I am not going to mend my ways—no, not even if I am to die a thousand deaths.' At this point Socrates' speech was interrupted by an uproar among the jurors (Plato: *Apology*, 28 B-30 C).

(ν) *When a question is put to the hero which offers him a possible line of retreat, the hero does not take the opening, but gives, instead, an answer that is calculated to exasperate the Court more than anything else that he could conceivably have said* (= Point 52).

The law at Athens was that, when a prisoner on trial had been found guilty by the Court, the prosecutor should table an assessment of the penalty and the prisoner a counter-assessment, and that the Court should then opt between the two assessments. After the Court had found Socrates guilty, Melétus proposed the death penalty; and in this situation the politic course for Socrates, if he were bent upon saving his life, was to make some counter-proposal which, while falling short of the death penalty, would be sufficiently drastic to have a chance of being accepted by the Court as a suitable alternative. So far from taking this line, Socrates virtually ensured that the Court should opt for Melétus's assessment—i.e. for the death penalty—by telling them that, if he was to make a counter-assessment that corresponded to his true deserts, he must assess himself to the penalty of being maintained at the public expense as a veteran benefactor of the community (Plato: *Apology*, 36 B-E; cf. Xenophon: *Apology*, § 23).

¹ See also V. C (i) (d) 3, vol. v, p. 404, above.

² πείσομαι . . . μάλλον τῷ Θεῷ ἢ ὑμῖν (Plato: *Apology*, 29 D). Compare Acts v. 29: 'We ought to obey God rather than men' (πειθαρχεῖν δεῖ Θεῷ μάλλον ἢ ἀνθρώποις). For this verbal correspondence see further p. 534, below.

(ξ) *On the strength of the hero's answer the Court immediately passes sentence of death upon him (= Point 53).*

The Athenian Court sentences Socrates to death; the Jewish Court, Jesus.

(ο) *A tableau of the hero holding a death-cup, with a small party of intimate companions grouped round him.*

Socrates literally drank his death out of a cup (Plato: *Phaedo*, 116 c-117 c), because at Athens in Socrates' day the statutory way of inflicting the death penalty was to administer a cup of deadly poison;² and in Plato's *Phaedo* (loc. cit.) this act is commemorated visually in a tableau of the hero holding the poison-cup in his hand in a room in which he is surrounded by his intimate friends. In the Ager Romanus in Jesus's day the statutory way of inflicting the death penalty upon malefactors who were not Roman citizens was not by poisoning but by crucifixion; and this was the death that Jesus actually died according to the Gospels. The tableau of the hero holding the cup in the midst of his friends does, however, occur in the Synoptic Gospels in the scene of the institution of the Communion-Rite of the Christian Church (Point 29 = Matt. xxvi. 27-9 = Mark xiv. 23-5 = Luke xxii. 19-20); and in the Passion of Jesus, as in that of Socrates, this scene is placed just before the hero's death. Moreover there is a connexion between the hero's death and the hero's cup in the story of Jesus as well as in the story of Socrates; for, though Jesus does not meet his death, as Socrates meets his, by drinking the cup, which in Jesus's hands contains not poison but wine, this wine is presented by Jesus to his companions as his own sacrificial blood. There are, of course, two signal differences between the Communion Chalice and the Hemlock Cup. While the Hemlock Cup is drunk by the hero himself, the Chalice is administered by the hero to his companions;³

¹ In the picture given by Plato fifteen of those present, including *Phaedo*, are named (*Phaedo*, 59 B-C), and it is mentioned that there were also several others; in the picture in the Gospels the party consists of the Twelve Apostles.

² The poison was hemlock, and the poisonous herb was grated up in a cup of water and was administered to the victim in this liquid form.

³ In the Gospels the death-cup that is drunk by the hero himself does occur more than once, but each time metaphorically and not 'in real life'. Jesus uses this simile first in his answer to the petition of the mother of the Sons of Zebedee (Matt. xx. 22-3 = Mark x. 38-40), and for the second time during the Agony (Point 36 = Matt. xxvi. 39 = Mark xiv. 36 = Luke xxii. 42). The simile is also placed in Jesus's mouth in the narrative of the Passion in the Gospel according to Saint John (xviii. 11), but here not in the context of the Agony (Point 36) but in the adoration with which he commands Peter to stop fighting (Point 45). This image of drinking a cup in the metaphorical sense of having an experience is presumably part of the legacy to the New Testament from the Old Testament, which the Evangelists knew by heart, and in which the use of the image is common. In the Old Testament, however, the simile does not appear ever to be used with reference to the particular experience of dying, and not even invariably with reference to experiences that are unpleasant. There is, of course, the obvious metaphor of draining a cup to the bitter dregs (Isa. li. 17; Ps. lxxiii. 10; Ps. lxxv.

and, while both cups are fraught with death for the hero himself, the Chalice imparts the sacrificial victim's spiritual life to those who are given to drink of it. Here we have a conspicuous example of one significant feature in our collection of correspondences that has been pointed out at the beginning of this Annex.¹ The old bottles of Hellenism are made use of by Christianity for holding its new wine. A *motif* or incident or tableau or saying is taken over into the story of Jesus out of one of the stories of the pagan Hellenic heroes, but, in the act of being taken over, it is given a new meaning—almost as though the old pagan form were being employed deliberately as a foil to bring out the newness of the Christian content.

(π) *When the hero is in articulo mortis, the friends who are with him weep—not for the hero, but for themselves because they are losing him—and then the hero tells them to restrain their tears* (= Point 68).

‘Up to this point, most of us had been fairly successful in stopping ourselves from crying; but, when we saw him drinking and then holding the empty cup, we could no longer bear it; and for my part my utmost efforts could not prevent the tears from flowing in floods. So I buried my face in my coat and wept for—myself, for it was certainly not for Socrates that I was weeping (ἀπέκλαον—ἐμαυτόν, οὐ γὰρ δὴ ἐκεῖνόν γε [compare Xenophon: *Hellenica*, Book II, chap. 2, § 3: οὐ μόνον τοὺς ἀπολωλότας πενθοῦντες, ἀλλὰ πολὺ μᾶλλον ἔτι αὐτοὶ ἑαυτοὺς (referring to the reception, by the people of Athens, of the news of the disaster at Aegospotami) and Luke xxiii. 28: μὴ κλαίετε ἐπ’ ἐμέ, πλὴν ἐφ’ ἑαυτὰς κλαίετε]). I was bewailing my own cruel fate in losing a man who was such an incomparable friend. Crito broke down even before I did, and, when he found that he could not stop his tears from flowing, he got up and went out. And then there was Apollodôrus, who had never stopped crying, even before, and who now burst out into a veritable roar of weeping and lamentation which overcame everybody else in the room except Socrates himself, who now remonstrated with us. ‘My dear good people,’ he exclaimed, ‘what a dreadful exhibition! Why, this was one of my reasons for sending

8); and we also find ‘the cup of fury’ (Isa. li. 17 (cf. Zech. xii. 2); Jer. xxv. 15) and ‘the cup of astonishment and desolation’ (Ezek. xxiii. 31–4). No doubt this usage of the simile in the Old Testament accounts for ‘the wine of the wrath of God’ and ‘the cup of his indignation’ and ‘the cup of the wine of the fierceness of his wrath’ in the Book of Revelation (xiv. 10, and xvi. 19). At the same time the ‘portion of their cup’ in the Old Testament is not invariably ‘snares, fire and brimstone, and an horrible tempest’ (Ps. xi. 6). While the dregs may be the punishment of the wicked, the wine itself may be the reward of the good (Ps. lxxv. 8). And when ‘my cup runneth over’ (Ps. xxiii. 5), this is manifestly ‘the cup of consolation’ (Jer. xvi. 7) or ‘the cup of salvation’ (Ps. cxv. 13).

¹ Cf. p. 377, above.

the women away; I was afraid of their misbehaving just like this. I fancy I have heard that one ought to be allowed to die in peace. Do, please, keep quiet and control yourselves' (Plato: *Phaedo*, 117 C-E).

(ρ) *In laying down his life, the hero demonstrates, by a triumphant response to the severest possible ordeal, that Righteousness has a supreme intrinsic value.*

It is commonly supposed that Plato had in mind his Master Socrates' life and death when—in the course of an essay (*Respublica*, 360 E–362 C) in distilling Righteousness and Unrighteousness, for purposes of comparison, in their pure and undiluted essence—he puts into the mouth of 'those who commend Unrighteousness as preferable to Righteousness' a famous prognostic¹ of the Righteous Man's end:

'They will say this: that the Righteous Man (ὁ δίκαιος), being what he is, will be scourged and racked and shackled and will have his eyes seared out with red-hot irons and finally will be impaled after having gone through every lesser torture—to discover, on the stake, that the right aim to set oneself is not to be righteous but to pretend to be' (Plato: *Respublica*, 361 E).

An echo of this passage of Plato may be caught, by an attentive ear, in a tirade against the Righteous Man which is put into the mouth of 'the ungodly in deed and word' in a post-Alexandrine work of Jewish literature (Wisdom ii. 12–20):²

'Let us set an ambush for the Righteous Man (ἐνεδρεύσωμεν τὸν δίκαιον) because he is a nuisance to us. . . . He claims to possess the knowledge of God (γνώσων ἔχειν Θεοῦ) and calls himself the Child of the Lord (Παῖδα Κυρίου).³ He has shown up the thoughts of our hearts (ἐγένητο ἡμῖν εἰς ἔλεγχον ἐννοιῶν ἡμῶν).⁴ The very sight of him is tiresome to us, because his life is unlike other lives and his tracks are out of the ordinary run. In his estimation we are counterfeit, and he shuns our paths as though they were dirt. He extols a hyperbole of Righteousness and pretends to have God for his father (ἀλαζονεύεται⁵ πατέρα Θεόν). Let

¹ Cited already in this Study in V. C (ii) (a), p. 275, above.

² Eduard Meyer's observations, in *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), pp. 39–40, on the way in which the Jewish philosophical literature of the Post-Alexandrine Age was affected by Hellenism, are pertinent to the case of the Book of Wisdom, though they are made apropos of the Book of Ecclesiastes.

³ See Point 75, and compare Plato: *Apology*, 27 C–D: Εἰ δαιμόνια νομίζω, καὶ δαίμονας δῆπου . . . τοὺς δὲ δαίμονας οὐχὶ ἤτοι θεοὺς γε ἡγοῦμεθα ἢ θεῶν παῖδας; Since Socrates himself used the term δαιμόνιον to describe his supernatural mentor (Point (θ) above), it would almost seem to follow that Socrates accepted Alcibiades' declaration (Point (η) above) that there was something divine inside him.—A.J.T.

⁴ Cf. Plato: *Apology*, 21 B–23 B, especially 23 A: οἴονται γὰρ με ἐκάστοτε οἱ παρόντες ταῦτα αὐτὸν εἶναι σοφὸν ἢ ἄν ἄλλον ἐξελέγω.—A.J.T.

⁵ Cf. Aristophanes: *Birds*, ll. 824–5—οἱ θεοὶ τοὺς γηγενεῖς / ἀλαζονεύόμενοι καθυπερηκόντισαν—quoted in V. C (i) (d) 11, Annex I, pp. 353–4, above.—A.J.T.

us see if his doctrines are true, and let us experiment with his exit. If the Righteous Man really *is* the Son of God (Υἱὸς Θεοῦ), then God will take his part and will deliver him from the hands of opponents.¹ So let us test him with contumely and torture, that we may know his goodness and may verify his long-sufferingness. Let us sentence him to a sordid death. According to his own doctrines, he will be looked after [by God].'

This passage of the Book of Wisdom has a near relationship with another work of Jewish literature of the same age, the Twenty-Second Psalm. Indeed, the affinity is so close that this Psalm could almost be inserted into the text of the Book of Wisdom—as the Righteous Man's cry of agony when his ungodly adversaries carry out their nefarious design—without the reader's being aware that this piece was an interpolation. And it is manifest that both passages have coloured the description, in the Synoptic Gospels, of the mocking of Jesus on the Cross (Point 72 = Matt. xxvii. 39-44 = Mark xv. 29-32 = Luke xxiii. 35-7 and 39).² In this connexion we may recall the incident of the hailing of Jesus by the centurion when Jesus is hanging dead on the Cross (Point 75); for the Lucan variant on the Marcan and Matthaean formula—'Certainly this was a righteous man' (ὅντως ὁ ἄνθρωπος οὗτος δίκαιος ἦν) in place of 'Truly this was the Son of God' (ἀληθῶς Θεοῦ Υἱὸς ἦν οὗτος)—reproduces, as we now see, the title under which the hero is introduced in the passage that we have quoted from the Republic as well as in the corresponding passage of the Book of Wisdom, while in the Book of Wisdom the Marcan and Matthaean formula—'the Son of God'—is also to be found as a description of a status to which the Righteous Man lays claim. The same status is perhaps implicitly claimed by Socrates, too, according to the Platonic version of his *Apology*,³ not indeed for himself, but for the supernatural mentor who speaks to him through an 'inner voice'.

(α) *The hero is better appreciated by foreigners than by his own countrymen.*

As Christianity takes root outside Jewry, among the Gentiles, so the teaching of the Attic philosopher Socrates is propagated by Theban and Phliasian Pythagoreans and by Megarian Eleatics. Of the fifteen disciples of Socrates who are mentioned by name as having been present at his death,⁴ no less than seven are non-Athenians.⁵

An Egyptian Bridge between Laconia and Galilee

If a memory of the life and death of Socrates has coloured the story of Jesus to the extent that appears to be indicated by the foregoing survey, we may infer that there is no *a priori* impossibility, or even improbability, in the hypothesis that the same story may also have been coloured in some degree by memories of the lives and deaths of other Hellenic heroes who lived and died in the period intervening between the date of the judicial murder of Socrates in 399 B.C. and the date of the Crucifixion. If we have succeeded in showing that this hypothesis is not ruled out in advance by any insuperable objections, our next step will be to explore the possible ways and means through which the impression made by the careers of our Spartan and Roman and futurist heroes upon the minds of contemporaries of their own kin and kind may have been transmitted to the minds in which—in a different social milieu and in a later age—the story of Jesus took the shape of the four Gospels.

Let us begin by reconnoitring one possible 'geopolitical' way along which the memories of the two Heracleidae, at any rate, may have travelled to Galilee from Laconia, and then examine two possible cultural means, one in a verbal medium and the other in a visual.

If we begin by asking ourselves what was the principal meeting place of Jews and Greeks at all times within the long Time-span during which the Syriac and Hellenic worlds were in contact with one another, we shall not hesitate to answer 'Egypt'. On Egyptian soil Greek and Jewish soldiers of fortune had begun to rub shoulders in the common service of the lords of the land as early as the seventh century B.C.; and a Graeco-Jewish intercourse which had thus begun in Egyptian cantonments under the régime of an indigenous Egyptiac dynasty whose home and capital was at Sais was still going on, four hundred years later, under the régime of an alien dynasty, of Macedonian Greek origin, which had installed itself at Alexandria. In the third century B.C. the structure of the Ptolemaic Empire with its metropolitan territory in Egypt and its outlying dependencies round the eastern and northern coasts of the Levant embraced both the Jewish temple-state of Jerusalem, which formed part of the Ptolemaic province of Coele Syria, and the Greek kingdom of Lacedaemon, which was one of the Ptolemaic Government's dependent allies in Continental European Greece; and there is some evidence that in this age Jerusalem and Sparta were already in direct diplomatic relations with one another.¹

¹ When the by then independent prince of Judaea, Jonathan Maccabaeus, sent an

The next chapter in this story opens with the refugee Spartan king Cleomenes' arrival at Alexandria in 222 B.C. One of the reasons why Cleomenes was eventually interned by the Ministers of Ptolemy IV Philopator was because of Cleomenes' prestige and influence among the mercenaries of Peloponnesian and Cretan origin in the Ptolemaic service who were stationed at Alexandria. The perhaps dangerously powerful hold which the Spartan exile possessed over these important troops had been brought to the Prime Minister Sosibius's notice by Cleomenes himself when—in a political crisis in which Cleomenes had been taken into the Ptolemaic Government's confidence—Cleomenes had offered to go bail to Sosibius for the loyalty of these troops.

"Don't you see", Cleomenes had said, "that there are nearly 3,000 mercenaries from the Peloponnese and about a thousand Cretans, and that I have only to nod to them in order to make them spring forward to do their duty like one man? And, with these troops solidly supporting you, what other troops are you terrified of? It must be the soldiers from Syria and Caria that are giving you bad dreams!"¹

There is no reason to question the authenticity of this incident, which is credible in itself and is reported on the good authority of Polybius; but if it is authentic it is illuminating; for the Spartan hero who already enjoyed this prestige among these troops at a time when he was nothing more than a romantic exile must have completed his conquest of their hearts and minds in the tragic act of his death. And, even if the Ptolemaic Government did succeed, by a deft combination of repression and propaganda, in driving underground an incipient worship of the dead Cleomenes among the populace of Alexandria,² we may guess that the dead Spartan hero's admirers among the Peloponnesian and Cretan soldiery

embassy to Sparta in 145 B.C., he appended to the note which was to be presented to the Lacedaemonian Government by his envoys a document which purported to be a copy of a letter written by King Areus of Sparta (*regnabat* 309/8–265/4 B.C.) to his contemporary the High Priest Onias of Jerusalem. This letter alluded to an alleged historical discovery of a blood-brotherhood between the Spartans and the Jews in virtue of a common descent from Abraham; and, on the strength of this, it proposed a political and economic *entente* between the Lacedaemonian and Hierosolymitan states. This 'letter from Areus' is to be found in the account of Jonathan Maccabaeus's embassy to Sparta in the First Book of Maccabees xii. 21–3, and it has been incorporated, from this source, by Josephus into his *Antiquities*, Book XII, chap. 4, § 10, where the same text will be found transposed into a more elegant style of Greek. As it stands, the document can hardly be genuine, but there is probably some historical fact behind it (on this question see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), pp. 30–1). The legend of the common ancestry of the two peoples turns up again in the Second Book of Maccabees v. 9, apropos of an appeal for support which the High Priest Jason made to Sparta, among other states, after his fall in 170 B.C. (Meyer, op. cit., loc. cit.). It may be noted that King Cleomenes III was King Areus' first cousin once removed (see the genealogical table in Beloch, J.: *Griechische Geschichte*, 2nd ed., vol. iv, part 2 (Berlin and Leipzig 1927, de Gruyter), p. 163).

¹ Polybius, Book V, chap. 36.

² For this interpretation of Plutarch: *Lives of Agis and Cleomenes*, chap. 60, see pp. 479–80, above.

silently rendered to him the divine honours which it was their official duty to render to their living paymaster Philopator.

What happened to these 4,000 Greek soldiers of fortune who were stationed in Egypt at the time when the last act of the tragedy of Cleomenes was played at Alexandria in 219 B.C.? We know something of their subsequent history because the year which witnessed Cleomenes' death also saw the launching of a Seleucid war of aggression against the Ptolemaic possessions on the Asiatic mainland; and this formidable threat to Ptolemy Philopator's empire from Antiochus the Great moved Ptolemy's Ministers to take drastic measures for reinforcing and strengthening the Ptolemaic military forces.¹ In the first place they recalled, and concentrated at Alexandria, all the mercenary troops that had previously been stationed in the Ptolemaic Empire's overseas possessions.² In the second place they recruited fresh mercenaries—and these in numbers sufficient to bring up to 8,000 men the total force of mercenaries that they were eventually able to put into the field. In the third place they broke up all the existing formations and organized the men in entirely new *cadres*. Finally, after having spent two years on these preparations, they ventured at last, in 217 B.C., to meet Antiochus in the field, and they inflicted on him a signal defeat at Raphia. Antiochus's discomfiture was so decisive that he immediately evacuated all his conquests in Coele Syria, and the liberated territories were promptly reoccupied by Ptolemy and regarrisoned.³ It is safe to assume that the new Ptolemaic garrisons in Coele Syria were in considerable strength; that they were drawn entirely from the mercenary element in the Ptolemaic Army;⁴ and that, in consequence of the thorough-going reorganization of the Ptolemaic forces before the Battle of Raphia, these garrisons must have included some of the 4,000 Peloponnesian and Cretan mercenaries who had been stationed in Egypt in 219 B.C., together with elements from the outlying garrisons which had been recalled to Alexandria in that year, as well as with elements subsequently recruited.

¹ What follows is stated on the authority of Polybius, Book V, chaps. 62–5.

² Were these 'the soldiers from Syria and Caria' to whom Cleomenes had referred so scornfully? In itself the phrase is ambiguous. In the light of the context the most natural way of interpreting it is as meaning 'soldiers of Syrian and Carian origin who were stationed in Egypt'; but alternatively it might mean 'soldiers stationed in Syria and Caria'.

³ For this sequel to the Battle of Raphia see Polybius, Book V, chaps. 86–7.

⁴ The Ptolemaic Government's practice seems to have been to employ mercenaries for their garrisons outside Egypt, and not to exact garrison duty overseas from the Phalanx, which was a militia recruited originally from military settlers, of Greek origin, in Egypt, and latterly (since the crisis of 219–217 B.C.) from native Egyptians as well. (For the composition of the Ptolemaic garrisons in the outlying dependencies of the Empire see Griffith, G. T.: *The Mercenaries of the Hellenistic World* (Cambridge 1935, University Press), pp. 131–5.)

If these inferences are warranted, two conclusions follow with regard to the history of the cult of Cleomenes between 219 and 217 B.C. The first is that the devotees of Cleomenes among the original 4,000 Peloponnesian and Cretan mercenaries who had been stationed in Egypt would now have every opportunity of imparting their own feeling for the dead hero to their new comrades in arms. The second inference is that the cult of Cleomenes among the troops would now be carried from Alexandria to the garrison-towns in Coele Syria by the new mixed units of mercenary soldiers in the Ptolemaic service which were stationed in these cantonments in and after 217 B.C.

Can we go farther? If 'the soldiers from Syria and Caria' who were recalled to Alexandria in 219 B.C. were native recruits from those regions, and not Greek soldiers who had simply been stationed there, the new Ptolemaic garrisons planted in Coele Syria in 217 B.C. may have included not only some of Cleomenes' Peloponnesian and Cretan devotees but also some soldiers of Syrian nationality (e.g. Judaeans and Galilaean Gentiles).¹ And here we see a possible point of cultural contact between the dominant minority and the internal proletariat of the Hellenic Society of the day.² Did these mixed Ptolemaic garrisons which lay in Coele Syria in and after 217 B.C. serve as incubators in which a new *motif* of Syriac folk-lore was hatched out of a Hellenic cult of an historical Spartan hero whose recent Passion was still a poignant memory in the souls of fellow soldiers who were also his fellow Greeks?

Farther than this it is hardly possible to go; for we have no record of what happened to the Ptolemaic garrisons in Coele Syria in and after 202 B.C., when Antiochus swooped down upon the coveted province for the second time, avenged his defeat of 217 B.C. at Raphia by an equally decisive victory at Panium,³ and then annexed the former possessions of the Ptolemaic Empire in Syria to the Seleucid Empire once for all. Did Ptolemy's mercenary garrisons come to terms with the Seleucid invader and purchase his permission to remain in their quarters by going over to his service? Or did they withdraw to Egypt, as their predecessors had

¹ The Galilaean were still Gentiles at this time and were to remain Gentiles for more than a hundred years to come. They only became Jews through their forcible conversion to Judaism by their Maccabean conqueror Alexander Jannaeus (*regnabat* 102-76 B.C.) (see II. D (iii), vol. ii, pp. 73-4, and the present Annex, in the present volume, p. 478, above). The point is important because the Galilaean, so long as they remained non-Jews, may be reasonably presumed to have been as receptively inclined towards Hellenic culture as other non-Jewish Syrians demonstrably were.

² The Greek soldiers of fortune who played so large a part in the social life of the Hellenic World during the two and a half centuries following the close of the Atheno-Peloponnesian War of 431-404 B.C. were the first contingent of broken men from whom the Hellenic internal proletariat was recruited (see V. C (i) (c) 2, vol. v, pp. 61-4, above).

³ The Battle of Panium was fought *circa* 200/198 B.C.

withdrawn in 219 B.C.? And, if they withdrew, did they leave any legacy of ritual or myth behind them among the local population with whom they had been living cheek by jowl for the past fifteen years?

These are questions to which we do not know the answers;¹ but the mere fact that we have been able to ask them means that we have stumbled upon a possible road along which the legend of Cleomenes—and, with it, the inseparably associated legend of Agis—may have made its way from Laconia through Alexandria to Galilee of the Gentiles, as the legend of Hêrâklês undoubtedly did make its way from its place of incubation in Greece to Galilee's next-door neighbour Tyre.

A Verbal Means of Conveyance

One of the forms in which we meet with the correspondences that we are studying is an assonance of words, and even of whole phrases or sentences, which sometimes amounts to an almost exact identity. Is there any obvious means of conveyance by which these common words might have found their way from one to another of the different contexts in which they are now embedded?

In attempting to answer this question, we may begin by observing that the genres of literary composition that are represented by the Gospels and by their sources—so far as these sources can be reconstructed—are categories which had already become well established in pagan Greek literature long before the Gospels were written, and which are likewise represented in the works of Plutarch, a pagan Hellenic man-of-letters who was approximately a contemporary of the authors of the two Gospels according to Saint Matthew and Saint Luke, if our modern Western scholars have hit the mark in their dating of these two books of the New Testament. The two main categories here in question are 'lives' and 'sayings'. Plutarch's *Lives* are the classical example, among the extant remains of Ancient Greek literature, of a type of composition which Plutarch himself merely inherited from a long line of distinguished predecessors;² and there are several collections of 'sayings' in the corpus of Plutarch's miscellaneous essays which is known as the *Moralia*. One such collection is the *Ἀποφθέγματα*

¹ We do know, however, that the Book of Daniel, which was written in Galilee in the fourth decade of the second century B.C., had an Egyptian prototype which would appear to have been written shortly before the end of the third century B.C. (see V. C (i) (c) 2, vol. v, p. 71, footnote 4, above). This is evidence for the existence, at the time in question in our present inquiry, of some channel or channels along which it was possible for an idea to be transmitted from Egypt to Coele Syria in the medium of the literary genre in which this idea had originally found expression. This fact throws at least a side-light on the questions which we are asking ourselves here.

² See the passage quoted from Leo on p. 436, above.

Βασιλέων καὶ Στρατηγῶν (*Regum et Imperatorum Apophthegmata*) which Plutarch dedicated to Trajan after the latter's accession to the Principate; another is the 'Αποφθέγματα Λακωνικά (*Apophthegmata Laconica*); and both the *Περὶ τῶν Ἀρεσκόντων τοῖς Φιλοσόφοις* (*De Placitis Philosophorum*) and the *Περὶ Στωϊκῶν Ἐναντιωμάτων* (*De Stoicorum Repugnantiis*) really belong to the same class. This latter class of composition is likewise represented by the collection of sayings of Jesus known as 'Q' which is a common source of the two Gospels according to Saint Matthew and Saint Luke.¹ The principal common source of these two Gospels, however, is the Gospel according to Saint Mark; and this, like all the Gospels, is an example of a mixed genre in which a 'life' and a collection of 'sayings' are combined by the artifice of taking the biographical narrative of events as a framework and inserting sayings, or even strings of sayings, at convenient points in the life-story.² This mixed genre, however, is not an invention of the Evangelists. It, too, is a well-established form of pagan Hellenic literary composition, of which the classical extant pagan example is the work *Περὶ Βίων, Δογμάτων καὶ Ἀποφθεγμάτων τῶν ἐν Φιλοσοφίᾳ Δοκιμησάντων* (*The Lives, Doctrines, and Sayings of the Philosophers of Repute*) from the pen of Diogenes Laertius, a pagan Hellenic writer who is believed to have lived in the first half of the third century of the Christian Era.

Did the Evangelists, then, set themselves deliberately to ransack existing works of pagan Hellenic literature—'lives' and collections of 'sayings' and books combining the two genres—in which, *ex hypothesi*, the hero was not Jesus but was Hēraklēs or Socrates or possibly the Spartan pair of Heracleidae or the Roman pair of Gracchi? This hypothesis of plagiarism is, as we have seen,³ not at all a convincing explanation of the verbal correspondences with which we are now concerned. The mere adoption of the pagan Hellenic genres is something that hardly requires explaining; for these well-established categories of composition would be accepted and adopted as a matter of course in the first century of the Christian Era by any one who was writing in Greek; and, as for the recurrence of particular words and phrases, it is much less likely that these were taken direct out of pagan Hellenic books than that they found their way into the Gospels out of a treasure of popular wisdom that was in current circulation by word of mouth. 'Folk-

¹ For a tentative reconstruction of 'Q' see Streeter, B. H.: *The Four Gospels* (London 1924, Macmillan), p. 291.

² According to Meyer, E.: *Der Papyrusfund von Elephantine*, 2nd ed. (Leipzig 1912, Hinrichs), p. 116, the Ahiqar Romance is another piece of literature of the mixed genre in which the story is merely a setting for the sayings.

³ In the present Annex, pp. 438-9, above

lore' is, in all probability, the immediate source from which the Evangelists drew the words and phrases, as well as the incidents and characters, that the Gospels have in common with certain works of pagan Hellenic literature; and we have seen reason¹ to believe that the same source was drawn upon, at least in some measure, by certain of the pagan Hellenic authors here in question. At the same time there are a number of common words and phrases that can hardly have found their way into the pagan works of literature in which they occur out of the reservoir of 'folk-lore'. For example, in seven of the thirteen verbal correspondences set out in our Table VIII, the word or phrase or sentence in its pagan context is cited as a quotation from some public speech that is said to have been delivered by the hero or from some dialogue in which he is said to have taken part; and it seems unlikely that any anonymous wisdom that was in oral circulation would have found its way into a context of this kind; for, if a speech or dialogue that is attributed to some celebrated historical character in a sophisticated work of literature is not authentic (as it often is not), it can hardly be anything but a deliberate piece of fiction from a forger's pen. When a pagan work—or the source of a pagan work—in which one of our common words or phrases is ascribed to such an origin as this, is demonstrably anterior to the Gospels in its date of composition, the most natural explanation of the recurrence of the same word or phrase in the Gospels is therefore to suppose that the speech or dialogue (whether genuine or spurious) that is cited by the pagan author is the ultimate source from which the corresponding word or phrase in the Gospels has been derived—even though, in the course of its journey from the pagan to the Christian book, the written word may have temporarily detached itself from the papyrus and have travelled part of its way as one of those winged words (the Homeric *ἔπεα πτερόεντα*) that flit, like living creatures, from mouth to mouth.²

An apparent case in point is the correspondence of a well-known pair of mutually contradictory sayings that are attributed to Jesus in the Synoptic Gospels³ with a single self-consistent saying that is attributed to Divus Julius by Cicero. In the Gospels according to Saint Matthew (xii. 30) and Saint Luke (xi. 23) Jesus is reported as saying 'He that is not with me is against me', whereas in the Gospel according to Saint Mark (ix. 40) he is reported as saying

¹ On pp. 457–63, above.

² *Nemo me lacrimis decoret nec funera fletu
faxit. cur? volito vivu' per ora virum.*

Ennius.

³ While the sayings are mutually contradictory, each of them is, of course, in harmony with its own context, and there would be no difficulty about either of them in itself, if it were not for the existence of the other.

'He that is not against us is on our part'. So long as we confine our attention to the Gospels, this pair of sayings is a puzzle, since on the one hand it is impossible to reconcile them, as they stand, with one another, while on the other hand it is difficult to suppose that they are entirely unrelated. Our puzzle appears to be solved by a passage in Cicero's speech *Pro Ligario* (§ 33) in which Cicero attributes *both* sayings to Caesar—just as, in the Gospels, *both* of them are attributed to Jesus—but this in a relation to one another in which, so far from being mutually contradictory, each saying gives point to the other. 'We used to hear you quoted', says the defeated Republican advocate in pleading for mercy upon a Republican political exile at the tribunal of the victorious dictator—'We used to hear you quoted as saying that we (i.e. the Republicans) reckoned as being against us all except those who were with us, whereas you reckoned all who were not against you as being of your party.'¹ It would seem captious to dispute either the authenticity or the originality of the saying that is here attributed to Caesar by Cicero;² and, if these two points be granted, then it becomes difficult to resist the conviction that Caesar's saying has passed into popular currency and has suffered, in the process, the twofold mishap of becoming dissociated from the name of its true author and of falling asunder into two separate sayings which seem contradictory instead of complementary when they are torn out of their original Caesarean setting. In this state of fragmentation these two sayings will then have found their way respectively into 'Q' and into Mark as sayings of Jesus which are mutually contradictory because Jesus is represented as uttering *both* of them apropos of himself, whereas the saying that has drifted into 'Q' ought properly to be said by the sayer of it, not apropos of himself, but apropos of his adversaries—in contrast to the antithetical saying which is correctly represented as being said by the sayer apropos of himself in the Gospel according to Saint Mark.

On this showing, we have to reckon with the possibility that, even if an orally circulating treasure of anonymous wisdom may have been the immediate source from which all the common words that we have detected were derived by the authors of the Gospels, some, at least, of these anonymous sayings may have made their way into this popular oral tradition out of sophisticated works of literature in which these same sayings were attributed—whether truthfully or mendaciously—to famous characters of Hellenic

¹ 'Te enim dicere audiebamus nos omnes adversarios putare nisi qui nobiscum essent, te omnes, qui contra te non essent, tuos.'

² Cicero, loc. cit., introduces the saying that he attributes to Caesar with the words: 'Let that phrase of yours which won you your victory hold good in this present case' ('valeat tua vox illa quae vicit').

history and mythology. If this possibility has to be taken into account, is there any obvious social milieu in which such sayings could have seeped down from a cultural stratum that would be apt to express itself in sophisticated literature to the very different cultural stratum whose natural form of expression would be an orally circulating 'folk-lore'? Is there anything analogous in this field to those mixed battalions of Ptolemaic mercenary troops—part Peloponnesian and part, perhaps, Syrian—which may, as we have seen,¹ have been instrumental in conveying a cult of Cleomenes not only in a vertical direction—from a dominant to a proletarian social stratum—but also in a horizontal direction by transporting this feeling of veneration in human hearts from the tenements and barracks of Alexandria to the cantonments and villages of Galilee? The answer to our question is in the affirmative; for in the Hellenic Society in its disintegration the cultural division between a cultivated and an illiterate class did not coincide with the juridical division between freemen and slaves any more closely than the professional division between soldiers and civilians coincided with the social division between Hellenes and Orientals. While there was a vast herd of freemen-illiterates, there was also an *élite* of slaves who were men of culture; and these cultivated slaves were a highly conductive medium of mental communication between a dominant minority to whom they were culturally akin and an internal proletariat of which they were juridically members.

In the Hellenic 'Time of Troubles' the status of slavery in itself was evidence of nothing except a stroke of Fortune—as cruel as it was common—which had deprived a human being of his freedom either before birth or after it. From the fact that a man was here and now a slave it was impossible to tell whether he had been born into slavery or been kidnapped into it;² whether he was illiterate or cultivated; or, supposing that he proved to be cultivated, whether he had acquired his cultivation in a now lost state of freedom or whether he was a born slave who had been given a liberal education—as he might have been trained in the mechanic arts of potting or weaving—by an enterprising owner who had gone to this expense for the improvement of one of his human chattels either because he required a cultivated slave for his own use or because he had speculated that a short-hand calligrapher who knew his way about Greek literature would be likely to fetch so very much higher a price on the slave-market than would be fetched by a potter or a weaver that it would repay the slave-dealer

¹ In the present Annex on pp. 496–500, above.

² For the diverse sources of recruitment of the slave-force in the latter days of the Hellenic 'Time of Troubles' see II. D (vi), vol. ii, pp. 213–16, above.

to put this particularly brainy piece of man-flesh through the longest and most expensive of the various alternative preparatory processes of improving the article before offering it for sale.

The Hellenic slave-intelligentsia which was recruited in this way—partly from slaves who had been born into slavery and been educated by their owners and partly from free-born members of the dominant minority who had fallen into slavery after having received the liberal education that was customary in their class—was ranged, of course, in several different ranks which were cultivated in different degrees. There were not only slave-amanuenses and slave-secretaries; there were also slave-tutors and slave-physicians and even slave-philosophers who were the pagan equivalents of domestic chaplains. And this cultural *élite* of an enslaved underworld includes names that have left a mark on Hellenic history.

The slave-philosopher Epictetus (*vivebat circa* A.D. 50–130) was the leading exponent of Stoicism in his generation. Epictetus had a younger contemporary in the freedman-scholar Hermippus of Berytus¹ (*floruit imperante Hadriano* A.D. 117–38), who wrote a book on *Slaves who have attained Academic Distinction*.² And Hermippus, in turn, had a younger contemporary, as well as fellow countryman, in the Syrian novelist Iamblichus (*floruit circa* A.D. 164), whose mother tongue was Aramaic, and who decorated his *Babyloniaca* with Oriental local colour, though he was writing in Greek for a Hellenic public. According to Suidas, Iamblichus was of servile origin; and, even though this account of Iamblichus's status may lack authority, there can be no doubt about the status of the slave-tutor Mardonius who in a later age weaned his pupil, the young prince Julian, away from a Christianity that was the adopted faith of the Constantian Dynasty to a Hellenism for which the tutor had an enthusiasm that was infectious. In accomplishing this pedagogic feat Mardonius might have given the history of the Hellenic World another turn, if it had been possible for Julian in his prime to succeed in his endeavour to translate into public policy the sentiments that had been inculcated into him in his boyhood (*inde ab* A.D. 339) by his slave-tutor's teaching.³ Through Julian's failure Mardonius has just missed the fame that was so nearly his; but Tiro (*vivebat ultimo ante Christum saeculo*), who so devotedly served his master Cicero in the more modest roles of

¹ According to Suides, Hermippus was born, not in Bayrūt itself, but in an up-country village.

² *Περὶ τῶν ἐν παιδείᾳ διαπρεφάντων δούλων*—a counterpart, in Greek, of Smiles' *Self Help*.

³ Julian's failure is discussed in V. C (i) (c) 2, vol. v, p. 147; V. C (i) (d) 6 (δ), vol. v, pp. 565–7; V. C (i) (d) 6 (δ), Annex, vol. v, pp. 680–3; and in V. C (ii) (a), in the present volume, pp. 222–3, above.

secretary and amanuensis, still lives for us in the pages of Cicero's letters—which Tiro preserved by collecting and editing them in a quite disinterested labour of love—as vividly as any other figure of secondary importance, slave or free, whose features happen to be presented to us in the extant remains of a Hellenic portrait gallery that has suffered grievous damage from the ravages of Time. But for a happy accident—contrived by Fortune when, for once in a way, she was in a propitious mood—this goodly company of the Hellenic slave-intelligentsia might have been adorned by the forcible enrolment into it of the greatest intellect to which Hellenism ever gave birth, if there is any truth in the tale that Plato, on his first visit to Sicily, so deeply incensed the Elder Dionysius by the unheard-of freedom of his speech that the Sicilian despot handed over the Athenian sage to the Lacedaemonian Ambassador at the Syracusan Court to dispose of at the Spartan's pleasure. The story goes that Pollis' pleasure was to sell Plato into slavery at Aegina, and that the philosopher only recovered his freedom thanks to the generosity of a Cyrenaean admirer named Annikaris, who bought him up in order to set him at liberty!

It is manifest that the slaves of this cultivated class would be likely to taste both the extreme of happiness and the extreme of misery that would come within the range of a slave's experience under the social system of the Hellenic Society in its disintegration-phase. On the one hand the service of a beloved and considerate master, such as Cicero, might almost charm a Tiro into forgetting the hard fact that, in law, there was a great gulf fixed between himself and this fellow man-of-letters who had never once reminded Tiro, either by deed or by word, of the existence of this juridical enormity. On the other hand a Tiro to whom Fortune had not allotted a master of the Ciceronian stamp might be made more miserable by even a slight failure of tact on his master's part than a slave-herdsman or a slave-gladiator could be made by the most brutal application of the rod or the branding iron. The very sensitiveness that had rendered the slave-intellectual eligible for the comparative amenity of the life that it was his relatively good fortune to live would also expose him to exquisite mental and moral torments. The precariousness of a slave's personal position—even when he was the devoted and valued servant of a high-minded and conscientious master—is illustrated by an incident in the Passion of Cato Minor in which the hero storms at his slaves, and actually draws blood from his own knuckles by striking one slave on the mouth, because, in their fear that their beloved master is meditating suicide, these slaves hesitate to bring back their master's sword which they have surreptitiously removed from its peg in

its owner's bedroom while Cato has been at dinner. The sharpness of the shock which this painful scene causes to the sensibilities of a modern Western reader of Plutarch's narrative¹ gives some measure of the suffering to which a cultivated slave would be perpetually exposed in even the most enviable conditions of service. And an exceptionally happy Tiro, who could thank the Gods for having enslaved him to a master at whose hands he had never in his life been repaid for his devotion with the petulance of Cato *in extremis*, might feel his gratitude tempered by the reflection that his own master's humaneness was, after all, unparalleled, and that consequently he, Tiro, was unique in his happiness among the groaning and travailing millions of his unfortunate companions in servitude.

This contrast between his personal devotion to his own master and his social indignation at the general standards of behaviour that were prevalent in the master-class would almost inevitably produce, in a Tiro's sensitive soul, a psychological conflict which would give the patient no peace till he had found some way of resolving it; and a possible resolution of it is not difficult to descry. The slave's first concern would be to dissociate his own beloved master, in his own mind, from a master-class upon which, as a whole, he could never bring himself to look with any feelings except those of abhorrence.² And he would achieve this mental dissociation by generalizing the beneficence of which Tiro himself was the beneficiary. In the imagination of his fond heart the grateful slave would idealize his beloved master into the likeness of a benefactor, not merely of the single slave who happened to enjoy his exceptional favour, but of the whole great army of all the slaves in the World, to whom even the most fortunate of their number must always remain bound by indissoluble ties of moral and emotional solidarity. In this mood the souls of Tiro and his like would become spiritual crucibles in which the *êthos* and outlook of morally eminent members of the Hellenic dominant minority might be transfigured into imaginary shapes that would have astonished the historical originals of the heroes of these slave-romances. An archaistic-minded reformer like Agis or Tiberius Gracchus—whose authentic purpose in urging his reforms upon his peers had been to salvage a social system which he was no less eager to preserve than they were—might be transfigured in the imagination of an adoring slave into a futurist-minded revolutionary

¹ Plutarch: *Life of Cato Minor*, chap. 68.

² The sharpness of the difference of the respective feelings that were evoked in the hearts of the slaves by good and by bad masters comes out in the passage quoted in Point 72, p. 401, above, from Diodorus's account of the First Sicilian Slave-War. Compare the episode in the same story that is quoted in V. C (i) (c) 2, vol. v, p. 72, footnote 2, above.

on the pattern of the contemporary leaders who were being thrown up out of the ranks of the Hellenic internal proletariat itself. And, when once a Tiberius Gracchus had thus been assimilated to a Eunus in the 'folk-memory' of a proletarian underworld, it would perhaps almost inevitably follow that the actually spoken and accurately remembered words of the imaginarily proletarianized reformer in the ranks of the Hellenic dominant minority would be ascribed, in a proletarian epic tradition, to this or that authentically proletarian saviour whose own words, as far as these were still remembered, had been of a somewhat similar tenor.¹

On this showing the Hellenic slave-intelligentsia—a social element whose existence in the body social of a disintegrating Hellenic Society is an undoubted matter of historical fact—will suggest itself as a possible means of conveyance of some, at least, of those undoubtedly common words and phrases that occur on the one hand in the extant accounts of heroes who were members of the Hellenic dominant minority while on the other hand they are also to be found in the extant accounts of proletarian revolutionary leaders as well as in the story of Jesus as this is told in the Gospels.

A Visual Means of Conveyance

When, in our consideration of possible means of conveyance, we pass from the verbal to the visual medium, we shall find a clue ready to our hand in the fact, which we have noticed above,² that not only Jesus but also some at least of our pagan historical heroes have come, after death, to receive religious worship. There is an historic association between religious worship and visual art. In the history of Christianity it has been one of the traditional practices of the Church to adorn its places of worship with visual works of art expressing the purpose and meaning of the Liturgy performed within the church walls;³ and the same visual forms of religious expression used to be employed in the temples of both the native and the adopted divinities of the pagan Hellenic World. It is to this Hellenic as well as Christian practice that we owe some of the finest and most famous of the extant remains of pagan Hellenic visual art: for example, the sixth-century frieze, repre-

¹ 'Might not the process be simpler and easier than you say? The educated slave would tell his fellow slaves stories of Socrates or Gracchus, or Agamemnon or Odysseus for that matter, and they would forget the names and contexts and have the stories floating in their minds. Compare the Classical traditions among the Norsemen, learnt partly from books, partly (among other sources) from their fellow soldiers at Constantinople.'—Professor Gilbert Murray.

² On pp. 478–80.

³ The anti-iconic movements in Orthodox Christendom in the eighth and ninth centuries and in Western Christendom since the sixteenth century (see V. C (i) (d) 9 (β), pp. 116–17, above) have been consciously 'Protestant' in the sense of being deliberate breaches with an established practice.

senting the battle between Gods and Giants, from the Treasury of the Cnidians at Delphi; the third-century representation of the same subject on the frieze from the Altar at Pergamum; and the fifth-century representation of the battle between Lapiths and Centaurs on the metopes from the Parthenon at Athens.

The works of visual art in Hellenic places of worship that have just been mentioned all have two features in common: in the first place they portray only a single scene and not a series, and in the second place this single scene has no special connexion with the ritual or the myth of the particular divinity to whom the temple in question was dedicated; but the Pergamene Altar was also adorned with another frieze which portrays a series of successive scenes in the career of one of the local heroes of Hellenic Mythology, Telephus; and there is at any rate one divinity of Syriac origin whose shrines in the Hellenic World in the Imperial Age were adorned with visual representations which portrayed, not some irrelevant Telephus or Briareus, but the indwelling divinity—Mithras—himself. In a Mithraeum the nature, attributes, functions, and career of Mithras were illustrated in a series of tableaux depicting successive chapters of a continuous story, in the style of the Telephus-frieze from Pergamum or of those pictures of the successive Stations of the Cross by which the last act in the Passion of Jesus is illustrated in the modern Western World on the walls of Catholic Christian Churches.¹

Such a series of tableaux has been brought to light in a recently excavated Mithraeum at Dieburg, in Germany,² which, in the opinion of the archaeologists, was built and consecrated not long before the abandonment, *circa* A.D. 260, of the *limes* of the Roman Empire in the gap between the Rhine and the Danube.³ In this case—and there is no reason to suppose that it is in any way abnormal or unrepresentative⁴—the bas-relief in which the god is

¹ The writer is informed by his sister, Miss J. M. C. Toynbee, that the Stations of the Cross do not appear to have been portrayed—or at any rate not portrayed as prominently as is now customary—until comparatively recent times. The present popularity of the theme seems to be traceable to the influence of the Franciscans. This particular theme, however, is, of course, only one of a number of different applications of a distinctive style of portrayal—the ‘continuous style’ in which a story is told by the device of presenting a series of successive scenes—and this ‘continuous style’ is one of the traditional modes of Christian iconography.

² More precisely, in Hessen-Darmstadt, at a point, on the road between the present cities of Darmstadt and Aschaffenburg, which lies just inside the former *limes* of the Roman Empire.

³ See Behn, F.: *Das Mithrasheiligtum zu Dieburg* (Berlin and Leipzig 1928, de Gruyter). For the probable date of the temple see *op. cit.*, pp. 44–5. The excavations which resulted in the discovery were made in June 1926 (*op. cit.*, p. 1). The writer's attention was first drawn to this work by his sister, Miss J. M. C. Toynbee.

⁴ The reliefs on the Dieburg *Kultbild* may now be brought into comparison with at least three kindred works of art: a small relief in the Museo Nazionale Romano; a relief representing Mithras Tauroctonus, surrounded by small painted scenes from the life of Mithras, in the Mithraeum at Dura-Europus (see Rostovtzeff, M.: *Dura-Europus and*

presented in visible material form as an object for public worship is set in a square frame which is composed of twelve smaller reliefs representing as many scenes in Mithras' career. The composition can perhaps be set out most briefly and clearly¹ in a simplified diagram:²

V	VI	VII	VIII
IV	Principal Bas - Relief		IX
III	Inscription ↓		X
II	I	XII	XI

The subjects of the twelve scenes in the frame round the central relief are as follows:

- I. A pair of horses [? representing the Creation of the Universe in an imagery in which the four elements are symbolized by the four horses of a chariot].
- II. Ahriman lying in wait to fight Mithras [?].
- III. The birth of Mithras from the rock.
- IV. Mithras piercing the clouds to bring rain [?].
- V. Mithras up a tree.
- VI. The steer in his stable.

its Art (Oxford 1938, Clarendon Press), pp. 92 and 96-7); eundem: 'Das Mithraeum von Dura' in *Römische Mitteilungen*, vol. xlix (1934), pp. 180 seqq.; and a painting representing Mithras Tauroctonus, framed on either side by painted scenes from the life of Mithras, in the Mithraeum in the gardens of the Palazzo Barberini at Rome (for this Mithraeum, which was discovered in 1936, see the *Giornale d'Italia*, 1st September, 1936, and the *Archäologisches Jahrbuch*, vol. li (1936), 'Archäologischer Anzeiger', pp. 475 seqq. The writer owes these references to his sister, Miss J. M. C. Toynbee.

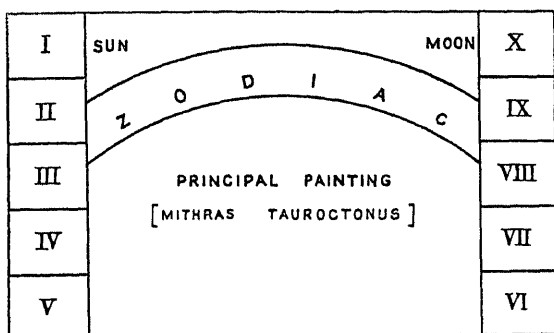

¹ The scholar who has published the results of the excavations at Dieburg describes the composition in the following terms:

'The margins of the large-scale sculptures of the god that serve as instruments of public worship (*der grossen Kulibilder*) are readily turned to account as fields for the presentation of individual scenes from the Mithras Legend. In the selection of these scenes it is not possible to discern any definite system, but for the most part we find a repetition of uniform types. . . . The Dieburg *Kulibild*, with its twelve sculptured scenes, surpasses all others hitherto discovered, not only in its wealth of *motifs*, but also in the point that, as will appear, a strict chronological order is adhered to in the series of sculptures. The serial order is here completely clear; on the left we find the scene of the birth of the god and on the right, next to the tablet bearing the inscription, his ascension into Heaven—which shows that the series of representations starts, as usual, at the bottom of the left-hand side, and then runs "clockwise". . . . The system that governs this series of scenes, and that is so strictly adhered to, knits them together into what amounts to an extract from the Mithras Legend in the form of a cycle of sculptures; and the order in which the individual sculptures are here placed in the series also throws a good deal of new light on other sculptures that are already well known.'—Behn, *op. cit.*, pp. 10-11.

² This diagram corresponds with the front side of the stone; on the back side there is a different representation of Mithras, here in the guise of Phaethon (Behn, *op. cit.*, pp. 21-2).

- VII. Mithras carrying the steer on his back.
 VIII. Mithras riding on the steer, which is now stampeding.
 IX. Mithras again carrying on his back the steer, which is now dead.
 X. A tree with three branches and with a Mithras-head on each of them.
 XI. Mithras and the steer, now sacrificed; Mithras and Sol drinking to one another, out of horns, over the steer's dead body.
 XII. Mithras mounting Sol's chariot, in which he is to ascend to Heaven.

This composition of the sculptured *Kultbild* of the Mithraeum at Dieburg in Hessen reappears, in essentials, in the painted *Kultbild* of the Mithraeum in the gardens of the Palazzo Barberini in Rome.

The subjects of the ten paintings flanking the central painting¹ are as follows:

- I. Juppiter with his thunderbolt.
 II. Terra Mater.
 III. The birth of Mithras.
 IV. Mithras bringing water out of a rock.
 V. Mithras carrying the steer.
 VI. Mithras initiating Sol, who kneels.
 VII. Mithras kneeling between Heaven and Earth.
 VIII. Sol and Mithras sacrificing.
 IX. Sol and Mithras ascending to Heaven in Sol's chariot.
 X. A heavenly banquet.

Like the series of twelve reliefs at Dieburg, this series of ten paintings in Rome represents in outline the career of the god from its beginning at his birth to its close at his ascension; and the existence of the series of Telephus-reliefs from Pergamum which

¹ It will be seen that here the series starts at the top, instead of the bottom, left-hand corner and runs 'anti-clockwise', in contrast to the arrangement of the Dieburg *Kultbild*, on which the series runs 'clockwise', starting from the bottom left-hand corner.

were carved in the third century B.C. is evidence that the 'continuous style' employed in these Mithraea in Italy and Germany was no recent innovation at the times when their *Kultbilder* were respectively painted and carved, but was a genre that had already been in vogue in the lifetime of King Agis IV of Sparta (*regnabat circa 244-240 B.C.*), who is the earliest in date of the eleven pagan historical heroes whose stories we are here comparing with the story of Jesus. There are also, of course, some conspicuous intervening links—for instance, the series of reliefs which tell a story (or, strictly speaking, act a play) on the Roman victory-columns and triumphal arches of the Imperial Age. Does our archaeological evidence warrant the conjecture that the custom of adorning the temples of the Gods with visual representations in the 'continuous style' dates from an age some five hundred years anterior to the date of the Dieburg Mithraeum? And can we venture further to assume that, if our pair of Heracleidae and our pair of Gracchi did come to receive religious worship, they would be honoured in whatever ways were customary in that age in the current worship of heroes and gods whose title to be worshipped was already well established?¹ If our conjecture and our assumption pass muster, they will lead us to the surmise that, if either Agis or Cleomenes or the Gracchi did have shrines dedicated to them after their deaths, these shrines will have been decorated with visual representations in the 'continuous style', and that the subjects of these series of scenes will have been the lives and Passions of the heroes for whose worship the shrines had been built and adorned. If our imagination will carry us thus far, it will further suggest to us that the scenes included in the series will have been of two different kinds: on the one hand authentically historical scenes commemorating the most celebrated or most critical or most tragic events and moments in the human hero's actual life on Earth; and on the other hand potently traditional scenes which properly belonged to the myth of some god or demigod such as Hêrâklês, and which were so indissolubly associated in the popular mind with the temples of this divinity that there will have been an almost irresistible impulse to introduce them into shrines dedicated to human heroes of a similar character, if there was any possibility of co-ordinating these mythical episodes with those authentic events in the human heroes' careers that were notorious matters of public knowledge.

Are there, as a matter of fact, any known examples in the history of Hellenic visual art of series of scenes in the 'continuous style' in which the characters are not gods or demigods but are human

¹ For this assumption see p. 480, above.

beings whose lives on Earth are matters of history? The majority of the figures are, of course, human in the Parthenon frieze, which is perhaps the most famous surviving work of the Hellenic sculptor's art; but these human figures from the chisel of an Attic master of the fifth century B.C. are human without being historical; for they are not individuals with proper names and with ascertainable dates of birth and death, but are the timeless and anonymous typical representatives of a community. Nor, again, do the scenes of the Parthenon frieze tell a story in the 'continuous style'. We must descend to the sculptures on the Roman columns and arches of the Imperial Age to find figures whom we can identify as historical individuals standing out here and there, in the successive acts of a drama in bas-relief, among the anonymous troops of Roman soldiers and enemy tribesmen. The pictures in the *salon* of the Villa dei Misteri at Pompeii, which must have been painted before the eruption of Vesuvius in A.D. 79, do not quite provide us with the clue that we are seeking. 'The subject of the paintings is the initiation of a bride before her marriage into certain mysteries of Dionysus'; but 'it is not certain whether the pictures represent several brides being initiated separately by various rites or one bride going through successive phases in the liturgical act';¹ and, even if we could be sure that the paintings are to be interpreted as a unity in the 'continuous style', we should still be in the dark as to whether or not the series has any personal reference. 'Maiuri explains the choice of this particular scheme of decoration by supposing that the mistress of the house was an initiate and priestess of some Dionysiac association, and he suggests that the bride seated on a couch in the last scene of all is the lady herself and that the paintings were meant to celebrate her wedding. But this, of course, cannot be proved.'² We shall find ourselves on firmer ground if, without moving from the point at which we here stand in the Time-dimension, we make, in Space, the short and easy journey from Pompeii to Puteoli and at the same time migrate from the realm of archaeological 'fact' into the realm of literary 'fiction'. For there is one character, located most probably at Puteoli³ about the middle of the first century of the Christian Era, who is not a god or hero and not a deified man and not even a public personage, but who nevertheless has the crucial scenes of his life depicted in the 'continuous style' on the walls of his own private house in which he is still living. And, although this character is a 'fictitious' one, it does not follow that his author's description of

¹ Carrington, R. C.: *Pompeii* (Oxford 1936, University Press), p. 164.

² *Ibid.*, p. 84.

³ See L. Friedländer's edition of Petronius Arbiter's *Cena Trimalchionis* (Leipzig 1906, Hirzel), pp. 8-10.

his manners and customs is untrue to the facts of the real life of the age.¹

In his account of an imaginary dinner-party at the home of a likewise imaginary self-made millionaire-freedman whom he has named Trimalchio, the Roman novelist Petronius Arbiter (*propria manu obiit* A.D. 66) describes the wall-paintings of which the guests were able to catch a glimpse as they were ushered from the front door to the dining-room.

'On the left as we entered, not far from the porter's cubicle, there was a huge dog (on a chain) painted on the wall, with "Cave canem" written above him in block letters. My companions went into fits of laughter; but for my part, when I had recovered my breath, I was all eyes for what unfolded itself on the rest of the wall. First came a picture of a slave-market, with captions (*cum titulis*),² showing Trimalchio himself, with a [child's] head of hair, bearing Mercury's wand in his hand and entering Rome under the guidance of Minerva. Next, the story of how he had learned to keep accounts and had eventually been appointed a cashier had all been rendered indefatigably, with [explanatory] lettering, by the painstaking artist. At the tail-end of the colonnade the hero was being lifted by the chin by Mercury and being towed through the air towards a lofty tribune, where Fortune with her cornucopia and the three Fates spinning golden distaffs were waiting to receive him. . . . I began to ask the major-domo what pictures they had in the interior. "The Iliad and the Odyssey," says he, "and Laenas' show of gladiators." But it was impossible to have eyes for everything.'³

In thus depicting the successive stages of his own career, and capping his historical feat of making his pile with the mythical *motif* of an ascension into Heaven, to what lengths of audacity was Trimalchio going? Was he casting himself for a role which the prevailing canons of taste and piety would have reserved exclusively for such superhuman heroes of mythology as Hercules and the Dioscuri? Or was he only committing the rather less flagrant enormity of portraying himself as authentically historical human beings were regularly portrayed, in accordance with an accepted convention of Hellenic religion and art, when these mortal men had become recipients of divine worship? Was it Hêraklês or the Heracleidae, was it the Dioscuri or the Gracchi, that Trimalchio was so impudently aping?

These are questions which it may not be possible to answer conclusively in the present state of our archaeological knowledge;⁴

¹ For the indispensable alloy of fact in so-called 'works of fiction' see I. C (iii) (e), Annex, vol. i, pp. 449-50, above.

² Compare the Greek transliteration of the Latin *titulum*—*τίτλον*—which is employed in John xix. 19 to describe the notice which Pilate is said to have affixed to the Cross.—A.J.T.

³ Petronius Arbiter: *Cena Trimalchionis*, chap. 29.

⁴ There is, however, one piece of literary evidence (to which the writer's attention has been drawn by Dr. Martin Braun) which suggests that, round about the beginning of

but an inability to determine exactly what may be the historical affiliations of Trimalchio's pictures of himself need not compel us to rule out all probabilities that we are unable to prove; for the always dubious *argumentum ex silentio* is particularly hazardous in the case in point—as is illustrated by one feature of Petronius's description. Trimalchio's visual record of his own career is not in marble, like the twelve scenes from Mithras' career in the Mithraeum at Dieburg; it is in paint, like the ten scenes from Mithras' career in the Mithraeum in the gardens of the Palazzo Barberini; and this touch may serve to remind us of the enormous extent of the lacunae in the array of our extant specimens of Hellenic visual art. The whole of our surviving record of Hellenic art, both visual and verbal, is fragmentary; in the field of sculpture, as in that of literature, what has come down to us is only an arbitrary and accidental excerpt out of a harvest of which by far the greater part has now been lost; and, if so little has survived of those relatively rare Hellenic works of visual art that were deemed worthy of being immortalized by being carved in marble, we possess to-day next to nothing of those no doubt far more numerous works that—like Trimalchio's picture-gallery—were rendered in evanescent paint on perishable plaster.

Trimalchio's wall-paintings, however, were substantial and durable by comparison with the shapes in which the scenes from the lives and deaths of our Heracleidae and our Gracchi are likely to have been handed down. For Trimalchio had a free hand; had it taken his fancy, he could have immortalized himself in marble without getting into trouble with the Imperial police, since, in the eyes of the public authorities of the age, a living freedman-millionaire would be as innocuous as he was contemptible in the eyes of Nero's *arbiter elegantiae*. There would be no such tolerance for visual works of art that were intended to perpetuate and consecrate the memory of notorious social reformers or revolutionaries who were still more dangerous to the established social order as dead martyrs than they had been as living agitators. It seems unlikely

the Christian Era, the visual representation, in the 'continuous style', of the Passions of historical, or supposedly historical, martyrs of recent date was a familiar idea in the Hellenic underworld—even in that Jewish section of it which was inhibited, by a traditional religious tabu, from the practice of the visual arts. In the Fourth Book of Maccabees, which was composed at some date, between 63 B.C. and A.D. 70, which was probably prior to A.D. 38, the account of the martyrdom of the Seven Brethren and their Mother—a possibly fabulous episode in the Jewish tradition of the persecution of Jewry by Antiochus Epiphanes (see V. C (i) (c) 2, vol. v, p. 72, with footnote 3, above)—contains the following passage: 'And had it been lawful for me to paint, as might some artist, the tale of thy piety (τὴν τῆς εὐσεβείας ἱστορίαν), would not the spectators have shuddered at the mother of seven sons suffering for righteousness' sake multitudinous tortures even unto death?' (Fourth Book of Maccabees xvii. 7, in Charles, R. H.: *The Apocrypha and Pseudepigrapha of the Old Testament*, vol. ii (Oxford 1913, Clarendon Press), p. 683).

that any of the régimes that were successively in power at Rome ever allowed the worship of the Gracchi, that had sprung up spontaneously on the spots where these two heroes had met their deaths (Point 83), to go to the length of housing itself in shrines with sculptures, or even pictures, on their walls. And it seems still more unlikely that any public worship of Cleomenes was ever permitted at Alexandria by a Ptolemaic Government which the Spartan martyr had incited the Alexandrian bourgeoisie to overthrow. A public worship of Cleomenes, in shrines avowedly dedicated to his memory, could not easily have been instituted even in the cantonments of the Ptolemaic garrisons in Coele Syria, where Cleomenes' worshippers would have been less immediately under the eye of the Ptolemaic police. If religious cults of the Heracleidae and of the Gracchi did arise and persist, we must think of them as being carried on underground, in the furtive privacy of an underworld which had learnt by experience how to evade the scrutiny of Lynceus; and our conjectural reconstruction of the visual side of such subterranean cults must be such as will be compatible with this probable environment. A series of scenes in the 'continuous style' from the lives of Agis and Cleomenes or from the lives of the Gracchi could not for long escape detection if either marble or plaster or boards were the medium in which it was conveyed. And on this account we must suppose that, while the plot of the series and the subjects and arrangement of the scenes might be taken from famous sculptures and wall-paintings in which the lives and deaths of Hêraklês or the Dioscuri were publicly exhibited, a clandestine visual record of the Passions of historical heroes, whose worships were *religiones non licitae*, would almost certainly be reduced to a miniature scale and reproduced on less conspicuous materials such as parchment or papyrus.¹ Popular reproductions of celebrated Hellenic works of art used to be made on a small scale and in inferior materials for the sake of cheapness. We know the shape of Pheidias' gold-and-ivory statue of Athena in the Parthenon thanks to the survival, far afield, of dwarf reproductions of it in coarser stone that were manufactured in the Imperial Age; and the author of the Acts of the Apostles

¹ This transposition of bas-reliefs into paintings is the more easy to imagine if we may assume that the Pergamene series of Telephus-reliefs is a typical specimen of the genre of which it is the earliest extant surviving example; for the Telephus-reliefs display a twofold innovation by contrast with the older style that is represented by the contemporary *Gigantomachia* that once adorned the same monument. The Telephus-reliefs are new-fangled not only in telling a story in the 'continuous style' but also in reproducing the painter's effects in relief (on this latter point see, for example, Overbeck, J.: *Geschichte der Griechischen Plastik*, 4th ed., vol. ii (Leipzig 1894, Hinrichs), pp. 285-6). A set of bas-reliefs that had been executed in this *malerische Compositionsweise* would manifestly be easier to re-translate into paint than a set that had been executed in the *echter Reliefstil*.

(xix. 24-5) informs us that one of the industries of Ephesus in the first century of the Christian Era was the mass-production of little silver keepsakes, in the shape of miniature shrines, that were to be bought and taken home by the pilgrims who came to visit the actual shrine of the Ephesian Artemis. We may take it that what was so commonly done for the sake of cheapness would almost certainly be done in cases where the wish for cheapness was reinforced by a need for secrecy.

On this showing, may we venture to imagine sets of pictures—representing scenes of which some would be traditional and others historical—being painted on handy and compact materials and circulating in this form clandestinely, from hand to hand, among members of the Hellenic internal proletariat whose reaction to the oppressiveness of the Hellenic dominant minority was to cherish the memory of reformers and revolutionaries who had died for the people in dying at the hands of the people's rulers? Such sets of pictures might speak for themselves if the mythical scenes were familiar and if the historical scenes were labelled with captions. Alternatively, they might be introduced as illustrations into popular books¹ in which the story of the hero's life and death would also be told in words in the form of either 'lives' or 'sayings' or some combination of the two genres.² In either of these two possible alternative formats the pictures would be so perishable that it would not be at all surprising that no specimens of them should have survived and that our only inkling of their existence should come from verbal tableaux into which (according to our conjecture) these visual images were eventually transposed when the pictures were used as sources for works of literature that were semi-popular and semi-sophisticated.

This hypothesis in regard to the origin of the verbal tableaux that occur on the one hand in the Gospels and on the other hand in the stories of certain pagan historical heroes finds some support in an analogous hypothesis which has been put forward by a distinguished modern Western scholar as a possible explanation of some incongruities in a passage of the Sixth Book (ll. 562-627) of the *Aeneid*. This passage purports to be a verbal description, from the mouth of the Sibyl, of the perpetual torments of the damned which it is not lawful for Aeneas to see with his own eyes; but in the opinion of Salomon Reinach the Sibyl's recitative is really a descriptive catalogue of a picture-gallery.

'Les éléments dont elle se compose offrent des détails graphiques qui laissent entrevoir, derrière les sources littéraires, des sources figurées,

¹ This notion of illustrated *Volksbücher* has been suggested to the writer by Dr. Martin Braun.

² For these genres of Hellenic literature see pp. 500-1, above.

c'est-à-dire des œuvres d'art. C'est comme une galerie de petits tableaux représentant des scènes des Enfers, artificiellement réunies par des formules comme *hic et* (l. 582), *nec non et* (l. 595), *quid memorem* (l. 601). Il importe peu que Virgile ait vu lui-même ces petits tableaux ou qu'il en ait emprunté la description à d'autres poètes; comme nous ne connaissons pas les sources grecques de ce passage, en dehors de l'*Odyssée*, nous pouvons traiter Virgile comme une source et chercher sous ses vers les images dont ils sont la traduction. Un trait comme celui du vers 605 [-6]—*Furiarum maxima iuxta/accubat*—est certainement inspiré d'un modèle graphique; que Virgile ou un autre avant lui s'en soit inspiré, c'est une question insoluble et qui ne nous intéresse pas ici.¹

But why should not the verbal means of conveyance by which these tableaux have actually been transmitted to us be accepted at their face value? In reckoning with these we are on sure ground because authentic specimens of them survive. Why should we go out of our way to postulate the existence of visual means of conveyance as well, when we are unable to support this postulate by bringing forward any material evidence in its favour? The answer is that the social stratum with which we are concerned in our present inquiry was one which, to our knowledge, was to a large extent illiterate; for it is well known that, in illiterate social milieux, things that, *ex hypothesi*, cannot be broadcast in writing are apt to be broadcast in pictorial representations instead, in so far as these can be made to do duty for the written word. In the Soviet Union, for example, in the early days of the Bolshevik Revolution, when the new rulers of half a continent set out to win support for themselves by launching an intensive campaign of mass-propaganda among an illiterate population, it is said that they used to send out propaganda-trains in which the rolling stock was plastered with pictorial posters. The Attica of the fifth century B.C. was much more literate than the Russia of the twentieth century of the Christian Era, as is testified by the institution of Ostracism;² but even in that enlightened century and country, and *a fortiori* in the vast and only superficially Hellenized Hellenic World *post Alexandrum*, the illiterate element in the population was sufficiently numerous to have to be sedulously catered for by being addressed in picture-language.³

The prevalence of a visual habit of mind in fifth-century Attica is attested by at least two passages in the extant masterpieces of the

¹ Reinach, S.: *Cultes, Mythes et Religions*, vol. ii (Paris 1906, Leroux), p. 160.

² Ostracism involved the taking of a plebiscite in which every adult male citizen had to write on a potsherd the name of a statesman whom he wished to condemn to banishment.

³ The institution of Ostracism is evidence for literacy being widespread, but not for its being universal—as witness the famous anecdote of the illiterate peasant who, when one of these negative plebiscites was being taken, asked Aristides, not knowing who he was, to write his (Aristides') own name on the peasant's voting-sherd.

Attic drama. In Aeschylus's *Agamemnon*, ll. 231-47, the chorus not only depict the sacrifice of Iphigeneia in what reads like a tableau transposed into words, but actually describe the protagonist in this scene as 'looking as she looks in the pictures' (πρέπουσά θ' ὡς ἐν γραφαῖς). In Euripides' *Hippolytus*, ll. 1004-5, the hero, when he is accused of a monstrous crime, protests his innocence in the words: 'I know nothing of this business [i.e. sexual intercourse] except through hearing of it in talk and seeing it in picture' (οὐκ οἶδα πράξιν τήνδε πλὴν λόγῳ κλύων / γραφῇ τε λεύσσων)—without any mention of the possibility of reading about it in the written word. The survival of the same habit of mind in the Hellenized 'Great Society' of the Imperial Age is similarly attested by a passage in Plutarch's *Lives of the Gracchi* (chap. 2), in which the author tries to convey to his readers the likeness-in-difference or difference-in-likeness between the two brothers by putting it to them that

'just as, in statues or pictures of the Dioscuri, the likeness between the two figures is qualified by a difference which is the difference between a boxer and a runner, so the strong resemblance between our two young Romans in the matters of courage and self-discipline and good breeding and eloquence and nobility of character is diversified by some striking points of unlikeness in the actions and policy in which they respectively realized and distinguished themselves.'

If this visual habit of mind is prevalent in both of two societies that have come into contact with one another, it is conceivable that one of them may transmit to the other its ideas and its myths by the visual means of conveyance without these ever being transposed into written, or even into spoken, words at any stage in their journey from the one social milieu to the other. According to one modern Western scholar,¹ 'bien des difficultés que l'on rencontre quand on veut expliquer certaines similitudes entre les fables et les épopées de la Grèce et de l'Inde s'évanouiraient peut-être si l'on admettait moins des emprunts directs, par la parole ou par l'écriture, que des emprunts par voie iconographique'. And Reinach² cites other archaeological authorities in support of the view that certain Scandinavian myths—for instance, the tale of Odin hanging on the tree, and the description of this tree itself, which is the World-Tree Yggdrasill—are transpositions into words of the sculptured crosses which met the eyes of the Vikings when they carried their raids into the British Isles.³

¹ Clermont-Ganneau, cited by Salamon Reinach, *ibid.*, vol. iv (Paris 1912, Leroux), p. 101 (the reference is to an article in the *Revue Critique*, vol. ii, pp. 215 and 232 (1878)).

² *Ibid.*, pp. 102-3.

³ In this context Reinach further suggests that the decorations carved on stone in such works of the Northumbrian sculptor's art as the Bewcastle and Rothwell crosses

The effectiveness of picture-language as a means of communication is brought out vividly in several well-known passages of Greek and Latin literature. In the Hellenic World in all ages of its history that have left us any legacy of literature the normal first step of a stranger who had arrived in a city which he had never visited before was to make the round of the public monuments—statues, colonnades, and temples—and to look at the bas-reliefs and wall-paintings which the public buildings contained.

This, for instance, is the *motif* of the opening scene (Book I, chap. 1) of Achilles Tatius's novel *Cleitopho and Leucippe*. 'As I was wandering', says the imaginary narrator, 'about the city [of Sidon], surveying the votive offerings in the temples, I saw a painting'—and the author straightway plunges into a detailed verbal description of a picture illustrating the myth of Europa. In a later chapter of the same novel (Book III, chap. 6) two shipwrecked travellers, who are kicking their heels at Pelusium while they are waiting for a passage, spend their time in looking at pictures of Andromeda and of Prometheus—which, again, are described in minute detail—in the temple of Zeus Casius. Nor was it only pagan travellers who condescended to avail themselves of this pleasantly educative means of killing time. 'While Paul waited for' his companions to join him at Athens, 'his spirit was stirred within him when he saw the city full of idols (κατείδωλον οὖσαν τὴν πόλιν)' (Acts xvii. 16); and the Christian apostle took his sightseeing as the text for a missionary sermon: 'For as I passed by and beheld your devotions (διερχόμενος γὰρ καὶ ἀναθεωρῶν τὰ σεβάσματα ὑμῶν), I found an altar with this inscription . . .' (Acts xvii. 23). The urban sightseeing which thus makes its appearance as a *motif* in both the Acts of the Apostles and the romance of *Cleitopho and Leucippe* is translated into a rural setting in the opening scene (Prooemium, chap. 2) of Longus's *Daphnis and Chloë*: 'As I was hunting in Lesbos I saw in a grove of the Nymphs the loveliest sight that I had ever set eyes on, a picture which was a love-story'—and, after describing the subject of the picture, which was a pastoral scene, the author tells his reader that the book which he is about to read is the fruit of a passion, with which the

are not original in their design but are translations into sculpture of the miniature paintings in Irish manuscripts which are themselves inspired by Hellenic prototypes of the Imperial and even the Pre-Imperial Post-Alexandrine Age. In this hypothetical translation of small-scale paintings on parchment into large-scale sculptures on stone we have the exact inverse of our hypothetical translation of sculpture and painting on plaster into miniatures painted on parchment or papyrus to illustrate the lives of Jesus and his pagan counterparts (see pp. 515–17, above). Reinach's hypothesis is, however, a matter of controversy. There are some scholars who hold that Northumbrian sculpture owes nothing to Irish inspiration; and there are others who do not admit that even the Northumbrian school of miniature-painting is of Irish origin (see Dawson, Christopher: *The Making of Europe* (London 1932, Sheed & Ward), pp. 206–8).

author was seized, to put some equivalent of the fascinating Lesbian picture into words (πόθος ἔσχεν ἀντιγράψαι τῇ γραφῇ).¹ The fascination exercised by sermons in stones—or on boards or plaster—was indeed so strong that we find even the conscientious Aeneas succumbing to it out of season.² As soon as he steps across the threshold of the temple of Apollo at Cumae, his attention is entirely absorbed by the scenes from the great corpus of Hellenic Mythology that are painted on the walls, and for the moment he becomes oblivious of the quest on which he is bent, though this quest is the serious and formidable one of making a descent into Hell. Aeneas would have lingered there sightseeing until he had taken in everything that there was to be seen, had not the Sibyl hustled him on into performing his religious duties, as Trimalchio's guests were hustled by the major-domo into taking their places at the dinner table.

quin protinus omnia
perlegerent oculis, nī iam praemissus Achates
adforet atque una Phoebi Triviaeque sacerdos,
Deiphobe Glauci, fatur quae talia regi:
'Non hoc ista sibi tempus spectacula poscit.'

In what did the fascination of this picture-language consist? Perhaps largely in identifying the subjects of the painted or sculptured scenes when these were not provided with captions or when the captions were there but were not intelligible to the sightseer, either because he was illiterate or because they were written in a language and a script which he could not read. This fascinating game of crying *τοῦτ' ἐκεῖνο* is played competitively by the chorus in Euripides' *Ion* at their first entry (ll. 184-218). This chorus is composed of Athenian women in the service of Queen Creūsa, and the scene is the temple of Apollo at Delphi which these Athenians are now seeing for the first time. In an animated dialogue they call one another's attention to the works of art with which the temple is decorated, as they recognize one mythical scene or figure after another.

'“See this; look; give your eyes to it; it is the Lernaean hydra being slain by Hēraklēs.”—“Yes, I see it, my dear; and here is Iolaus.”—“Well, but just look at this; here is Bellerophon mounted on Pegasus.”—“My eyes are being drawn in all directions; don't miss the Giants.”—“My dears, we are looking at these.”—“Well, do you see her brandishing

¹ It will be seen that in this passage Longus professes to have done the very thing that is attributed to Virgil, or to Virgil's source, by Reinach in the passage quoted on pp. 517-8, above. In this connexion it is not without interest to note that Longus betrays some acquaintance with Virgil's work (see J. M. Edmonds in the Loeb edition of *Daphnis and Chloe* (London 1916, Heinemann), p. vii).

² Virgil: *Aeneid*, Book VI, ll. 13-41.

³ Ibid., ll. 33-7.

her aegis?"—"See Pallas, my own goddess? No mistake!"—"And then Zeus with his thunderbolt?"—"Yes, I see him; he is blasting Mimas."—"And here is Bacchus."¹

This passage of Euripides' *Ion* bears out Reinach's observation that 'toute image est une énigme qui . . . réclame impérieusement une explication, et les motifs graphiques se transmettent et se perpétuent comme les mots du langage'.² Guessing at the answer to riddles is always fun, but it does not always happen that the guesser guesses right; and Reinach's thesis, in the brilliant essay from which we are here quoting, is that the riddles presented in the series of tableaux in *Aeneid* VI, ll. 562-627, are there interpreted in a sense that makes nonsense of the meaning which the hands that originally designed these pictures were intending to convey.

In the *Aeneid*, of course—and not only there but also in every other work of Greek and Latin literature in which they figure—the subjects of these scenes—Salmoneus, Ixion and Sisyphus, Tityos and Tantalus, Theseus and Peirithous, the Danaids, and the rest—are represented as damned souls who are suffering in an Other World eternal punishments for sins which they committed in This World once upon a time. Reinach submits that this is a false interpretation which has been put upon the pictures in order to make them serve as illustrations of a system of theology which was unheard of in the archaic Hellenic World—or was it the pre-Hellenic Minoan World?³—in which these pictures had originally taken shape. This system is that of Orphism; and Orphism is a cutting from an exotic plant which was deliberately imported into Hellas no earlier than the sixth century B.C.⁴ According to Reinach, the pictures were intended by their original designers to represent their subjects, not as undergoing perpetual tortures in Hell, but as snap-shotted, for the sightseer's information, in either one or other of two alternative postures in which the sightseer would be prone to visualize them. The subject is represented either as engaged in some notoriously characteristic activity of his life or else as *in articulo mortis* if what is notorious about him is, not what he did with his life, but the manner in which he lost it.⁵ The

¹ This is not, of course, a full translation of the passage but only a sketch of the gist of it.

² Reinach, op. cit., vol. ii, pp. 183-4.

³ It has been brought to the writer's attention by Professor Gilbert Murray that a number of *motifs* which appear in literary form in the Hellenic Mythology—e.g. Odysseus and the Ram; Oedipus and Laius; Orestes killing Clytaemnestra and Aegisthus—are also to be found in visual form engraved on Minoan gems.

⁴ Reinach, op. cit., pp. 203-4. For the arguments in favour of the view that Orphism was not the revival of a submerged religious legacy from the Minoan World, but was an artificial product that was manufactured by Hellenic hearts and minds out of contemporary Oriental materials in the sixth century B.C., see V. C (i) (c) 2, vol. v, pp. 84-7, above.

⁵ Reinach, op. cit., vol. ii, pp. 166-9.

picture of Salmoneus portrays a successful rain-maker producing the thunderstorm and lightning-flash in the sky by the sympathetic magic that he is performing on the ground as he drives a thundering chariot while he waves lightning-torches in his hands. The proper caption for this picture is 'The storm successfully discharged by Salmoneus' and not 'Zeus blasting Salmoneus for his impiety in having attempted to perform a social service which is Zeus' own exclusive prerogative'.¹ Similarly, Ixion lashed for ever to a perpetually revolving wheel is not a sinner undergoing eternal punishment but is the *numen* in the Sun-Disk represented anthropomorphically in the style of the Assyrian Asshur and the Achaemenian Ahuramazda.² And Sisyphus, too, in his own way, is achieving as triumphant a *tour de force* as the divinity that makes the Sun go round or as the magician who brings the rain. Sisyphus³ is not a *forçat* serving a sentence of penal servitude which is as heart-breakingly futile as it is back-breakingly laborious. He is the superb technician who built on the heights of the Acrocorinthus the great white marble structure which was still known as the Sisypheum in the last century B.C.⁴ The stone that he is hoisting up will never, it is true, quite reach the top of the mountain, but that is simply because the emplacement of the Sisypheum lies a little way below the summit!⁵ The Danaids, again, are not miserably expiating the damnable sin of having murdered their husbands, but are beneficently engaged on their life-work of irrigating the thirsty plain of Argos.⁶ As for Tityos, he is really being eaten, not excruciatingly alive, but insensitively dead, by his attendant vultures; for the picture represents, not another of the torments of the damned, but the corpse of a warrior who has died a glorious death on the battle-field⁷—just as Tantalus represents, not a sinner being 'tantalized', but the drowning king of a city that has been engulfed in a lake as the result of an eruption or an earthquake.⁸

These examples of the misinterpretation of visual riddles are all taken from the Hellenic cycle of art and mythology, and are all to be explained (if Reinach's theory is right) as attempts to give old *motifs* a satisfactory meaning in terms of a new theology. But this is by no means the only stage on which the same comedy of errors has been played. There is, for instance, at least one Christian legend that can be accounted for in a similar way. It is told of a number of Christian martyrs that, immediately after their decapitation, they rose to their feet, picked up their own severed heads, and walked off head in hand. This legend appears to be a

transposition into words of statues in which these saints were visually represented in this posture; and these statues themselves can be traced back, as the Bollandist Fathers have shown, to a passage of Saint John Chrysostom¹ in which the writer imagines the martyrs appearing before the throne of God with their heads in their hands, as soldiers address themselves to their commander with confidence when they are able to display to him the wounds that they have received in his service.

Let us now apply these prolegomena to the tableaux, set out in Table V above,² that are common to the story of Jesus and the stories of our pagan historical heroes. On a number of points the considerations that we now have in mind may prove illuminating.

In the first place, if we run our eye down the list, we shall see that most of the tableaux in it that do not represent notorious historical scenes in the life of this hero or that can be explained as adaptations of familiar traditional scenes from the myth of some god or demigod.

The tableaux of the Hubbub at Night-time with Lights (Point 41), the Posse of Officers of the Law Abashed in the Hero's Presence (Point 43), and the Trial at Night-time (Point 49), and again those of the Women in the Background (Point 80), the Descent from the Gallows (Point 81), and the *Pietà* (Point 82), would appear to be representations of authentic scenes in the Passion of Agis.³ The

¹ Migne: *Patrologia Graeca*, vols. xlix-l, col. 576: οὕτω καὶ οὗτοι τὰς κεφαλὰς ὡς ἀπεμήθησαν ἐπὶ τῶν χειρῶν βαστάζοντες, καὶ εἰς μέσον παράγοντες, εὐκόλως ἅπαντα, ὅσα αὐτὸν θέλωσι, παρὰ τῷ βασιλεῖ τῶν οὐρανῶν ἀνέω δύνανται.

² On p. 411, above.

³ There is another tableau—not included in our table of eighty-nine points—which may perhaps also have found its way into the story of Jesus out of the authentic history of Agis. When, after the introduction of Agis' social reforms, Agis' partisan Lysander, who was now a member of the governing Board of Overseers, was scheming to remove Agis' colleague and opponent King Leonidas by forcing him into exile, Lysander 'proceeded, in company with his fellow Overseers, to "watch for the sign"'. This "watching for the sign" is [an ancient Spartan ritual] to the following effect. Once in every nine years the Overseers choose a clear moonless night and sit through it in silence with their eyes fixed on the sky. If on that night a star shoots across the sky from one quarter to another, they put the Kings on trial on the presumption that they must have committed some offence against Religion, and in the meanwhile they suspend them from office, pending the arrival from Delphi or Olympia of an exculpating oracle. On the occasion in question, Lysander asserted that this "sign" had appeared to him, and on the strength of this he gave notice that there was to be a trial of King Leonidas' (Plutarch: *Lives of Agis and Cleomenes*, chap. 11). This piece of star-gazing was a crucial event in Agis' political career, and a picture of it might well have been one of the regular scenes in a standard pictorial representation of Agis' life and Passion. Is it conceivable that this hypothetical picture in a Spartan picture-book may be the source of the verbal tableau in Matt. ii. 9-11? The original picture would presumably represent a group of magisterial-looking men (the Spartan Board of Overseers) sitting in front of a building (the Brazen House of Athena Chalcioecus) and gazing at a shooting star (the motion of which would perhaps be indicated by a trail of light). A Jewish interpreter of this picture would expect the star-gazers to be magi (especially on the morrow of an historic journey of a party of magi from east to west: see pp. 455-6, above). He might jump to the conclusion that there was a connexion between the star and the house, and might suppose that the star had come to rest over the house in order to draw the star-gazers' attention to it. From this, again, he might infer that the house was the goal of a pilgrimage on which the star-gazers had been led by following the star from their home in the east. We may observe that if, in the original Spartan picture, the house really was the temple of

tableaux of a Party going Out of Doors (Point 33), a Fight (Point 44), the Pricking of the Hero's Body with a Stabbing Weapon (Point 79), and the Women in the Foreground (Point 80 A) would appear to be taken, similarly, from the true history of the Passion of Cleomenes. The tableau of the Young Male Fugitive Leaving his Wrap in the Hands of his Pursuers (Point 48) is a picture of the martyrdom of Tiberius Gracchus.¹ The tableaux of a Crowd Mounting on to the Roofs in order to get within Range of the Hero (Point 11), a Bodyguard Watching and Sleeping by Turns (Point 37), and a Watcher Caught Napping (Point 38) look as though they came from the true history of the life and death of Gaius Gracchus. The Roman Washing his Hands in a Basin in Public (Point 64) is entered, in Clio's register, not as Pontius Pilate but as Catiline.

On the other hand the tableaux of a Rider, with Companions on Foot, Making a Progress through the Streets of a City (Point 16) and the Hero Forcibly Clearing a Public Place of Trespassers (Point 17) would appear to portray two scenes out of the ritual of 'the Ride of the Beardless One'.² The tableau of the Bosom Friend Leaning on the Hero's Breast (Point 28) looks like a scene from the romance of Pantheia and Abradatas,³ which in turn is perhaps a version of the myth of Ishtar and Tammuz; and it is possible that the tableau of the *Pietà* was also generated by this Sumeric myth and that it made its way into the Hellenic story of Agis from an Oriental source. The tableau of the Agony (Point 36) looks like a scene from the tragedy of *Hercules Furens*, and the tableau of the Hero Ripping off his Shirt (Point 71) like a scene from the tragedy of *Hercules Oetaeus* (if we may venture to identify the shirt worn by Cleomenes on his dying day with the deadly Shirt of Nessus).⁴ The tableaux of the Hero Arrayed in a Royal Robe and Crown (Point 66) and the Hero being Exhibited in Public as a Claimant to Kingship (Point 67) look like scenes from the ritual of the ephemeral reign of the mock-king of the Saturnalia and the Sacaea;⁵ and the tableau of a Crucified Man being Acclaimed as a Son of God (Point 75) may perhaps be traceable to the same origin.

In the next place we may take note of a pair of tableaux—the

Athena Chalcioecus, then, in the next picture in the Spartan series, 'the house' did harbour 'the King'; for the effect of Lysander's prosecution of King Leonidas on the strength of 'the sign' was to frighten Leonidas into taking asylum in Athena's sanctuary (Plutarch, *cap. cit.*).

¹ Reinach, *op. cit.*, vol. iv, p. 168, suggests that Mark xiv. 51-2 is derived (not from the story of Tiberius Gracchus, but) from Amos ii. 16: 'And he that is courageous among the mighty shall flee away naked in that day.' This suggestion seems far-fetched; for Mark's young man is not represented as being courageous (as is the other anonymous disciple who shows fight in Mark xiv. 47). On the other hand in Amos there is no mention of the fugitive leaving his wrap behind.

⁴ See p. 472, above.

³ See pp. 460-3, above.

⁵ See pp. 481-6, above.

Descent from the Gallows or Cross (Point 81) and the *Pietà* (Point 82)—which appear to have passed direct out of the Hellenic into our Christian iconography without having been transposed into words, and then retransposed into visual form again, *en route*. The tableau of the Descent is equally prominent in our Christian iconography and in the word-picture in Plutarch's *Lives of Agis and Cleomenes*; on the other hand there is no corresponding text, describing the event, in the Gospels.¹ The *Pietà* is, of course, depicted in a word-picture in the Gospels as well as in Plutarch; but in its portrayal of the same scene the Christian iconographical tradition differs from the Gospels and agrees with the Passion of Agis in one capital point.² In the Christian iconographical tradition, as in the story of Agis, the most prominent actors in this scene are the women of the dead hero's entourage, whereas in the Gospels the women are not mentioned and the laying out of the body for burial is ascribed to a man, namely, Joseph of Arimathaea (who, in the Gospel according to Saint John, is said to have been assisted, not by the women, but by another man, namely Nicodemus). Whatever the ultimate origin of the tableau of the *Pietà*, the assignment of a prominent part in this scene to female characters seems not unlikely to have originated in an authentic feature of the historical Passion of King Agis; for gynaeocracy—'the monstrous regiment of women'—was one of the conspicuous features in the social life of Sparta under the Lycurgean *agôgê*, and this more than ever in the days of Sparta's decadence.³

Such direct transmission of tableaux from the Hellenic to the Christian iconography would appear, however, to be exceptional. All the rest of the tableaux under consideration are to be found in verbal form in the Gospels; not all of them have subsequently found their way back into visual form by being adopted as themes of a Christian iconographical tradition; and, in so far as this retransposition has taken place, the Christian portrayal of these scenes appears to be based upon the text of the Gospels for the most part—though it may have drawn, in addition, upon Hellenic iconographical sources which it is no longer in our power to detect because these have not survived independently.

If we now look into the setting in which our tableaux occur in the Gospels, we may find some corroboration for our conjecture that, at an earlier stage of their history, these tableaux were in circulation in visual form in series which were intended to illustrate the

¹ For the origin of the apparent allusion to the Descent from the Cross in the Gospel according to Saint Luke see p. 404, footnote 1, above.

² On this point see p. 404, footnote 2, above.

³ For the ascendancy of women in 'Lycurgean' Sparta see Part III. A, vol. iii, p. 75, with footnote 4, above.

myths or legends or histories of gods or demigods or human martyrs.

There are, for instance, certain tableaux which in their context in the Gospels seem inconsequent or even incongruous, but which explain and justify themselves in their pagan contexts. This difference in degree of relevancy or congruity suggests that the tableau is native to the context in which it seems to be at home, and that in the other context, in which it does not cohere with its surroundings, it is adventitious. But why should an author have burdened his book with scenes for which he has not succeeded in finding a convenient place or function? The answer may be that the author has been defeated by a problem which he could not solve yet at the same time could not evade. These scenes which he has failed to knit up into the main fabric of his work may have been virtually impossible for him to leave out for the reason that his public may have expected to find them in any *Volksbuch* in which the hero was presented in the role of a saviour. Whether the ultimate origin of these scenes was historical or mythical, they had come, we may surmise, to be regarded as an indispensable part of the credentials of any hero who was a candidate for recognition as being the Saviour *par excellence*. An author whose purpose in writing his book was to present as the Saviour some hero of his own who had not yet won any general acknowledgement could not afford to leave these obligatory scenes out. So in they must go, however difficult it might be to piece them together with the particular story which this particular author was setting out to tell.

Two tableaux which are inconsequent in the Gospels but germane to their other contexts are the Posse Abashed (Point 43) and the Young Man Fleeing (Point 48). The former scene explains itself in the story of Agis, where the men are ordered to put Agis to death and flinch, naturally enough, from executing an order to take the life of a legitimate King of Sparta who has the holy blood of Hêraklê's in his veins. The latter scene explains itself in the story of Tiberius Gracchus, where the fugitive is the hero himself, and where the scene is one of supreme dramatic and emotional interest because it portrays the hero at the instant before he meets his death.

Three tableaux which are incongruous in the Gospels but germane to their other contexts are the Presentation of the Two Swords (Point 32), the Fight (Point 44), and the Command to Cease Fighting (Point 45). In the Gospels all three points are incongruous because, at any rate in the version of the story which has prevailed, Jesus is presented as a gentle hero and not as a violent

one (Point 1), and his non-resistance is one of the hinges on which the plot of the drama turns. On the other hand the fight followed by a command to cease fighting is of the essence of the story of Cleomenes; for Cleomenes is a man of violence who is attempting to make himself master of Alexandria by a *coup de main* and who will therefore fight like a lion so long as his desperate enterprise seems to have any chance of success, but he is also a man of chivalry who will be prompt to avoid what would now be merely aimless bloodshed as soon as it becomes plain that his stroke has failed. As for the tableau of the Presentation of the Two Swords, we may perhaps hazard the guess that the text in the Gospel according to Saint Luke (xxii. 38)—‘And they said: “Lord, behold here are two swords”, and he said unto them: “It is enough”’—may be a transposition into words of one of the details in some popular reproduction of the *Necyia*: a panoramic picture of Hades and its denizens, of which the original, from the hand of no lesser a master than Polygnotus, was one of the treasures of Delphi.¹ Among the heroes of Hellenic Mythology with whose figures Polygnotus’s picture was thronged were that inseparable pair of friends Theseus and Peirithous; and in Pausanias’ description of the picture² this particular group of figures is described in the following words: ‘Below Odysseus are Theseus and Peirithous sitting on thrones—Theseus holding in both hands the swords, Peirithous’s and his own, while Peirithous has his eyes fixed on them.’

We may next return for a moment to the consideration of eight tableaux which, in the Gospels, are all associated with quotations from the Jewish Scriptures and which we have examined in this connexion at an earlier point in our present inquiry.³ These eight tableaux are the Rider (Point 16), the Harrying of the Hucksters (Point 17), the Presentation of the Two Swords (Point 32), the Roman Washing his Hands (Point 64), the Trio of Victims (Point 70), the Shirt (Point 71), the Corpse Intact on the Cross (Point 78), and the Pricking of the Hero’s Body (Point 79). At a first assay we have found ourselves at a loss to understand the relation between these tableaux and the quotations by which they are accompanied in the New Testament. In almost every case the appositeness of the Scriptural text to the tableau is, as we have seen, too slight to warrant the hypothesis that the text may have been the

¹ The present writer’s attention was drawn to Polygnotus’s presentation of Theseus and Peirithous by Reinach’s reference to it in *op. cit.*, vol. ii, pp. 184–6. On the other hand Reinach himself, in another place—*op. cit.*, vol. iv, p. 167—suggests that Luke xxii. 38 is derived (not from Polygnotus’s picture, but) from Judges vii. 18 and 20: *‘Ρομφαία τῷ Κυρίῳ καὶ τῷ Γεδεὼν’* (‘a sword for [sic] the Lord and for Gideon’).

² Pausanias: *Descriptio Graeciae*, Book X, chap. 29, § 9. The description of the whole picture occupies chaps. 28–31 inclusive.

³ See pp. 420–8, above.

original material out of which the tableau has been made. And this negative conclusion is borne out by our observation that one of the texts—Isa. liii. 12—is quoted in the Gospel according to Saint Mark apropos of Point 70 and in the Gospel according to Saint Luke apropos of Point 32,¹ while conversely one of the tableaux—No. 17—is accompanied by a combination of texts from Isaiah and Jeremiah in the Synoptic Gospels, but in the Gospel according to Saint John by quite a different text that is taken from one of the Psalms.² How, then, we have still to ask ourselves, have these tableaux and these texts come to be brought into their present association with one another? In the light of the results of our present examination of possible visual means of conveyance we may at last be able to find the answer to this riddle.

Let us suppose that the eight tableaux here in question had come to be regarded as obligatory scenes in any portrayal of any saviour's Passion. Granting this, we may imagine the Evangelists—or the predecessors who served them as sources—being impelled to furnish a Hellenic tableau with a Jewish caption by the consciousness of a need to mitigate the inconsequence, or attenuate the incongruity, of a tableau which an exacting popular tradition would forbid them to leave out, however great might be the difficulty of bringing this tableau into harmony with a story which possessed a plot and an atmosphere of its own that were individual and perhaps unique. The Scriptural caption might not be closely to the point; it might, indeed, be so irrelevant that an identical caption could be fitted by different hands to different tableaux, or an identical tableau be furnished by different hands with different captions. In a semi-sophisticated work such lapses from the sophisticated standard of literary competence might cause little heart-searching either to the author or to his public. On the other hand the author, for his part, might feel himself considerably fortified by the feat of having brought the adventitious Hellenic material into even the loosest relation with the Jewish Canon of Scripture. That feat might be a *tour de force*, and yet the mere juxtaposition of tableau and text would go far to consecrate and justify the tableau in eyes which still saw the Universe through the lens of Judaism. In bringing such tableaux into even a forced and artificial relation with Scriptural texts the Evangelist would be taking not only the first but perhaps actually the decisive step towards capturing from Hellenism, and annexing to Judaism, certain 'features' (in the journalistic usage of the word) which it was obligatory for him to incorporate into his own work because these by now traditional traits had come to be the hall-marks of a *soi-disant* saviour's

¹ See p. 426, above.

² See pp. 425-6, above.

authenticity in the eyes of a public which was already being recruited from the non-Jewish masses of a promiscuous proletarian underworld.

To furnish a picture with a caption is an attempt to give this old picture a new meaning without actually touching the picture itself; but this is an external treatment which can only be expected to be effective if the reinterpretation that is required is superficial. If the picture has to be reinterpreted in a radical way, this can hardly be achieved without at least some retouching; and we can put our finger upon several tableaux which in fact seem to bear the marks of having been repainted to some extent in order to enable them to carry a new meaning.

There are two cases, for example, in which, to all appearance, a scene has been made to fit into a series to which it did not originally belong by reducing the figure of the original protagonist to the dimensions of a minor character. In this fashion the scene of the Rider (Point 16) seems to have been fitted into the story of Cleomenes by transferring the Rider's part from the hero to one of his henchmen¹—in contrast to the treatment of the same scene in the Gospels, where the Rider remains the principal figure that he is in the original rite from which this scene seems to be ultimately derived. In a similar way the scene of the Flight and Pursuit of Tiberius Gracchus on the Day of his Martyrdom (Point 48) seems to have been fitted into the story of Jesus by transferring the Fugitive's part from the hero to one of his henchmen whom an embarrassed adapter leaves anonymous, without attempting to identify this obligatory figure with any of the characters who appear on the stage in earlier acts of the Christian drama.

We may also recall one case in which we have found reason² to surmise that a character—'the Bosom Friend'—has undergone a

¹ Before we traced the tableau of the Rider back to the rite of 'the Ride of the Beardless One' (see p. 481, above), we had already rejected the hypothesis that this tableau might have given rise to the name of Cleomenes' companion Hippitas. We took note (on p. 462, footnote 2, above), of the fact that Hippitas was an authentic historical personage whom Polybius displays to us in the act of strolling, in his leader's company, along the quayside at Alexandria. According to Plutarch-Phylarchus, however, Hippitas was a lame man; and this, according to the same authority, was the reason why, on the day of the abortive *coup*, the lame man's companions commandeered a horse and mounted him upon it. No doubt Hippitas may have been too lame to charge at the double when he was not too lame to stroll; or he may have gone lame in the interval between the scene in which he figures on foot in the narrative of Polybius and the scene (which has no counterpart in Polybius's pages) in which he figures on horseback in the narrative of Plutarch-Phylarchus. It seems more likely, however, that Phylarchus has named Hippitas with his own hand—or stylus—as an excuse for hoisting his victim into the saddle, and that he has singled out Hippitas for playing the Rider's part on account of his name—if we may assume that Phylarchus had found the inclusion of the Rider Scene obligatory, and that he was in difficulties over conscripting somebody to play a part which even the most audaciously romantic historian could not venture to assign to Cleomenes himself when the whole world was aware that, on that day in Alexandria, Cleomenes had charged and fought on foot.

² See pp. 461-3, above.

change of sex.¹ In the tableau of the Favourite Companion Lying on the Hero's Breast (Point 28) the Bosom Friend is of the male sex in the stories of Cleomenes and Gaius Gracchus and Jesus alike. On the other hand in the romance of Pantheia and Abradatas (an older story which is perhaps a version of the myth of Ishtar and Tammuz) the corresponding figure in the same tableau is not male but female. We have already conjectured² that this change of sex may have been the work of Phylarchus, and that this romantic historian may have been tempted to take this liberty by the play of his volatile imagination upon the superficial similarity between the names of Pantheia and Panteus.

The necessity of transferring a tableau from a setting in which the hero is violent to one in which he is gentle has, in at least two cases, apparently compelled the authors of the Gospels—or their sources—to make changes that go farther than a transfer of parts or even a change of sex. For example, in the tableau of the Favourite Companion Lying on the Hero's Breast (Point 28)—as this appears in the story of Abradatas (where the favourite companion is the hero's widow Pantheia), as well as in the stories of Cleomenes and Gaius Gracchus (where the favourite companion is a man)—the hero's body is not alive and in peace but is the corpse of a warrior who has died by violence, while the favourite companion is in the act of slaying herself (or himself) upon the hero's dead body. On the other hand in the same tableau, as this appears in the story of Jesus, the hero is lying, not dead on the ground, but alive in the triclinium, and the favourite companion is leaning on his breast, not in order to join him in death, but in order to talk with him privily. It will be seen that in this case (if our explanation is right) the tableau has been reinterpreted as drastically as it well could be without altering the grouping of the figures. It will also be seen that no lesser change would have availed to fit into the Passion of a gentle hero a tableau which is, in origin, a violent hero's death-scene. The same problem has had to be faced in the transfer, from the Passion of Agis to the Passion of Jesus, of the tableau of a Hubbub at Night-time with Lights (Point 41); and here it has been solved by turning a scene which originally portrayed an attempt to rescue the hero into a portrayal of his arrest.

We may also notice two apparent cases of rationalization in the style of Phylarchus's treatment of the Rider Tableau.³ In the pair of tableaux (Points 66 and 67) in which the hero is arrayed in a royal robe and crown he is dressed (if Frazer's conjecture is right)⁴

¹ Compare the metamorphosis of the Bodhisattva Avalokita into the goddess Kwan-yin in the course of the migration of the Mahāyāna from India to the Far East.

² See pp. 461-3, above.

³ See p. 530, footnote 1, above.

⁴ See pp. 481-6, above.

to fit the part of the mock-king in the ritual of the Saturnalia or the Sacaea. In both the story of Tiberius Gracchus and the story of Jesus, however, this pair of tableaux is given a matter-of-fact explanation which lies quite outside the realm of religious or magical practice. Jesus is represented as being robed and crowned in mockery of the fact that he—an obscure man of the people—has solemnly pleaded guilty to the charge of having claimed to be a king. Tiberius Gracchus is represented as being first robed and crowned in a kind of private dress-rehearsal for a future coronation as King of Rome, and then subsequently denounced to the Senate as asking the People for a diadem. Similarly, when Cleomenes is portrayed as ripping open the seam of his shirt (Point 71), he is represented in the narrative of Plutarch-Phylarchus as performing this trivial action for the matter-of-fact purpose of giving free play to his sword-arm. We may suspect, however, that this ostensibly rational explanation is no more than an ingenious expedient for fitting into the story of Cleomenes a tableau in which, in the original, the Heracleid's ancestor Hêraklês was depicted in the act of trying in vain to tear off from his tormented body the poisoned Shirt of Nessus.

Inversely, there is one case in which an originally matter-of-fact scene appears to have been given a ritualistic meaning in order to fit it into another story. In the original picture the Roman Washing his Hands in a Basin (Point 64) is Catiline; he is washing them because they are literally stained with the blood of a victim whom he has been putting to a lingering death; and the basin that he uses is the nearest one to hand (it happens to be a holy water basin at the door of a temple).¹ In the Gospel according to Saint Matthew, where the Roman's part is transferred from Catiline to Pilate, the blood-stain is not literal but metaphorical; the washing is not a practical or utilitarian act, but a ritualistic and symbolical one; and the water is fetched expressly for the purpose, instead of being casually found at hand. These changes are necessary if the

¹ On this point Professor Gilbert Murray queries: 'Would that incident be depicted? Were there pictures of the doings of villains?' No doubt, a character who was a villain in the eyes of the designer of a picture would not be given the *beau rôle*, or even the central part, in the tableau. If he appeared at all (as, e.g., Judas would appear in the scene of the Betrayal) he would figure simply as a necessary foil to the hero. A character, however, who was a villain in one person's eyes might be a hero in another's. We assume that Catiline was a villain because we see him through the eyes of Cicero and Sallust (even though it is possible, and indeed probable, that we should have formed the same opinion of Catiline independently if we had been in a position to pass judgement on him at first hand). At the same time we know that Catiline was not a villain, but a hero, in the eyes of his fellow desperadoes who responded to his call to arms and died fighting under his leadership; and, if Catiline's 'Passion' was pictorially represented in the 'continuous style', it would be in the circle of his followers and admirers that the series of pictures, commemorating his life and death, would originate and circulate. In such circles the atrocity committed by Catiline upon Marcus Marius might count, not as a crime to be buried in oblivion, but as a *beau geste* to be immortalized.

tableau is to be incorporated into the story of a Passion in which the hero suffers his death on the Cross and not under a butcher's knife.

Finally, we may notice that our hypothetical visual means of conveyance might serve to account, not only for all our 'common scenes' (Table V), but also, incidentally, for at any rate more than one of our 'common words' (Table VIII). If we glance back at Petronius's fictitious account of the series of wall-paintings in the 'continuous style', representing scenes from the past life and future apotheosis of Trimalchio, which meet the eyes of the millionaire-freedman's guests, we shall observe that, according to Petronius, every scene in this set is garnished with a number of explanatory captions.¹ We may now observe that this lettering need not necessarily be cast in the form of a statement in the third person nor necessarily be placed outside the picture in the margin either above it or below it. It is just as feasible, and perhaps more neat, to put the explanatory words into the first person and to paint or inscribe them on a scroll issuing out of the mouth or mouths of one or more of the figures in the picture or bas-relief. In Reinach's opinion,² one of the lines in the Virgilian word-picture of the eternal punishment of Phlegyas—'Discite iustitiam moniti et non temnere divos' (*Aeneid*, Book VI, l. 620)—reproduces a saying which, in the picture that was Virgil's ultimate source, was painted or inscribed as though it were issuing from the mouth of the figure of Phlegyas.

This hypothesis may not, perhaps, account as a rule for those 'common words' in our list that are quoted as extracts from speeches or dialogues; but it may explain three which are cast in the form of exclamations. These three exclamatory phrases are 'Weep not for me, but weep for yourselves' (Point 68 = Saying (θ)); 'Remember me when thou comest into thy kingdom' (Point 72 = Saying (κ)); and 'It is finished' (Point 74 = Saying (λ)). And we may now perhaps hazard a guess at what was the subject of the original series of tableaux in which two, at any rate, out of our three phrases made their first appearance. 'Weep not for me, but weep for yourselves' are words that might aptly have been put into the mouth of the figure of Socrates by a painter or sculptor who was transposing into visual form the scene in Socrates' prison immediately after Socrates has drained the death-cup (Point (o) in the correspondences between the story of Jesus and the story of Socrates), as this scene is described by Plato in his *Phaedo*, 117 C-E (Point (π) in the correspondences between the story of Jesus and the story of Socrates). At any rate, this form of words does

¹ See the passage of Petronius's *Cena Trimalchionis* that has been translated on p. 514, above.

² Reinach, op. cit., vol. ii, p. 182.

succinctly combine Phaedo's unspoken thoughts and feelings (as analysed, in the Platonic dialogue, by Phaedo himself) with the vocal remonstrance that Plato puts into Socrates' mouth.¹ As for 'It is finished' (τετέλεσται), this sounds like an echo of 'This was the end (ἦδε ἡ τελευτή) of our companion', which is the opening phrase of the last sentence of the *Phaedo*; and we can readily imagine our hypothetical painter taking this phrase for the title of a picture in which Socrates would be depicted lying dead after the poison has taken effect. These would, in fact, almost inevitably be the last two pictures in any series that was intended to tell the story of the Life and Death of Socrates graphically in the 'continuous style'. And we can also guess what must have been the first picture in the portrayal of Socrates' Passion. This first picture would be the trial scene; and here an artist whose theme was *The Apology* might summarize the prisoner's speech in his own defence by inscribing 'One ought to obey God rather than men'² on a scroll issuing out of Socrates' mouth.

This last conjecture may conclude our present inquiry.

The Economy of Truth

To what conclusions does this inquiry lead? In the first place it perhaps throws some further light upon the problem of Schism-and-Palingenesia, which has been the chief subject of this part of our Study; and in this light we may be able to see more plainly the bow in the cloud. At first sight it might seem as though the schism that accompanies the breakdown of a civilization were an unmitigated disaster. In this schism a social unity is cleft asunder into a pair of fragments whose ragged edges are divided by an intervening gap, and the stroke of Fate or Fortune that has parted them looks at first like an act of sheer sabotage; but a longer view shows that the shock has not simply shattered the social fabric; it has also set an electric current coursing through its fibres, and in the space where the spark is forced to leap the gap between fragment and fragment it describes, between these severed poles, an arc of light whose glow illuminates the Universe. The vision of salvation as Transfiguration, and of the Saviour as God Incarnate, is attained in a spiritual intercourse, across a social gulf, between souls that have been partially estranged from one another through being confined in the separate prison-houses of a dominant minority and an internal proletariat.

But what of the inquiry itself? The findings of this amateur

¹ A translation of this passage of the *Phaedo* has already been given in this Annex on pp. 493-4, above.

² Acts v. 29 = Apology 29 D (see p. 491, footnote 2, above).

essay in what is called 'the Higher Criticism' will almost certainly have been felt by some readers to be insufferable if false and desolating if true. Is this bound to be the feeling of the devout soul towards the critical intellect?

If we wish to understand the history of a debate between 'the Higher Critics' and the champions of religious orthodoxy which has been going on in our Western World for the better part of a century, we must look first for the agreed basis—the *compromis* as it is called in the technical terminology of the international lawyers—on which the argument is being conducted; and when we observe what the *compromis* here is we shall perhaps be surprised. The tacit understanding seems to have been that what is at stake in this debate is nothing less than the essence of the Christian Faith: the threefold belief in the love of God, in His incarnation in Jesus Christ, and in His perpetual operation in This World through the Holy Spirit. The champions of orthodoxy appear to have tacitly admitted that these foundations of Christianity will collapse if 'the Higher Critics' succeed in proving their case; and 'the Higher Critics', on their side, have been not loath to accept this construction of the wager. On this tacit understanding 'the Higher Critics' are prone to boast that they have won the match whenever they score even a trifling success; and in the same frame of mind the champions of orthodoxy are no less prone to proclaim that the whole method of 'the Higher Criticism' has been discredited whenever they succeed in forcing their opponents to evacuate some recently occupied advanced post. This common assumption of the possibility of a 'knock-out blow' perhaps accounts for the barrenness that has been characteristic of the debate hitherto. For the assumption is assuredly an untenable one.

On the one hand the champions of orthodoxy are surely deluding themselves if they imagine that they will ever be able to drive 'the Higher Criticism' right out of the religious field. Unquestionably this 'Higher Criticism' has come to stay; and the local counter-attacks which may succeed here and there and now and then in driving it out of this or that advanced post can never seriously threaten its main positions. On the other hand 'the Higher Critics', for their part, are surely deluding themselves no less if they imagine that any of their thrusts have touched the quick. So far they have merely been singeing their opponent's beard and sticking pins into his hide; and these are hits which cause annoyance without endangering life. The rather laborious operations of the present writer in the present inquiry have no doubt been of this superficial kind; and his own expectation, for what it may be

worth, is that, at the end of the story, 'the Higher Criticism' will be found to have been, not the bane of Religious Belief, but its useful, though humble, servant.

The 'Higher Critic's' keen-edged blade is not the headsman's but the pruner's; and Religious Belief is a tree whose growth is stimulated by pollarding.¹ The great positive advances in religious insight and saintliness are apt also to have this negative, destructive side; and it was this aspect of both Judaism and Christianity that first struck the imagination of the pagan world on which these two 'higher religions' made their successive impacts. When an Antiochus III and a Pompey forced their way into the Holy of Holies at the Temple in Jerusalem, the one thing that they both of them noticed was that this Jewish sanctum was empty. What an exposure of the hypocrisy of a community that had been making such a fuss about the sacrosanctity of its outlandish religion! So these Jews had not been willing even to go to the expense of providing their Yahweh with the statue that was due to him! On a similar line of reasoning other Hellenes in a later age arrived, *bona fide*, at the conclusion that the Primitive Christians were atheists because these iconoclasts contested the divinity of the pagan gods.² The salutariness of the Jewish and the Christian attack upon idolatry and polytheism escaped the notice of the hostile critics, because they did not apprehend that this negative attitude was ministering to a positive purpose, and that these 'atheists' were sweeping their cloudy pagan pantheon out of the light in order to bring within sight of pagan eyes the beatific vision of the One True God. In the present age it is perhaps not impossible that the same salutary work of unveiling a truth that is divine may be the surprising function of an ostensibly godless 'Higher Criticism'. But an apologist for 'the Higher Critics' cannot file this plea unless he is able to show that, here once again, the pruner's knife is clearing the ground for a more abundant life, and the air for a more penetrating vision.

Perhaps we may plead that our present essay in 'the Higher Criticism' does fulfil this condition in some slight degree. If its negative result has been to call in question the originality of a number of elements in the Gospels, its positive result—which it will have achieved in so far as it has been successful in tracing these apparently adventitious elements back towards their apparently Hellenic origins—will have been to vindicate the claim of Christianity to be a religion in which God has revealed Himself in

¹ For the simile of the pollarded tree see I. C (iii) (b), vol. i, pp. 168-9, above.

² On this point see IV. C (iii) (c) 2 (β), vol. iv, p. 348; V. C (i) (c) 2, Annex II, vol. v, p. 584; and V. C (i) (d) 7, in the present volume, p. 40, footnote 2, above.

history, while translating this claim into terms which, to traditionally orthodox minds, may seem to empty the claim of just those traditional contents which, for them, give it its supreme significance and value. They will see our investigation as an attack upon the historicity of the story of Jesus Christ as this is presented in the Gospels; and at this price they will not thank us for having perhaps slightly extended, at least in one direction, the traditional view of the historical antecedents of the epiphany of Christianity.

The notion that Christianity did not make its epiphany full-grown and fully-armed, like Pallas Athene, is of course in itself not a matter of controversy. In the orthodox tradition of the Church it has always been recognized that the incarnation of God in Christ is the culminating act of a long religious drama. The text of the New Testament itself bears the stamp of the doctrine that the coming of Christ is the fulfilment of Scripture; and it has been one of the most fruitful commonplaces of orthodox exegesis to trace the process of revelation backwards from Jesus to the Prophets, from the Prophets to Moses, from Moses to Abraham. The concept of progressive revelation is thus in itself quite familiar; but, in the orthodox Christian tradition hitherto, this concept has only been applied to the Judaic tributary that has flowed into the river of Christianity out of the Syriac World. Latterly, however, it has been discovered by our modern Western scholarship that the mundane area of catchment of these living waters has been of a wider range than is covered by the single domain of Jewry, notwithstanding the immensity of this Jewish empire in the spiritual dimension. It has come to be realized that the Hellenic World, too, has played some part in catching and transmitting the waters by which the river has been fed, and that the number of the tributaries of Christianity has to be reckoned as not one but two, whose respective names are Judaism and Hellenism.¹ This discovery is not at all sensational; for it merely confirms empirically what was to be expected *a priori* in view of the historical background out of which Christianity emerged. Christianity was born into a world which was the product of a collision between the Syriac and the Hellenic cultures.

To minds that look out upon the Universe through Christian eyes this traditionally Christian concept of a progressive revelation surely need not turn into a stumbling-block in the process of being extended from a Jewish to a Hellenic field. But other minds may challenge the concept in principle and in all its applications, traditional or critical. Why *should* revelation come gradually? Why should not God have declared himself to Man once for all in some

¹ This view has been presented, by anticipation, in V. C (i) (d) 5, vol. v, p. 434, above.

instantaneous blaze of His divine light? The decisive answer to this impatient question is that 'with men this is impossible' though 'all things are possible with God'.¹ Human life in This World is imprisoned in the Time-dimension; and this means that, under mundane conditions, the apprehension of spiritual truth, like all other human activities, must be a process that has its own specific pace. On this showing, the gradualness of revelation is not an arbitrary decree of an omnipotent God but is a necessary consequence of the mundane limitations of Man; and the evidence which goes to show that revelation does come to Man in this gradual way will accordingly remind us that God is master of this, as of every, situation. It is not in a waterspout but in a gentle shower that the golden rain pierces the brazen carapace of Danae's dungeon. And God's method of progressive revelation may be accurately described, in Newman's famous phrase, as 'an economy of truth', if the word 'economy' is taken in its proper meaning of a masterly dispensation, without any connotation of dishonest short measure.

But what is truth? For it is one thing to dispense pure truth in doses that have been adjusted to the capacity of the recipient, and another thing to dole out a truth that has been slyly diluted with falsehood. 'Have you not', some reader may ask, 'been virtually accusing God of practising a fraud when, without denying that the Gospels may be God's revelation, you argue that the Gospels contain elements that are not historical, in the sense that certain recorded acts were not in fact performed, and certain reported words were not in fact uttered, by the person who is credited with them, or in the circumstances assigned to them, by the Evangelists?' This question is perhaps best answered by counter-questioning the questioner. Is God's economy, we may ask, to be dictated to God by Man? Is God to be prohibited by a human veto from revealing Himself through *Dichtung* if He will, as well as through *Wahrheit*? Are not all human modes of expression at God's disposal? Is not divine truth revealed in the story of a fictitious Lazarus and an anonymous Dives? And, if, as a matter of fact, the Parables have been recognized by the Church as being revelation without being history, are we debarred from accepting other elements in the Gospels on the same footing because, unlike the Parables, they do not proclaim themselves to be fiction, but are cast, like epic poetry or 'folk-tales', in the form of statements of fact?

But is it credible that God should have revealed himself in 'folk-lore'? To this last question the answer is that it is in 'folk-lore' if anywhere—for it is certainly not on ballot-papers—that *Vox*

¹ Matt. xix. 26.

Populi becomes *Vox Dei*. And this answer has good authority; for it has been given in one of the sayings that are attributed to Jesus in an early collection which 'the Higher Critics' call 'Q':

'In that hour Jesus rejoiced in spirit and said: "I thank thee, O Father, Lord of Heaven and Earth, that thou hast hid these things from the wise and prudent and hast revealed them unto babes. Even so, Father; for so it seemed good in thy sight."'¹

A STUDY OF HISTORY

2

The Royal Institute of International Affairs is an unofficial and non-political body, founded in 1920 to encourage and facilitate the scientific study of international questions.

The Institute, as such, is precluded by its rules from expressing an opinion on any aspects of international affairs; opinions expressed in this book are, therefore, purely individual.

Late sh. m. Book 11. 44.6-12.11-8

PREFACE

THESE four volumes contain Parts VI-XIII of the thirteen parts which are set out in the plan of the book on p. v above, and their publication brings the book to a close.

I was not able to begin writing these concluding eight parts till I had been released from work as a temporary civil servant during the Second World War. By the summer of A.D. 1946, when I found myself free to return to my normal occupations, more than seven years had passed since the publication of volumes iv-vi in the summer of A.D. 1939, forty-one days before Great Britain had gone to war with Germany, and more than seventeen years had now passed since the latest of the notes for the book, which had all been written between June 1927 and June 1929, had been put on paper.

If these notes had not still been in existence—as they were, thanks to their safe-keeping during the war in the hands of the Council on Foreign Relations in New York—I might have found it beyond my power to take up my work again after a seven years' interruption during which there had been a break in my personal life as well as in the life of the society into which I had been born. On the other hand, I should assuredly have failed at this stage to carry the work to completion if, after having set my thoughts moving again by reacquainting myself with my notes in their original form, I had not thrown them into the melting-pot and recast them.

The world around me and within me had, indeed, met with a number of challenging and transforming experiences in the course of the nineteen years and more that, by the summer of A.D. 1946, had already passed since the first of the original notes for the book had been written. The focus and perspective in which the earlier millennia of the Age of the Civilizations presented themselves to the eyes of our generation had been appreciably modified in the meantime by further discoveries in the field of Archaeology. The prospects of a contemporary Western Civilization, and of an *Oikoumenê* which this civilization had enveloped in its world-encompassing net, had become clearer and graver since the National Socialist movement in Germany had given to Western Man—and to his non-Western contemporaries likewise—a horrifying practical demonstration of the moral depths to which the heirs of a Christian civilization were capable of dragging themselves down. A new dimension of the Spiritual Universe had been brought to light by the psychologists, and a new dimension of the Material Universe by the atomic physicists. An Einstein and a Rutherford, a Freud and a Jung, and a Marshall and a Woolley, as well as a Gandhi, a Stalin, a Hitler, a Churchill, and a Roosevelt, had been changing the face of the Macrocosm; and at the same time my inner world had been undergoing changes which, on the miniature scale of an individual life, were, for me, of proportionate magnitude. The cumulative effect of these divers changes in my universe had been so far-reaching that, when in A.D. 1946 I was once more free to think of resuming and finishing my work,

I found that the reawakening of my original thoughts was only the beginning of my next task. In order to carry out my purpose, I should have to think again in the light of the revolutionary experience which the nineteen intervening years had been thrusting upon me and my contemporaries.

The effort required for performing this act of mental rejuvenation might have been beyond my capacity if I had been left to attempt it in solitude; but at this point I was effectively helped on my way by the timely receipt of a series of invitations to give public lectures on the topics that were the agenda for the still unexecuted parts of the plan of the book. In a set of Edward Cadbury Lectures delivered at the University of Birmingham, England, in the autumn of 1946 I dealt with the subjects of Parts VI–VIII; in a set of Mary Flexner Lectures delivered at Bryn Mawr College, Pennsylvania, in the spring of 1947 I dealt with the subject of Part IX; in a set of Bampton Lectures delivered at Columbia University, New York, in April 1948 I dealt with the subject of Part XII, and, later in the same month, with the subject of Part XIII in a set of Rushton Lectures delivered at Southern College, Birmingham, Alabama. The subject of Part XI was my theme in a set of Chichele Lectures delivered in the autumn of 1948 in the University of Oxford on an invitation from All Souls College. The subject of Part X was broached in a couple of lectures delivered in April 1949 in the University of Chicago on an invitation from the Committee on Social Thought.

I was fortunate in being given these opportunities of feeling my way back into a study of History for the immediate practical purpose of sharing my thoughts and feelings with responsive audiences. The congenial necessity of writing notes for these lectures gave me the stimulus that I needed in order to recast my original notes for the book in a new form answering to the new experiences, public and personal, that I had encountered since the summer of 1927. In the outcome, the original plan of the book still stood and the execution of Parts VI, VIII, X, and XIII was carried out more or less on the lines of the original notes. The subjects of Parts VII, IX, XI, and XII, on the other hand, came, in the event, to be treated very differently from the original design—and the subject of Part XI, in particular, so differently that the title of this Part had to be changed from ‘Rhythms in the Histories of Civilizations’ to ‘Law and Freedom in History’.

When these invitations to lecture had thus given me the impetus required for finishing the book in the light of my experience since 1927, I should have found myself overwhelmed by the accumulation of seven years’ arrears of work on the Chatham House *Survey of International Affairs*—work which was the first call on my time and energy—but for the imagination, considerateness, and generosity of the Royal Institute of International Affairs, the Rockefeller Foundation of New York, and the Institute for Advanced Study at Princeton, N.J., in co-operating with one another to release the major part of my time, for a period of five years beginning on the 1st July, 1947, for writing the rest of *A Study of History*, partly in England and partly in America,

under ideal conditions. My debt to the Rockefeller Foundation, and to the authorities at Bryn Mawr College who were the Foundation's consultants when it was considering this project, is a greater one than I can put into words.

My acknowledgements and thanks for the help of many kinds, from many quarters, which I have received in the writing of the book as a whole are set out at the end (in volume x, on pp. 213-42), since they run to too great a length to allow of their being included in a preface; but I cannot bring myself to postpone my expression of gratitude for certain essential pieces of help in the production of this last batch of four volumes.

The index to the volumes now published, like the two indexes to the preceding six volumes, has been made by my wife and colleague and co-author of the *Survey of International Affairs*. If the reader ever loses the thread of my thought, he will find it again here—as I know from having often found it, myself, in the indexes to the two previous batches of volumes. My gratitude is not lessened by the happy knowledge that this skilful and exacting task has been a labour of love.

Miss Bridget Reddin has completed the enormous tasks—begun in the winter of 1930-1—of typing from a manuscript that has always been complicated, and of deciphering a handwriting that has not improved in the course of putting on paper some millions of words. Both the printer and I would have been at a loss if Miss Reddin had not returned to give us this help after having served during the Second World War, with my wife and me, in the same department of the Government of the United Kingdom.

The book that I am finishing in the act of writing this preface has had a long history on the Time-scale of an individual human life. Now that I have finished it, I can see in retrospect that, without knowing it, I was already at work on it in rather early days. For instance, the Annex to Part VI C (ii) (c) 3 first found its way on to paper, in the form of a child's coloured illustrations to the text of Herodotus, Book VII, chaps. 61-99, in a drawing-book, dated August 1903, which is on my table at my elbow at this moment. Upon it lies the manuscript—running to sixty-four pages of sermon paper and ending with a quotation from the Book of the Prophet Ezekiel xxxvii. 1-10—of an essay on 'the Philosophy of History' read at Oxford to an undergraduate society at some date in the academic year 1910-11. In the summer of 1920, after the philosophic contemporaneity of the Western and Hellenic civilizations had been borne in on me by the experience of the First World War, I for the first time consciously tried—and, at this first attempt, signally failed—to write the present work in the form (dictated by a Late Medieval Italian education in the Greek and Latin Classics) of a commentary on the second chorus (ll. 332-75) of Sophocles' *Antigone*. I did not succeed in finding my way into my subject till more than a year later.

On Saturday, 17 September, 1921, I was travelling with my school-fellow and life-long friend Theodore Wade-Gery in the Orient Express *en route* from Constantinople to England. Before dawn we had been awakened by the rumbling of our train as it crossed the bridge over the

Maritsa, below Adrianople, and, for the rest of that day, we were travelling on westward up the valley of a river that had once been famous as the Hebrus. As I stood, hour after hour, at the corridor window, watching the stream glide by, with an endless fringe of willows and poplars marking out, as they slid past, the curves of the gently flowing waters' course, my mind began to dream of historical and legendary events of which an Hellenic Thrace and an Ottoman Rumili had been the theatre: the legendary violent death of the Prophet Orpheus; the historic violent deaths of the Emperors Valens and Nicephorus; the entrenchment of the Ottoman Power on the European side of the Straits in the reign of Sultan Murād I. When a group of inquisitive Bulgarian peasants clustered round the door of our coach as the train lingered in a wayside station, my eye was caught by the fox-skin cap that one of these Thracian contemporaries of mine was wearing; for this was the headgear in which Herodotus (in Book VII, chap. 75) had paraded the Asiatic Thracian contingent of Xerxes' expeditionary force, and a picture of a Thracian fighting-man in just such a cap, which I had copied into my drawing-book eighteen years ago, had left its imprint on my memory. These stimulating sights and reminiscences must have released some psychic well-spring at a subconscious level. That evening I was still standing at the window, overwhelmed by the beauty of the Bela Palanka Gorge in the light of a full moon, as our train bore down upon Nish. If I had been cross-examined on my activities during that day, I should have sworn that my attention had been wholly absorbed by the entrancing scenes that were passing continually before my outward eye. Yet, before I went to sleep that night, I found that I had put down on half a sheet of notepaper a list of topics which, in its contents and in their order, was substantially identical with the plan of this book as it now stands printed in volumes i, iv, and vii. The path that had thus unexpectedly—and, as it might seem, casually—opened at last before my feet was to carry me farther than I then foresaw on a journey that was to take nearly thirty years to complete; but, once open, the path went on unfolding itself before me till today I find myself at this long journey's end.

ARNOLD J. TOYNBEE

LONDON

16 August 1951

SINCE writing this preface, I have begun to be able to see ahead to the next stage of this Study beyond the moment when I shall have delivered the last proofs of volumes vii-x to the printer.

While these four volumes have been in the press, I have been co-operating with my friend Professor E. D. Myers, of Washington and Lee University, Lexington, Virginia, and with my former colleague Mrs. Gomme, who was the head of the cartographical section of the Foreign Office Research Department during the Second World War, in producing the maps, and compiling the gazetteer of place-names that

are either shown on these maps or are mentioned in the text of volumes i-x, which are to be published together in a forthcoming volume xi. This eleventh volume, which is mostly Professor Myers' and Mrs. Gomme's work, will, I believe, be welcomed by readers of volumes i-x.

On the 26th February, 1953, the Rockefeller Foundation once again came to my aid in a most imaginative and effective way by giving my wife and me a grant to cover the costs of travel with a view eventually to revising this book. Our first use of this kind grant was to pay a visit to Mexico, from the 14th April to the 16th May, 1953, for the three-fold purpose of seeing at first hand some of the monuments of the Middle American Civilization and of the Spanish Empire of the Indies in the former Viceroyalty of New Spain and some of the aspects, in the Mexican field, of the current encounter between the World and the Modern West. Thanks to the hospitality and help of the Federal Ministry of Public Instruction and the Autonomous National University of Mexico, we were able to use our precious time in Mexico to good advantage. We look forward to following up this reconnaissance in Middle America by visiting Japan and Peru in 1956 on a journey to and from Australia which is to take us round the World. When, after that, we settle down to the task of revision, our plan is, first, to produce a volume of 'reconsiderations' (*retractationes* in Saint Augustine's usage of the Latin word). Since the first publication of the first batch of volumes in 1934, there have been additions to our historical knowledge, particularly through the wonderful work of the archaeologists, which have changed the appearance of some tracts of the historical landscape. There have also been comments and criticisms, both general and particular, on the ideas presented in the book and on some of the citations of facts by which these ideas have been illustrated and supported. While I have already profited greatly by many of these criticisms in writing the later volumes, I shall not have drawn the full benefit from them till I have taken a synoptic view of them; and this will be the second topic in the volume of *retractationes* that my wife and I are planning to produce.

We also have other books on the stocks, and we should be happy if there could be said of us what Clarendon has said of himself in his autobiography:

'In all this retirement he was very seldom vacant . . . from reading excellent books or writing some animadversions and exercitations of his own. . . . He left so many papers of several kinds, and cut out so many pieces of work, that a man may conclude that he never intended to be idle.'¹

SCRIPTORIS VITA NOVA

O silvae, silvae, raptae mihi, non revidendae,
O mea, Silvani filia, musa dryas,
non dolet: hoc Paeto dictum immortale profata
Arria procudit mi quoque robur et aes—
mi quoque; non solus tamen exsulo: nonne priores
clara creaverunt tristi opera exsilio?
Exsul—et immeritus—divom, Florentia, carmen
edidit, alma intra moenia tale tua
nil orsus, vates. Non iuste expulsus Athenis,
Pangaei clivis advena Threiciis,
scripsit postnatis in perpetuom relegendam
vir, bello infelix dux prius, historiam.
His ego par fato: par sim virtute. Fovetur
acrius aerumnis magnanimum ingenium.
Me patriae excidium stimulat nova quaerere regna.
Troia, vale! Latium per maria atra peto.
Silvae, musa dryas, praesens Silvane, penates,
'non' mihi clamanti 'non' reboate 'dolet'.

*Quae sibi nil quaerens quaerenti tanta ministrat,
quae nil accipiens omnia suppeditat,
quae constanter amat non tali robore amata,
quae dare—et hoc totis viribus—ardet opem,
nonne haec digna suo Beronice nomine sancto?
Quod patet ante oculos, improbe, nonne vides?*

Cui tam cara comes, non exsulat exsul: ubique
patria qua praesens coniugis adsit amor.

*Caece diu, tandem vidisti clarius. Audi:
Perdita mortali gaudia flere nefas:
non datur humanis in perpetuom esse beatos:
mox marcent vitae praemia: segnities
Elysii pretiumst: hebetat dulcedo: doloris
sopitam recreant volnere viva animam.
Haec non quaesitae tibi ianua aperta salutis:
tu fato felix: te nova vita vocat.*

Gavissus iuvenis vitae describere metas,
ausus eram fatum prospicere ipse meum.
Prospexi triplicem—fauste ducentis Amoris,
Musarum comitum, coniugis—harmoniam,
amens, qui, vasti peragrans vagus aequora ponti,
non cavi fulmen, saeva procella, tuom.
Non iterum de me dictabo oracula: nosti,
qui me servasti, Tu mea fata, Deus.

II. OPERATIONS ACCORDING TO PLAN	126
(a) ENCOUNTERS WITH THE MODERN WESTERN CIVILIZATION	126
1. <i>The Modern West and Russia</i>	126
Russia's 'Western Question'	126
Channels of Western Cultural Radiation into Russia	128
Alternative Russian Responses to the Challenge of Western Technology	130
The Race between the West's Technological Advance and Russia's Technological Westernization	136
The Soviet Union's Encounter with the United States	141
2. <i>The Modern West and the Main Body of Orthodox Christendom</i>	150
The Difference between the Ottoman Orthodox Christian and the Muscovite Reaction to the West	150
The Ottoman Greek Orthodox Christian Phobia of the West	151
The Defeat of Cyril Loukaris	152
The Frustration of Evyénios Voúlgharis	160
The Revolution in the Ottoman Orthodox Christians' Attitude towards the West	161
The Revolution in the West's Attitude towards Orthodox Christianity	165
Channels of Western Cultural Penetration into an Ottoman Orthodox Christendom	168
The Reception of a Modern Western Culture by the Ottoman Orthodox Christians and its Political Consequences	182
The Ottoman Millet System of Communal Autonomy	184
The Fiasco of the Phanariots' 'Great Idea'	187
The Disruption of an Ottoman Orthodox Christendom by a Modern Western Nationalism	189
Russia's Competition with the West for the Ex-Ottoman Orthodox Christians' Allegiance	192
3. <i>The Modern West and the Hindu World</i>	198
Likenesses and Differences in the Situations of a Hindu Society under British Rule and an Ottoman Orthodox Christendom	198
The Reception of a Modern Western Culture and its Political Consequences	200
The Gulf between a Hindu and a Post-Christian Western Weltanschauung	205
The Aloofness of a Reformed British Civil Service in India	207
The Unsolved Problem of a Rising Pressure of Population	213
4. <i>The Modern West and the Islamic World</i>	216
The Encirclement of the Islamic World by the West, Russia, and Tibet	216
The Postponement of the Crisis	219
The Muslim Peoples' Military Approach to the Western Question	232
The Salvaging of an Ottoman Society by Selim III, Mehmed 'Ali, and Mahmüd II	239
The Collapse in Turkey and Egypt at the Beginning of the Last Quarter of the Nineteenth Century	249
The Failure of the Arabs to Respond to a Continuing Challenge of Western Aggression	257

The Failure of a Turkish Committee of Union and Progress to Maintain the Ottoman Empire	261
The Success of Mustafâ Kemâl Atatürk in Creating a Turkish National State	263
Russia's Competition with the West for an Ascendancy over the Islamic World	268
5. <i>The Modern West and the Jews</i>	272
The Peculiarities of the Western Province of a Jewish Diaspora's Domain	272
The Persecution of the Peninsular Jews under a Visigothic Catholic Christian Régime	277
The Respite for the Peninsular Jews under Andalusian and Ottoman Muslim Régimes	280
The Causes of the Western Christians' Ill-treatment of the Jews	281
The Plot of the Jewish Tragedy in a Western Christendom	285
A Mirage of Enfranchisement	286
The Fate of the European Jews and the Palestinian Arabs, A.D. 1933-48	288
Causes of the Failure of Enfranchisement	292
Inherent Consequences of the Captivation of the Jews by a Modern Western Gentile Nationalism	295
Inherent Consequences of Zionism's Departure from a Traditional Jewish Practice of Political Quietism	298
The Effects of the First World War on the Destiny of Palestine	301
Great Britain's Responsibility for the Catastrophe in Palestine	303
Germany's and the United States' Responsibility for the Catastrophe in Palestine	306
The Retrospect and the Outlook	309
6. <i>The Modern West and the Far Eastern and Indigenous American Civilizations</i>	313
The Perils of Ignorance	313
The Fate and Future of the Indigenous American Civilizations	315
Chinese and Japanese Reactions to the Impact of an Early Modern West	316
Chinese and Japanese Reactions to the Impact of a Late Modern West	324
The Unsolved Problem of a Rising Pressure of Population	330
A Communist Russia's Chinese Fifth Column	334
7. <i>Characteristics of the Encounters between the Modern West and its Contemporaries up to Date</i>	337
(b) ENCOUNTERS WITH MEDIEVAL WESTERN CHRISTENDOM	346
1. The Flow and Ebb of the Crusades	346
2. The Medieval West and the Syriac World	363
3. The Medieval West and Greek Orthodox Christendom	375
4. The Medieval West and Kievan Russia	398
(c) ENCOUNTERS BETWEEN CIVILIZATIONS OF THE FIRST TWO GENERATIONS	403
1. Encounters with the Post-Alexandrine Hellenic Civilization	403
Likenesses and Differences between the Post-Alexandrine Hellenic and the Modern Western Eruption	403
The Flow and Ebb of Post-Alexandrine Hellenism	407
The Epiphany of Higher Religions	416

CONTENTS

xxiii

2. Encounters with the Pre-Alexandrine Hellenic Civilization	418
The Hellenic Society's Offensive in the Mediterranean Basin	418
The Syriac Society's Political Consolidation for Self-Defence	423
The Achaemenian Empire's Counter-Offensive	430
The Aftermath on the Political Plane	435
The Aftermath on the Cultural Plane	437
3. Encounters with the Syriac Civilization	439
4. Encounters with the Egyptian Civilization in the Age of 'the New Empire'	447
5. Tares and Wheat	451
C. THE DRAMA OF ENCOUNTERS BETWEEN CONTEMPORARIES (STRUCTURE, CHARACTERS, AND PLOT)	454
I. CONCATENATIONS OF ENCOUNTERS	454
II. ROLES, REACTIONS, AND DENOUEMENTS	464
(a) AGENTS AND REAGENTS	464
(b) ALTERNATIVE POSSIBLE REACTIONS	466
(c) ALTERNATIVE POSSIBLE DENOUEMENTS	476
D. THE PROCESSES OF RADIATION AND RECEPTION	481
I. THE DIFFUSION OF CULTURE	481
II. THE DIFFRACTION OF CULTURE	495
Culture-Patterns and their Instability	495
The Conduciveness of Cultural Disintegration to Cultural Inter-course	501
Decomposition through Diffraction	508
Inverse Selection through Transmission	514
E. THE CONSEQUENCES OF ENCOUNTERS BETWEEN CONTEMPORARIES	522
I. AFTERMATHS OF UNSUCCESSFUL ASSAULTS	522
(a) EFFECTS ON THE FORTUNES OF THE ASSAULTED PARTY	522
(b) EFFECTS ON THE FORTUNES OF THE ASSAILANT	527
II. AFTERMATHS OF SUCCESSFUL ASSAULTS	529
(a) EFFECTS ON THE BODY SOCIAL	529
1. Symptoms in the Social Life of the Assailant	529
2. Symptoms in the Social Life of the Assaulted Party	530
(a) 'One Man's Meat is Another Man's Poison'	530
(β) 'One Thing Leads to Another'	542
(b) RESPONSES OF THE SOUL	564
1. Dehumanization	564
2. Zealotism and Herodianism	580
A Pair of Polar Standpoints	580
A Survey of Zealot and Herodian Reactions	584
A Meeting of Extremes	610
The Ineffectiveness of the Zealot-Herodian Response	621
3. Evangelism	623

ANNEXES

A KEY TO THE CROSS-REFERENCES

IN THE FOOTNOTES TO VOLS. VII-X

THE final text of this book, like the original notes for it, has been written (except for some of the annexes) in the order in which the chapters appear in the Table of Contents. At each step in both making the notes and writing the text, the writer has always tried to see the particular passage on which he has been working at the moment in its relation to the plan of the whole book; and he has printed in his footnotes to the text the resulting network of cross-references because he believes that a method of continually taking his bearings, which has been an indispensable guide and discipline for the course of his own thought, is likely also to be of some help to his readers.

Since, in the nature of the case, the quantity of these notes of cross-references has increased as one Part of the book after another has been written out in full, the writer has sought, in the printing of this concluding batch of four volumes, to spare the reader's eye—and, in the act, to lighten the printer's labours—by reducing the bulk of his cross-references to a minimum. Accordingly, each reference has been cut down to three entries: a large Roman numeral indicating the Part, a small Roman numeral indicating the volume, and an Arabic numeral giving the page, with an n. to stand for 'footnote' when the reference is to one of these. For example, a reference which in volumes i-vi would have appeared in a footnote in the form 'See IV. C (iii) (c) 2 (γ), Annex, vol. iv, p. 637, above', would appear in the four present volumes as 'See IV. iv. 637'. Neither the printer nor the reader, the writer believes, is likely to regret this compression.

VI UNIVERSAL STATES

A. ENDS OR MEANS?

THE starting-point of this book was a search for fields of historical study which would be intelligible in themselves within their own limits in Space and Time, without reference to extraneous historical events. An empirical pursuit of this inquiry led us to find the self-contained units for which we were seeking in societies of the species called civilizations,¹ and so far we have been working on the assumption that a comparative study of the geneses, growths, breakdowns, and disintegrations of the twenty-one civilizations that we have succeeded in identifying would comprehend everything of any significance in the history of Mankind since the time when the first civilizations emerged among the primitive societies which had previously been the only existing form of human social organization. Up to the present stage of our investigation this assumption has perhaps on the whole been justified by results; yet from time to time we have stumbled upon indications that our first master-key might not serve to unlock all the doors through which we have to pass in order to reach our mental journey's end.

Near the outset, in the act of identifying as many representatives as possible of the species of society that we had set ourselves to study, we found that certain civilizations were related to one another by a tie that was closer than the mere common characteristic of being representatives of the same species. We described this more intimate relation as one of 'apparentation-and-affiliation';² and we found, on analysis,³ that the evidences of apparentation-and-affiliation were certain characteristic social products of a Dominant Minority, an Internal Proletariat, and an External Proletariat into which the 'apparented' society split up in the course of its disintegration. It appeared that dominant minorities produced philosophies which sometimes gave inspirations to universal states, that internal proletariats produced higher religions which sought to embody themselves in universal churches, and that external proletariats produced heroic ages which were the tragedies of barbarian warbands.

In the aggregate, these experiences and institutions manifestly constitute a link between an 'apparented' and an 'affiliated' civilization that cannot be ignored. And this link in the Time-dimension between two non-contemporary civilizations is not the only kind of relation between civilizations that a comparative study of universal states, universal churches, and heroic ages brings to light. Though civilizations may be intelligible fields of historical study and self-contained units of social life on the whole—at any rate by comparison with the relatively parochial and ephemeral political communities into which they are apt to articulate themselves in their growth stage—the fractions, in the shape

¹ See I. i. 17-50.

² See I. i. 44.

³ See I. i. 52-62.

of social classes, into which they disintegrate after breaking down acquire a liberty to enter into social and cultural combinations with alien elements derived from other contemporary civilizations.¹ This receptivity of theirs is revealed in the institutions that are their products. Some universal states have been the handiwork of alien empire-builders; some higher religions have been animated by alien inspirations;² and some barbarian war-bands have imbibed a tincture of alien culture.³

Universal states, universal churches, and heroic ages thus link together contemporary, as well as non-contemporary, civilizations in relations that are closer and more individual than an affinity consisting in the bare fact of their being representatives of the same species of society; and this observation raises the question whether we have been justified in treating these historical phenomena as mere by-products, in each case, of the disintegration of some single civilization and in assuming that the civilizations themselves are the sole objects of historical study which we need to take into account. Now that we have found that universal states, universal churches, and heroic ages cannot, for their part, be studied intelligibly within the framework that the history of a single civilization provides, ought we not to study them on their own respective merits, with a view to testing the validity, or at any rate the sufficiency, of the assumption on which we have been proceeding hitherto? Until we have examined the respective claims of institutions of each of these three kinds to be intelligible fields of study in themselves, and have also considered the alternative possibility that they might be parts of some larger whole embracing them and the civilizations alike, we cannot be sure that we have brought within our purview the whole of human history, above the primitive level, in all its aspects.

This further inquiry was the task that we set ourselves at the end of Part V of this Study.⁴ We shall now try to acquit ourselves of it in Parts VI, VII, and VIII; and happily in this case we are in a position to proceed straight from the formulation of our question to an attempt to answer it, without having to go through the laborious process of seeking, sifting, assembling, and comparing those historical facts that are indispensable raw materials for the empirical method of investigation that we are following in this Study. An incidental survey of philosophies and universal states, higher religions and universal churches, heroic ages and war-bands has already been taken in our review of the dominant minorities and the internal and external proletariats of civilizations in disintegration,⁵ and the results have been summarized in four tables printed in volume vi⁶ and reprinted here.⁷

Accordingly, without further preliminaries, we can now investigate the claims of universal states, and may begin by asking whether they are ends in themselves or means towards something beyond them.

Our best approach to this question may be to remind ourselves of certain salient features of universal states that we have already ascertained.

In the first place, universal states arise after, and not before, the breakdowns of the civilizations to whose bodies social they bring political unity. They are not summers but 'Indian Summers', masking autumn and presaging winter.¹ In the second place, they are the products of dominant minorities: that is, of once creative minorities that have lost their creative power.² The negativeness which is the hall-mark of their authorship and also the essential condition of their establishment and maintenance is brought out in the following passages from the works of a nineteenth-century French philosopher and a twentieth-century English satirist.

'The result of the Roman conquest was the destruction of all the city-states in the greater part of the then known world, just as the result of all the partial conquests that merged in the Roman conquest had been already to reduce their numbers. Thereafter one city-state alone, the arch-aggressor, remained standing; but on the very morrow of the establishment of the Empire we see Rome herself promptly divesting herself of her original character, gradually losing her power of aggression and withdrawing into herself. Her dominant aim at this stage is no longer conquest but conservation; the Roman city-state, in short, disappears in order to make way for the Roman Empire.

'But what order, what state of society, did this empire stand for? Was the aim of conservation, which we have just attributed to the Roman Empire, expressed in a new dogma, in a corresponding social hierarchy, as the Roman conquest had been expressed and organised by the religious dogmas and the social institutions of the Roman city-state? Unquestionably, no: in casting our eyes over this immense empire, we do not find anywhere, in all its vast extent, any sentiments, ideas or habits that do not go back to the preceding institution—that of the city-state. And these sentiments, ideas and habits are deprived of energy, are no longer able to receive any [practical] social application, and therefore no longer provide positive links between individuals. In short, the Roman Empire in no sense constitutes a society; for, in its capacity as an empire, it has no religion, no goal, and no general practical aim whatsoever; it represents merely a vast aggregation of human beings, a shapeless congeries of the débris of societies. The imperial administration—in spite of being so far-flung, so complicated, so meticulous, and of giving so great an appearance of symmetry at first glance—does not constitute a political order or a social hierarchy at all; this administration is in strict truth nothing but a vast office for administering Rome's conquests. . . .

'These are the characteristics and the causes of the demoralisation of Rome that has made so lively an impression on the mind of Posterity. This demoralisation had almost reached full measure before the Empire had completed the first century of its existence. Thereafter, this huge body appears to maintain itself merely by a kind of mechanical equilibrium; and, if it does not actually dissolve, that is not so much because there is any positive reason for it to maintain itself as because there is no positive reason, either, for it to undergo any change.'³

The point thus illustrated by Bazard from 'real life' in the instance of

¹ See IV. iv. 56-119, especially 59-60.

² See V. v. 35-58.

³ Bazard, A: 'Exposition de la Doctrine Saint-Simonienne', in *Œuvres Complètes de Saint-Simon et d'Enfantin*, vol. xlii (Paris 1877, Leroux), pp. 181-5.

the Roman Empire is brought out more wittily by Huxley in his imaginary Anti-Utopia:

‘“The Nine Years’ War, the great Economic Collapse. There was a choice between World Control and destruction. Between stability and. . .

“It’s curious . . . to read what people in the time of Our Ford used to write about scientific progress. They seem to have imagined that it could be allowed to go on indefinitely, regardless of everything else. Knowledge was the highest good, truth the supreme value; all the rest was secondary and subordinate. True, ideas were beginning to change even then. Our Ford himself did a great deal to shift the emphasis from truth and beauty to comfort and happiness. Mass production demanded the shift. Universal happiness keeps the wheels steadily turning; truth and beauty can’t. And of course, whenever the masses seized political power, then it was happiness rather than truth and beauty that mattered. Still, in spite of everything, unrestricted scientific research was still permitted. People still went on talking about truth and beauty as though they were the sovereign goods. Right up to the time of the Nine Years’ War. *That* made them change their tune all right. What’s the point of truth or beauty or knowledge when the anthrax bombs are popping all around you? That was when science first began to be controlled—after the Nine Years’ War. People were ready to have even their appetites controlled then. Anything for a quiet life. We’ve gone on controlling ever since. It hasn’t been very good for truth, of course. But it’s been very good for happiness. One can’t have something for nothing. Happiness has got to be paid for. . . .”

“Art, science—you seem to have paid a fairly high price for your happiness,” said the Savage. . . . “Anything else?”

“Well, religion, of course,” replied the Controller: “There used to be something called God—before the Nine Years’ War. . . .”¹

This, however, is not the whole picture; for, besides being accompaniments of social breakdown and products of dominant minorities, universal states display a third salient feature: they are expressions of a rally—and a particularly notable one—in a process of disintegration that works itself out in successive pulsations of lapse-and-rally followed by relapse;² and it is this last feature that strikes the imagination and evokes the gratitude of the generation that lives to see the successful establishment of a universal state set a term at last to a Time of Troubles that had previously been gathering momentum from successive failures of repeated attempts to stem it.³

Taken together, these features present a picture of universal states that, at first sight, looks ambiguous. Universal states are symptoms of social disintegration, yet at the same time they are attempts to check this disintegration and to defy it.

The tenacity with which universal states do cling to life, when once established, is revealed by a survey of their endings. The divers types into which these endings can be analysed form an illuminating series when arranged in an ascending order of the obstinacy with which a universal state rebels against being condemned to death. To comprehend,

¹ Huxley, Aldous: *Brave New World* (London 1932, Chatto & Windus), pp. 56 and 269–70 and 271.

² This rhythm has been analysed and illustrated in V. vi. 278–321.

³ See V. vi. 181–2 and 191.

and compare with one another, these divers typical endings of universal states, we must view each of them in the setting of its own particular version of the common plot of the tragedy of decline and fall; and an attempt at a survey on these lines will be found in an annex to the present chapter at a later point in this volume.¹ The analysis of the divers types of endings of universal states, which this survey of their histories yields, may be summarized here as follows:

When the establishment of a universal state by indigenous empire-builders has been forestalled by the intrusion of an alien society, the impulse, in the body social of the disintegrating society, to pass through the universal state phase before going into dissolution is powerful enough sometimes to be able to constrain the triumphant alien aggressor to provide his victims with the institution which his very triumph has made it impossible for indigenous hands to set up. The Central American, Chibcha Andean, main Orthodox Christian, and Hindu civilizations all succeeded in exacting this social service from alien intruders; the Hindu Civilization actually succeeded in exacting it from two intruders in succession: first from Mughal representatives of the Iranic Muslim Civilization and then from British representatives of the Western Civilization.

When an indigenous universal state has been overthrown by the intrusion of an alien civilization before the exhaustion of the social rally which the foundation of the universal state has inaugurated, the impulse in the body social of the invaded disintegrating society to complete the universal state phase before going into dissolution is powerful enough sometimes to be able to constrain the triumphant aggressor to provide an alien substitute for the indigenous institution which he himself has destroyed, and sometimes to enable the invaded society to bide its time—for many centuries if need be—until at last it finds its opportunity to expel the intruder, re-establish the long ago overthrown indigenous universal state, and, this time, carry it through to the completion of its natural course. The Andean and the Babylonian Society succeeded in exacting from their alien conquerors the social service that they required—the Andean Society from Spanish representatives of the Western Civilization, the Babylonian actually from two intruders in succession: first from Achaemenid representatives of the Syriac Civilization and then from Seleucid representatives of the Hellenic. The Syriac and the Indic Society succeeded in biding their time and eventually re-establishing their overthrown indigenous universal states.

When an indigenous universal state has collapsed after the exhaustion of the social rally which its foundation has inaugurated, the impulse in the body social of the disintegrating society to complete the universal state phase, before going into dissolution, is powerful enough to be able to achieve the restoration of the prostrate indigenous universal state, sometimes—as the Hellenic, Sinic, and Sumeric civilizations achieved this—by self-help alone, and sometimes—as the Orthodox Christian Civilization in Russia achieved it—by self-help reinforced by the reception of an alien civilization.

¹ On pp. 569-76, below.

After an indigenous universal state has reached the term of its natural expectation of life and has duly given place to the social interregnum in which the dissolution of a moribund civilization is normally consummated, the impulse in the body social of the moribund society to retrieve its life from the jaws of death may be powerful enough—as is witnessed by the Egyptiac Civilization's achievement of this *tour de force*—to be able to restore the defunct universal state and thereafter to maintain it in existence by one means or another until the moribund society, preserved within this institutional mummy-case in an uncanny state of life-in-death, has succeeded, like King Menkaure in the folk-tale,¹ in doubling the span of life allotted to it by the Gods.

Indeed, after a universal state has reached the term of its natural expectation of life, the determination of the body social of the moribund society not to taste of death may be obstinate enough—as is witnessed by the history of the Far Eastern Civilization in China—to be able to maintain the senile universal state in existence, without a break, for an additional term by inducing a vigorous and victorious barbarian invader to shoulder the burden of preserving an institution which he might have been expected to destroy.

These divers endings of universal states bear concordant witness to the craving for life by which these institutions are animated. So strong is this craving of theirs that they refuse to forgo their claims to be brought into existence and to be allowed to live out their normal terms, and sometimes even refuse to pass out of existence after having duly realized their natural expectation of life. In other words, universal states show a strong tendency to behave as though they were ends in themselves, whereas in truth they represent a phase in a process of social disintegration and, if they have any significance beyond that, can only have it in virtue of being a means to some end that is outside and beyond them.

The judgement of History on their idolization of themselves is pronounced in one of the masterpieces of a Modern Western poet:

It is not growing like a tree
 In bulk, doth make Man better be,
 Or standing long an oak, three hundred year,
 To fall a log at last, dry, bald and sere:
 A lily of a day
 Is fairer far in May,
 Although it fall and die that night—
 It was the plant and flower of light.
 In small proportions we just beauties see,
 And in short measures Life may perfect be.²

¹ See IV. iv. 409 and V. v. 2.

² Ben Jonson.

B. UNIVERSAL STATES AS ENDS

(I) THE MIRAGE OF IMMORTALITY

A Paradoxical Misapprehension

AS we have seen in the last chapter, the endings of universal states indicate that these institutions are possessed by an almost demonic craving for life; and, if we now look at them, no longer through the eyes of alien observers, but through those of their own citizens, we shall find that these are apt not only to desire with their whole hearts that this earthly commonwealth of theirs may live for ever,¹ but actually to believe that the immortality of this human institution is assured—and this sometimes in the teeth of contemporary events which, to an observer posted at a different standpoint in Time or Space, declare beyond question that this particular universal state is at this very moment in its last agonies. To observers who happen to have been born into the history of their own societies at a time when these have not been passing through the universal state phase, it is manifest that universal states, as a class of polity, are by-products of a process of social disintegration and are stamped by their certificates of origin as being uncreative and ephemeral.² Why is it, such observers may well ask, that, in defiance of apparently plain facts, the citizens of a universal state are prone to regard it, not as a night's shelter in the wilderness, but as the Promised Land, the goal of human endeavours? How is it possible for them to mistake this mundane institution for the *Civitas Dei* itself?

This misapprehension is so extreme in its degree that its very occurrence might perhaps be called in question, were this not attested by the incontrovertible evidence of a cloud of witnesses who convict themselves, out of their own mouths, of being victims of this strange hallucination.

The Aftermaths of the Roman Empire³ and the Arab Caliphate⁴

In the history of the Roman Empire, which was the universal state

¹ This desire appears to be the characteristic sentiment of citizens of universal states that have been established and maintained by indigenous empire-builders, in contrast to the aversion commonly felt for universal states of alien origin (see V. v. 341-51). An indigenous origin is, of course, the rule, and an alien origin the exception. The love and hatred inspired by these two different kinds of universal state both show a tendency to grow stronger with the passage of time.

² An imperfection that is transparent in universal states is, of course, characteristic of all states of all kinds in all circumstances, as is pointed out by a Modern Western Christian philosopher in the following passage:

'What men call peace is never anything but a space between two wars: a precarious equilibrium that lasts as long as mutual fear prevents dissension from declaring itself. This parody of true peace, this armed fear, which there is no need to denounce to our contemporaries, may very well support a kind of order, but never can it bring Mankind tranquillity. Not until the social order becomes the spontaneous expression of an interior peace in men's hearts shall we have tranquillity; were all men's minds in accord with themselves, all wills interiorly unified by love of the supreme good, then they would know the absence of internal dissension, unity, order from within, a peace, finally, made of the tranquillity born of this order: *pax est tranquillitas ordinis*. But, if each will were in accord with itself, all wills would be in mutual accord, each would find peace in willing what the others will. Then also we should have a true society, based on union in love of one and the same end' (Gilson, E.: *The Spirit of Mediaeval Philosophy*, English translation (London 1936, Sheed & Ward), p. 399).

³ See xi, map 29.

⁴ See xi, map 37.

of the Hellenic World, we find the generation that had witnessed the establishment of the *Pax Augusta* asserting, in evidently sincere good faith, that the Empire and the City that has built it have been endowed with a common immortality.¹

Tibullus (*vivebat circa* 54-18 B.C.) sings of the 'aeternae urbis moenia',² while Virgil (*vivebat* 70-19 B.C.) makes his Iuppiter, speaking of the future Roman scions of Aeneas' race, proclaim: 'His ego nec metas rerum nec tempora pono:/imperium sine fine dedi.'³ A soldier-historian may show somewhat greater caution than a philosopher-poet by expressing the same expectation in the form, not of a divine communiqué, but of a human hope. In recording the adoption of Tiberius by Augustus, Velleius (*vivebat circa* 19 B.C.-A.D. 31) speaks of a 'spem conceptam perpetuae securitatis aeternitatisque Romani imperii'.⁴ An historian-propagandist can perhaps afford to be less circumspect, and Livy (*vivebat* 59 B.C.-A.D. 17) writes with the assurance of Tibullus: 'in aeternum urbe condita';⁵ 'urbem . . . diis auctoribus in aeternum conditam'.⁶ But Horace, who was both a poet and a sceptic, was doubly audacious in claiming immortality for his own verse and in taking, as his concrete measure of eternity, the repetition, in *saecula saeculorum*, of the annual round of the religious ritual of the Roman city-state:

Exegi monumentum aere perennius
regalique situ Pyramidum altius,
quod non imber edax, non Aquilo impotens
possit diruere aut innumerabilis
annorum series et fuga temporum.
non omnis moriar . . . : usque ego posterâ
crescam laude recens dum Capitolium
scandet cum tacitâ virgine pontifex.⁷

These lines ring ironically in the ears of a Modern Western student of history as he reflects on the unsuccessful rearguard action that was fought by an outgoing Roman Paganism, only four centuries after Horace's day, to induce a Christian Roman Government to reinstate in the Senate House the statue and altar of Victory that had been placed there by 'Caesar the God' in Horace's lifetime.⁸ If some good-natured deity had forewarned Horace, in time, of this not far distant demise of Rome's native religious institutions, we may guess that the poet would have heartily thanked his informant and hastily changed his measure of duration. Whether Horace's poetry was, as its author believed it to be, immortal, Time, in A.D. 1952, had still to show; but this ethereal creation of an individual genius had already lasted, *volitans viva per ora virum*, four or five times longer than the rites that are the second term of the poet's unlucky comparison. As a sceptic, the Roman poet Horace finds

¹ 'The little rivulet of disbelief which runs counter to the main stream of popular faith, and which takes the form of a belief in an "allotted span" for the Roman state', is traced from the last century B.C. to the fifth century of the Christian Era by D. A. Malcolm in 'Urbs Aeterna', in *The University of Birmingham Historical Journal*, vol. iii, No. 1 (1951), pp. 1-15.

⁸ See V. vi. 89, with n. 3.

his match in the English historian Gibbon; yet Gibbon, who was inspired on the 15th October, A.D. 1764, to record 'the triumph of Barbarism and Religion' over the Roman Empire by hearing friars singing Vespers in the Temple of Iuppiter as he sat musing among the ruins of the Capitol¹ nearly 1,772 years after the date of Horace's death on the 17th November, 8 B.C., no doubt believed in the immortality of Horace's verse as confidently as the justifiably conceited poet had believed in it himself.

The same ludicrously inadequate ritual 'yard-stick' that had been taken by Horace as a measure for the duration of his personal literary work was taken by Livy as a measure for the duration of his historical theme the Roman Empire: 'Vestae aedem petitam et aeternos ignes et conditum in penetrali fatale pignus imperii Romani.'² The 'guarantee' (*pignus*) of the Roman Empire's survival is the Palladium.³ In thus reading his modern political symbolism into an archaic religious rite, Livy was perhaps taking a cue from his Imperial patron, and Augustus a cue from his Imperial predecessors on the throne of an earlier universal state which had failed after all to discover the elixir of life. According to an eminent authority,⁴ the interpretation of Vesta's undying flame as a symbol of the eternity of an oecumenical ruler was a Roman adaptation of an Achaemenian idea⁵ that was adopted by Augustus when, in 12 B.C., he became Pontifex Maximus and consecrated a new temple of Vesta in his house on the Palatine. Augustus's successors, from the Antonines onwards, gave publicity to this idea by making it their practice to have Vesta's fire carried in procession in front of them.⁶

During the century and a quarter that elapsed between the death of Augustus in A.D. 14 and the accession of Pius in A.D. 138, the concept of the eternity of Rome and the Roman Empire had been cherished by two bad emperors who both had met their deserts by coming to untimely personal ends. Nero had instituted games 'quos pro aeternitate imperii susceptos appellari [ludos] maximos voluit'.⁷ The *Acta Fratrum Arvalium* record 'aeterni[tati imperi vaccam]' among the proceedings of A.D. 66,⁸ and 'vota si custodieris aeternitatem imperii quod [susci]piendo ampliavit (Domitianus)'⁹ under the years A.D. 86, 87, and 90.

In the Age of the Antonines we find a Greek man of letters expressing the Augustan belief in the more delicate form of a prayer, without a suspicion that he was living in an 'Indian Summer' and was praying that

a fugitive October might be miraculously transformed into a perpetual June.

'Let us invoke all the gods and all the children of the gods, and let us pray them to grant this empire and this city life and prosperity world without end. May they endure until ingots learn to float on the sea and until trees forget to blossom in the spring. And long live the supreme magistrate and his children likewise. Long may they be with us to carry on their work of dispensing happiness to all their subjects'.¹

Thereafter, when the touch of winter begins to make itself felt, its victims defy a change of season, which they have not foreseen and cannot face, by insisting more and more emphatically that they have been privileged to enjoy an everlasting midsummer's day.² In the Severan Age and its bleaker sequel, the contrast between the official eternity of the emperors³ and the ephemerality that was their actual lot makes a painfully strange impression.⁴ It is still more strange to hear the watchwords of the Augustan poets being no less confidently repeated, in the same Latin, and this by men of letters whose mother-tongue was Greek,⁵ on the eve of the final collapse of all but the easternmost extremity of the Latin-speaking portion of the Empire.⁶ And, even after the truth has been proclaimed, in a deed more eloquent than any words, by Alaric's capture and sack of Rome herself, we can hear, above the reverberations of this resounding blow, the high voice of a Gallic poet reasserting the immortality of Rome as he travels back from the no longer inviolate Imperial City to his own war-ravaged native province.

Erige crinales lauros seniumque sacrat
verticis in virides, Roma, refinge comas. . . .
astrorum flammae renovant occasibus ortus;
lunam finire cernis, ut incipiat.

¹ Aristeides, P. Aelius: *In Romam*, edited by Keil, B., *Aelii Aristidis Quae Supersunt Omnia*, vol. ii (Berlin 1898, Weidmann), p. 124 (Or. XXVI, § 109).

² See V. vi. 370-5.

³ In this age of the Roman Empire's decline 'Your Eternity' gradually comes to be used, like 'Your Majesty' in Modern Western Europe, as the stock style and title for a crowned head (Cumont, *op. cit.*, p. 435).

⁴ The inscription 'Aeternitas Augusti' first appears on the Senatorial copper coinage of the Roman Empire in the reign of Vespasian (*imperabat* A.D. 69-79), gradually wins its way on to coins of other series, and holds its own till the close of the fourth century of the Christian Era (Cumont, *op. cit.*, p. 438). Severus (*imperabat* A.D. 193-211), whose accession, like Vespasian's, had cost the Empire a disastrous civil war, perhaps had as much—or little—warrant for inscribing on his coinage the motto 'Aeternitas Imperii' and for evoking a dedication 'pro aeternitate imperii et salute Imperatoris Caesaris L. Septimi Severi' (C.I.L., vol. ii (Berlin 1869, Reimer), p. 31, No. 259). But the same motto becomes a bad joke on coins issued in the names of Caracalla and Geta as well as their father; and it makes a farcical effect on coins bearing the name of a Philip or a Carus. (See Cumont, *op. cit.*, p. 437.)

⁵ In the *Res Gestae* of the Antiochene historian Ammianus Marcellinus the Tibullan phrase 'urbs aeterna' is used as a stock periphrasis for 'Rome': e.g. in Book XIV. vi. 1: in Book XV. vii. 1 and vii. 10; in Book XVI. x. 14; and in eight other places. According to Charlesworth, M. P.: 'Providentia and Aeternitas', in the *Review*, vol. xxix, No. 22 (April 1936). The same conviction is expressed in the circumlocutions 'victura dum erunt homines Roma' (Book XIV. vi. 3) and 'victura cum saeculis Roma' (Book XXVI. i. 14). The Alexandrian poet Claudian, in his *De Consulatu Stilichonis*, Book III, ll. 159-60, declares: 'Nec terminus unquam/Romanae ditionis erit', and spends a dozen further lines on variations on this Virgilian theme.

⁶ For the *tracée* of the geographical line of division between the Latin-speaking and Greek-speaking portions of the Roman Empire, see IV. iv. 326, n. 2.

victoris Brenni non distulit Allia poenam;
 Samnis servitio foedera saeva luit.
 post multas Pyrrhum clades superata fugasti;
 flevit successus Hannibal ipse suos.
 quae mergi nequeunt nisu maiore resurgunt,
 exsiliuntque imis altius acta vadis.
 utque novas vires fax inclinata resumit,
 clarior ex humili sorte superna petis.
 porrige victuras Romana in saecula leges,
 solaque fatales non vereare colos. . . .
 quae restant, nullis obnoxia tempora metis:
 dum stabunt terrae, dum polus astra feret.
 illud te reparat quod cetera regna resolvit:
 ordo renascendi est, crescere posse malis.
 ergo age, sacrilegae tandem cadat hostia gentis:
 submittant trepidi perfida colla Getae.
 ditia pacatae dent vectigalia terrae;
 impleat augustos barbara praeda sinus.
 aeternum tibi Rhēnus aret, tibi Nilus inundet,
 altricemque suam fertilis orbis alat.¹

Perhaps the strangest testimony of all is Saint Jerome's description of the shock that he suffered when the news of the fall of Rome reached him in his remote and still secure retreat at Jerusalem. The saint was devoted to the service of a Church that avowedly placed its hopes in the Commonwealth of God, and not in any earthly polity; yet this news, mundane though it might be, affected Jerome so profoundly that for the moment he found himself incapable of proceeding with his literary labours of theological controversy and scriptural exegesis;² and the language in which he describes his admiration for what Rome has once been and his grief for the fate that has now overtaken her anticipates the language of Rutilius in verbal correspondences that can hardly be accidental.³ Their common stupefaction, perhaps even more than their common sorrow, at the break-up of the universal state that was their common social universe was an emotion strong enough to bridge the moral gulf between the would-be exclusively Christian saint and the aggressively pagan *Praefectus Urbi emeritus*.

The shock administered by the fall of Rome in A.D. 410 to the citizens of a transient universal state which they had mistaken for an everlasting habitation⁴ has its counterpart in the shock suffered by the subjects of the Arab Caliphate when Baghdad fell to the Mongols in A.D. 1258.⁵ In

¹ Rutilius Namatianus, C.: *De Reditu Suo*, Book I, ll. 115-16, 123-34, 137-46. The poet's exhortation to his heroine in ll. 141-2 was duly acted upon by her when, a century and more after Rutilius's day, Justinian annihilated the Visigoths' Ostrogothic cousins in a fight to the finish on Italian soil, and even struck some shrewd blows at the Visigoths themselves in the distant retreat that they had found for themselves in Spain after having sacked Rome *en route*. The sequel, however, was just the opposite of what Rutilius so confidently looks forward to in ll. 143-6. So far from restoring the Empire's revenues, Justinian's reconquest of some of the Empire's lost Latin provinces was achieved at such a cost, in blood and treasure, to the hitherto still sound Greek and Oriental core of the Hellenic universal state that his extravagant régime was quickly followed by a collapse which proved to be irretrievable (see IV. iv. 326-8 and 397-8, and V. vi. 224-5).

² See Saint Jerome, Ep. cxxvii, cap. 12, quoted in V. v, 223, n. 2.

³ See V. v. 345, n. 4.

⁴ Luke xvi. 9.

⁵ A touch of the emotion caused by this catastrophe can be felt in the last words of the passage quoted from Falak-ad-Din Muhammad b. Aydimir in IV. iv. 446.

the Roman World the shock was felt from Palestine to Gaul; in the Arab World, from Farghānah to Andalusia.

'It is difficult to estimate the bewilderment that Muslims felt when there was no longer a Caliph on whom the blessing of God could be invoked in the *khutbah*; such an event was without precedent throughout the previous history of Islam. Their suffering finds expression in the prayer offered in the great mosque of Baghdad on the Friday following the death of the Caliph: "Praise be to God who has caused exalted personages to perish and has given over to destruction the inhabitants of this city. . . . O God, help us in our misery, the like of which Islam and its children have never witnessed; we are God's, and unto God do we return".'¹

The intensity of the psychological effect is even more remarkable in this than in the Roman case, for, by the time when Hūlāgū gave the 'Abbasid Caliphate its *coup de grâce*, its sovereignty had been ineffective, for three or four centuries past, over the greater part of the vast domain that was nominally subject to it.² It is perhaps comprehensible that, even for that length of time, a shadow should continue to be mistaken, half deliberately, for the substance by a dominant minority for whom the moribund universal state represented their own latest achievement and last hope; a more astonishing testimony to the hold that a universal state can acquire over the hearts and minds of contemporaries is the fascination which it also exerts upon members of the now victoriously insurgent internal and external proletariats, who do not so much refuse to admit as, apparently, fail altogether to realize that they are in the act of pulling down with their own hands an institution which, in their eyes, is so venerable that it would be inconceivably impious even to imagine its disappearance.

On the strength of this widespread and long-lasting hallucination, which is itself a psychological and political fact to be reckoned with by the roughest-handed and hardest-headed carvers-out of indigenous or barbarian successor-states, the holders, in lawful succession, of the sovereign authority in a universal state may retain—for generations or even centuries after their loss of all genuine power over their nominal dominions—a by no means negligible status as the sole dispensers of legitimacy. Indeed, this monopoly of an imponderable political commodity usually counts for so much that it is rare to find a barbarian conqueror of an imperial province allowing himself the satisfaction of openly boasting that he has seized his prize by force and is holding it by right of conquest.³ The heretic Arian Vandal conquerors of Roman

¹ Arnold, Sir T. W.: *The Caliphate* (Oxford 1924, Clarendon Press), pp. 81–82.

² For the stages in the progressive decline of the 'Abbasid Caliphate from the ninth century of the Christian Era onwards, see Arnold, *op. cit.*, pp. 57–69.

³ 'The minister who manages to establish an ascendancy over the ruler . . . appropriates the power without giving an inkling of his desire to usurp the throne; he contents himself with the [substantial] advantages of royalty: that is to say, the power of enjoining and prohibiting, of binding and loosing, of deciding and annulling. By this policy he leads the notables of the empire to believe that he is acting under instructions transmitted to him by the sovereign from his cabinet, and that he is merely executing the prince's orders. Although he has appropriated the whole of the authority, he takes care not to usurp the marks, emblems and titles of sovereignty, in order to avoid exciting any suspicions of his ambitions. The curtain which, since the foundation of the empire, has made the sultan and his ancestors invisible to the public, likewise serves to conceal the encroachments of the minister and to make the public believe that this officer is just the

Africa, and the heretic Shi'i Katāma Berber conquerors of 'Abbasid Ifrīqiyah and Egypt, did permit themselves this indulgence; indeed the Katāma's self-declared but unauthenticated 'Fātimid' leaders were not content with repudiating the authority of the legitimate Sunnī 'Abbasid Caliphs at Baghdad, but pretended to the title of Caliphs themselves." For such presumption these two avowedly usurping war-bands both paid the penalty of being liquidated—the Vandals by Belisarius's Roman expeditionary force, and the Fātimids by the Sanhāja Berbers in Ifrīqiyah and by Saladin in Egypt.¹ These, however, are exceptions that prove a rule. The Amalung leaders of the Arian Ostrogoths and Buwayhid leaders of the Shi'i Daylamīs² were wiser in their generation in seeking title for their conquests by ruling them, in official theory, as vicegerents of the Emperor at Constantinople³ and the Caliph at Baghdad⁴ respectively; and, though this tactful handling of a senile universal state did not avail, in their case, to avert the doom to which both of these war-bands condemned themselves by clinging to their distinctive heresy instead of commending themselves to their subjects by adopting the orthodox faiths of Catholic Christianity and of Sunnī Islam,⁵ the same political manœuvre was brilliantly successful when executed by fellow barbarians who had the sagacity or good fortune to be at the same time impeccable in their profession of religious faith. Clovis, for instance, who was the most successful of all founders of barbarian successor-states of the Roman Empire, found it worth while to follow up his conversion from paganism to Catholicism in A.D. 496 by obtaining in A.D. 510 from Anastasius, the reigning Emperor at Constantinople, the title of proconsul with the consular insignia.⁶ In the history of the decline of the 'Abbasid Caliphate there are notable examples of a corresponding practice.

'Throughout the whole period of the decline of the Caliphate up to the date of the death of Musta'sim (A.D. 1258), the Caliph was to all orthodox Sunnis⁷ the Commander of the Faithful, and as Successor of the Prophet

prince's lieutenant and nothing more.'—Ibn Khaldūn: *Muqaddamāt*, French translation by de Slane, Baron McG. (Paris 1863-8, Imprimerie Impériale, 3 vols.), vol. i, p. 379.

¹ See V. v. 252 and 358. In the former passage, the Sanhāja have been correctly described as Sunnis but incorrectly as Murābits. In the latter passage, the deposition of the Fātimids in Egypt has been erroneously ascribed to Saladin's uncle and companion in arms Shirkūh, who died before the process of extinguishing the Fātimids was completed by Saladin in A.D. 1171.

² For the Buwayhids, see I. i. 356 and V. v. 358.

³ In this device for saving Roman 'face', Theodoric had been anticipated by his predecessor and victim Odovacer.

⁴ See Arnold, op. cit., pp. 60-68, especially the account, on pp. 65-68, of the particularly piquant farce that was played in A.D. 980, at the Caliphial Court of Baghdad, by the Buwayhid 'mayor of the palace' 'Adūd-ad-Dawlah, who chose the occasion of his presentation of an ambassador from his fellow heretic the Fātimid anti-Caliph at Cairo as his moment for obtaining from the 'Abbasid Caliph Tā'i a formal commission to exercise those plenary powers of government in the Caliph's dominions which he had long since usurped *de facto*.

⁵ For the contrast between the respective fortunes of barbarian conquerors who retain an heretical form of religion or a tinge of alien culture and those who adopt the culture and faith of the subject population which they have taken over from a derelict universal state, see V. v. 351-8.

⁶ See J. B. Bury's footnote in his *editio minor* of Edward Gibbon's *The History of the Decline and Fall of the Roman Empire*, vol. iv (London 1901, Methuen), p. 119.

⁷ For the mass-conversion to Islam that accompanied the decline of the 'Abbasid Caliphate and anticipated the dissolution of the Syriac Society, see pp. 397-400, below.—A.J.T.

he was held to be the source of all authority and the fountain of honour. The Caliph by his very name led men's thoughts back to the founder of their faith, the promulgator of their system of sacred law, and represented to them the principle of established law and authority. Whatever shape the course of external events might take, the faith of the Sunnī theologians and legists in the doctrines expounded in their textbooks remained unshaken, and, even though the Caliph could not give an order outside his own palace, they still went on teaching the faithful that he was the supreme head of the whole body of Muslims. Accordingly, a diploma of investiture sent by the Caliph, or a title of honour conferred by him, would satisfy the demands of the religious law and tranquillise the tender consciences of the subjects of an independent prince, though the ruler himself might remain entirely autonomous and be under no obligation of obedience to the puppet Caliph. . . . Even the Buwayhids, though their occupation of Baghdad was the culmination of the rapid growth of their extensive dominions, and though the Caliph was their pensioner and practically a prisoner in their hands, found it politic to disguise their complete independence under a pretence of subserviency and to give a show of legitimacy to their rule by accepting titles from him.¹

The precedent set by the heretical Buwayhids was followed by their Sunnī rivals, supplanters, and successors in the scramble for fragments of the 'Abbasid heritage.² Mahmūd of Ghaznah (*dominabatur* A.D. 998–1030)³ obtained a title from the 'Abbasid Caliph Qādir bi'llāh (*imperabat* A.D. 991–1031) to legitimize the dominion which he had won for himself *de facto* by successful rebellion against a Sāmānid master whose Transoxanian principality was itself the fruit of previous successful usurpation at the 'Abbasid Caliphate's expense.⁴ The Saljūq Turkish Nomad supplanters of the Sāmānids and the Buwayhids took over the Buwayhids' ascendancy at Baghdad in A.D. 1055 under the pretext of delivering the 'Abbasids from it. At the opposite extremity of Dār-al-Islām, *circa* A. D. 1086, Yūsuf b. Tāshfin, the founder of a Murābit Berber principality embracing derelict provinces of both the 'Abbasid Caliphate of Baghdad in North-West Africa and the Umayyad Caliphate of Cordova in the Iberian Peninsula, obtained a title and insignia from the 'Abbasid Caliph Muqtadī (*imperabat* A.D. 1075–94), who, by his complacency in granting his uncouth petitioner a style barely distinguishable from his own,⁵ rather easily won the empty distinction of being the first of his House whose Commandership was recognized—though not, of course, obeyed—by the Faithful in Andalusia. In A.D. 1175 Saladin, having appropriated, in the preceding year, the heritage of his own dead master Nūr-ad-Dīn's lawful heir, sought and obtained from the reigning Caliph Mustadī (*imperabat* A.D. 1170–80) a retrospective legitimization of the dominion which he had already acquired *de facto* by his act of usurpation. How could the Caliph refuse this request from an orthodox Sunnī champion who had restored the recitation of the Caliph's name in the bidding prayer (*khutbah*) in the mosques of Egypt after an interval of

¹ Arnold, *op. cit.*, pp. 77 and 78.

² See *ibid.*, pp. 78–88.

³ For Mahmūd of Ghaznah see I. i. 360, n. 1, and V. v. 303.

⁴ For the role of the Sāmānids as wardens of the North-Eastern Marches of the Syriac World, see II. ii. 142.

⁵ Yūsuf was now entitled to style himself the Amīr-al-Muslimin, in the Maghrib, of the Amīr-al-Mu'minin at Baghdad.

more than two hundred years during which it had been recited there in the names of heretical pseudo-Fātimids?¹ How could he disappoint a hero who had broken an aggressive Frankish Power that, by its lodgement in Syria, had almost severed the geographical link between the Asiatic and the African portion of Dār-al-Islām? And how could he say 'No' to a war-lord whose territories lay next door to the Caliph's own, and who could march, if provoked, on Baghdad as easily as on Cairo, Jerusalem, or Damascus?

In the thirteenth century of the Christian Era a special need for the Caliph's good offices was felt by the 'Slave Kings' of Delhi,² who were masters of a vast new domain that had been added to Dār-al-Islām by the conquest of Hindustan between the years 1191 and 1204 of the Christian Era. The rule over this new dominion was transmitted, not by hereditary succession from father to son, but by acquisition by slave from slave, and each 'Slave King' who mounted the throne, in his turn, by this contentious avenue required a personal ablution from the 'Abbasid fount of honour to make his tenure secure. The practice was initiated by the first ruler of the series, Iltutmysh, who made himself master of Delhi in A.D. 1211 and obtained a retrospective diploma of investiture from the Caliph Mustansir (*imperabat* A.D. 1221-42) in A.D. 1229.

'The document was solemnly read out in a vast assembly held in Delhi, and Iltutmysh from that date put the name of the Caliph on his coins. His successors followed this pious example. The name of the last 'Abbasid Khalifah of Baghdad, Musta'sim (*imperabat* A.D. 1242-58) first appears on the coins of 'Alā-ad-Dīn Mas'ūd Shāh (*dominabatur* A.D. 1241-6); and, though Musta'sim was put to death by the Mongols in A.D. 1258, his name still appears on the coins of successive Kings of Delhi, e.g. Mahmūd Shāh Nāsir-ad-Dīn (*dominabatur* A.D. 1246-65), Ghiyāth-ad-Dīn Balban (*dominabatur* A.D. 1265-87), and Mu'izz-ad-Dīn Kayqubād (*dominabatur* A.D. 1287-90), the last monarch of the so-called 'Slave' dynasty; and the first of these continued to have the name of Musta'sim mentioned in the *khutbah*.

'A new dynasty arose, that of the Khaljī [or Khiljī]; the same need for legitimization was apparently still felt, and the coins of Jalāl-ad-Dīn Firūz Shāh II (*dominabatur* A.D. 1290-5) continued to bear the name of Musta'sim, though this Caliph had been trampled to death by the Mongols more than thirty years before.³

¹ Saladin employed the manœuvre of acting in the name of an august puppet twice over. He had established himself in Egypt as the Sunni Wazir of the Shi'i Fātimid Caliph whom he deposed (the inverse of the situation at Baghdad two centuries earlier, when Sunni 'Abbasid Caliphs had been in the power of Shi'i Buwayhid 'mayors of the palace' (see p. 13, n. 4, above)). Saladin now secured legitimization for his acquisitions by holding them, in turn, as the vicegerent of the 'Abbasid Caliph Mustadī.

² See II. ii. 131; III. iii. 30 and 31, n. 1; IV. iv. 99, with n. 1.

³ Though Hülāgū Khan was a pagan under the influence of a Nestorian Christian wife (see II. ii. 238 and 451), he did not take the 'Abbasid Caliph's life without some searchings of heart:

'The awe with which the institution of the Caliphate was regarded, even in these days of its weakness, may be realised by the fact that, cruel and bloodthirsty savage though Hülāgū was, even he hesitated to put to death the Successor of the Prophet, for the Muhammadans him in his army in the expedition against Baghdad had warned him that the Khalifah was shed upon the ground, the World would be overspread with darkness and the army of the Mongols be swallowed up by an earthquake' (Arnold, op. cit., p. 81).

'What was an unfortunate Muslim monarch to do, who felt that his title was insecure? He knew that it was only his sword that had set him on the throne, that his own dynasty might at any time be displaced, as he had himself displaced the dynasty that had preceded him, while his legal advisers and religious guides told him that the only legitimate source of authority was the Khalifah, the Imām; and he realised that all his devout Muslim subjects shared their opinion. So he went on putting the name of the dead Musta'sim on his coins, because he could find no other, and the Muslim theory of the State had not succeeded in adjusting itself to the fact that there was no Khalifah or Imām in existence. His [Jālāl-ad-Dīn's] successor, 'Alā-ad-Dīn Muhammad Shah I (*dominabatur* A.D. 1295-1315), got out of the difficulty by ceasing to insert Musta'sim's name and by describing himself merely as Yamīn-al-Khilāfat Nāsir Amīrī'l-Mu'mīnīn, "the Right Hand of the Caliphate, the Helper of the Commander of the Faithful", and this was sufficient for the satisfaction of tender consciences, though in reality he was giving no help at all to any Caliph, any more than either of his predecessors had done, who had seen the unhappy Musta'sim trampled to death without moving a finger, though they had gone on making use of his name for their own selfish purposes.'¹

The Aftermaths of the Manchu,² Ottoman,³ and Mughal⁴ Empires

The belief in the immortality of universal states which is attested by their ability to maintain their status as dispensers of legitimacy long after they have lost the realities of power—or even after they have actually ceased altogether to exist—can be illustrated from other histories besides those of the 'Abbasid Caliphate at Baghdad and the Roman Empire at Constantinople.

The Government of the Manchu incarnation of the Far Eastern universal state in China—surrounded, as the Middle Kingdom was accustomed to find itself, by tributary states, such as Korea, Annam, and the Mongol principalities, whose rulers did receive investiture from the Son of Heaven at Peking—affected to believe that all sovereigns, in any part of the World, with whom the Celestial Empire might be drawn into diplomatic relations, derived their title from the same unique source of legitimacy.⁵

In the decline of the Ottoman Empire, during the critical period between the disastrous end of the great Turco-Russian War of A.D. 1768-74 and the ignominious end of Sultan Mahmūd II's final trial of strength with Mehmed 'Ali Pasha in the hostilities of A.D. 1839-40, the ambitious war-lords who were carving out successor-states for themselves *de facto*—a Mehmed 'Ali in Egypt and Syria, an 'Ali of Yannina in Albania and Greece, a Pasvānoghlu of Viddin in the north-western corner of Rumelia—were sedulous in doing in the Pādīshāh's name all that they were doing to his detriment in their own private interests; and, even when the greatest and most successful of them all, Mehmed 'Ali, had to submit to seeing the verdict of ordeal by battle between himself and his lawful master reversed by the irresistible decision of the Concert

⁵ See xi, map 52.

of Powers of an infidel Western World, his mortification at being awarded the loss of Syria as the fruit of his victory was tempered by his satisfaction at securing from the Powers, as his *quid pro quo*, a diploma, drawn in the Pādishāh's chancery, which conferred the Pashalyq of Egypt on Mehmed 'Ali and his heirs in perpetuity.

Even when an Ottoman Emperor who had been wont to style himself 'Sultan of the Two Continents, Khāqān of the Two Seas',¹ had thus declined into being the 'Sick Man' of Europe,² dependent for his very existence on the infidel Powers finding it convenient still to keep the life in his body for fear of falling out awkwardly among themselves over the disposal of his estate, it became one of the regular practices of Western diplomacy, for the best part of a century, to mitigate, by maintaining the fiction of legitimacy, the shock that was being administered to Muslims, inside and outside the Ottoman Empire, by its progressive break-up. On the model of the Danubian Principalities of Wallachia and Moldavia and the Khanate of the Crimea, the embryos of the Ottoman Empire's Orthodox Christian 'successor-states' were required to serve terms in the transitional status of 'autonomous' principalities or provinces under the 'suzerainty' of a Pādishāh³ who had emphasized this aspect of his office by changing his style, as was done by Sultan Mahmūd II (*imperator* A.D. 1808-39), to 'Sultan of the Sultans of the Age'.⁴ Serbia served this apprenticeship from A.D. 1830 to A.D. 1878; Samos from A.D. 1832 to A.D. 1913; Bulgaria and Eastern Rumelia from A.D. 1878 to A.D. 1908; Crete from A.D. 1898 to A.D. 1913. The juridical independence of Rumania and Serbia dated only from 1878 and that of Bulgaria only from 1908. The Powers themselves conformed to the formality which they imposed upon their Ottoman Christian creatures and protégés. It was in the name of the Sultan at Constantinople that the Hapsburg Monarchy administered Bosnia-Herzegovina from A.D. 1878 to A.D. 1908 and Great Britain administered Cyprus from A.D. 1878 and Egypt from A.D. 1882 until she found herself at war with Turkey in A.D. 1914.

The Ottoman and Manchu Empires' success in still retaining, in their decline, a monopoly of the prerogative of serving as a fount of legitimacy was not, however, so remarkable as the Mughal Empire's performance of the same diplomatico-psychological *tour de force*; for the Timurid Mughal Dynasty continued to assert this prerogative in its dealings with alien Powers who held the shadow of a *ci-devant* Mughal Empire at their mercy after it had sunk to a degree of impotence to which neither the Ottoman nor the Manchu Empire ever sank until its dying day.

Within half a century of the Emperor Awrangzib's death in A.D. 1707, an empire which had once exercised an effective sovereignty over by far the greater part of the Indian sub-continent had been whittled down to a

¹ See Arnold, *op. cit.*, p. 147.

² The phrase seems to have been struck out by the Tsar Nicholas I of Russia in conversation with Lord Aberdeen in A.D. 1844, but the celebrated occasion of its use by its coinor was in A.D. 1853, on the eve of the Crimean War.

³ 'Pādishāh' was the Persian for 'Foot Shah', meaning a potentate who had his foot on the necks of other potentates. It was thus the equivalent of 'Shāhinshāh' or 'King of Kings'.

⁴ See Arnold, *op. cit.*, pp. 147-8.

torso that was no more than some 250 miles long by some 100 miles broad,¹ and within a hundred years of A.D. 1707 this truncated dominion had been reduced to the circuit of the walls of the Red Fort at Delhi; yet, 150 years after A.D. 1707—the date which had marked the palpable beginning of a decline that had been germinating long before that—a descendant of Akbar and Awrangzib was still squatting on their throne in their imperial palace, and he might have been left undisturbed there for an indefinite time to come, even by British rulers of India who had retorted to ‘the Great Mogul’s’ claim still to be their suzerain by insisting that he had now become their pensioner, if, in A.D. 1857, his apparently fantastic pretension to be still seised *de jure* of his mighty ancestors’ imperial authority had not been unexpectedly vindicated by a flagrant act which the Mughal Emperor could not avert and which his British masters could not overlook.

In 1857, to the Emperor’s own dismay and to his British masters’ indignation, the British East India Company’s mutinous sepoy army insisted upon exploiting a puppet Emperor’s not yet exhausted prestige by inaugurating in his name² the government of a revolutionary counter-rāj which they were seeking to substitute by force of arms for the unconsecrated dominion of their British employers.

‘There is much evidence . . . of the King’s distrust of and distaste for the Army. . . . But there is also no doubt that he clothed their acts with the mantle of his authority’;³

and, in insisting upon acting in a now impotent ‘Great Mogul’s’ name, the Mutineers in A.D. 1857 were taking practical account of a persisting state of Indian public opinion with which their predecessors had likewise found it necessary to reckon. This was the consideration that had moved the British East India Company, in acquiescing in the terms of the imperial farmans of A.D. 1764 and 1765, to acknowledge the Emperor’s suzerainty as the *quid pro quo* for his formal conferment upon them of the right to conduct the administration and collect the revenue in the imperial provinces of Bihar and Bengal; and the same consideration had moved successive Marāthā war-lords of the House of Sindia, from A.D. 1755 to A.D. 1803, to exercise their offensively asserted *de facto* domination over the remnant of the Mughal Empire in the doubly modest official role of deputies for an absentee regent (in the person of the Marāthā Peshwa at Poona) over a puppet Mughal Emperor’s shrunken dominions.⁴

The most striking demonstration that this imponderable remnant of Mughal imperial power did in fact possess a genuine specific gravity that could not be ignored with impunity was afforded by British experience. Though, as early as A.D. 1773, the British had revoked⁵ the recognition, accorded by them in A.D. 1765, of the Mughal Emperor’s continuing suzerainty over Bihar and Bengal, they were confronted as late as A.D. 1811 with a reassertion of the Emperor’s title to a formal sovereignty in

⁵ See *ibid.*, pp. 32 and 34.

these long-since ceded provinces which they did not find it altogether easy to quash;¹ and in the Emperor's last stronghold at Delhi within the walls of the Red Fort the controversy over the question whether he was the suzerain or a pensionary of the British East India Company² remained unsettled throughout the fifty-five-years' interval between the British military occupation of Delhi in A.D. 1803 and the suppression of the Mutiny in A.D. 1858. The British East India Company's explicit public declaration in A.D. 1811 that it was 'unnecessary to derive from the King of Delhi any additional title to the allegiance of our Indian subjects'³ was a form of words that, to Indian minds, was less significant than the British Resident's continued performance of a subject's customary visible acts of homage when he attended the Emperor's *darbar*;⁴ and the British thesis was overtly challenged in A.D. 1829, when a new incumbent of the office of Nizām of Hyderabad applied to the Mughal Emperor for investiture,⁵ as his predecessor had applied in A.D. 1803.⁶

"Those who took the imperial claims at their face value and those who regarded the Imperial Court as a mere puppet show, alike erred. . . . The British were prone to the latter mistake. But that it was a mistake was shown by the eagerness with which so realistic a man as Madho Rao Sindia sought the cloak of imperial authority for his acts, or a prince like the Nizām solemnly sought confirmation of his accession from Delhi as late as 1803 [and as 1829]. The truth was as nearly expressed as possible by Major Browne when he wrote: "I take the Shah's name to be of as much importance as an Act of Parliament in England if supported by as strong a force." "

The justice of this comparison was to be demonstrated, half a century later, when the British East India Company's own mutinous Indian soldiery followed Sindia's example by cloaking their force under the name of the last occupant of Akbar's imperial throne.

Ghosts of Defunct Universal States

A still more remarkable testimony to the tenacity of the belief in the immortality of universal states is the paradoxical practice of evoking their ghosts after they have proved themselves mortal by expiring. The 'Abbasid Caliphate of Baghdad was thus resuscitated in the shape of the 'Abbasid Caliphate of Cairo,⁸ the Roman Empire in the two rival shapes of the Holy Roman Empire of the West⁹ and the East Roman Empire of Orthodox Christendom;¹⁰ the Empire of the Ts'ing and Han Dynasties in the shape of the Sui and T'ang Empire of the Far Eastern

Society in China.¹ Such ghosts of universal states are conspicuous products of the historical phenomenon of 'renaissance' or contact in the Time-dimension between a civilization of the 'affiliated' class and the extinct civilization that is related to it by 'apparentation',² and, in that aspect, they are dealt with in a later part of this Study.³

The four representatives of this spectral species of polity that are here in question display wide differences from one another both in the timing of their evocation and in their subsequent fortunes. Whereas the Sui and T'ang Empire in the Far East and the Holy Roman Empire in the West were not evoked till after an interval of more than four hundred years since the *de facto* break-up of the universal state of which each of them was respectively a revival,⁴ and the East Roman Empire not till after an interval of some hundred and fifty years,⁵ the 'Abbasid Caliphate was resuscitated at Cairo less than three and a half years after its extinction at Baghdad.⁶ From the date of their prompt installation in A.D. 1261 by the strong hand of the Mamlūk Sultan Baybars to the date of their almost unnoticed cessation as a result of the conquest and annexation of Egypt by Sultan Selīm I 'Osmanli in A.D. 1517, the Cairene 'Abbasid Caliphs were never anything more than the puppets that they were intended to be.⁷ The Holy Roman Empire, after starting as a mighty power in virtue of being imposed upon the Austrasian Frankish state at the culminating moment of its history, shared in the collapse which Charlemagne brought upon his ambitious political structure by recklessly overstraining its resources, and was never more than partially rehabilitated by the successive efforts and sacrifices of Saxon, Franconian, and Swabian heirs of this fatal incubus; yet it survived, at least as a name—the ghost of a ghost—for nearly a thousand years after Charlemagne's death.⁸ On the other hand the East Roman Empire in the main body of Orthodox Christendom and the Sui and T'ang Empire in the Chinese portion of the Far Eastern World fulfilled the intentions of their respective founders by becoming and remaining solid political realities—the East Roman Empire for more than 250 years⁹ and the Sui and T'ang Empire for not

¹ See II. ii. 376; III. iii. 449; and X. ix. 16.

² For this relation of Apparentation-and-Affiliation between civilizations of different generations, see I. i. 44, 45-6, 51-2.

³ In X. ix. 7-21.

⁴ The Empire of the Posterior Han became impotent *de facto circa* A.D. 175; the Far Eastern Society in China was united politically under the Sui Dynasty in A.D. 581. The Roman Empire in the West became impotent *de facto* after the *Clades Gothica* of A.D. 378 or, at latest, after the death of the Emperor Theodosius I in A.D. 395; Charlemagne was crowned Emperor in St. Peter's at Rome on Christmas Day, A.D. 800.

⁵ The Roman Empire in the East ran out between the death of Justinian in A.D. 565 and the overthrow of Maurice in A.D. 602; the East Roman Empire was constructed by Leo Syrus (*imperator* A.D. 717-40).

⁶ See Arnold, *op. cit.*, p. 82, following Suyūti: *Husn-al-Muhādarah*, vol. ii, pp. 53 seqq. and 57. The Caliph Musta'sim was put to death at Baghdad in February 1258; his uncle was installed at Cairo as the Caliph Mustansir in June 1261.

⁷ When the first of them, Mustansir, showed signs of taking his office seriously, his Mamlūk patron Baybars packed him off to his death, on the forlorn hope of reconquering Baghdad from the Mongols, and installed another member of the 'Abbasid House in his stead. This lesson was not forgotten by Caliph Hākim and his successors (see Arnold, *op. cit.*, pp. 94-95).

⁸ Charlemagne died in A.D. 814; the Emperor Francis II Hapsburg renounced the title of Roman Emperor in A.D. 1806 (see I. i. 343 and X. ix. 11).

⁹ From the raising of the second Arab siege of Constantinople in A.D. 717 to the outbreak of the Great Romano-Bulgarian War in A.D. 977.

much less than 300¹—but this at the cost, on which their founders certainly never reckoned, of exhausting the strength of the still immature societies on whose life-blood these two lusty vampire-states waxed fat for a season.² The common feature, conspicuous above these differences, that concerns us here is the status which these ghosts, like their originals, acquired and retained as founts of legitimacy.

The Haunting of Cairo and Istanbul by the Ghost of the Caliphate

The Mamlûks had been quick to install a refugee 'Abbasid at Cairo because, being themselves usurpers of their Ayyubid masters' heritage, and being faced with the problem of handing it down thereafter from slave to slave, they had the same urgent and recurring need of legitimization as their contemporaries and counterparts the Slave Kings of Delhi. The Mamlûk Sultans and their subjects appear to have treated their 'Abbasid puppets with contempt from first to last,³ and at Mecca their names were never recited in the *khutbah*.⁴ Distance, however, lent them an appearance of dignity, and contemporary Muslim rulers in Hindustan made the same use of the Cairene 'Abbasid Caliphs as their predecessors had made of the last Baghdadi 'Abbasid Caliph Musta'sim. A diploma of investiture was sought and obtained from the Cairene 'Abbasid Caliph of the day not only by the parricide and tyrant Muhammad b. Taghlaq (*dominabatur* A.D. 1324-51) but by his estimable successor Firûz Shâh (*dominabatur* A.D. 1351-88), who had not his predecessor's incentive for seeking external sanction for his régime.⁵ Even Timur Lenk's grandson Pîr Muhammad seems to have thought of taking the same step as a manœuvre in the contest for Timur's heritage, and the Ottoman Pâdishâh Bâyezîd I (*imperabat* A.D. 1389-1402) seems actually to have applied in A.D. 1394 to the reigning Cairene 'Abbasid for a grant of the title of Sultan.⁶

Bâyezîd's descendant Selîm I felt himself in no need of legitimization, and did not covet a title borne by a puppet of his defeated and executed opponent the last Mamlûk Sultan Tûmân Bey.⁷ A new generation of *de facto* rulers of a nascent Iranic Muslim World esteemed the blood of the Eurasian Nomad war-lord Chinghis Khan to be a nobler liquid than that of any Meccan Holy Family, and they were also well aware that the strength of their own right arm was their only valid title in the last resort. In these revolutionary circumstances the maintenance of 'Abbasid Shadow-Caliphs at Cairo, and the occasional utilization of these *fainéants*' services as rubber-stamps by other Muslim potentates besides

¹ From the foundation of the Sui Empire in A.D. 581 to A.D. 878, when the T'ang régime became impotent *de facto* (see IV. iv. 87-88 and V. vi. 311, n. 3).

² For this fatal effect of the success of the East Roman Empire on the fortunes of the main body of the Orthodox Christian Society, see II. ii. 368 and IV. iv. 320-408.

⁴ See *ibid.*, p. 101.

⁵ See *ibid.*, pp. 103-5.

⁶ See *ibid.*, pp. 105-6.

⁷ See *ibid.*, chap. xii. 'The fiction that the last 'Abbasid Caliph of Egypt handed over his dignity, by a formal act of transfer, to Sultan Selim, was first enunciated in A.D. 1787 by' the Levantine Christian scholar 'Constantine Mouradgea d'Ohsson in his monumental work *Tableau Général de l'Empire Ottoman*' (*ibid.*, p. 146), thirteen years after the negotiation of the Russo-Turkish peace treaty of Küçük Kaynarja, which seems to have been the first occasion on which the Ottoman Pâdishâh made any attempt to turn his title of Caliph to any practical account (see p. 23, below).

their own Mamlūk slave-masters, had not deterred ex-barbarian *novi homines* from confidently assuming for themselves, and politely applying to one another, the style of 'Caliph' as a synonym for the effective sovereign of a state that was not oecumenical but was merely a Great Power.¹ This inflationary style had already been accepted by Bāyezīd I 'Osmanlı's father and predecessor Murād I (*imperabat* A.D. 1360-89) from the pens of the rulers of neighbouring Turkish principalities in Anatolia.² In these circumstances the history of the Khilāfat might have been expected to come to an end with the death, in obscurity, of the last Cairene Caliph in A.D. 1543; yet this was not, after all, the last chapter in this long-protracted story. After having thought nothing of the Caliphate for more than four hundred years after the unwarrantable ascription of the office to Sultan Murād I, the 'Osmanlis discovered belatedly, in the days of their decline, that this long despised and neglected ornament was worth bringing out of their lumber-room and polishing up.

During the century which began with the negotiation of the Russo-Turkish peace treaty of Küçük Qaynārja in A.D. 1774 and ended with the accession of 'Abd-al-Hamīd II to the Ottoman throne in 1876 the Ottoman Caliphate ceased to be merely titular and became for the first time an active factor in international affairs. This change was the consequence of three new developments: first, the continual transfer of ex-Ottoman provinces, containing Muslim populations, to the rule of Western Governments; second, the successive extinction of all sovereign independent Sunnī Powers of any importance, with the single precarious exception of the fast diminishing Ottoman Empire, and their replacement by the colonial empires of Western Powers (the most conspicuous example of this second development being India, where a large Muslim population passed from the Mughal Rāj to the British Rāj after a short interval of anarchy); and, third, the gradual emergence in Islamic society of a new sense of solidarity and a new desire to express this feeling in some practical form—a development which was a natural and, indeed, almost inevitable reaction to the other two. As a result of these three related developments, interest in the Caliphate revived, and at the same time a confusion of thought arose regarding the character of an office which had been obsolete, in all but name, for many centuries.

"This confusion was due to the misinterpretation of both the history and the theory of the Caliphate by insufficiently instructed Western observers, who drew a false analogy between an Islamic institution which they failed to understand and a Western institution with which they were familiar. They equated the Caliphate with the Papacy; explained it as a "spiritual" office in the Western sense (an abstraction

¹ See Arnold, *op. cit.*, chaps. ix and xi. This rapid depreciation of a title connoting a unique oecumenical sovereignty into one applied by courtesy to any sovereign of any consequence in a comity of parochial states has its parallel in the fate of the title of 'Emperor' in the Western World. The usurpation of this title by Napoleon Buonaparte on the 18th May, 1804, was followed—when the last legitimate Holy Roman Emperor Francis II Hapsburg had opened the flood-gates in proclaiming himself 'Hereditary Emperor of Austria' on the 10th August, 1804, and renouncing his own legitimate title of 'Roman Emperor' on the 6th August, 1806—by the crowning of Dom Pedro I as 'Constitutional Emperor of Brazil' on the 12th October, 1822 (see X. ix. 11).

² See Arnold, *op. cit.*, pp. 130-1.

which was quite foreign to Islamic thought); assumed that the double title of Sultan-Caliph implied a personal union of the "spiritual" and "temporal" powers in the Ottoman Pādishāh; and inferred that these powers could alternatively be divided between different persons. Their error obtained a wide currency in the West¹ (except among a few scholars without influence in international affairs) and even among Muslims who had received a Modern Western in place of a Classical Islamic education. It was consciously and skilfully exploited by 'Abd-al-Hamīd in his dealings with Western Governments, with Muslim peoples under Western rule, and with his own Muslim subjects.²

In at least three peace treaties signed between the years A.D. 1774 and A.D. 1913³ the Ottoman negotiators slyly took advantage of this Western Christian misconception of the Caliphate as a 'spiritual' office in order to secure, in territories that the Sultan was being compelled to cede as Pādishāh, a recognition of his continuing authority there as Caliph—a concession which, if maintained and fully implemented, would have restored to him under one title the political authority that he was surrendering under another. As it turned out, the Christian parties to two of these treaties quickly detected the ruse and insisted—in the one case within seven years and in the other within eleven years of the date of signature of the original instrument—on the cancellation of the insidious provisions.⁴

Although, however, the Caliphate, thus refurbished and passed off as a 'spiritual' office, did not, after all, prove an effective instrument for staving off, or even attenuating, the loss of Ottoman political control over ex-Ottoman territories that the Sultan-Caliph had been compelled to surrender owing to the turning of the tables in the military and political relations between the Ottoman Empire and its Western or Westernizing neighbours since the close of the seventeenth century of the

¹ It seems to have been popularized by M. C. M. d'Ohsson in the first volume of his *Tableau Général de l'Empire Ottoman* (Paris 1787), in which 'he speaks of the "sacerdotal authority" of the Sultan and styles him the "Pontiff of the Musulmans"' (Arnold, op. cit., p. 170).

² Toynbee, A. J.: *Survey of International Affairs*, 1925, vol. i (Oxford 1927, University Press): 'The Islamic World since the Peace Settlement', pp. 32-33.

³ The Russo-Turkish peace treaty signed at Küçük Qaynārja on the 21st July, 1774, Art. 3; the Italo-Ottoman preliminaries of peace signed at Ouchy on the 15th October, 1912; the Turco-Bulgarian peace treaty signed at Constantinople on the 29th September, 1913 (see Toynbee, op. cit., pp. 34-36).

⁴ See Toynbee, op. cit., p. 36. The extent to which the minds of the ruling element in Russia had been Westernized by A.D. 1774 is revealed by the success of Ottoman diplomacy in playing this trick upon the representatives of a still officially Orthodox Christian Power; for in Orthodox Christendom the Christian distinction between Church and State had been confounded in the constitution of Leo III's East Roman Empire (see IV. iv. 352-3 and 592-623); and this East Roman 'Caesaro-papism', transmitted to Russia, had been carried a step farther by Peter the Great when, in A.D. 1700, he had allowed the Patriarchate of Moscow to lapse and then, in A.D. 1721, had made the Orthodox Church in his dominions into a department of state in form as well as in fact by the introduction of the administration of a 'Holy Synod' (see p. 38 below). Thus, in the years immediately preceding A.D. 1774, Church and State were so nearly fused together into an indistinguishable unity that it ought not to have been difficult for Russian statesmen of that age to appreciate, by analogy, the non-existence, in Islam, of any differentiation of a 'spiritual' from a 'temporal' sphere of social life. The less obvious implications of the status of the Oecumenical Patriarch of Constantinople as a servant of the East Roman Emperor had been realized immediately by the less sophisticated Bulgars upon their conversion to Orthodox Christianity in A.D. 865 (see IV. iv. 377-81).

Christian Era, it did produce psychological effects which were imponderable yet appreciable factors in international politics. It gave pause to aggressive-minded Western or Westernizing Powers which had taken the measure of the Ottoman Empire's present political weakness but still remained in awe of the explosive religious force of Islam. Conversely, it made the Ottoman Empire—shrunk though it was—a moral rallying-point for a Muslim diasporá, not only in ex-Ottoman provinces which had passed under the rule of Orthodox Christian 'successor-states', but in distant regions, on other fringes of Dār-al-Islām, which had never been under the rule of an Ottoman or any other Caliph. By the date of the abolition of the Ottoman Caliphate in A.D. 1924 the Muslim minorities in the British Indian Empire, the Soviet Union, and the Chinese Republic alone numbered considerably more than a hundred million in the aggregate, and these outlying millions—unlike the Arab peoples and others in the solid core of the Islamic World, including the Ottoman Turks themselves—had little prospect of ever being able to attain the current political ideal of a Westernizing World by exchanging the alien rule under which they were living at the time for national states of their own.¹ Their situation was not unlike that of their predecessors in the tenth, eleventh, and twelfth centuries of the Christian Era, when Dār-al-Islām was being overrun by barbarians and partitioned among military adventurers, and in these circumstances the Ottoman Caliphate gave them something of the same cohesion and encouragement that the 'Abbasid Caliphate of Baghdad had given to Muslims of that earlier age.²

These psychological effects of the Ottoman Caliphate, as turned to account by Sultan 'Abd-al-Hamid II (*imperabat* A.D. 1876–1909), were such manifestly valuable assets for the Ottoman body politic that the 'New 'Osmanli' liberal opponents of a tyrannous Hamidian autocracy sought, not to abolish the Ottoman Caliphate, but to preserve it for manipulation as an instrument of their own Turkish national policy. The sovereign was styled Caliph, as well as Sultan and Pādishāh, in the Ottoman Constitution of A.D. 1876, and the Caliphate survived 'Abd-al-Hamid's successful *coup d'état* of 1877 and unsuccessful attempt to repeat it in 1909 after the re-establishment of the Constitution in 1908.³ It even survived the abolition of the Sultanate and the vesting of the sovereign power in Turkey in the Great National Assembly at Ankara by a law voted by that body on the 1st November, 1922.⁴ This drastic piece of legislation was a retort to the hostile action of the last Sultan-Caliph Mehmed VI Vahid-ad-Din (*imperabat* A.D. 1918–22), who, seeing

¹ On this point see Toynbee, *op. cit.*, p. 39. By the time when the present passage was being written, the abolition of the Ottoman Caliphate was already more than a quarter of a century old, and the Indian Muslims had succeeded in establishing a separate national state of their own in the shape of Pakistan; but it would have been premature to assume that this was necessarily the end of the story.

² For the alertness of Sultan 'Abd-al-Hamid II in making use of railways, newspapers, and other Modern Western means of communication and propaganda for keeping in touch with a Muslim clientèle all over the World, see Toynbee, *op. cit.*, pp. 39–40.

³ See Toynbee, *op. cit.*, pp. 42–43, and the present Study, IX. viii. 261–3.

⁴ The text of this law of the 1st November, 1922, is printed in Toynbee, *op. cit.*, pp. 50–51.

the monarch's opportunity in the country's adversity, had thrown in his lot with the Empire's ex-victorious adversaries in the late wars of 1914-22 in the hope of putting back the constitutional clock to the point at which it had been marking time before the Revolution of A.D. 1908. In the same law the Caliphate was declared to reside in the House of 'Osmān, and the right of election to the office to lie with the Turkish Great National Assembly. On the strength of a legal opinion (*fatwā*), rendered by the Commissary for the Islamic Law (*Sherī'ah*) in the Government ruling the country in the Assembly's name, to the effect that the office of Caliph had been forfeited by Vahid-ad-Dīn Efendi, the Assembly voted, on the 18th November, 1922, that the office was now vacant, and on the same day they elected another member of the House of 'Osmān, 'Abd-al-Mejīd Efendi, as Caliph without any other title.¹

In attempting to draw this distinction between two traditional titles which historically and juridically were, both alike, emblems of political authority, the followers of Ghāzi Mustafā Kemāl Atatürk were unintentionally playing on themselves the trick which their ancestors had deliberately played on the Russians in A.D. 1774,² and, once again, the equivocal situation created by a false interpretation of the nature of the Caliph's office proved untenable—notwithstanding the suitably in-offensive character of the Assembly's unlucky nominee. When the law of the 1st November, 1922, was followed by another of the 29th October, 1923, proclaiming Turkey a republic and declaring the President of the Republic to be Chief of the State, the incompatibility between the legal position thus created in Turkey and the prerogatives of the Caliphate according to the *Sherī'ah* became so glaring that it was bound to be used as ammunition by Turkish opponents of the régime and to cause overt anxiety among Indian Muslims. The premature publication, in opposition newspapers at Constantinople, of a letter from two eminent Indian Muslims, the Agha Khan and Mr. Ameer Ali, to the Prime Minister of Turkey, intimating, in studiously tactful language, the distress that the Turkish Great National Assembly's actions had been producing among Muslims abroad,³ precipitated the passage by the Turkish Great National Assembly, on the 3rd March, 1924, of a law abolishing the Caliphate and banishing the members of the Ottoman Imperial family from the territories of the Republic of Turkey.⁴ When the news reached Delhi—where, as we have seen, the Caliphate had been revered for seven hundred years with a *naïveté* seldom corrected by first-hand acquaintance—the shock declared itself in a dramatic incident at a Red Crescent tea-party which offers a burlesque counterpart to the

¹ See Toynbee, *op. cit.*, p. 51.

² The innocent misapprehension under which the Assembly acted in November 1922 was attested in a speech delivered by Mustafā Kemāl Pasha himself on the 30th October, 1922, in the debate preceding the passage of the Law of the 1st November. To the question 'What becomes of the Caliphate when the temporal power is taken away from it?' the Ghāzi gave the Levantine d'Ohsson's erroneous answer: in the days of the 'Abbasid Caliphs at Baghdad and of their successors at Cairo, 'the spiritual and temporal power existed separately side by side'. The relevant passage of the speech is printed in Toynbee, *op. cit.*, pp. 54-55.

³ The text is printed in Toynbee, *op. cit.*, pp. 571-2.

⁴ *Ibid.*, p. 575.

tragic scene in Saint Jerome's cell at Bethlehem when the Christian scholar received the news of the fall of Rome.¹

'A mission from the Turkish Red Crescent Society, which was collecting funds in India at the moment when the news of the abolition of the Ottoman Caliphate arrived, found it advisable to cut short its activities and return home. (*The Times*, 5th March, 1924; *Oriente Moderno*, IV, 3, p. 181). The news was actually received during a tea-party at Delhi, where the members of the Turkish mission were being entertained by their Indian co-religionists. Upon the recital of the telegram containing the text of the Turkish Law of the 3rd March, [1924,] all but two of the Indians present immediately left the room.'²

At the time when the present chapter was being written, it looked as if this had really been the end of the Caliphate, for an immediate attempt on the part of the Hāshimī King Husayn of the Hijāz to assume the office (on the eve, as it turned out, of his own ejection from his ancestral patrimony by Ibn Sa'ūd) was—in spite of the Sharīf's unimpeachable Qurayshī lineage and his sovereignty, at the moment, over the two Holy Cities of Mecca and Medina—as dismal a failure as most of his other enterprises.³ Nor did any practical action result from a Caliphate Congress held at Cairo on the 13th–19th May, 1926.⁴

Yet, even if this forecast were to prove correct—though, in the light of previous history, it would not be safe to sign a death certificate for so resilient an institution as the Caliphate until it had been in abeyance for at least a quarter of a millennium⁵—the marvel would be, not that the Caliphate should have petered out at last, but that, on the strength of having been an effective sovereignty over a span of less than two hundred years,⁶ it should have been able within that time to acquire a prestige sufficient to keep it alive, and twice revive it,⁷ for another eleven hundred

¹ See the passage quoted in V. v. 223, n. 2.

² Toynbee, op. cit., p. 63, n. 7. Indian Muslims might have inoculated themselves against this shock by previously exposing themselves to another. 'The present writer once heard, from a British resident in Constantinople, of one instance in which this ignorance [of realities in Turkey] was cruelly dispelled. His informant had been in commercial relations with an Indian Muslim merchant who was a capable man of business and a loyal subject of the British Indian Government, but who cherished a keen sentimental regret for the lost dominion of Islam in India and consoled himself with the belief that in the Ottoman Caliphate there survived one Islamic Power which was as splendid as the Mughal Empire and as efficient as the British Rāj. After sustaining his self-respect as a Muslim upon this illusion for many years, this Indian merchant saved enough money to make a pilgrimage to the seat of the Caliphate at Constantinople—which meant more to him than the Holy Land of the Hijāz—and there became the guest of his British correspondent. The contrast between his long-cherished dream of the Caliphate and the sordid reality of the Ottoman Empire caused him a distress which it was painful to witness. He was appalled by the vast difference of standard between Muslim government in *Dār-al-Islām* and British government in India; and he went home with his spirit broken' (Toynbee, op. cit., p. 39, n. 1).

³ See Toynbee, op. cit., pp. 63–66.

⁴ See *ibid.*, pp. 81–90.

⁵ Its latest interregnum had lasted from the death of the last Cairene 'Abbasid Caliph Mutawakkil in A.D. 1543 to the drafting of the Russo-Turkish Treaty of Küçük Kaynārja in A.D. 1774.

⁶ From the death of the Prophet Muhammad in A.D. 632 to the death of the 'Abbasid Caliph Amin (*imperabat* A.D. 809–13), in a civil war with his brother and supplanter Ma'mūn (*imperabat* A.D. 813–33) over the heritage of their father Hārūn-ar-Rashid (*imperabat* A.D. 786–809).

⁷ i.e. at Cairo in A.D. 1261 and at Constantinople in A.D. 1774.

years¹ during which it never emerged from the state of political impotence into which it had begun to decline in the reign of Hārūn-ar-Rashid's son Ma'mūn (*imperabat* A.D. 813-33).

*'The Holy Roman Empire'*²

This life-curve of the Caliphate, with its successive evocations at Cairo and Istanbul, has its counterpart in the aftermath of the Roman Empire in the West, with its abortive revival there in the shape of the Holy Roman Empire.³ The Roman Power which Pope Leo III and Charlemagne tried to raise from the dead on Christmas Day, A.D. 800, had been effective in the West for rather more than four hundred years.⁴ The Austrasian Power, which thus rashly shouldered the formidable burden of the Roman mantle, was effective for not more than 127 years at the longest reckoning.⁵ Yet, on the strength of these two spasmodic 'jet-propulsions', the Holy Roman Empire not only materialized in the heyday of Austrasia's fortunes, but survived thereafter for all but a thousand years more⁶ in a state of paralysis into which it fell at the death of Charlemagne, the first holder of the title (*regnabat* A.D. 768-814; *imperabat* A.D. 800-14), and from which it never afterwards more than partially recovered.⁷ The shadowy aftermath of the Roman Empire in the West thus attained a span of more than fourteen hundred years in all.⁸ A millennium and a half is no doubt an infinitesimally short span of time on the Time-scale of the age, up to date, of the Human Race or of Life or of the Earth or of the Stellar Cosmos,⁹ but it is a period of almost Egyptian longevity on the scale of the six-thousand-years-old history of the species of human societies called civilizations.

¹ Reckoning from the death of the Baghdadī 'Abbasid Caliph Amīn in A.D. 813 to the deposition of the Constantinopolitan 'Osmanli Caliph 'Abd-al-Mejid in A.D. 1924.

² See xi, map 37.

³ In conformity with our procedure in reckoning back the history of the Caliphate to its inauguration at Mecca in A.D. 632, and not merely to the evocation of its ghost at Cairo in A.D. 1261, we have to reckon back the history of the institution liquidated at Vienna in A.D. 1806 to the foundation of the Roman Empire itself by 'the crafty nephew of Julius' in the year 31 B.C.—as Lord Bryce makes his reckoning in the famous exordium of *The Holy Roman Empire* (quoted in I. i. 343).

⁴ Reckoning from the Battle of Actium in 31 B.C. to the Battle of Adrianople in A.D. 378, or at latest to the death of the Emperor Theodosius I in A.D. 395 (see p. 20, n. 4, above, and p. 40, n. 2, below).

⁵ Reckoning to the death of Charlemagne in A.D. 814 from the Battle of Tecticiacus in A.D. 687 in which Charlemagne's great-grandfather Pepin of Heristal had ended the anarchy let loose by the decay of the Merovingian Power and had brought Neustria as well as Austrasia under the effective rule of the House of Arnulf. The period would be still shorter if its initial date were to be reckoned from Charles Martel's victory over the Arabs at Tours in A.D. 732 or from the crowning of Pepin III in A.D. 754 as King of the Franks (see IV. iv. 488, n. 1), or from the crowning of Charlemagne himself as Emperor on Christmas Day, A.D. 800.

⁶ Reckoning from the death of Charlemagne in A.D. 814 to the renunciation of the title by Francis II in A.D. 1806.

⁷ In Charlemagne's time, and likewise at each of the successive revivals of the Holy Roman Empire after its first rapid lapse into impotence in the hands of Charlemagne's Carolingian successors, this Western ghost of the Roman Empire was an effective political power only in so far as it played the part of a continental march for Western Christendom. Under Charlemagne and the Saxon Emperors the Holy Roman Empire served as a march against the Continental European barbarians (see II. ii. 166-70); under the Hapsburgs it served as a march against the 'Osmanlis' (see II. ii. 177-90).

⁸ Reckoning from the death of Theodosius I in A.D. 395 to A.D. 1806.

⁹ For time-scales, see Zeuner, F. E.: *Dating the Past* (London 1946, 2nd ed. 1950, Methuen), and the present Study, I. i. 173.

It is noteworthy that, like the 'Abbasid Caliphate, the Holy Roman Empire retained, even at the vanishing-point of its effective power, a certain market value as a unique fount of honour.

'To [the] strange political fiction [that the 'Abbasid Caliphs of Baghdad were still ruling after they had ceased to govern] there is a parallel in the history of the Holy Roman Empire during the fifteenth century [of the Christian Era]. While the unfortunate Emperor Frederick III, having been driven out of Vienna, was wandering about from monastery to monastery as a beggar, making what money he could out of the fees paid by those on whom he conferred titles, a contemporary jurist, Aeneas Piccolomini (afterwards famous as Pope Pius II), could write that the power of the Emperor was eternal and incapable of diminution or injury, and that anyone who denied that the Emperor was lord and monarch of the whole Earth was a heretic, since his authority was ordained by Holy Writ and by the decree of the Church.'¹

In A.D. 1952, when nearly a century and a half had elapsed since the self-liquidation of the Holy Roman Empire in A.D. 1806 by a voluntary act of the then reigning Emperor, the title of 'Count of the Holy Roman Empire' was still being conferred by the Sovereign Pontiff of the temple-state of the Vatican—who would perhaps have pleaded a victor's right to dispose of the sole remaining spoils of a rival institution which his own predecessors had brought to the ground in the tremendous struggle between Papacy and Empire during the so-called 'Middle Ages' of Western history.²

The Haunting of the 'Osmanlis and the Mongols by 'Ghosts of Ghosts'

While the Holy Roman Empire was compensated for the briefness of its effective reign, and the Cairene Caliphate for being cheated of any effective reign at all, by the inordinate length of a dim epilogue, the East Roman Empire in Orthodox Christendom and the Sui and T'ang Empire in the Far East had to pay for a longer spell of full-blooded life by suffering a more swift and drastic liquidation. No milder remedy than this could have saved from an immediate and premature death the societies on whose life-blood these two vampires had been feasting. The collapse, when it came, was in both societies so extreme that the exhausted civilization was fain to receive its respite and rest-cure in the shape of a universal state from the hands of alien empire-builders—the 'Osmanlis performing this unwelcome and indispensable service for the main body of Orthodox Christendom, and the Mongols for China.³

These aliens began by filling the social void which they found in their field of reconstruction work with characteristic institutions of their own,⁴ and they also eked out their own talents by enlisting ability wherever else they could lay hands on it, rather than from among the demoralized and discredited *ci-devant* dominant minority of the prostrate society for whose government the high-handed conquerors had now made themselves responsible. The Mongols organized their government of China

³ See IV. iv. 512-84.

⁴ For the institutions that the 'Osmanlis brought with them into Orthodox Christendom from the Eurasian Steppe, see III. iii. 22-50.

with the help of Muslims from the western fringes of their spreading dominion, or of Western Christians from beyond its verge, of whom the most famous was Marco Polo. The 'Osmanlis drew on Western Christian renegades as well as on children of their own Orthodox Christian *ra'iyeh* whom they had first 'denatured' by a Platonic system of education. In the governments of both these alien universal states it is the more remarkable to observe, on closer inspection, the presence of a number of institutional survivals of the liquidated vampire polities, and to find the evicted native dominant minority stealthily winning their way back into power as the mandarins who inducted Mongol and Manchu war-lords into the arts of Chinese administration, and as the Phanariots who made themselves indispensable to their Ottoman masters as soon as these were driven to enter into serious diplomatic relations with the Powers of the Western World owing to the loss of their own former military ascendancy.¹ Though the institutional survivals, as they catch our eye, present themselves largely in the forms of outward ceremonial and official insignia and costume, we may infer with confidence, from these outward visible signs, an inward psychological legacy from the East Roman Empire to an Ottoman 'Qaysar-i-Rum' and from the Sui and T'ang Empire to a Mongol 'Son of Heaven'.

'The Great Idea' of the Modern Greeks

The legacy that descended on the victorious 'Osmanlis did not cease to weigh upon the discomfited Greeks. Though the East Roman Empire came to grief in A.D. 1071² through the nemesis of the suicidal policy of military aggression on all fronts³ which had preceded, precipitated, and followed the great Romano-Bulgarian war of A.D. 977-1019, and though the rally led by the Emperor Alexius Comnenus (*imperabat* A.D. 1081-1118)⁴ brought no more than a passing relief, the Byzantine political incubus that was crushing the life out of the Greek people not only made a profound impression on their imaginations but also secured an enduring hold on their affections. When the Western military adventurers whose enterprise was nicknamed 'the Fourth Crusade' gave the stricken East Roman Empire its *coup de grâce* by storming and sacking Constantinople in A.D. 1204, they found the prestige of the battered Imperial Throne at Constantinople still standing so high among the conquered Greek population that they decided to enthrone one of their own number as a usurping 'Latin Emperor', in the hope—a vain one, yet the only hope that they had—that the double magic of the Imperial City and Name might commend their hated rule to their recalcitrant subjects.

These lures did indeed exercise an irresistible attraction upon the East Roman Empire's refugee Greek 'successor-state' at Nicaea in North-Western Anatolia, which had first successfully defied the invaders and had afterwards anticipated the career of the 'Osmanlis by bestriding the Dardanelles and gathering in fragments of ex-Imperial territory in the Balkan Peninsula.⁵ The able princes of Nicaea were

⁴ See V. vi. 298.

³ See IV. iv. 391-404.

⁵ See III. iii. 27.

obsessed from first to last by the ambition of reoccupying Constantinople and there assuming the Imperial style and title; and in A.D. 1261 Michael Palaiologhōs duly achieved these Epimethean ambitions at the cost of losing to Turkish interlopers the best part of that precious Anatolian ground from which his principality had drawn its strength. This loss condemned the outwardly restored Empire to impotence from the start. Yet even the two-centuries-long agony of this shadow of a shadow of the Roman Empire, from the reoccupation of Constantinople in A.D. 1261 to its capture by the 'Osmanlis in A.D. 1453, did not cure the Greeks of their infatuation with a polity that had proved their ruin. Year by year, till these years had mounted up to little less than half a millennium,¹ the Greeks of Constantinople continued, under Ottoman rule, to expect the restoration of the East Roman Empire by a miraculous intervention of God.² And, in spite of invariable disappointment, 'the Great Idea'³ had power to entice Ypsilandi into making his fatuous raid across the Pruth in A.D. 1821⁴ and Venizelos into embarking in A.D. 1919 on an Anatolian adventure that was to meet with such a tragic ending in 1922. Nothing less than the eviction of a Greek diasporā of some

¹ A.D. 1453-1923.

² This expectation was sufficiently intense and persistent to find its way into Modern Greek folk-lore, where it expressed itself in the two parallel motifs of the miraculously interrupted service in the Cathedral Church of Ayia Sophia in Constantinople and the miraculously interrupted frying of the fishes.

A folk-song about the miraculous interruption of the service on the eve of the capture of the Imperial City by Sultan Mehmed II Fātih in A.D. 1453 is printed in Politis, N.G.: 'Εκλογαὶ ἀπὸ τὰ Τραγούδια τοῦ Ἑλληνικοῦ Λαοῦ (Athens 1914, Estia), pp. 4-5, and a folk-song about the miraculous interruption of the fish-frying in Passow, A.: *Carmena Popularia Graeciae Recentioris* (Leipzig 1860, Teubner), p. 147, No. cxcvii. A folk-tale about the fish-frying is published by Politis in two versions in his *Μελέται περὶ τοῦ Βίου καὶ τῆς Γλώσσης τοῦ Ἑλληνικοῦ Λαοῦ: Παραδόσεις* (Athens 1904, Sakellarios, 2 parts), part i, p. 21 (texts), and part ii, pp. 656-7 (commentary). The writer has been able to run these sources of the legend to earth thanks to the learning and the kindness of Professor R. J. H. Jenkins.

In one of these three pieces of popular Romaic Greek literature—the folk-song about the fishes—the episode of the miracle heralding the fall of Constantinople stands by itself—τὰ ψάρια πεταχτήκανε, τὰ ψάρια ζωνταῖα ἐπὶ τῇ ἀρχιεπισκοπῇ τοῦ καβαλάρησ—without the promise of an equally happy ending for the other two. The other two pieces of literature are the sequel in both the other two places. The first of the two prose versions of the legend about the fish, as given by Politis, runs as follows:

'At the time when the Turks were besieging the City, a monk was frying seven fishes in a frying-pan. He had already fried them on one side and was just turning them over on to the other when someone comes and tells him that the Turks have taken the City. "Never will the Turks set foot in the City," says the monk. "I will wait to believe that till I see these fried fishes come to life again." The words were not out of his mouth before the fishes leapt out of the frying-pan alive and dropped into a piece of water close by; and, down to this day, those fishes that came alive are in Balyqlı [*Anglicē* 'Fishwych'—A.J.T.] and will continue to be found there, still half-fried yet alive again, until the hour comes for us to take the City. Then, they say, another monk will come and finish frying them.'

'The fishes are pointed out in the holy well of the Zoodhókhos, outside the walls [of Constantinople], not far from the Gate of Silymbria (*alias* Piyı), according to Politis, *Μελέται*, part ii, p. 656. According to a Turkish version of the tale (*ibid.*, n. 1), there were originally seven fishes, but only five are now left.

The writer of this Study visited Balyqlı in A.D. 1921, but did not see even a residue of five half-fried fishes swimming there, though, in a year when Eastern Thrace was under Greek military occupation again for the first time since A.D. 1360, the possibility that the Greeks might reoccupy Constantinople too seemed less remote than at any other date, either earlier or later, since A.D. 1453.

³ 'Ἡ Μεγάλη Ἰδέα, meaning a conception of Modern Greece as being the heir of the East Roman Empire.

⁴ See II. ii. 226-7 for Ypsilandi (in Greek spelling 'Hypsēlantēs') and his adventure.

1,280,000 souls from Anatolia and Eastern Thrace¹ availed to banish from Greek minds the persistent dream of restoring the East Roman Empire; and the previous potency of the ghost that was thus at last exorcised is demonstrated by the sequel. Though the Graeco-Turkish war of A.D. 1919-22 had inflicted greater devastation and suffering on both sides than any of its predecessors, it was followed within eight years by a Graeco-Turkish *entente*;² and this apparent paradox admits of only one explanation. The loading of the atmosphere with a new charge of hate was far outbalanced by the lightening of it through the dissipation of an old illusion.

'At Ankara, a silent witness of the historic event of October 1930 was one of the most famous monuments of Classical Antiquity: the longest extant Latin inscription in the World, in which the first of the Roman Emperors had recorded his achievements. The Roman Empire had bequeathed its name to its former dominions in the Near East (Rum, Rum-ili, Romania) and to the peoples which had inherited them. The 'Osmānlis had been known as Romans (Rūmīs) among their Muslim neighbours in Iran and Hindustan, while the modern Greeks had called themselves Romans (Romaioi) until a romantic nationalism, acquired in the West, had taught them to think of themselves as Hellenes. The hold of Rome upon the Near Eastern imagination had only relaxed with the break-up of the Ottoman Empire, which was the Roman Empire's last and strangest reincarnation. The Greeks really repudiated their Imperial Roman heritage when they rose in insurrection in A.D. 1821, the Turks when they signed their National Pact in A.D. 1920. Therewith, the ghost of the Roman Empire, which had so long haunted the Near East, was finally exorcised. The Imperial City of Constantine—the New Rome on the Bosphorus—had ceased to be the capital of an empire or even of a "successor-state". Indeed it was no longer a bone of contention between the states into which the defunct empire had been partitioned. The Oecumenical Patriarch, who had once laid claim, in his very title, to be the head of the Orthodox Church through all the World, had seen his flock diminish until now it was merely represented by that Orthodox Christian minority—less than 100,000 strong—which was recognised as "established" in Constantinople by the terms of the convention of the 10th June, 1930. . . . A meeting, at Constantinople, between the ecclesiastical head of the ancient Greek Church and the political head of the modern Greek State had ceased to be an event of political significance. If there were any statesmen living in 1930 who could claim to have "made history", they were Mustafā Kemal and Eleftherios Venizelos.'³

'Moscow the Third Rome'⁴

While 'the Great Idea' of the Greeks had been a minor tragedy and major curiosity of history, the sowing of the same seed in Russia had been big with consequences of historic importance which, at a date midway through the twentieth century of the Christian Era, had perhaps not yet come to full harvest.

⁴ See xi, map 49.

When the lingering shadow of a restored East Roman Empire—the ghost of the ghost of an Hellenic universal state—was finally effaced by the Ottoman conquest of Constantinople in A.D. 1453, the Russian offshoot of Orthodox Christendom¹ was about to enter into a universal state of its own. The establishment of this Russian universal state may be dated from the annexation of the Republic of Novgorod² between

¹ For the relation of Russian Orthodox Christendom to the original home of the Orthodox Christian Civilization in Anatolia and the Balkan Peninsula, see I. i. 132–3.
² See IV. iv. 88; V. v. 312; V. vi. 191 and 309; and IX. viii. 126. Prince Dmitri Obolensky comments:

'Is there not some danger of over-estimating the importance of this union? I would say that the annexation of Novgorod and its dependencies by Ivan III, though of course it vastly increased the territories and economic resources of Muscovy, was in itself only a stage in the lengthy process by which the Muscovite sovereigns succeeded in annexing the greater part of their Kievan predecessors' "patrimony" (except, of course, the south-western regions). This process began *circa* A.D. 1300 and may be said to have ended in A.D. 1533, with the death of Basil III; and the annexations of Tver, the Chernigov and Seversk lands, Pskov, Smolensk and Ryazan, which took place in the latter part of Ivan III's reign and in the reign of Basil III, were perhaps in the long run as important landmarks in this process of "gathering" as the conquest of the Novgorodian lands.

'It seems to me, moreover, that the term "universal state" is more applicable to the multi-national Empire that arose out of Ivan IV's Eastern conquests than to the still essentially Russian states of Ivan III and Basil III. For the annexation of Smolensk (A.D. 1514) and the incorporation of the Ryazan principality (*circa* A.D. 1520) into Muscovy mark the final political unification of the Great Russian lands under Muscovite dominion, while the conquest of Qazän, Astrakhan and Western Siberia in the reign of Ivan IV, which brought into the Muscovite realm large areas of non-Russian population and culture, may perhaps be regarded with greater justification as the opening chapters in the history of the Russian "universal state".'

On consideration of the first of the two points here made by Prince Obolensky, the writer of this Study does not find himself persuaded that the union of Novgorod with Muscovy was not, after all, the crucial event in the process of the political unification of the territorial patrimony of a Russian Orthodox Christendom under Muscovite rule. Among the parochial states that had sprung from the ruins of the ascendancy of the principality of Kiev, Novgorod was surely unique in being a commercial community with a vast economic hinterland extending north-eastwards to the shores of the White Sea and the Arctic Ocean as far as the estuary of the River Obi on the farther side of the Urals, and in maintaining an active intercourse with the Hanseatic states members of a contemporary Western city-state cosmos on the cultural as well as on the economic plane. In exchange for the furs produced by her north-eastern hinterland, Novgorod had imported from her Western customers the political institution of self-government on the city-state scale. In virtue of this combination of commercial wealth with political liberties, Novgorod was surely the one other Russian parochial state in this age that might perhaps have competed seriously with Moscow for the role of becoming the nucleus of a Russian universal state which, had it crystallized round Novgorod instead of crystallizing round Moscow, would have had a different *ethos*, as well as a different geographical centre, from the Muscovy that actually performed this historic service for a Russian Orthodox Christendom. On this account the writer remains convinced that, in the building of the Russian universal state, the subjugation of Novgorod by Moscow was the decisive event that may be taken as marking the Russian universal state's establishment (though, of course, the precise dating of the consummation of any historical process is inevitably arbitrary and conventional and consequently open to dispute).

Prince Obolensky's second point turns, as will be seen, on the choice of a different criterion for the epiphany of a universal state from the criterion chosen in the present Study. The term 'universal state' is used here to denote an empire that is 'oecumenical' in the sense of embracing the whole geographical domain of the 'world' constituted by some single civilization, while Prince Obolensky is inclined to appropriate the same term for the different (though, no doubt, equally legitimate) purpose of denoting a state that is universal in the sense of embracing at least parts of the domains of more civilizations than one. In a later chapter (pp. 61–67, below) we shall observe that most of the universal states that had been 'oecumenical' in the sense of embracing the whole domain of some single civilization had also been 'cosmopolitan' in the sense of including parts of the domains of alien civilizations as well; but this feature in the composition of a universal state, though usual, will prove to be neither essential nor indeed invariably present. The essential and never-absent mark of a universal state, in the sense in which the term is used in this Study, is the political unification, within its frontiers, of the whole domain of some single civilization.

A.D. 1471 and A.D. 1479 by the Grand Duke of Moscow, Ivan III (*imperator* A.D. 1462–1505). This swift sequence of momentous events in the main body of Orthodox Christendom and in its Russian off-shoot, and the dramatic contrast between the final downfall of Orthodox Constantinople and the definitive triumph of Orthodox Moscow, made a profound effect upon the Russian imagination.

'The expansion of every nation, the growth of every empire, is usually the outward sign of an inward conviction of the people that they have a special mission to perform. The striking transformation of the small Moscow principality into one of the largest states of the World was the result of the deep-rooted belief of her people that they were called upon to defend Eastern Orthodoxy.'¹

Other Orthodox Slav princes before the Muscovite Ivan III had coveted the dazzling insignia of the East Roman Empire and had audaciously stretched out greedy hands to snatch them from the person of a legitimate Emperor reigning at Constantinople; but, unnerved by their own impiety, they had faltered and failed, with disastrous ulterior consequences for their own principalities. After missing, in A.D. 913, a chance of mounting the Imperial Throne at Constantinople, Khan Symeon of Bulgaria had proclaimed himself 'Emperor of the Romans and Bulgars' in A.D. 925, and the Archbishop of Preslav 'Patriarch' of his hybrid empire in the year after;² but within less than a century the Bulgarian state had been erased from the political map of Orthodox Christendom: a war to the death had ended in the outright annexation of all Bulgaria by an East Roman Empire which Khan Symeon had aspired to supplant.³ The Bulgar Khan had rashly challenged the East Roman Empire at its zenith; at its nadir, when the possession of the beggarly remnant of its domain was being contested between a legitimate Palaiologhos and the pretender John Kandakouzinós, the Serb war-lord Stephen Dushan had had himself crowned by the Patriarch of Bulgaria and by his own Serbian Archbishop of Peć on Easter Day, A.D. 1346, as 'King of Serbia . . . Albania and the sea-board, prince of the Empire of Bulgaria, and lord of almost all the Empire of Romania'.⁴ The misgivings revealed in this cautiously accurate enumeration had afterwards been veiled in the bolder style and title of 'Emperor and Autocrat of Serbia and Romania';⁵ yet the waning shadow of the East Roman Empire had eluded Dushan's grasp, and, within less than half a century, the Serb war-bands had been scattered like chaff by their 'Osmanli competitors for the prize of becoming the founders of a universal state for the main body of Orthodox Christendom. The Muscovites, who afterwards trod with impunity the perilous path down which a Bulgarian Symeon and a Serbian Stephen had carried their ephemeral empires to destruction, were not even inspired directly by either of these two magnificent failures; they drew their inspiration from a Second

⁵ Gibbons, loc. cit.

Bulgarian Empire which had dragged out its undistinguished existence during the two centuries (A.D. 1186-1393) between the collapse of the East Roman Empire in South-Eastern Europe and the political unification of the main body of Orthodox Christendom by the 'Osmanlis.

'The Second Bulgarian Empire with its centre at Trnovo had for a time controlled the Balkans; its rulers had styled themselves Tsar and Auto-krâtôr, and at their court there had been a literary revival when Greek works were translated into Bulgarian. Among these translated works was the verse chronicle of Manasses. In this chronicle the decline of the Roman Power in Western Europe was described: the Old Rome of the West had failed, but Constantinople had taken its place and still stood young and vigorous. In the Bulgarian version Constantinople disappears, and in its stead the chronicler's praise is transferred to "our new Tsarigrad" and the Bulgarian Tsar. Trnovo claimed for itself the imperial glory of the city of Constantine. In A.D. 1393 the Bulgarian Empire fell before the attack of the Turks, and many exiles fled from Bulgaria to Moscow. A Bulgarian, Kiprian, at this time became Metropolitan of Moscow. It looks as if these *émigrés* had carried with them the imperial theory which on Bulgarian soil had been shattered by the Turkish victory. It was Kiprian who, when a dispute had arisen between Moscow and the [East Roman] Empire, wrote to the Patriarch of Constantinople: "We have a church but no Emperor, and we do not recognise him." Byzantium replied by a re-assertion of its sole claim to imperial sovereignty. In A.D. 1438-9 came the Council of Florence and the union of the Eastern and Western churches. Orthodoxy had been betrayed by the Greeks: The Metropolitan Isidor [of Moscow], who had played the traitor's part at the Council, was cursed as a renegade.¹ In A.D. 1453 Constantinople itself fell into the hands of the Turks. The lesson thus taught by history was obvious: here was the hand of God.²

The Muscovites took full advantage of the opportunity that now lay open to them. In A.D. 1472 the Grand Duke Ivan III married Zoë (*Russicé* Sophia) Palaiológos, a niece of the last Constantinopolitan Orthodox Emperor Constantine,³ and adopted as his own coat-of-arms the two-headed East Roman eagle.⁴ In A.D. 1480 he repudiated the

¹ Isidore was not only discredited; he was ejected and replaced by a successor of Russian, instead of Greek, nationality; and at the same time the Oecumenical Patriarch's ecclesiastical suzerainty over the Metropolitan See of Moscow was repudiated. See IX. viii. 398.—A.J.T.

² Baynes, N. H., and Moss, H. St. L. B.: *Byzantium* (Oxford 1948, Clarendon Press), pp. 383-4. Cp. Zernov, N.: *Moscow the Third Rome*, reprint of 2nd ed. (London 1944, S.P.C.K.), p. 34: 'This catastrophe, comparable only to the destruction of Jerusalem or the sack of Rome, required an explanation, and this was found in the apostasy of the Emperor and the Oecumenical Patriarch.'

³ The Thirteenth, counting from Constantine the Great, on one reckoning, the Eleventh on another.

⁴ These two events are, however, given a different complexion by Prince Obolensky in 'Russia's Byzantine Heritage', *Oxford Slavonic Papers*, vol. i (Oxford 1950, Clarendon Press), p. 46:

'Of course there can be no doubt that Russian Tsarism welcomed the theory that the seat of Imperial sovereignty had migrated to Moscow after the fall of Constantinople; the Tsar's adoption of Byzantine titles, heraldry and ceremonial can be regarded as a visible symbol of this claim. But . . . the Christian universalism of East Rome was transformed and distorted within the more narrow framework of Muscovite nationalism. The really significant fact is that the beginning of Russia's turning away from her Byzantine heritage in the late fifteenth century coincided with the growth of her connexions with the West; Ivan III's marriage with Zoë was a harbinger of these connexions; for the

suzerainty of the Tatars of Bātū Khan's Appanage and proclaimed his own independence under the title of Autocrat. His second successor Ivan IV the Terrible (*imperabat* A.D. 1533-84) had himself crowned Emperor in 1547. In A.D. 1551 a Council of the Russian Church asserted the superiority of the Russian version of Orthodoxy over all others.¹ In the reign of Tsar Theodore (*imperabat* A.D. 1584-98), in A.D. 1589, the Metropolitan of Moscow was elevated by the Oecumenical Patriarch of the day to the status of Patriarch of All Russia.² In taking these successive steps the Russians were on stronger ground than their Bulgar and Serb precursors whose ventures had ended so ignominiously. They were not usurpers challenging living legitimate bearers of the Imperial title, but residuary legatees taking over a vacant heritage; and, so far from being conscious of sin, they were confidently self-righteous.

† 'The feeling that the Greeks had betrayed their Orthodoxy, and were therefore punished by God, was particularly strong in the remote Church of Russia, where anti-Latin tendencies were very pronounced. . . . To the Russians it seemed that, if the Greeks were rejected by God for the betrayal of Orthodoxy, they themselves were restored to political independence because of their devotion to the Church. The Russian nation was the last stronghold of the Orthodox Faith, and would thus inherit all the privileges and duties of the Christian Roman Empire.'³

This Russian belief in Russia's high destiny was fortified by Biblical and Patristic authority. The four successive universal states that were a prominent motif in the Book of Daniel⁴ had been identified by the Christian Father Hippolytus (*florebat circa* A.D. 230)⁵ as the Empires of Babylon,⁶ the Achaemenidae, Alexander the Great, and Rome.

'During the ascendancy of the Fourth Realm the greatest events in human history were expected to take place, including the Second as well niece of the last Byzantine Emperor came to Russia from Italy accompanied by a papal legate, and the marriage had been arranged in Rome.'

¹ See Zernov, *op. cit.*, p. 58.

² See Zernov, *ibid.*, pp. 69-73. In spite of his assumption of this style and title, the Patriarch of Moscow did not succeed immediately in extending his ecclesiastical domain beyond the previous limits of the Muscovite Metropolitan See. Russian Orthodox Christians who were political subjects of the United Kingdom of Poland-Lithuania and who did not become Uniate ecclesiastical subjects of the Roman Church continued to be ecclesiastical subjects of the Oecumenical Patriarchate of Constantinople until after Kiev had fallen under the political sovereignty of Muscovy—as it fell provisionally in A.D. 1667 and definitively in A.D. 1686. After the death of the reigning Metropolitan of Kiev in A.D. 1671, the Muscovite Government deliberately kept the See vacant; and, when in A.D. 1684 they gave their consent at last to the holding of a new election, they stipulated that the new incumbent should be the ecclesiastical subject of the Patriarch of Moscow, and no longer of the Oecumenical Patriarch of Constantinople. The Metropolitan of Kiev who was elected on the 29th June, 1685, accordingly obtained investiture from the Patriarch of Moscow; and, when the Oecumenical Patriarch refused to recognize the alienation of the See of Kiev from his own ecclesiastical jurisdiction, he was compelled to give way by the Sultan acting at the instance of the Tsar, whom the Porte was eager to appease, in the vain hope of deterring Moscow from joining the Western Christian coalition against the Ottoman Empire (see Doroshenko, D.: *History of the Ukraine*, English translation (Edmonton, Alberta, 1939, The Institute Press), pp. 324-8).

³ Zernov, *op. cit.*, pp. 34-36.

⁴ Daniel ii. 27-49; vii. 1-28; ix. 24-27.

⁵ Though Hippolytus lived and worked in Rome, he wrote in Greek—which was the language of the proletariat, and therefore of the Church, in the Imperial City till after his day—and his works were therefore current in Eastern Orthodox Christendom.

⁶ i.e. the Neo-Babylonian Empire of Nebuchadnezzar, not the original Babylonian Empire of Hammurabi.

as the First Coming of the Messiah. The collapse of the western part of the Roman Empire in the fifth century did not affect this conviction, for the Eastern Christians believed that Constantinople was the New or Second Rome. They ascribed to her the same promises of indestructibility which were originally made in regard to Rome herself. When Moscow became the only capital among the Eastern Christians free from the control of the Infidels, it was natural that she should be elevated to the position of the Third and Last Rome.¹

This belief was given its classical formulation by an elder of a monastery in Pskov, Philotheus, in an epistle addressed to the Grand Duke Basil III (*imperabat* A.D. 1505-33).

'The Church of Old Rome fell [because of] its heresy; the gates of the Second Rome, Constantinople, were hewn down by the axes of the infidel Turks; but the Church of Moscow, the Church of the New Rome, shines brighter than the Sun in the whole Universe. Thou art the one universal sovereign of all Christian folk; thou shouldst hold the reins in awe of God. Fear Him who hath committed them to thee. Two Romes are fallen, but the Third stands fast; a fourth there cannot be. Thy Christian kingdom shall not be given to another.'²

Two generations later, a paraphrase of this famous passage was written into the installation charter of the first Patriarch of Moscow³ over the signature of his creator the Oecumenical Patriarch Jeremiah:

'Because the Old Rome has collapsed on account of the heresy of Apollinarius, and because the Second Rome, which is Constantinople, is now in [the] possession of the godless Turks, thy great kingdom, O pious Tsar, is the Third Rome. It surpasses in devotion every other, and all Christian kingdoms are now merged in thy realm. Thou art the only Christian sovereign in the World, the master of all faithful Christians.'⁴

The Russians' bold application to their own universal state of the belief in the immortality of an oecumenical Roman Empire seems to have moved a Muscovite Government—in so far as this 'great idea' had any practical influence on Muscovite policy—to concentrate its attention and effort more steadily than ever upon working for the Russian aims of saving a still inviolate 'Third Rome' from suffering 'the Second Rome's' and 'the First Rome's' fates and of liberating from Western political and ecclesiastical domination the Russian Orthodox Christian lands and peoples that had fallen under the rule of Poland and Lithuania since the fourteenth century,⁵ without allowing itself to be diverted by Western diplomacy into fancying itself in the romantic role of a divinely appointed liberator of non-Russian Orthodox Christians who had fallen under Otto-

¹ Zernov, N.: *The Russians and their Church*, p. 50.

² Philotheus of Pskov, op. cit., as cited in Zernov, *The Russians and their Church*, p. 51. In this passage, Philotheus has taken his cue from earlier Russian expressions of the same idea. For instance, 'the chronographer of A.D. 1512 writes: "Constantine's city is fallen, but our Russian land through the help of the Mother of God and the Saints grows and is young and exalted. So may it be, O Christ, until the end of Time!" The words which the Bulgarian translator of Manasses had applied to Tmovo are here claimed for Moscow' (Baynes, N. H., and Moss, H. St. L. B.: *Byzantium* (Oxford 1948, Clarendon Press), p. 384).

³ For the establishment of the Patriarchate of Moscow in A.D. 1589, see p. 35, above.

⁴ Text as cited in Zernov, op. cit., p. 71.

⁵ See IX. viii. 126-8.

man Muslim rule as a penalty for 'the Second Rome's' apostasy.¹ The political mission of 'the Third Rome' would be neither to rescue nor to reform 'the Second Rome', but to supplant her, as it had been the Christian Church's mission to supplant the Jewish Church. The effect, in Russian souls, of the concept of 'Moscow the Third Rome' seems to have been to precipitate, focus, and express a Russian sense of the uniqueness of Russia's own destiny as the sole surviving repository and citadel of an impeccably orthodox Christianity; and this sense of destiny subsequently demonstrated its strength by surviving some very formidable opposition.

While 'it is an open question whether Jeremiah himself fully understood the Russian text [of his charter] and shared the interpretation given by the Russians to the act committed by him',² it is certain that, when the four Greek Patriarchs of Constantinople, Alexandria, Antioch, and Jerusalem jointly accorded recognition to the Patriarchate of Moscow in A.D. 1593, they assigned to the new Patriarch the fifth and not the first place in their order of precedence.³ Thereafter, in the seventeenth and eighteenth centuries, the ideal of 'Moscow the Third Rome' was signally defeated first by Greek Orthodoxy and then by the secular civilization of the West.

In consequence of a schism within the bosom of the Russian Church, arising from the championship of Greek as against Russian ritual practice⁴ by no less a person than the reigning Patriarch of Moscow, Nikon,⁵ the four Greek Patriarchs—Ottoman *ra'iyyeh* though they were—became for a moment the arbiters of Russia's ecclesiastical destiny. At a Council held at Moscow in A.D. 1666–7, over which the Patriarchs of Alexandria and Antioch presided, the opponents of Nikon's Graecizing reforms were excommunicated, and the Russian hierarchy were compelled to sign a statement renouncing the pretension, put on record by the Council of A.D. 1551, that Muscovite Orthodoxy was an ensample for the rest of the Orthodox Church. At the same time Nikon himself was deposed and unfrocked.⁶

¹ See Prince Dmitri Obolensky in *Oxford Slavonic Papers*, vol. i (Oxford 1950, Clarendon Press), pp. 46 and 62, together with the further observations from him and from B. H. Sumner that are quoted, in an annex, on pp. 577–9, below.

² Zernov, *op. cit.*, p. 71.

³ See Zernov, *op. cit.*, loc. cit.

⁴ 'The cause of these differences in ritual, discovered by the Russians in the seventeenth century, was their long separation, under the Tatar yoke, from the rest of Eastern Christendom. For, whilst the Church of Byzantium had gradually altered liturgical customs, the Russians had preserved intact the ritual received by them at the time of their conversion in the tenth century' (Zernov, *op. cit.*, p. 100). It will be seen that the circumstances in which this issue between the Russian and Greek versions of Eastern Orthodoxy arose in the seventeenth century were remarkably similar to those in which the issue between the Irish and Roman versions of Western Catholicism had arisen in the seventh century (see the present Study, I. i. 29 and II. ii. 333–6). There is a singular resemblance between the masterful characters, and parallelism between the chequered careers, of Nikon and Wilfrid. The two prelates won a conspicuous and enduring victory for the causes of Constantinople and Rome respectively, and both of them eventually brought personal discomfiture and downfall on themselves through the intolerable hybrid bred in their imperious souls by the brilliance of their previous successes.

⁵ Nikon *patriarchico munere fungebatur* A.D. 1652–66.

⁶ Zernov, *op. cit.*, pp. 103–4. This Greek ecclesiastical ascendancy in Muscovy proved ephemeral. 'In general, the religious and cultural links between the [Russians and the Greeks], which had been steadily increasing during the first three-quarters of the

In the next generation, Peter the Great applied his extraordinary genius to a revolutionary attempt to transform Muscovy from a Russian Orthodox Christian universal state, believing itself to be charged with a unique oecumenical mission, into an efficient parochial state member of the contemporary Western comity. Peter transferred the capital of his dominions from Russian Orthodox Moscow to a new city, founded by him in the maritime Western March of the Russian World and named after its founder; and, on the culturally as well as physically virgin soil of St. Petersburg, a Westernizing Russia was to have a seat of government that would be Western from the start, uncontaminated by any antecedent deposit of Orthodox tradition.¹ Peter also instilled a tincture of Westernism into the Muscovite Church by filling the key posts in the Russian Orthodox hierarchy, hitherto held by Muscovites, with Ukrainian clerics from Kiev and the Ukrainian territories lying east of the River Dniepr that had been acquired by Muscovy from Poland-Lithuania in A.D. 1667;² for, under a Roman Catholic ascendancy, the Ukrainian Orthodox clergy, whether they opposed Romanization or yielded to it, had been constrained to study Roman theology and in the process had been mentally re-oriented to a partially Western outlook.³ Finally, after having left the Patriarchal Throne of Moscow lying vacant for twenty years, Peter replaced the Patriarchate in A.D. 1721 by a 'Holy Synod' composed of ecclesiastics appointed by the Emperor himself and explicitly acknowledging his supremacy; and, to make sure that his control should be effective, he placed the Synod under the supervision of a lay Procurator.⁴

This rain of blows might have been expected to be crushing, yet the ideal once conveyed in the concept of 'Moscow the Third Rome' clung to life in its traditional religious expression and eventually found for itself new expressions in terms of the ideologies of a Westernizing World whose atmosphere the Russians were now constrained to breathe. The

seventeenth-century, had declined in the last quarter, when Kiev [ceded to Muscovy by Poland-Lithuania in A.D. 1667], not Constantinople, proved itself the leading Orthodox cultural influence on Russia. When in A.D. 1685-6 the Metropolitanate of Kiev was placed under the jurisdiction of the Moscow Patriarchate, this was effected without previous agreement with Constantinople, and the [Oecumenical] Patriarch could do nothing but register unavailing protests. Ukrainians, not Greeks, became the leading representatives, in Russia, of new trends in Orthodox thought and education. Constantinople no longer, as in the days of Nikon, represented for Russia the fountainhead of learning and of Orthodox tradition' (Sumner, B. H.: *Peter the Great and the Ottoman Empire* (Oxford 1949, Blackwell), p. 64). Both Peter the Great and his ambassador at Constantinople, P. A. Tolstoi, seem to have disliked and despised the Phanariot Greek Orthodox Christian prelates (see *ibid.*, pp. 63-65).

¹ A corresponding consideration had been in the mind of Constantine the Great when he had transferred the capital of the Roman Empire from Old Rome to his own foundation of New Rome or Constantinople. The seat of Government of a converted Roman Empire was to be Christian from the outset, unaffected by the archaic paganism that was dying so hard in its Senatorial fastness on the banks of the Tiber (see V. vi. 89). In making the transfer, both Constantine and Peter were, of course, moved by political and strategic motives in addition to the cultural motive here in question (see II. ii. 157-8 and pp. 221-3, below).

² The Zaporozhian Cossacks, who controlled the southern fringe of the Ukraine, below Kiev (see II. ii. 154-7 and V. v. 283), had transferred their allegiance from Poland-Lithuania to Muscovy already between the years 1648 and 1667.

³ See Zernov, N.: *Moscow the Third Rome*, pp. 89-91.

⁴ See Zernov, *op. cit.*, pp. 81-82; eundem, *The Russians and their Church*, pp. 122-4; and the present chapter of the present Study, p. 23, n. 4, above.

excommunicated opponents of Nikon succeeded in establishing and maintaining, under the Petrine régime, the dissident church of the Old Believers,¹ and in a Western Age of Romanticism the Russian faith in Russia's unique destiny and oecumenical mission acclimatized itself to the spiritual temperature of a secular Western culture under the guise of the Slavophil Movement.² When the Petrine political régime collapsed in A.D. 1917, the Patriarchate of Moscow was re-established³ and the political capital was retransferred to Moscow from Petrograd.

It might have been expected, again, that, after this flicker of life, the ideal of 'Moscow the Third Rome' would have received its *coup de grâce* from the Bolshevik régime; for did not Lenin and his companions out-Peter Peter? Was it not the aim of the Communists to complete the Westernization of Russia on a radical futurist pattern? Were they not setting themselves to uproot, not merely Orthodoxy, but the very belief in the existence of God? Did they not deliberately eliminate the name of Russia from the official style of their 'Union of Soviet Socialist Republics'? The answers to these rhetorical questions are necessarily affirmative, yet they leave unsolved the enigma of the ambiguity in the nature of Bolshevism which has been touched on at an earlier point in this Study⁴ and which still remained obscure at a time when the Soviet Government had been in existence for a third of a century.

The would-be disciples of Marx might prove to be involuntary disciples of Philotheus. It was they, after all, who had repaired Peter's breach with Muscovite geographical tradition by bringing back to Moscow from Leningrad the capital of the Empire which the Soviet régime had inherited from Peter, and Peter from Ivan III; and, though this deliberate act of theirs had no doubt been prompted by other motives,⁵ it was improbable that, once ensconced in the Kremlin, they would be impervious to an atmosphere from which their clear-sighted precursor had taken

¹ See V. vi. 120-1 and IX. viii. 131-2.

² See Kohn, Hans: 'Dostoevsky's Nationalism', in the *Journal of the History of Ideas*, October 1945, vol. vi, No. 4 (New York 1945, College of the City of New York), pp. 385-414, and the present Study, IX. viii. 131-2.

³ Tikhon, the Metropolitan of Moscow, was elected Patriarch on the 5th November, 1917 (i.e. after the Bolsheviks had come into power), by a Church Council, including lay as well as ecclesiastical members, which had been convened on the 15th August (Zernov, *The Russians and their Church*, p. 154).

⁴ In III. iii. 200-2. See further IX. viii. 133-6 and 607-8.

⁵ These motives are discussed, in an annex, on pp. 690-1, below. One motive of the Bolsheviks in retransferring the capital from Leningrad to Moscow on the 12th March, 1918, had been to entrench themselves in a strategic position covering the eastern exit of an overland avenue of attack from Western Europe along which the Germans had marched, in Polish and French footsteps, in two world wars. Another of their motives had been to establish their hold over, and spread their doctrine among, the mass of the people whom they had set out to rule, by planting themselves at a point which, besides covering the most dangerously exposed of all Russia's twentieth-century frontiers, had the second advantage of lying much nearer than Leningrad lay to the heart of the country. This was the motive that likewise led the British Government of India to retransfer the capital of the Indian Empire from Calcutta to Delhi in A.D. 1912, the Kemalist Government of Turkey to remove the capital of Turkey from Constantinople to Ankara in April 1920, and the Kuomintang Government of China to retransfer the capital of China from Peking to Nanking in A.D. 1928. Such moves are likely to have two-way cultural effects. While they may fulfil the migrating Governments' purpose of strengthening their own influence over the interior of their dominions, these Governments will also be exposing themselves, by their migration, to the influence of the traditional culture of the interior. (For transfers of capitals and some of their causes and effects, see II. ii. 112-208 and pp. 193-228, below.)

such pains to extricate the new ruling element in his own anti-traditional régime. The spirit of Moscow was a faith in Russia's destiny;¹ and, at the time of writing, the Russians' consciousness of a unique destiny was sharing with the Americans' possession of a unique weapon the invidious distinction of being one of two titanic facts that, between them, were darkening the horizon of a world which had condemned itself to political unification by its two feats of disintegrating the Atom and 'annihilating distance'. This was an impressive testimony to the strength of the belief in the immortality of a Roman Empire which in reality had ceased to exist not less than thirteen hundred years ago.²

The Riddle of the Prestige of the Imperial Office in Japan

A similar testimony to the endurance of the prestige of the Ts'ing and Han Empire is perhaps afforded by the history of the Imperial House of Japan.³

At an earlier point in this Study⁴ an explanation has been offered for the ebbing away of power from the Imperial Government in Yamato to the feudal nobility in the Kwanto. We have still to explain why an Imperial House which exercised effective authority for less than three hundred years after the reorganization of the Imperial Government on a Chinese model in A.D. 645 should have survived for another thousand years in impotence as the sole fount of honour and dispenser of legitimacy. All the *de facto* rulers of Japan, since the time in the tenth century of the Christian Era when the Imperial Government had lost control, had felt it necessary to do their ruling in the Emperor's name. At the time of writing, an utterly victorious occupying Power was finding it convenient to administer the country through a native Japanese Government acting in the name of the Emperor of the day.

This extraordinary vitality of the prestige of the Japanese Imperial House had been attributed by the Japanese themselves to their own official belief that the Imperial Family were descendants, in unbroken line, from the Sun Goddess Amaterasu. But, though, no doubt, this myth went back to the dawn of Japanese history, the deliberate exploitation of it for a political purpose seemed to be no older than the Meiji Period, when the new masters of Japan, who had wrested the *de facto* power from the last of the Tokugawa shoguns in A.D. 1868 and had appropriated to themselves the manipulation of the indispensable Imperial puppet under pretence of 'restoring' him to the status enjoyed by his forefathers, were concerned to enhance the prestige of the institution in whose name they had to rule. Moreover, the Emperor Hirohito did not seem to have forfeited his hold on the allegiance of the Japanese people by his public declaration to them, on New Year's Day 1946, that he was not a god but a man.⁵ It therefore looked as if there were some

¹ For the persistence of this faith and the fundamental identity of the Slavophil and the Communist manifestation of it, see Kohn, *op. cit.*, p. 414.

² Reckoning that even the relatively tough Greek and Oriental core of the Roman Empire went to pieces within the hundred years following the death of Justinian in A.D. 565. In the West the Empire went to pieces some two hundred years earlier (see p. 20, n. 4, and p. 27, n. 4, above).

³ For the relation of the offshoot of the Far Eastern Civilization in Japan to the main stem in China, see I. i. 132-3.

⁴ In II. ii. 158-9.

⁵ In his rescript of that date, the Emperor Hirohito declared: 'The ties between us and

firm foundation, other than the Sun Goddess myth, for the immense esteem which the Imperial House had continued to enjoy through all vicissitudes of their fortunes and Japan's, and this foundation might perhaps be discovered in the historic 'reception', in A.D. 645, of the Chinese Imperial Constitution of that age. This bureaucratic system of administration was far too elaborate and refined to be practicable under the rude conditions of contemporary Japanese society. Yet its exotic character, which doomed it to a speedy failure in the field of practical politics, may have been the very feature that ensured its age-long preservation as a palladium of the Japanese polity; for the Japanese Imperial Constitution of A.D. 645 was modelled on that of the then reigning Chinese dynasty of the T'ang, and the T'ang Empire had been a resuscitation of the Han Empire, which had been the Sinic Society's universal state. On this showing, the Japanese Imperial Office in the twentieth century of the Christian Era was living on political capital that had been accumulated by Han Liu Pang in the second century B.C.

The Grounds of the Illusion

We have perhaps now sufficiently established the fact that the belief in the immortality of universal states survives for centuries and millennia after it has been decisively confuted by plain hard facts. What are the causes of a phenomenon that looks strange at first sight?

One manifest cause is the potency of the personal impression made by the founders of universal states and by their successors who enter into the fruits of their labours¹—an impression that their contemporaries, who receive it at first hand as the direct beneficiaries of these great men's achievements, hand on to a receptive Posterity with an emphasis which, by the cumulative effect of transmission, exaggerates an imposing truth into an overwhelming legend. From among the many famous testimonies to the impression made by the Emperor Augustus, we have singled out already, in another context, the almost lyrical tribute paid by Philo,²

our people have always stood upon mutual trust and affection. They do not depend upon mere legends and myths. They are not predicated on the false conception that the Emperor is divine and that the Japanese people are superior to other races and fated to rule the World' (English text published in *The New York Times*, 1st January, 1946).

¹ A survey of representatives of these two generations of 'saviours with the sword' has been given in V. vi. 189-97. See further V. vi. 370-5.

² See V. vi. 181, n. 3. The Alexandrian Jewish man of letters' private and personal tribute to Augustus has an official counterpart in a decree passed—probably in the year 9 B.C.—by the *Kourov* of the Province of Asia, providing that in this province in future Augustus's birthday shall be kept as New Year's Day and that the first month of the new calendar year shall be called 'Caesar'. This inscription (No. 458 in W. Dittenberger: *Orientalis Graeci Inscriptiones Selectae*, vol. ii (Leipzig 1905; Hirschel), pp. 48-60) expresses the same sentiments as Philo in outright religious language:

'[The Most Divine Caesar] has re-established a Universe that had everywhere been in disintegration and had degenerated into a lamentable state. He has put a new face on the whole Cosmos—a Cosmos that would have been only too happy to pass out of existence if, at the critical moment, Caesar had not been born to be the Universe's universal blessing. . . . The Providence that has organised every detail of Human Life has exerted and surpassed Itself in order to bring Life to perfection in producing Augustus—whom It has filled with virtue to be the benefactor of Mankind, sending him to us and to Posterity as a saviour whose mission has been to put an end to War and to set the Universe in order.'

This official eulogy is capped by one from Halicarnassus (No. 94 in *The Collection of Ancient Greek Inscriptions in the British Museum*, Part IV, section i (Oxford 1893,

who, as a Jew, a Hellenist, an Alexandrian, and a philosopher, can hardly be suspected of having gone to exceptional lengths in his enthusiasm for the Roman founder of an Hellenic universal state. The prestige to which such tributes gave a flying start can be seen gathering momentum during the next two centuries.

'A very important "virtue", which emerges and takes shape slowly, . . . is the *Providentia* (in Greek *πρόνοια*) of the ruler. This . . . "foresight" or "forethought" . . . as we meet it in Cicero . . . appears to be a virtue at once of the wise magistrate, who foresees and so forestalls dangers, and of the loving father, who makes provision for the welfare and future of the family of which he is the head. Both these senses tend to blend and come together, as they naturally might in a ruler who was at once a magistrate . . . of the Roman People and a father for the whole Empire.

'Through a hundred years it develops till it reaches its first climax under Trajan, "the most provident prince". . . This aspect of the rule of Trajan and Hadrian and the Antonine Emperors, stressed as it was on coins, on buildings, by speakers and publicists, was bound to have its effect. Slowly the common people learnt to look for help and aid to the *Providentia* of their all-powerful ruler—he knows, he cares, he can act: he is like some Hercules, who visits all corners of the World putting down injustice and ending misery. Remembering this, we can form for ourselves some faint idea of how tremendous the effect of Hadrian's great journeys must have been on the provincials: here was an Emperor who did not stay in Rome (or, if he left it, leave merely for campaigns), but who visited every part of his realm to put things in order and to restore. . . As years pass, this *Providentia* of the one ruler becomes more comprehensive. . . When men are in distress and trouble they turn to the one person of whose help they can be sure: oppressed tenant-farmers on an Imperial estate in Africa appeal for aid to the *Divina Providentia* at Rome, and the harassed colonists of Scaptopara in Thrace beg the Emperor to pity them and help them by his *θεία πρόνοια*.¹

'There is something very touching in this faith, this belief in the *providentissimus princeps*: however far away he may be in Rome, he cares for them, he pities them, he cannot be deceived, and he exerts always, to quote the fine phrase of one of Hadrian's officers, "a care that is never tired, with which he watches unrestingly on behalf of the good of Mankind (*indefatigabilis cura, per quam adsidue pro humanis utilitatibus excubat*)". . . Justice, clemency, duty, warlike prowess—these are fine things; but even more important is it that the subject peoples and provincials over this vast area should have believed in a ruler who was not merely a soldier but who cared for them and provided for their needs.'²

Clarendon Press), pp. 63-65), which must have been drafted not earlier than the year 2 B.C., since it cites Augustus's title 'Pater Patriae':

'Considering that the eternal and immortal Nature of the Universe has lavished upon Mankind the greatest blessing, redounding to superlative benefactions, in bringing forth Caesar Augustus, who in the blissful life of our generation is the father of his own fatherland the goddess Rome, and is the ancestral Zeus and saviour of the whole Human Race, whose providence has not only fulfilled but has surpassed the prayers of all Mankind—for there is peace on land and sea, the commonwealths flourish in law-abidingness, concord and prosperity, and there is a peak and a fecundity of every blessing: of good hopes for the future and of good cheer in the present, in a world whose inhabitants have been given full measure of matches and monuments and celebrations. . . '

¹ 'La notion de l'éternité des Césars est . . . étroitement unie à celle de leur divinité' (Cumont, Fr.: 'L'Éternité des Empereurs Romains', in *Revue d'Histoire et de Littérature Religieuses*, vol. i (Paris 1896; printed at Macon), pp. 439-40).

² Charlesworth, M. P.: *The Virtues of a Roman Emperor: Propaganda and the Creation*

This epiphany of the ruler of a universal state as the one shepherd whose oecumenical monarchy makes one fold for all Mankind¹ appeals to one of the Human Soul's deepest longings, as, in Dostoyevski's fable, the Grand Inquisitor reminds a subversive Christ.

'Thou mightest have taken . . . the sword of Caesar. Why didst Thou reject that last gift? Hadst Thou accepted that last counsel of the mighty spirit, Thou wouldst have accomplished all that Man seeks on Earth—that is, someone to worship, someone to keep his conscience, and some means of uniting all in one unanimous and harmonious ant-heap; for the craving for universal unity is the third and last anguish of men. Mankind as a whole has always striven to organise a universal state. There have been many great nations with great histories, but the more highly they were developed the more unhappy they were, for they felt more acutely than other people the craving for world-wide union. The great conquerors—Timurs and Chingis Khans—whirled like hurricanes over the face of the Earth, striving to subdue its people, and they too were but the unconscious expression of the same craving for universal unity. Hadst Thou taken the World and Caesar's purple, Thou wouldst have founded the universal state and have given universal peace. For who can rule men if not he who holds their conscience and their bread in his hands?'²

Another cause of the persistence of the belief in the immortality of universal states is the impressiveness of the institution itself, as distinct from the prestige of the succession of rulers who are its living incarnations. A universal state captivates hearts and minds because it is the embodiment of a rally from the long-unhalted rout of a Time of Troubles, and it was this aspect of the Roman Empire that eventually won the admiration and love of originally hostile Greek men of letters.

'There is no salvation in the exercise of a dominion divorced from power. To find oneself under the dominion of one's superiors is a "second best" alternative; but this "second best" proved to be the best of all in our present experience of a Roman Empire. This happy experience has moved the whole World to cleave to Rome with might and main. The World would no more think of seceding from Rome than a ship's crew would think of parting company with the pilot. You must have seen bats in a cave clinging tight to one another and to the rocks; and this is an apt image of the whole World's dependence on Rome. In every heart to-day the focus of anxiety is the fear of becoming detached from the cluster. The thought of being abandoned by Rome is so appalling that it precludes any thought of wantonly abandoning her.

'There is an end of those disputes over sovereignty and prestige which were the causes of the outbreak of all the wars of the past; and, while some of the nations, like noiselessly flowing water, are delightfully quiet—rejoicing in their release from toil and trouble, and aware at last that all their old struggles were to no purpose—there are other nations which do not even know or remember whether they once sat in the seat of power.

of Belief (London 1937, Milford), pp. 15, 16, 17, and 19–20. Cf. eundem: 'Providentia and Aeternitas', in the *Harvard Theological Review*, vol. xxix, No. 2, April 1936. ¹ John x. 16.

² Dostoyevski, F.: *The Brothers Karamazov*, Part II, Book V, chap. 5: 'The Grand Inquisitor'.

In fact we are witnessing a new version of the Pamphylian's myth (or is it Plato's own?). At a moment when the states of the World were already laid out on the funeral pyre as the victims of their own fratricidal strife and turmoil, they were all at once presented with the [Roman] dominion and straightway came to life again. How they arrived at this condition, they are unable to say. They know nothing about it, and can only marvel at their present well-being. They are like sleepers awakened who have come to themselves and now dismiss from their thoughts the dreams that obsessed them only a moment ago. They no longer find it credible that there were ever such things as wars; and, when the word "war" is mentioned to-day, it has a mythical sound in most peoples' ears. . . .

"The entire Inhabited World now keeps perpetual holiday. It has laid aside the steel which it used to wear of old and has turned, care-free, to festivities and enjoyment of all kinds. All other rivalries have died out, and one form of competition alone now pre-occupies all the cities—a competition in making the finest show of beauty and amenity. The whole World is now full of gymnasiums, fountains, gateways, temples, workshops, academies; and it is now possible to say with scientific certainty that a World which was in its death-agonies has made a recovery and gained a new lease of life. . . . The whole Earth has been laid out like a pleasure park. The smoke of burning villages and the watch fires (lit by friend or foe) have vanished beyond the horizon, as though some mighty wind had winnowed them away, and their place has been taken by an innumerable multitude and variety of enchanting shows and sports. . . . So that the only people who still need pity for the good things that they are missing are those outside your empire—if there are any such people left. . . ."¹

If there are, they are hardly worth speaking of in the estimation of those inside, and this is another reason why the belief in their immortality that universal states inspire is so blindly persistent. Universal states are the supreme expressions, on the political plane, of a sense of unity which is one of the psychological products of the process of social disintegration.² During the Times of Troubles through which disintegrating civilizations make their rough passage, the vision of unity grows ever clearer and the yearning for it ever more poignant as the reality of it continues to elude the storm-tossed wayfarers; and, when, at the lowest ebb of hope, the long-pursued goal is at last unexpectedly attained, and this in a monumental form, the psychological effect is overwhelming.

'Ahuramazda, the creator of Heaven and Earth, has made the King of the Persians "ruler, far and wide, over this great Earth"—made "him, the one [lord], to be ruler over many"; made him "king over many lands and tongues", "over the mountains and plains this side of the Sea and beyond it" [Babylonian Inscription H]. He can style himself "the lord of all men from sunrise to sunset" [Aeschines, iii. 132]. All the peoples whose representatives are portrayed on the seat of his throne render him obedience, bring him tribute and serve in his armed forces."³

This sense of unity and universality is not a peculiarity of the

³ Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), pp. 24-25.

Achaemenian Empire;¹ it is the hall-mark of universal states, which stamps those that bear it as authentic representatives of this class of polity. In his eulogy of Rome, the Greek man of letters, quoted above, makes a point of the universality of her rule as well as of the new lease of life that she has brought to a lacerated Hellenic Society.

'Of this city of Rome you could not say either that it was left unfortified with a Lacedaemonian bravado or that it was enclosed in fortifications of a Babylonian magnificence. . . . You have not, however, you Romans, neglected to build walls; only you have run them round your empire and not round your city. You have placed them in the uttermost parts of the Earth; yet they are magnificent walls which are worthy of you and are a sight for the eyes of all who live within their shelter—though it would take an intending sight-seer months or even years to reach them if Rome itself were the starting-point of his journey; for you have pushed your way beyond the outermost circuit of the Inhabited World and there, in no-man's-land, you have drawn a second circuit with a more convenient *tracée* which is easier to defend—for all the world as though you were simply fortifying a city. . . . This circuit is utterly impregnable and indestructible at every point; it outshines all others; and no system of fortifications that was ever constructed before bears any resemblance to it.'²

In this passage, a literary contemporary of Marcus Aurelius, in whose anxious reign Rome's magnificent world-wall was beginning to crack, was re-expounding the theme of a writer of the preceding generation, in whose day the World's defences did indeed look impregnablely secure. During the last two centuries, says Appian of Alexandria (*vivebat circa* A.D. 90-160) in the preface to his *Studies in Roman History*,

'The [Roman] State has reached its highest point of organisation and the public revenue its highest figure, while a long and stable peace has raised the whole World to a level of secure prosperity. A few more subject nations have been added by the Emperors to those already under the

¹ In the sentence immediately preceding the passage quoted above, Eduard Meyer suggests that 'the Empire of the Achaemenidae is the first state known to history to have put forward the claim to universality'. This is surely incorrect. The Sumeric universal state founded by Ur-Engur, *alias* Ur-Nammu (*imperabat circa* 2143-2126 or 2079-2062 B.C.), and re-established by Hammurabi (*imperabat circa* 1792-1750 or 1728-1686 B.C.), advertised a claim to universality by entitling itself 'The Realm of the Four Quarters'; and, though Hammurabi was a contemporary of the epigoni of the Egyptiac Twelfth Dynasty, we may guess that, from the standpoint of 'the Middle Empire', which was the Egyptiac universal state, even the Sumeric 'Realm of the Four Quarters' was an exception, hardly worth speaking of, to Pharaoh's universal rule even at a date when this had in truth fallen into decadence. 'The New Empire's' claim to universality is better attested than 'the Middle Empire's', and also better founded, since, in 'the New Empire's' day, 'the Realm of the Four Quarters' was extinct and its former dominions in Syria and Mesopotamia had become provinces or dependencies of the Emperors who were reigning at Thebes. The Emperor Ikhnoton, who broke so sharply with his predecessors' traditions on so many points, both cherished and accentuated their oecumenicalism. Universality was the leading note of his revolutionary cult of the Aton; and the impartial benevolence with which the Aton showed the light of His countenance to all peoples was symbolized in the foundation of an 'Aton city' in Nubia, and perhaps another in Syria, as counterparts of the original 'Aton city' which Ikhnoton had laid out in Middle Egypt on the site subsequently known as Tall-al-'Amarnah (see Breasted, J. H.: *The Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), pp. 322-3).

² Aristides, P. Aelius: *In Romam*, edited by Keil, B., in *Aelii Aristidis Quae Supersunt Omnia*, vol. ii (Berlin 1898, Weidmann), pp. 114-15 (Or. XXVI, §§ 79-84).

Roman dominion, and others which have revolted have been reduced to obedience; but, since the Romans already possess the choicest portions of the land and water surface of the globe, they are wise enough to aim at retaining what they hold rather than at extending their empire to infinity over the poverty-stricken and unremunerative territories of uncivilized nations. I myself have seen representatives of such nations attending at Rome on diplomatic missions and offering to become her subjects, and the Emperor refusing to accept the allegiance of peoples who would be of no value to his government. There are other nations innumerable whose kings the Romans appoint themselves, since they feel no necessity to incorporate them into their Empire. There are also certain subject nations to whom they make grants from their treasury, because they are too proud to repudiate them in spite of their being a financial burden. They have garrisoned the frontiers of their Empire with a ring of powerful armies, and keep guard over this vast extent of land and sea as easily as if it were a modest farm.¹

In the view of an Appian and an Aelius Aristeides, the Roman Empire was eternal²

sicut summarum summa est aeterna, neque extra
qui locus est quo dissiliant neque corpora sunt quae
possint incidere et validâ dissolvere plagâ.³

In the lines of the Latin poet, Democritus's argument looks as impregnable as the Roman *limes* itself.

Nec rerum summam commutare ulla potest vis;
nam neque quo possit genus ullum materiai
effugere ex omni, quicquam est [extra], neque in omne
unde coorta queat nova vis irrumpere et omnem
naturam rerum mutare et vertere motus.⁴

A universal state has indeed as little to fear from outer barbarians as the Universe has from stray star clusters that are *ex hypothesi* non-existent; yet the argument is a fallacy nevertheless, for, as we have seen in an earlier context, 'things rot through evils native to their selves'.⁵ In Physical Nature there are elements whose atoms disintegrate by spontaneous radiation, without requiring any bombardment from extraneous bodies; and, in human social life, universal states 'are betrayed by what is false within'⁶ into revealing, for those who have eyes to see through their specious appearance of impregnability, that, so far from being immortal, these are spontaneously fissile polities.

¹ Appian of Alexandria: *Studies in Roman History*, Preface.

² A modern Western student of the religions that were contemporaries of Christianity traces to Syria the association, in Roman minds, of the idea of the Roman Empire's eternity with the idea of its universality:

'L'origine de cette association des deux idées doit sans doute être cherchée en Syrie, où un seul et même mot '*olmo* signifie *aevum* et *mundus*, de telle sorte que le même titre, qu'on trouve porté par un dieu, peut se traduire aussi bien par "maître du monde" que par "maître de l'éternité"' (Cumont, Fr.: '*L'Éternité des Empereurs Romains*', in *Revue d'Histoire et de Littérature Religieuses*, vol. i (Paris 1896; printed at Macon), p. 450, n. 2).

(II) THE DOOM OF TITHONUS

If it were the truth—as the course of history had so far invariably indicated it to be—that a universal state is not the goal of human endeavours, the watchword for citizens of universal states should be ‘here have we no continuing city’.¹ Yet the impulse to idolize any institution is so strong,² and the particular institution with which we are here concerned wears so radiant a halo in the deceptive light cast by the mirage of immortality, that it is not surprising to find its citizens persistently mistaking this Gilead for the Promised Land, and translating their error into action by attempting to settle down there in comfort instead of proceeding manfully on their pilgrimage. Transjordan is indeed a better-watered and more smiling land than Palestine, and its woods and pastures appear to offer to the weary fugitive from the desert of a Time of Troubles a home which he can make his own without having to face the final ordeal of crossing Jordan’s stream. The penalty of this intellectual and moral aberration is the doom of Tithonus.

An obscure divinity of the Nubian marches of the Egyptiac universal state³ was transfigured by the genius of Hellenic mythology into a mortal king of the Ethiopians who had the misfortune to be loved by Eôs, the immortal Goddess of the Dawn. The goddess besought her fellow Olympians to confer on her human lover the immortality which she and her peers enjoyed; and, jealous though they were of their divine privileges, she teased them into yielding at last to her feminine importunity. Yet even this grudging gift was marred by a fatal flaw; for the eager goddess had forgotten that the Olympians’ immortality was mated with an everlasting youth, and the other immortals had spitefully taken care to grant her no more than her bare request. The consequence was both ironic and tragic. After a honeymoon that flashed past in the twinkling of an Olympian eye, Eôs and her now immortal but still inexorably aging human mate found themselves condemned for eternity to grieve together over Tithonus’s hapless plight. A senility to which the merciful hand of Death could never set a term was an affliction that no mortal man could ever be made to suffer, and an eternal grief was an obsession that left no room for any other thought or feeling.

The tragic irony of the Hellenic myth has been transposed into the realism of a Flemish picture by the sardonic imagination of Jonathan Swift in the character of Gulliver’s cicerone on the air-borne island of Laputa.

‘He gave me a particular account of the Struldbrugs among them. He said they commonly acted like mortals till about thirty years old, after which by degrees they grew melancholy and dejected, increasing in both till they came to fourscore. . . . When they came to fourscore years, which is reckoned the extremity of living in this country, they had not only all the follies and infirmities of other old men, but many more which arose from the dreadful prospects of never dying. They were not only opinionative,

¹ Heb. xiii. 14.

² For the idolization of institutions, see IV. iv. 393-423.

³ For the authentic god Tetwen, see Meyer, E.: *Geschichte des Altertums*, vol. i, Part II, 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 210.

peevish, covetous, morose, vain, talkative, but incapable of friendship and dead to all natural affection. . . . Envy and impotent desires are their prevailing passions. But those objects against which their envy seems principally directed are the vices of the younger sort and the deaths of the old. By reflecting on the former, they find themselves cut off from all possibility of pleasure; and whenever they see a funeral they lament and repine that others are gone to an harbour of rest to which they themselves never can hope to arrive. They have no remembrance of anything but what they learned and observed in their youth and middle age, and even that is very imperfect. And, for the truth or particulars of any fact, it is safer to depend on common traditions than upon their best recollections. . . .

'The language of this country being always upon the flux, the Struldbrugs of one age do not understand those of another, neither are they able after two hundred years to hold any conversation (farther than by a few general words) with their neighbours the mortals; and thus they lie under the disadvantage of living like foreigners in their own country. . . .

'They were the most mortifying sight I ever beheld. . . . Besides the usual deformities in extreme old age, they acquired an additional ghastliness, in proportion to their number of years, which is not to be described; and among half a dozen I soon distinguished which was the eldest, although there was not above a century or two between them.'¹

For any human soul or human institution, an immortality in This World would prove a martyrdom, even if it were unaccompanied by either physical decrepitude or mental senility.

Eadem sunt omnia semper.
 si tibi non annis corpus iam marcet et artus
 confecti languent, eadem tamen omnia restant,
 omnia si pergas vivendo vincere saecula,
 atque etiam potius, si nunquam sis moriturus.²

'In this sense it would be true to say that any man of forty who is endowed with moderate intelligence has seen—in the light of the uniformity of Nature—the entire Past and Future';³ and, if this estimate of the capacity of human souls for experience strikes the reader as an inordinately low one, he may find the reason in the character of the age in which the philosopher-emperor happened to live; for an 'Indian Summer' is an age of boredom. The price of the Roman Peace was the forfeiture of Hellenic liberty;⁴ and, though that liberty might always have been the privilege of a minority, and this privileged minority might latterly have turned irresponsible and oppressive,⁵ it was manifest in retrospect that the turbulent wickedness of the Ciceronian climax of an Hellenic 'Time of Troubles' had provided a wealth of exciting and inspiring themes for Roman public speakers which their epigoni in a smugly ordered Trajanic epoch might conventionally condemn as

⁵ 'Corruptissimā re publicā plurimae leges . . . continua discordia, non mos, non ius; deterrima quaeque impune ac multa honesta exitio fuere' (Tacitus, loc. cit.).

horrors not *nostri saeculi*¹ but must secretly envy as they found themselves perpetually failing in their laborious efforts to substitute far-fetched artifice for the stimulus of importunate life.²

The doom of Tithonus may overtake a whole society as well as an individual soul.

'Un peuple marche, vit, fonctionne, souvent même grandit après que le mobile générateur de sa vie et de sa gloire a cessé d'être.'³

On the morrow of the breakdown of the Hellenic Society, Plato, seeking anxiously to safeguard the Hellenic Civilization against a further fall by pegging it in a securely rigid posture,⁴ had idealized the comparative stability of the Egyptiac culture;⁵ and a thousand years later, when this Egyptiac culture was still in being while the Hellenic Civilization had arrived at its last agonies, the last of the Neoplatonists pushed their reputed master's sentimentality to an almost frenzied pitch of uncritical adoration.⁶

Thanks to the obstinacy of the Egyptiac universal state in again and again insisting on returning to life after its body, like Êr's, had been duly laid upon the salutary funeral pyre,⁷ the Egyptiac Society lived to see its contemporaries—the Minoan and Sumeric civilizations and the Indus Culture—all pass away and give place to successors of a younger generation, some of which passed away in their turn while the Egyptiac Society still kept alive. Egyptiac students of history could have observed—if they had had the curiosity to observe—the birth and death of the First Syriac,⁸ Hittite, and Babylonian offspring of the Sumeric Civilization, and the rise and decline of the Syriac and Hellenic offspring of the Minoan. Yet, even if they had made the most of this intellectual opportunity, would it have been worth the spiritual price? The fabulously long-drawn-out epilogue to the broken-down Egyptiac Society's natural term of life⁹ was an alternation between dull stretches of boredom, in which the victim lay prone, an *ἄχθος ἀρούρης*,¹⁰ in a cataleptic trance, and hectic bouts of demonic energy into which this somnolent society was galvanized by the impacts of alien bodies social.

The Egyptiac reactions to these impacts of foreign bodies may be likened to the successive explosions that keep a jet-plane in the air. The first recurrence of the Egyptiac universal state in the form of 'the New Empire' was a consequence of Amosis' 'Zealot' reaction against the tincture of Sumeric culture in the Hyksos barbarians who had swooped

¹⁰ *Iliad*, Book XVIII, l. 104, *et alibi*.

down to batten on the carcass of 'the Middle Empire' after this original Egyptiac universal state had gone into dissolution in due course.¹ The subsequent re-establishment of the Egyptiac universal state in the northern half of the Egyptiac World under the Saïte régime was a consequence of the 'Zealot' reaction of Psammetichus I (*imperabat* 663–609 B.C.)² against the Babylonian culture of Assyrian invaders.³ Psammetichus and his Saïte successors liberated Egypt from the Assyrians, and kept her free from the Assyrians' Neo-Babylonian successors, by employing the prowess of Ionian and Carian mercenaries. The infiltration of Hellenic culture that seeped into Egypt in the wake of these 'brazen men from the sea'⁴ produced, within a hundred years, a 'Zealot' reaction against Hellenism in which Amasis (*dominabatur* 566–526 B.C.) usurped the throne of the too complacently xenophile Saïtes with a popular mandate to put the intrusive Hellenes in their place. The Achaemenian conquest of Egypt *circa* 525 B.C.—which the conqueror, Cambyses, rendered doubly odious by persecuting the Egyptiac religion and culture with an un-Achaemenian intolerance⁵—evoked a spate of insurrections, the first in 485–484 B.C., the second lasting from 465 to 449, and the third from 404 to 343, that gave Egypt successive interludes of freedom from alien rule. The Achaemenian reconquest of Egypt in 343 B.C. was final only because it was followed within the next few years by a Macedonian conquest of the whole Achaemenian Empire. Yet the Egyptiac capacity for provocation by alien impacts was not exhausted. The Macedonian conquest of Egypt in 332 B.C. was followed, before the close of the third century B.C., by a fresh spate of insurrections,⁶ through which the native Egyptiac community wrung notable concessions from their Hellenic masters. It was not till after the Ptolemaic had given place to a Roman régime that these explosions of xenophobia which had been following one another in the Egyptiac World since the sixteenth century B.C. gave way at last to a counter-movement towards assimilation that culminated in the conversion of the provincial capitals (*metropoleis*) of the 'nomes' into simulacra of Hellenic city-states;⁷ and it was not till the fifth century of the Christian Era that this long-delayed liquidation of the petrified Egyptiac culture was completed by a mass-conversion to Christianity.⁸

¹ See I. i. 138–9; II. ii. 112; V. v. 351–3; and V. vi. 190.

² See II. ii. 116 and IV. iv. 476.

³ The Psammetichian reaction seems to have surpassed the Amosan in vehemence, if this can be measured in terms of Archaism. The Archaists of the Eighteenth Dynasty, under the mild stimulus of the Sumeric tincture in the Hyksos, sought to leap no farther back up the stream of Egyptiac history than the age of 'the Middle Empire'; the Archaists of the Twenty-Sixth Dynasty, more violently stimulated by the full-blooded Babylonian Civilization of the Assyrians, sought to carry their flying leap right back to the age of 'the Old Kingdom'.

⁴ Herodotus, Book II, chap. 152.

⁵ See V. v. 704–5.

⁶ The first of these native Egyptiac revolts against the Ptolemaic régime broke out *circa* 213/212 B.C. according to *The Cambridge Ancient History*, vol. vii (Cambridge 1928, University Press), pp. 151–2; in 216 B.C. according to Tarn, W. W.: *The Hellenistic Age* (London 1927, Arnold), pp. 161–4. The next insurrection followed *circa* 189–184 B.C.

⁷ See IX. viii. 408 and 586.

⁸ Even this final apostasy from their ancestral civilization did not cure the Egyptians of a xenophobia which, by that time, had been their breath of life for two thousand years. The Christianity to which they and their Hellenic contemporaries were simultaneously converted did not bridge the gulf between the Egyptians and their alien masters. Before the fifth century was over, the Egyptians had transferred their religious allegiance from the Catholic—or, as they termed it, 'Imperial' (Melchite)—Church (see II. ii. 236, n. 1,

The same rhythm of trance-like somnolence alternating with outbursts of fanatical xenophobia can be discerned in the epilogue to the history of the Far Eastern Civilization in China.¹ The tincture of Far Eastern Christian culture in the Mongols who had forced upon China an alien universal state evoked a reaction in which the Mongols were evicted and their dominion over China was replaced by the indigenous universal state of the Ming. Even the Manchu barbarians, who stepped into a political vacuum created by the Ming's collapse and whose taint of Far Eastern Christian culture was less noticeable than their receptivity in adopting the Chinese way of life, aroused a popular opposition which, in Southern China at any rate, never ceased to maintain itself underground and broke out into the open again at last in the T'ai'ping insurrection of A.D. 1852-64.² The infiltration of the Early Modern Western Civilization, in its Catholic Christian form, in the sixteenth and seventeenth centuries of the Christian Era provoked the proscription of Catholicism in the first quarter of the eighteenth century. The blasting open of the sea-gates of China for Western trade by military force between A.D. 1839 and A.D. 1861 provoked the retort in kind of the anti-Western 'Boxer' Rising of A.D. 1900; and the Manchu Dynasty was overthrown in A.D. 1911 in retribution for the double crime of being ineradicably alien itself and at the same time showing itself incompetent to keep the now far more formidable alien force of Western penetration at bay.³

In the trance-like phases of this ghastly alternating rhythm, the Egyptiac and the Chinese Society recall the figure of Lot's wife transformed into a pillar of salt as the retribution for her forbidden backward glance at the perishing Cities of the Plain. In the furious bouts in

and IV. iv. 86) to a Monophysitism that could serve them as an expression of their anti-Hellenic feelings. This 'cultural isolationism' survived down to the twentieth century of the Christian Era, some seven centuries after the mass-conversion of all but a small minority of the Egyptian people from Monophysitism to Islam and after the complete replacement of Coptic by Arabic as the language of the Egyptian Christian and Muslim Egyptians alike. In the twentieth century of the Christian Era, when a Westernizing Egyptian intelligentsia was aspiring to make Egypt the cultural and perhaps even the political metropolis of the Arabic World of the day, the Egyptian fallāḥīn—Arabic-speaking Muslims though they now were—felt no more at home with their Asiatic Arab coreligionists than their progenitors had felt with the Hyksos, Assyrians, Persians, and Hellenes. The home-sickness of the Egyptian fallāḥīn that had been sent to Palestine and 'Irāq during the war of A.D. 1914-18, and the reaction of the Egyptian insurrection of A.D. 1919 against a British régime.

¹ See IV. iv. 86-88; V. v. 3-4, 54, and 348-51.

² For the T'ai'ping insurrection, see V. v. 107 and 112. Since the T'ai'ping movement was to some extent stimulated by Western Protestantism, its suppression by the Imperial Government was also in some sense an anti-alien movement, like the contemporary suppression of the Muslim insurrections in Kansu and Yunnan. But the Imperial Government did not get the upper hand over the Western-stimulated T'ai'ping until it had itself enlisted Western military leadership and organization by placing its own forces under the command of General Gordon (see V. vi. 208).

³ The 'Boxer' Rising was anti-Manchu mainly for the reason that the decrepit Manchu régime of the day was only ineffectively anti-Western. From the T'ai'ping insurrection onwards, all Chinese revolts that were directly anti-Manchu were also indirectly anti-Western. We are reminded of the anti-Western impetus of the Wahhābī reaction against the Ottoman Empire of Sultan Selim III and the Mahdist reaction against the Egypt of Khedive Ismā'il (see IV. iv. 76-78; V. v. 294-6, 329, and 333-4; and IX. viii. 601-2). The two subsequent counter-movements towards assimilation—to Western culture through the Kuomintang and to Russian culture through Communism—were counterparts of the successive conversions of an Egyptiac Society to Hellenism and to Christianity under the Roman Empire.

which these same societies are galvanized into action by the stimulus of an alien energy that they abhor, they call up the more horrifying image of Life-in-Death as she displayed herself to the Ancient Mariner.

The western wave was all aflame,
The day was wellnigh done!
Almost upon the western wave
Rested the broad, bright Sun;
When that strange shape drove suddenly
Betwixt us and the Sun. . . .

Are those her ribs through which the Sun
Did peer, as through a grate?
And is that woman all her crew?
Is that a Death? and are there two?
Is Death that woman's mate?

Her lips were red, her looks were free,
Her locks were yellow as gold:
Her skin was as white as leprosy,
The Nightmare Life-in-Death was she
Who thicks man's blood with cold.¹

Happily in this instance life is kinder than legend, for the sentence of immortality that mythology has passed on Tithonus and the Struldbrugs is commuted in real life to a not interminable longevity. Marcus's disillusioned man of forty must die at last though he may outlive his zest for life by fifty or sixty years; and a universal state that kicks again and again against the pricks of death will weather away, in the course of ages, like the pillar of salt that was fabled to be the petrified substance of a once living woman. The struggle for the dreadful prize of immortality is actually foredoomed to failure.

Nec prorsum vitam ducendo demimus hilum
tempore de mortis nec delibare valemus
quo minus esse diu possimus forte perempti.
proinde licet quot vis vivendo condere saecula:
mors aeterna tamen nilo minus illa manebit,
nec minus ille diu iam non erit, ex hodierno
lumine qui finem vitae fecit, et ille
mensibus atque annis qui multis occidit ante.²

¹ Coleridge, S. T.: *The Rime of the Ancient Mariner*. In XII. ix. 412-13 this image is applied to the Western Civilization's situation in the twentieth century of the Christian Era.

² Lucretius: *De Rerum Natura*, Book III, ll. 1087-94.

C. UNIVERSAL STATES AS MEANS

(I) THE PRICE OF EUTHANASIA

THE attempt to secure immortality in This World is a vain effort, whether blind or deliberate, to thwart the economy of Nature.

Cedit enim rerum novitate extrusa vetustas
semper, et ex aliis aliud reparare necessest . . .
materies opus est ut crescant postera saecula;
quae tamen omnia te vitâ perfuncta sequentur;
nec minus ergo ante haec quam tu cecidere, cadentque.
sic alid ex alio nunquam desistet oriri,
vitaque mancipio nulli datur, omnibus usu.¹

The fate of Tithonus testifies that 'whosoever will save his life shall lose it'; but is it likewise true that 'whosoever will lose his life for My sake, the same shall save it'?² In an earlier version of this saying, it is driven home still more pointedly that the sacrifice has to be altruistic in order to be efficacious. 'Whosoever shall lose his life for My sake and the Gospel's, the same shall save it.'³ On this showing, a universal state that eschews the vain quest for immortality and aspires to euthanasia must emulate the Phoenix. It must not only sacrifice its own life; it must make this sacrifice for the sake of something beyond itself. Such voluntary altruism is unheard-of in any universal state and indeed in any institution, since the besetting sin of all institutions is to become idolized ends in themselves.⁴ There had indeed been universal states which, through a fortunate failure to bring upon themselves Tithonus's fate, had won the Phoenix's reward without having risen to the Phoenix's virtue. The Phoenix's reward for the agony of being burnt alive is to conjure up his own double out of his ashes; and there had been universal states which, by dying betimes, had won this reward for the moribund civilizations of which they had been the last political embodiments. For example, the Western and Orthodox Christian civilizations had sprung from the ashes of the Roman Empire,⁵ which had been the Hellenic universal state; the Iranic and Arabic civilizations from the ashes of the 'Abbasid Caliphate,⁶ which had been the Syriac universal state; the Hellenic and Syriac civilizations themselves from the ashes of Cnossos, the seat of 'the thalassocracy of Minos';⁷ the Babylonian and Hittite civilizations, and perhaps the Indic Civilization too, from the ashes of the Empire of the Four Quarters,⁸ which had been the Sumerian universal state; the Hindu Civilization from the ashes of the Gupta Empire,⁹ which had been the Indic universal state; the Far Eastern Civilization from the ashes of the Han Empire,¹⁰ which had been the Sinic universal state; the Mexican and Yucatec civilizations from the ashes of the 'First Empire' of the Mayas,¹¹ which had been the Mayan universal state and

which, on one interpretation of the fragmentary and cryptic evidence as to the circumstances of its demise, would have been the only universal state so far known to history that had gone into voluntary liquidation.¹ It is indeed something of a miracle that an institution that is a by-product of social disintegration should play any part at all in a fresh act of creation. Yet, before we attempt to assess what the Phoenix's reward amounts to, we must ask ourselves whether the mere reproduction of its own kind is after all the highest purpose that a broken-down civilization can hope to serve. We will not beg that question, but will reserve it for discussion later.² What concerns us in our present inquiry is the possibility that a universal state may find euthanasia in spite of itself; and we can see at once that this unsought and unmerited good fortune can only be obtained through the tender mercy of God in the guise of stern compulsion.

'Lead me, O Zeus, and thou too, Fate, to that goal, whatsoe'er it be, to which ye have posted me. I will follow without flinching—though, if I turn coward and hang back, I shall follow just the same.'³

The hard but saving truth thus baldly stated by a Stoic philosopher has been expressed by a Christian seer in more movingly mysterious words.

'When thou wast young, thou girdedst thyself and walkedst whither thou wouldest; but, when thou shalt be old, thou shalt stretch forth thy hands and another shall gird thee and carry thee whither thou wouldest not.'⁴

The grace of God can lead even the reluctant soul or society into sharing in God's creative work. In the simile of the sowing of the seed⁵ the issue between freedom and compulsion is left dormant.

The destinies of universal states thus prove to be paradoxical. These imposing polities are, as we have seen,⁶ the last works of dominant minorities in the disintegrating bodies social of moribund civilizations, and these dominant minorities are far indeed from consciously accepting the role of self-abnegation that is evidently the only condition on which their latest handiwork can bear fruit. Their conscious purpose, in every case, is to preserve themselves by conserving the wasting energies of the society with whose fortunes their own are bound up, and their intention in establishing a universal state is to use it as a means to this self-regarding end. This intention, however, is never fulfilled. A universal state, however long its life may be drawn out, always proves to have been the last phase of a society before its extinction, and the pursuit of the mirage of immortality, into which a dominant minority is misled through mistaking its ephemeral universal state for the goal of human endeavours, leads the deluded pursuer towards the unsuspected and uninviting goal of petrification, from which the only means of release is the ignominious

⁶ In V. v. 35-57.

fate of eventually being swallowed up and assimilated by an alien civilization.¹ If a dominant minority takes the contrary path that leads through self-abnegation to a fresh opportunity for sharing in a creative act, it always does so in spite of itself. A dominant minority is incapable either of the resignation with which Moses accepted the sentence that he should see the Promised Land, but should not go over thither, or of the selflessness with which he carried out his instructions to charge, encourage, and strengthen his designated successor Joshua for the enviable mission of reaping the fruits of Moses' own thankless labours.² A dominant minority will never show the generosity of David in assembling the materials for a Temple which not he but Solomon is to build,³ or the humility of John the Baptist in confessing 'I am not the Christ';⁴ 'he that cometh after me is preferred before me';⁵ 'he must increase, but I must decrease'.⁶ The actor who has thus been forced into playing the forerunner's part after having failed in an attempt to pose as the heir of the Kingdom⁷ is not a sublime or sympathetic figure; yet even a grudging performance may fulfil the playwright's purpose by carrying out his plot to its designed denouement.

The makers and masters of a universal state have perhaps one excuse for thus kicking against the pricks. However low their handiwork may rank in the general scale of creative achievements, it is at any rate indisputably the highest representative of its kind. Whereas parochial states prey on one another, and for this pernicious purpose cause human beings to shed one another's blood and to regard an anti-social practice as a public virtue, universal states come into existence in order to put a stop to wars and to substitute co-operation for bloodshed. If even universal states prove to be, not permanent ends in themselves, but merely ephemeral creatures whose happiest destiny is to find euthanasia by spending themselves in the service of others, this suggests that, in the hierarchy of human institutions, the place of states in general must be a relatively low one.

If a universal state finds its significance as a means for the performance of services, who are its beneficiaries? They must be one or other of three possible candidates for the part—the internal proletariat or external proletariat of the moribund society itself, or some alien civilization which is its contemporary—and in serving the internal proletariat a universal state will be ministering to one of the higher religions that make their epiphany in the internal proletariat's bosom. In the traditional language of an outgoing Early Modern Age of Western Christian history,

'Tous les grands empires que nous avons vus sur la terre ont concouru par divers moyens au bien de la Religion et à la gloire de Dieu, comme Dieu même l'a déclaré par ses prophètes.'⁸

(II) SERVICES AND BENEFICIARIES

(a) THE CONDUCTIVITY OF UNIVERSAL STATES

Our next task is to make an empirical survey of the services involuntarily offered by universal states and of the uses made of these facilities by internal proletariats, external proletariats, and alien civilizations; but we have first to find the answer to a preliminary question: How can any services at all be rendered to anyone by an institution that is passive, conservative, archaistic, and in fact negative in every respect?

"The world empire of Rome was a negative phenomenon: the result, not of any surplus of power on the one side (the Romans ceased to enjoy that after [their victory at] Zama), but of an absence of resistance on the other side. It would be quite untrue to say that the Romans conquered the World. They merely took possession of something that was lying about for anyone to pick up. The Roman Empire was brought into existence, not by an extreme exertion of Rome's total military and financial energies, as these had once been exerted against Carthage, but through a renunciation, by the contemporary Oriental World, of the externals of self-determination. . . . The petrified remains of Imperialism are to be seen in empires like the Egyptian, the Chinese and the Roman and in societies like the Indian World and the World of Islam, which remain in existence for hundreds and thousands of years and may pass from one conqueror's hand to another's: dead bodies, shapeless masses of humanity from which the soul has departed, the used-up material of a great historical past.¹ The imperialism that leaves such débris is the typical symptom of social dissolution.²

How—in terms of the expressive Sinic notation for the rhythm of the Universe³—can so unpromising a Yin-state give rise to a new burst of Yang-activity? It is easy, of course, to see that, if once a spark of creative energy has been kindled in the shelter of a universal state, it will have a chance of swelling into a steady flame which it might never have had if it had been exposed to the buffeting blast of a Time of Troubles. The establishment of a universal state marks the beginning of the second rally in the succession of bouts of the rhythm of Rout-and-Rally through which the life of a civilization runs out from breakdown to dissolution,⁴ and this second rally is usually the most vigorous in the series. But this service, though valuable, is negative. What feature in the social situation arising under a universal state is the positive source of that new capacity to create, which is the supreme benefit that a universal state confers on its beneficiaries, though it is apparently unable to profit by it for its own account? Perhaps one clue is to be found in the tendency shown by

¹ This aspect of the psychological condition of the subject populations of universal states has been discussed in the present Study in V. v. 60-95.—A.J.T.

² Spengler, Oswald: *Der Untergang des Abendlandes*, vol. i, 11th-14th edition (Munich 1920, Beck), p. 51. Cp. vol. ii, 1st-15th edition (Munich 1922, Beck), p. 529, quoted in V. v. 620, n. 1. The pith of the point that Spengler is making in these two passages is concentrated in Francis Bacon's dictum, quoted on p. 110, below, that 'it was not the Romans that spread upon the World, but it was the World that spread upon the Romans'.

³ For the Sinic conception of Yin and Yang, see II. i. 201-3.

⁴ This rhythm of disintegration has been analysed in V. vi. 278-87.

Archaism to defeat itself by being inveigled into construction in its efforts to justify itself by 'making things work'.¹

A universal state is pushed into constructive action primarily, no doubt, by the impulse, which is strong in every state, to work for its own self-preservation and do whatever may prove necessary for this purpose. But, though this impulse may be the primary one, it is not the predominant one in this case; for a universal state is not subject to the pressure from other representatives of its kind which is so potent an influence in the life of parochial states—especially at the climax of a Time of Troubles, when the struggle for existence between the warring parochial states of a disintegrating society is apt to attain its highest degree of intensity. The establishment of a universal state brings with it an abrupt transition from internecine warfare to profound peace; and the victims of a change that is a blessing for Society as a whole might appraise the victorious empire-builders' achievement by applying to it the ironic judgement: 'Ubi solitudinem faciunt, pacem appellant.'² A universal state is established through a knock-out blow by which some single parochial state wipes all competitors off the map and so emerges from the struggle as the sole survivor. A universal state is *ex hypothesi* unique within its own world; and the prestige of this uniqueness works together with the *vis inertiae* of an exhausted society to keep a universal state in being when once it has come into existence. A universal state on the morrow of its foundation thus has little cause to be concerned over its own security. Instances can, no doubt, be found in which this has been the motive of a universal state's policy. For example, the first founder of the Sinic universal state, Ts'in She Hwang-ti, deliberately obliterated the old inter-state frontiers and remapped his now unified Sinic World into a new pattern of artificial provinces which cut across the old pattern of historic principalities; and the second founder, Han Liu Pang, who began by discarding Ts'in She Hwang-ti's new political map as an unnecessarily revolutionary innovation, was led by his own experience virtually to reimpose it.³ The Napoleonic Empire,⁴ which was the abortive universal state of the medieval Western city-state cosmos,⁵ employed the same device in its efforts to wipe out the traces of the states that it had supplanted.⁶ Again, the Inca makers and masters of an Andean universal state modified and systematized the institutions of the conquered peoples, though this without destroying them;⁷ and the Imperial Roman Government displayed what might seem to be an excessive nervousness in suppressing all manner of private associations, and showing some suspicion even of such humble and apparently harmless varieties of the species as friendly societies and funeral clubs. Such symptoms are, however, rare on the whole, and this is an indication

¹ This self-defeat of Archaism has been examined in V. vi. 94-97.

² Tacitus: *Agricola*, chap. 30, § 7.

³ See pp. 169-74, below.

⁴ See xi, map 60.

⁵ See V. v. 619-42.

⁶ This remapping of the medieval Western city-state cosmos by Napoleon and of the Sinic World by Ts'in She Hwang-ti and Han Liu Pang is an instance of the breach in institutions that is one of the manifestations of Futurism (see V. vi. 107-11).

⁷ See Markham, Sir C.: *The Incas of Peru* (London 1910, Smith Elder), p. 161. See also the other authorities quoted in the present Study, V. v. 90, n. 2.

that, in the policy of universal states, the motive of self-preservation does not play an important part.

A different motive for action, which is strong in proportion to the weakness of the universal state's concern for self-preservation, is supplied by the need for conserving, not a state that is universal in virtue of having no surviving competitors, but the society itself that has been unified politically in the universal state—or, rather, what remains of this society and its institutions by the time when the tardy and violent imposition of peace by a single surviving Power has put an end at last to the long-drawn-out and ever-mounting agony of a Time of Troubles. In the course of that terrible experience, most of the institutions inherited from the age of growth have either been destroyed outright or else been so badly hurt that, even after the process of attrition has been arrested by the establishment of the universal state, they crumble and collapse, one after another, through the delayed but inescapable effects of fatal injuries previously received. The inclusion of the surviving fabric of the shattered society within the universal state's political framework does not avail either to restore what has already perished or to prevent the progressive collapse of the remainder; and the menace of this immense and constantly extending social vacuum compels the Government of the universal state to act against its own inclinations by constructing stop-gap institutions to fill the void, as the only means open to it of conserving Society itself—the fundamental task that is the universal state's *raison d'être*.

A classic illustration of this necessity of stepping ever farther into an ever-widening breach is afforded by the administrative history of the Roman Empire during the two centuries following its establishment in 31 B.C. as a result of the Battle of Actium. The Roman *arcanum imperii* was the principle of indirect rule. The Hellenic universal state was conceived of by its Roman founders as an association of self-governing city-states¹ with a fringe of autonomous principalities in regions where the Hellenic culture had not yet struck political root. The burden of administration—which, even at the end of an Hellenic Time of Troubles, was still, in the public estimation, an honourable and covetable load—was to be left resting on the shoulders of these responsible self-governing local authorities; the Imperial Government was to confine itself to the two-fold task of keeping the local communities in harmony with one another and protecting them against attack on the part of the outer barbarians; and, for these limited Imperial activities, a slender military framework and light political superstructure were all that was required. This fundamental policy was never deliberately revised; yet, if we resurvey the Roman Empire as it emerged from a spell of two centuries of Roman Peace, we shall find that its administrative structure had in fact been transformed as a result of innovations that were reluctant and piecemeal but were far-reaching in their cumulative effect because they were all in the same direction.

By the end of the reign of Marcus Aurelius (*imperabat* A.D. 161–80) the last of the client principalities had been *gleichgeschaltet* with the

¹ See IV. iv. 310.

provinces,¹ and, more significant still, the provinces themselves had become organs of direct administration instead of remaining mere frameworks for local groups of self-administering city-states. The cause of these far-going moves towards a centralization of world-government was not any desire on the part of the Imperial authorities to take over the responsibility for details; it was a progressive loss of efficiency on the part of the local authorities that forced the Imperial Government to step in. In the generation of Augustus the government provided by client princes of the stamp of Herod the Great had in general been as effective as it had been ruthless. Among other things, it had been observed that these were more active than the Roman governors of adjoining provinces in defending their territories against the raids of pirates from beyond the pale.² The city-states, again, whatever their juridical status, had been mostly successful in still finding sufficient numbers of citizens of sufficient public spirit, integrity, ability, and affluence to administer their affairs without remuneration and to consider themselves richly rewarded by the honour and prestige which local office still carried with it. In the course of the next two centuries the human resources for the conduct of local government gradually ran dry, and the Central Government, faced with this increasing dearth of the local administrative talent on which it had been accustomed to rely, found itself constrained not only to replace client princes by Imperial governors but to put the administration of the city-states in the hands of 'city managers' who were appointed by the Imperial authorities instead of being elected (as the city-state magistrates were) by the local notables, and who were responsible, through the provincial governor, to the Emperor himself.

In the second century of the Empire's existence, at the very opening of a delusive 'Indian Summer',³ we can follow the progress of this disquieting administrative development in the famous correspondence between the Emperor Trajan (*imperabat* A.D. 98-117) and his friend and subordinate Pliny the Younger during the latter's term of service as governor of the province of Bithynia. Before the end of the story, the whole administration of the Roman Empire, from top to bottom, had passed into the hands of a hierarchically organized bureaucracy, while the self-complacent local magistrates and town councillors of the once self-governing city-states had been degraded into becoming the unwilling

¹ See further p. 166, below. The religious consequences of this process of *Gleichschaltung*—which is not a peculiarity of the Roman Empire but is characteristic of universal states as a species—have been touched upon in V. vi. 36.

² Strabo, writing on the morrow of the establishment of the Augustan Peace, makes the following observation at the end of his description of the piratical raids into the domain of the Hellenic universal state which were at that time the main source of livelihood for the barbarians (Achaei, Zygi, Heniochi) inhabiting the strip of inhospitable country between the crest of the North-Western Caucasus Range and the north-eastern coast of the Black Sea:

'In places under [the] autocratic rule [of princes of client states of the Roman Empire] the victims [of these piratical raids] are afforded some protection by their rulers; for the princes make frequent counter-attacks and bring the war-canoes down, crews and all. The territory under direct Roman administration receives less effective protection owing to the indifference shown by the non-permanent lieutenant-governors sent out from Rome' (Strabo: *Geographica*, Book XI, chap. ii, § 12 (C 496)).

³ For these 'Indian Summers' in the lives of universal states, see IV. iv. 58-70.

instruments of the central exchequer for extracting ruinously heavy taxes from the local notables.¹

The central authorities themselves had been no more eager to impose these changes than the local authorities had been to suffer them. Both alike had been the victims of *force majeure*; and, in yielding to such necessity, the government of a universal state is indeed defeating its own ends, since the new institutions which it reluctantly constructs with a conservative intention inevitably have an innovating effect. The consequences are revolutionary because these new institutions are highly 'conductive'. In a previous context² we have seen that two leading motifs in the *Zeitgeist* of an age of social disintegration are a sense of promiscuity and a sense of unity; and, though these two psychological tendencies may be antithetical from the subjective standpoint, they conspire to produce an identical objective result. Receptivity is a distinguishing mark of the empire-builders themselves,³ notwithstanding their conservative intentions, and this undesired and unvalued characteristic of theirs may have been one of the causes of their victory in their life-and-death struggle, during a Time of Troubles, with their competitors in command of the other parochial states of their world for the prize of surviving to become the founders of the ultimate universal state. This dominant spirit of the age endows the new stop-gap institutions thrown up by a universal state with a 'conductivity' comparable to that which the Ocean and the Steppe derive, not from a human psychological atmosphere, but from their own physical nature.⁴

'As the surface of the Earth bears all Mankind, so Rome receives all the peoples of the Earth into her bosom, as the rivers are received by the sea.'⁵

And the spectacle of the same universal state had suggested the same simile to the writer of this Study, before he had become acquainted with the passage, just quoted, from the pen of a Greek man of letters who knew the Roman Empire at first hand during the last days of its 'Indian Summer'.

'The writer can best express his personal feeling about the Empire in a parable. It was like the sea round whose shores its network of city-states was strung. The Mediterranean seems at first sight a poor substitute for the rivers that have given their waters to make it. Those were living waters, whether they ran muddy or clear; the sea seems just salt and still and dead. But, as soon as we study the sea, we find movement and life there also. There are silent currents circulating perpetually from one part to another, and the surface water that seems to be lost by evaporation is not really lost, but will descend in distant places and seasons, with its bitterness all distilled away, as life-giving rain. And, as these surface-waters are drawn off into the clouds, their place is taken by lower layers continually rising from the depths. The sea itself is in constant and creative motion, but the influence of this great body of water extends far beyond its shores.

¹ See III. iii. 99-100.

² In V. v. 439-568 and V. vi. 1-49.

³ See V. v. 439-45.

⁴ The conductivity of Nomadism has been noticed in III. iii. 391-4.

⁵ Aristeides, P. Aelius: *In Romam*, § 62 in B. Keil's edition (*Aelii Aristidis Quae Supersunt Omnia*, vol. ii (Berlin 1898, Weidmann), p. 108), quoted in V. v. 344.

One finds it softening the extremes of temperature, quickening the vegetation, and prospering the life of animals and men, in the distant heart of continents and among peoples that have never heard its name.¹

The social movements that make their way through the conductive medium of a universal state are in fact both horizontal and vertical. Examples of horizontal motion are the circulation of medicinal herbs in the Roman Empire and the spread of the use of paper from the eastern to the western extremity of the Arab Caliphate.

'Different herbs', says Pliny the Elder, 'are brought from different quarters to and fro all over the World for the welfare of the Human Race. The immense majesty of the Roman Peace reveals to one another not merely human beings, in all their diversity of countries and nationalities, but also the mountains and the ranges that tower up into the clouds, with their fauna and flora. God grant that this divine benefaction may be eternal. The gift bestowed by the Romans on Mankind can only be described as a new form of light.'²

As for the transit of the Far Eastern invention of paper across the conductive expanse of the Arab Caliphate, this was impressively rapid. Reaching Samarkand from China in A.D. 751, the use of paper had spread to Baghdad by A.D. 793, to Cairo by A.D. 900, to Fez (Fas), almost within sight of the Atlantic, by about A.D. 1100, and to Jativa in the Iberian Peninsula by A.D. 1150.³

The vertical movements are sometimes more elusive but often more important in their social effects—as is illustrated by the history of the Tokugawa Shogunate,⁴ which was the universal state of the Far Eastern Society in Japan. The Tokugawa régime set itself to insulate Japan from the rest of the World, and was successful for nearly two and a half centuries in maintaining this political *tour de force*; but it found itself powerless to arrest the course of social change within an insulated Japanese Empire, in spite of its efforts to petrify a feudal system, inherited from the preceding 'Time of Troubles', into a permanent dispensation.

'The penetration of money economy in Japan . . . caused a slow but irresistible revolution, culminating in the breakdown of feudal government and the resumption of intercourse with foreign countries after more than two hundred years of seclusion. What opened the doors was not a summons from without but an explosion from within. . . . One of [the] first effects [of the new economic forces] was an increase in the wealth of the townspeople, gained at the expense of the samurai and also of the peasants. . . . The *daimyō* and their retainers spent their money on luxuries produced by the artisans and sold by the tradesmen, so that by about the year [A.D.] 1700, it is said, nearly all their gold and silver had passed into the hands of the townspeople. They then began to buy goods on credit. Before long they were deeply indebted to the merchant class, and were obliged to pledge, or to make forced sales of, their tax-rice. . . . Abuses and disaster followed thick and fast. The merchants took to rice-broking,

³ See Carter, T. F.: *The Invention of Printing in China and its Spread Westward*, revised ed. (New York 1931, Columbia University Press), pp. 97-100; Lévi-Provençal, E.: *L'Espagne Musulmane au X^{ème} Siècle* (Paris 1932, Larose), p. 185.

⁴ See xi, map 55c.

and then to speculating. . . . It was the members of one class only, and not all of them, who profited by these conditions. These were the merchants, in particular the brokers and money-lenders, despised *chōnin* or townsmen, who in theory might be killed with impunity by any samurai for mere disrespectful language. Their social status still remained low, but they held the purse and they were in the ascendant. By the year 1700 they were already one of the strongest and most enterprising elements in the state, and the military caste was slowly losing its influence.¹

If we regard the year 1590 of the Christian Era, in which Hideyoshi overcame the last resistance to his dictatorship, as the date of the foundation of the Japanese universal state, we perceive that it took little more than a century for the rising of the lower layers of water from the depths to the surface to produce a bloodless social revolution in a society which Hideyoshi's successor Tokugawa Ieyasu and his heirs had sought to freeze into an almost Platonically utopian immobility. This social upheaval was a result of the operation of internal forces within a closed system, without any impulsion from outside the frontiers of the Japanese universal state.

The extent of the resultant change is impressive—and the more so, considering that, for a universal state, the Tokugawa Shogunate was culturally homogeneous to an unusually high degree. Apart from a little pariah community of Dutch business men who were strictly segregated on the islet of Deshima,² the only heterogeneous element in the otherwise culturally uniform Japanese life of that age was a barbarian Ainu strain that was socially impotent in so far as it was not already culturally assimilated.³ In most universal states, such partially assimilated barbarians have been one only—and this the least alien one—of several alien cultural elements. Owing to the tendency of the parochial states of a broken-down civilization in its Time of Troubles to sharpen their weapons in fratricidal conflicts with one another and to take advantage of this dearly bought increase in their military proficiency to conquer neighbouring societies with their left hands while continuing to fight one another with their right hands,⁴ most universal states have embraced not only a fringe of conquered barbarians but substantial slices of the domain of one or more alien civilizations as well. Some universal states, again, have been founded by alien empire-builders, and some have been the product of societies within whose bosoms there has already been some degree of cultural variety—even on a reckoning which does not differentiate between march-men and the denizens of the interior of the same social world.⁵ Such cultural diversity, which is the rule rather than the exception in the structure of universal states, is apt to heighten the effects of the social 'conductivity' that is characteristic of them all.

¹ Sansom, G. B.: *Japan: A Short Cultural History* (London 1931, Cresset Press), pp. 460-2. See further eundem: *The Western World and Japan* (London 1950, Cresset Press), chaps. ix-xi (pp. 177-289).

² See II. ii. 232-3.

³ For the barbarian frontier of the Far Eastern World in Japan, and for the effect of this frontier on Japanese history, see II. ii. 158-9.

⁴ See III. iii. 139-53.

⁵ For the distinction between marches and interiors, and its historical importance, see II. ii. 112-207.

No other universal state known to History appears to have been as homogeneous in culture as Japan under the Tokugawa régime. In 'the Middle Empire' of Egypt,¹ in which a fringe of barbarians on the Nubian glaciis of its Theban march was one element of variation from the cultural norm of the Egyptiac Society of the age,² there was another and more positive feature of cultural diversity in the Empire's culturally Sumeric provinces and client states in Palestine and Coele Syria. As for 'the New Empire',³ which was a deliberate revival of the original Egyptiac universal state, it accentuated the pattern of its prototype by completing the assimilation of the barbarians of Nubia⁴ and by embracing the domain of an abortive First Syriac Civilization in Syria and North-Western Mesopotamia;⁵ and this culturally tripartite structure—in which the cultural domain of the civilization through whose disintegration the universal state has been brought into existence is flanked by culturally alien territories annexed at the expense of both barbarians and neighbouring civilizations—appears to be the standard type.

For example, in the Mauryan Empire,⁶ which was the original Indic universal state, an Indic cultural core was flanked by an alien province in the Panjab, which had been at least partially Syriacized during a previous period of Achaemenian rule⁷ after having been partially barbarized by an antecedent Völkerwanderung of Eurasian Nomads,⁸ while in other quarters the Mauryan Empire's Indic core was flanked by ex-barbarian provinces in Southern India and possibly farther afield in both Ceylon and Khotan as well. The Guptan Empire,⁹ in which the Mauryan was eventually reintegrated, possessed an ex-barbarian fringe, with an alien Hellenic tincture, in the satrapy that had been founded by Saka war-bands in Gujerat and the North-Western Deccan,¹⁰ and a Hellenized fringe, with a Kushan barbarian dilution, in the territories under its suzerainty in the Panjab. In a Han Empire¹¹ which was the Sinic universal state, the Sinic World proper was flanked by barbarian annexes in what was eventually to become Southern China, as well as on the Eurasian Steppe, and by an alien province in the Tarim Basin, where the Indic, Syriac, and Hellenic cultures had already met and mingled before this cultural corridor and crucible was annexed to the Han Empire for the first time in the second century B.C. and for the second time in the first century of the Christian Era.¹² In the Roman Empire,¹³ which was the Hellenic universal state, a culturally Hellenic core in Western Anatolia, Continental European Greece, Sicily, and Italy, with outlying enclaves in Cilicia, in Syria, at Alexandria, and at Marseilles, was combined with the domain of the submerged Hittite Civilization in Eastern Anatolia, with the homelands of the Syriac and Egyptiac civilizations in Syria and in the Lower Nile Valley, with the colonial domain of the Syriac Civilization in North-West Africa, and with ex-barbarian hinterlands in North-

West Africa and in Western and Central Europe as far as the left bank of the Rhine and the right bank of the Danube.¹

There are other cases in which this standard cultural pattern has been enriched by some additional element.

In the Muscovite Tsardom² a Russian Orthodox Christian core was flanked by a vast ex-barbarian annex extending northwards to the Arctic Ocean and eastwards eventually to the Pacific, and by an Iranic Muslim annex consisting of the sedentary Muslim peoples of the Volga Basin, the Urals, and Western Siberia. This pattern was afterwards complicated by Peter the Great's deliberate substitution of a Westernized for a traditional Orthodox Christian cultural framework for the Russian Orthodox Christian universal state, and by the subsequent annexation of additional alien territories—at the expense of the Islamic World on the Eurasian Steppe and in the Crimea, the Caucasus, and the Oxus-Jaxartes Basin, and at the expense of Western Christendom in the Baltic Provinces, Lithuania, Poland, and Finland.

In the Achaemenian Empire,³ which was the original Syriac universal state, there was an antecedent cultural diversity, within the Syriac core itself, between the Syrian creators of the Syriac Civilization and their Iranian converts,⁴ and a geographical gap between Syria and Iran that was still occupied by the dwindling domain of the gradually disappearing Babylonian culture.⁵ The Achaemenian Empire also embraced the domain of the submerged Hittite culture in Eastern Anatolia, the best part of the domain of the Egyptiac Civilization,⁶ fringes torn from the Hellenic and Indic worlds, and pockets of partially reclaimed barbarian highlanders and Eurasian Nomads. Moreover, after its life had been prematurely cut short by Alexander the Great, its work was carried on by his political successors, and especially by the Seleucidæ, whom it would be more illuminating to describe as alien Hellenic successors of Cyrus and Darius. In the Arab Caliphate,⁷ in which the Achaemenian Empire was eventually reintegrated,⁸ the Syriac core—in which the earlier diversity between Syrian creators and Iranian converts had been replaced by a cleavage, along approximately the same geographical line, between ex-subjects of the Roman and ex-subjects of the Sasanian Empire—was united politically, by Arab barbarian empire-builders, with barbarian annexes—in North-West Africa, in the fastnesses of Daylam and Tabaristan between the Elburz Mountains and the Caspian Sea,⁹ and on the fringes of the Eurasian Steppe adjoining the Oxus-Jaxartes Basin—and with fragments of alien civilizations: a slice of the new-born Hindu World in Sind;¹⁰ the potential domain of an abortive Far Eastern Christian Civilization in the Oxus-Jaxartes Basin;¹¹ an

Orthodox Christian diaspora in Syria and Egypt; and a fossil of the by then elsewhere extinct Babylonian Society at Harran.¹

In the Mongol Empire,² which was a universal state imposed by alien empire-builders on the main body of the Far Eastern Society in China, the annexes to a Chinese core were unusually extensive—including, as they did, the whole of the Eurasian Nomad World, the whole of Russian Orthodox Christendom, and the ex-Sasanian portion of a Syriac World which by that time was *in extremis*. The Mongols themselves were barbarians with a tincture of Far Eastern Christian culture.³ In the Manchurian empire-builders,⁴ who subsequently repeated the Mongols' performance on a less gigantic yet still imposing scale, there was the same tincture in a more diluted form;⁵ and the Chinese universal state in its Manchu avatar once again embraced, in addition to its Chinese core, a number of alien annexes: a 'reservoir' of barbarians in the still unfelled backwoods and still virgin steppes of Manchuria, the whole of the Tantric Mahayanian Buddhist World in Tibet, Mongolia, and Zungaria,⁶ and the easternmost continental outposts of the Islamic World in the Tarim Basin, the north-western Chinese provinces of Kansu and Shansi, and the south-western Chinese province of Yunnan.⁷

In the Ottoman Empire,⁸ which provided, or saddled, the main body of Orthodox Christendom with its universal state, the alien 'Osmanli empire-builders united an Orthodox Christian core with a fringe of Western Christian territory in Hungary, with the whole of the Arabic Muslim World except Morocco, the Sudan, and South-Eastern Arabia, and with pockets of barbarians and semi-barbarians in Serbia, Bosnia, Albania, the Mani, the Caucasus, the Crimea, and on the Arabian Steppe. In the Mughal Empire,⁹ which was the Ottoman Empire's counterpart in the Hindu World, the pattern was simpler, since, apart from the Iranian Muslim empire-builders and their co-religionists who had been deposited in the Hindu social environment by earlier waves of invasion from the Middle East and Central Asia,¹⁰ the Mughals' only non-Hindu subjects were the Pathan barbarian highlanders on the north-western fringe of their dominions. When, however, the Mughal Rāj was replaced by a British Rāj,¹¹ the pattern of the Hindu universal state became more complex; for the advent of a new band of alien empire-builders, which substituted a Western element for an Islamic at the political apex of the Hindu universal state, did not expel the Indian Muslims from the stage of Hindu history, but merely depressed their status to that of a numerically still formidable alien element in the Hindu internal proletariat, so that the Hindu universal state in its second phase combined elements drawn from two alien civilizations with a Pathan barbarian fringe and a Hindu core.

There had been other universal states in which, as in the Mughal

Empire, the cultural pattern had been less complex than the standard type yet not so simple as that of the Tokugawa Shogunate.

The Empire of Sumer and Akkad,¹ which was the Sumeric universal state, included no representatives of an alien civilization—unless Byblus and other Syrian coast-towns are to be counted as such in virtue of their tincture of Egyptiac culture. On the other hand, the Sumeric Civilization itself was represented in two varieties at least—a Sumero-Akkadian and an Elamite²—and in no less than three if the domain of the Indus Culture should prove also to have been included in 'the Empire of the Four Quarters of the World'.³ Moreover, the Babylonian Amorites, who eventually restored a polity that had been first constructed by the Sumerian Ur-Engur (*alias* Ur-Nammu) of Ur,⁴ were not merely marchmen but marchmen with a barbarian tinge. So, on a broader and a longer view, the cultural pattern of the Sumeric universal state proves to have been less homogeneous than might appear at first sight. 'The thalassocracy of Minos',⁵ again, which was the Minoan universal state, probably included representatives of the continental Mycenaean variety of the Minoan culture as well as the creators of that culture in its Cretan homeland, even if it did not embrace any representatives of an alien civilization.

In the Central American World⁶ two once distinct sister societies—the Yucatec Civilization and the Mexic—had not yet lost their distinctive characteristics, though they had already been brought together by force of Toltec arms, when the task, and prize, of establishing a Central American universal state was snatched, at the eleventh hour, out of the hands of barbarian Aztec empire-builders by Spanish representatives of an utterly alien Western Christendom.⁷ In the Andean World the Empire of the Incas,⁸ which was the Andean universal state, already included representatives of the Kara variety of the Andean culture as well as the creators of that culture in the Peruvian coastlands and its propagators on the Peruvian, Bolivian, and Argentinian sections of the Andean Plateau,⁹ before the indigenous Incan empire-builders were suddenly and violently replaced by Spanish *conquistadores* from Western Christendom who turned the Andean World upside-down, with a vigour reminiscent of Alexander the Great's, by proceeding to convert the indigenous population to Christianity and to variegate the social map by studding it with immigrant Spanish landlords¹⁰ and self-governing municipalities.¹¹

The Danubian Hapsburg Monarchy,¹² which served as a carapace for Western Christendom against the assaults of the 'Osmanlis, and which,

¹² See xi, map 51.

seen from the south-east, wore the deceptive appearance of being a full-blown Western universal state,¹ set itself, like the Tokugawa Shogunate, to achieve domestic cultural uniformity, but lacked both the ruthlessness and the insularity which, between them, enabled the Japanese isolationists for a time to put their policy into effect. In pursuing its aim of being totally Catholic, the Hapsburg Power did succeed, more or less, in extirpating Protestantism within its frontiers; but the very success of its stand, and eventual counter-attack, against the Ottoman embodiment of an Orthodox Christian universal state broke up the Danubian Monarchy's hardly attained Catholic homogeneity by transferring to Hapsburg from Ottoman rule a stiff-necked minority of Hungarian Protestants and a host of Orthodox Christians of divers nationalities, most of whom proved unwilling to accept the ecclesiastical supremacy of Rome, even when the yoke was proffered in the easy form of Uniatism, while, among those who did accept this relatively light burden, the rank and file remained nearer in heart and mind to their dissident Orthodox ex-co-religionists than they ever came to be to their fellow Catholics who were of the Latin Rite.

The Neo-Babylonian Empire,² which was the Babylonian universal state, similarly forfeited its cultural purity—and thereby worked unwittingly for the eventual extinction of the Babylonian Civilization itself—when Nebuchadnezzar conquered and annexed the homeland of the Syriac Civilization west of the Euphrates; and the impress of the indigenous Babylonian culture became progressively fainter as the domain which Nebuchadnezzar had bequeathed to a short line of native successors was incorporated first into the barbaro-Syriac Empire of the Achaemenids and then into the Hellenic Empire of the Seleucids.

Our survey has shown that, in the cultural composition of universal states, a high degree of diversity is the rule; and, in the light of this fact, it is evident that one effect of the 'conductivity' of universal states is to carry farther, by less violent and less brutal means, that process of cultural pammixia that is started, in the antecedent Times of Troubles, by the atrocities that these bring in their train. The refugees, exiles, deportees, transported slaves, and other *déracinés* of the more cruel preceding age are followed up, under the milder régime of a universal state, by merchants, by professional soldiers, and by philosophic and religious missionaries and pilgrims who make their transit with less tribulation in a more genial social climate.

The cumulative cultural effect of these voluntary and involuntary migrations within the ambit of a disintegrating society has been examined at earlier points in this Study³ and need not be resurveyed here. The Israelites who were deported by the Assyrians to the cities of the Medes and the exiles from Jerusalem whose memories made them weep by the waters of Babylon may serve as typical representatives of the *déracinés* of a Time of Troubles. In the Papal emissary Friar William of Rubruck's poignant account of how he spent Palm Sunday, A.D. 1254, in the Mongol capital, Qāraqorum, in the company of fellow Catholic deportees from

¹ See II. ii. 177-88 and V. v. 325-7.

² See xi, map 19.

³ Especially in V. v. 58-194 and 439-80.

far-away Western Christendom,¹ we can catch the anarchy of a Time of Troubles in the act of turning into the orderly peace of a universal state. In the secret and silent circulation of the waters of that seemingly motionless sea, the Orontes discharges into the Tiber and the sands of the Shāmīyah are deposited on the banks of the Tyne. The missionary of Christianity, Saint Paul, travels from Antioch to Rome, and, 'as an inscription from South Shields informs us, a Romano-Oriental from Palmyra could marry a Romano-British wife and settle down for the rest of his days in the neighbourhood of Hadrian's Wall'.²

Judgements passed on the effects of this pammixia diverge, poles apart, according to the divers social, political, and historical standpoints of the observers who make them. A grandchild of those European Greeks whose heroic resistance against enormous odds had barely saved them from being incorporated, at the blossoming-season of their own civilization's growth, into the world-empire of the Achaemenidae, can write of 'the appalling present condition of the populations under the Persian yoke, which have been quite disintegrated by being interlarded and kneaded up together'.³ Another Greek, born more than five hundred years later into the 'Indian Summer' of an Hellenic universal state which he could readily appreciate because it was so long overdue, could say to Rome, as the highest praise that he could give her: 'You have made one single household of the entire Inhabited World';⁴ and a Gallic poet, writing more than two hundred years later again, at a moment when the Roman Empire in the West had already received its death-blow, could give the Greek stylist's phrase a Latin echo in the famous epigrammatic line: 'Urbem fecisti quod prius Orbis erat'.⁵ On this controversial question of the value of the result, points of view may differ completely; but there is no disputing the facts themselves, however depreciatory or laudatory may be the literary framework in which they are presented.

'I am not unaware', writes a Roman encyclopaedist towards the end of the first century of the Roman Peace, 'that it may justly be regarded as the lapse of an insensitive and lazy mind to have given so brief and cursory a description of a country that is the nurse of all countries—their nurse and their parent and the chosen vessel of divine grace for the mission of making the skies themselves clearer, gathering the scattered realms into one flock, softening harsh traditional practices, bringing together into mutual converse, through a common medium of linguistic exchange, the discordant and barbarous tongues of innumerable peoples, conferring humanity on Man, and, in a word, becoming the single fatherland of all nations throughout the World'.⁶

What Pliny writes of Roman Italy and of the world-empire that she had built up around herself is true, in some degree, of every universal state.

(b) THE PSYCHOLOGY OF PEACE

A universal state is imposed by its founders, and accepted by its subjects, as a panacea for the ills of a Time of Troubles. In psychological terms it is an institution for establishing and maintaining concord;¹ and this is the true remedy for a correctly diagnosed disease. The malady from which a broken-down civilization is suffering as the penalty for its breakdown is that of being a house divided against itself, and this schism in Society is a double one. There is a horizontal schism between contending social classes as well as a vertical schism between warring states, and a universal state is born of a paroxysm which exacerbates this twofold strife to an unprecedented and intolerable degree of intensity and, in the same act, puts a sudden stop to it for the time being. The immediate and paramount aim of the empire-builders, in making a universal state out of the Power that emerges as the sole survivor from a war of annihilation between the parochial states of the preceding age, is to establish concord among themselves and with their fellow members of the dominant minority of their society who are survivors of the former ruling element in those parochial states that have succumbed in the fratricidal struggle. Non-violence, however, is a state of mind and principle of behaviour that cannot be confined to one compartment of social life; it must apply in some degree to all social relations if it is to apply to any; and therefore the concord which a dominant minority, in urgent need of being at peace within itself, is moved to seek and ensue² in its own domestic life has to be extended to the dominant minority's relations with the internal and external proletariats and with any alien civilizations with which the disintegrating civilization is in contact. In these relations, if there cannot be perfect and permanent peace, there must at least be an armistice and a *modus vivendi*.

This universal concord, which is the prevailing psychological climate under the dispensation of a universal state, profits its divers beneficiaries in different degrees. While it enables the dominant minority to recuperate to some extent—and indeed is the condition *sine qua non*, if it is to recuperate at all—it brings a greater relative access of strength to the proletariat. Concord is, in itself, a negative boon. 'A bruised reed shall he not break, and the smoking flax shall he not quench.'³ The practical effect of such forbearance varies with the quality of the flax and the reed; and, in the case in point, the life has already gone out of the dominant minority and cannot be revived by a belated relief from attrition, whereas the same relief enables the proletariat, which has been stimulated and not crushed by its foregoing tribulations, to 'shoot up and thrive'.⁴ Accordingly, during the armistice inaugurated by the establishment of a universal state, the proletariat must increase but the dominant minority must decrease.⁵ Under the common régime of concord the dominant minority's conservation of energy freezes into

⁴ The phrase used by Herodotus (Book I, chap. 66) to describe the progress of Sparta under the impetus that she received from the institution of the Lyncurgen *agôgê*.

⁵ John iii. 30.

Archaism,¹ and this Archaism rankles into Esotericism—a regressive Esotericism distinguishable from the progressive form of the same social aberration which is one of the perilous stepping-stones of a civilization in its growth-phase. On the other hand the toleration practised by the founders of a universal state for the sake of getting rid of fratricidal strife among themselves incidentally gives the internal proletariat a chance to found a universal church, while the atrophy of the martial spirit among the subjects of a universal state, resulting from the monopoly of the military profession by the Imperial Power, gives the external proletariat or a neighbouring alien civilization a chance of breaking in and seizing for itself the dominion over an internal proletariat that has been conditioned by the peculiar climate of a universal state to be passive on the political plane, however active on the religious.

The relative incapacity of the dominant minority to profit by conditions which it itself has called into existence through the act of establishing a universal state is strikingly illustrated by its almost invariable failure to propagate a philosophy or a 'fancy religion' of its own from above downwards.² In this matter the political pressure which the sovereign or the ruling element in a universal state is able to bring to bear upon the mass of the population seems to be a positive obstacle to the attainment of the ruler's desire, and his will here defeats itself in attempting to gain its ends by means that generally prove effective in other spheres. The working of this psycho-social 'law' has been examined in this Study already in an earlier passage³ which need not be recapitulated.

It is all the more remarkable to observe how effective a use the representatives of the internal proletariat are apt to make of the opportunity offered by the pacific atmosphere of a universal state for propagating, from below upwards, a higher religion and eventually establishing a universal church. We may recall the more striking examples from a fuller survey that we have made in a previous chapter of this Study.⁴

'The Middle Empire' of Egypt, for instance, which was the original Egyptiac universal state, was used to this effect by the Osirian Church.⁵ The Neo-Babylonian Empire, which was the Babylonian universal state, and its successive alien successor-states, the Achaemenian Empire and the Seleucid Monarchy, were similarly used by Judaism and by its sister-religion Zoroastrianism⁶—a creation of the Iranian wing of the proletariat of the Babylonian World which made converts of the Achaemenid empire-builders but escaped the blight that might have been the penalty for its having become the religion of the powers that be, thanks to the studied religious tolerance of all the Achaemenidae except, perhaps, Cambyses and to the personal religious laxity of the later rulers of the dynasty from

¹ See V. vi. 49-97.

² The most striking apparent exception is the successful establishment of Confucianism as the official philosophy of the Sinic universal state by the Emperor Han Wuti. The success of this imposition of a philosophy of the dominant minority upon the internal proletariat of the Sinic World is at least partly explicable by the fact that the 'Confucianism' which thus became a going concern was an amalgam in which an element of authentic philosophy was heavily alloyed with popular superstitions (see V. v. 418-19, 555-7, 654-5, and 708).

³ See V. v. 646-712.

⁵ In V. v. 58-194.

⁶ See V. v. 120-4.

Artaxerxes II onwards.¹ The opportunities offered by the Roman Peace were seized by a number of competing proletarian religions—by the worship of Cybele and Isis and by Mithraism and Christianity,² as well as by the Babylonian philosophy of astral determinism.³ The corresponding opportunities offered by a *Pax Hanica* in the Sinic World were competed for by an Indic proletarian religion, the Mahāyāna, which had arisen out of a philosophy of the Indic dominant minority in the crucible of the Kushan Empire,⁴ and by the indigenous Sinic proletarian religion of Taoism, which likewise created itself out of a philosophy in emulation of the equally astonishing genesis of its Indic rival.⁵ The Arab Caliphate provided a comparable opportunity for Islam—thanks to the *êthos* of the Umayyad Caliphs, who, with the exception of 'Umar II, were as tolerant and as lax as the Achaemenidae⁶—and the Gupta Rāj in the Indic World for Hinduism.⁷ The Mongol Empire, which for a moment extended an effective *Pax Nomadica* over the Continent from the west coast of the Pacific Ocean to the east coast of the Baltic Sea and from the southern fringes of the Siberian tundra to the northern fringes of the Arabian desert and the Burmese jungle, struck the imagination of the missionaries of a host of rival religions by the portentous scale of the opportunity which this almost literally universal state appeared to offer; and, considering how brief this passing moment actually was, it is remarkable to observe how successfully it was turned to account by the Nestorian and the Western Catholic Christian churches and by Islam, as well as by the Lamaist Tantric sect of Mahayanian Buddhism.⁸ The successive Ming and Manchu avatars of the universal state which the Mongol Empire had provided for the main body of the Far Eastern World gave Western Catholic Christianity a second opportunity of attempting the conquest of a new world,⁹ and the same church made a simultaneous attempt to take advantage of the foundation of a Japanese universal state in the shape of the Tokugawa Shogunate.¹⁰ The Ottoman Empire gave an opening for Bedreddinism, Imāmi Shī'ism, and Bektāshism,¹¹ and the Mughal Rāj in the Hindu World for Kabirism and Sikhism.¹²

The exponents of the higher religions that had thus so frequently profited by the favourable social and psychological climate of a universal state had in some cases been conscious of the boon and had ascribed its bestowal upon them in an auspicious hour to the providence of the One True God in whose name they had been going forth converting and to convert their fellow men. In the eyes of the authors of the Books of 'Deutero-Isaiah', Ezra, and Nehemiah,¹³ the Achaemenian Empire was the chosen instrument of Yahweh for the propagation of Judaism,¹⁴ and

¹³ According to van Hoonacker, A.: *Une Communauté judéo-araméenne à Elephantine aux vi^e et vii^e siècles avant J.C.* (London 1915, Milford), pp. 22-23, Nehemiah (whose first mission this scholar dates in 445 B.C.) really preceded Ezra (whose mission he dates in 398 B.C.).

¹⁴ See V. vi. 17, 122, n. 3, and 130, n. 3. In inverse form and in non-supernatural terms the same conception of the relations between Judaism and the Achaemenian

this conception of the final cause of a universal state was applied to the Roman Empire by a Father of the Christian Church in a passage so felicitous that it gave birth to a patristic commonplace.

'The incarnation of the Word of God united divine nature with human nature so [completely] that God's nature was able to stoop to the depths and ours to be raised up to the heights. In order that the effects of this ineffable act of grace might be spread throughout the World, God's providence previously brought into existence the Roman Empire. Its territorial acquisitions were carried to the lengths required for enabling all nations everywhere to become neighbours in the intimate contact that is established in a universal state. It was thoroughly consonant with the divine plan of action that many kingdoms should thus be confederated in a single empire and that the evangelization of all Mankind should find itself able to make an unimpeded and rapid progress through the ranks of peoples held together under the rule of a single polity.'¹

The inspiration, direct or indirect, of this passage in a fifth-century Christian sermon can be discerned in an ode from the pen of a seventeenth-century Christian poet, when he imagines Nature put out of countenance by her Maker's overwhelming act of becoming incarnate.

But He, her fears to cease,
Sent down the meek-eyed Peace;
She, crown'd with olive green, came softly sliding
Down through the turning sphere,
His ready harbinger,
With turtle wing the amorous clouds dividing;
And, waving wide her myrtle wand,
She strikes a universal peace through sea and land.

No war or battle's sound
Was heard the world around:
The idle spear and shield were high uphung;
The hookèd chariot stood

Empire is presented by Eduard Meyer: 'Once again [i.e. in the light of the newly discovered Elephantine papyri] it is made unquestionably manifest that Judaism is a creation of the Persian Empire: the Babylonian Jews actually set in motion [for their own purposes] the engine of the Imperial Government and made use of its authority to impose on the Jews in Palestine and the Diaspora the Law which Ezra had composed' (Meyer, E.: 'Zu den aramäischen Papyri von Elephantine' in the *Mittheilungen* of the Königl. Preussische Akademie der Wissenschaften, Gesamtsitzung vom 23 November, 1911). According to Van Hoonacker, op. cit., p. 20, Meyer exaggerates the extent of the new departure in the development of Judaism in the fifth century B.C.

¹ '[Verbum] caro factum ita divinam naturam naturae univit humanae ut illius ad infima inclinatio, nostra fieret ad summa provectio. Ut autem huius inenarrabilis gratiae per totum mundum diffunderetur effectus, Romanum regnum divina providentia praeparavit; cuius ad eos limites incrementa perducta sunt quibus cunctarum undique gentium vicina et contigua esset universitas. Disposito namque divinitus operi maxime congruebat ut multa regna uno conföderentur imperio et cito pervios haberet populos praedicatio generalis quos unius teneret regimen civitatis' (Leo the Great, Pope: Sermo lxxxii, chap. 2, in Migne, J.-P.: *Patrologia Latina*, vol. liv, col. 423). Leo the Great has been cited as an exponent of the gentle response of Christianity to the challenge of social disintegration in V. v. 77. Another passage in the same sermon, on Rome's debt to the Christian Church, is quoted on p. 697, below. The present passage is anticipated in an address to an Antonine emperor by Bishop Melito of Sardis, which is quoted by Eusebius: *Historia Ecclesiastica*, Book IV, chap. xxvi, §§ 7-8.

Unstain'd with hostile blood;
 The trumpet spake not to the armèd throng;
 And kings sat still with awful eye,¹
 As if they surely knew their sovran Lord was by.²

An opportunity so marvellous as to seem truly heaven-sent is indeed presented to a higher religion by the establishment of an imperial peace; yet, in the relation between a successful missionary church and the universal state within whose framework it is carrying out its purpose of converting Mankind, the climate of toleration, which gives the work of conversion so favourable a start, does not always persist till the end of the story and is sometimes actually transformed into its own opposite by the very success of the tolerated religion in taking advantage of it during the first chapter.

There have, no doubt, been cases in which there has been no such sinister termination of the armistice between an internal proletariat and a dominant minority that is inaugurated by the establishment of a universal state.

For example, in the history of the Osirian Church in the Egyptiac World, the apprehensive hostility which the rising proletarian religion evoked in the hearts of the ruling element in the Egyptiac Society at as early a date as the eve of the Time of Troubles³ does not appear to have led on to any overt trial of strength between this would-be universal church and 'the Middle Empire' that was the Egyptiac universal state; and in the ensuing interregnum the rival religions of the Egyptiac internal proletariat and dominant minority actually made common cause against the religion of an external proletariat with an alien cultural tinge, and entered into an alliance which proved to be the prelude to amalgamation.⁴ Peace likewise seems to have been preserved in the Sinic World between the Mahāyāna and the Taoist Church on the one side and the Han Empire on the other until the Sinic universal state went into dissolution towards the end of the second century of the Christian Era.

When we come to Judaism and Zoroastrianism, we cannot tell what their ultimate relations might have been with either the Neo-Babylonian or the Achaemenian Empire, since each of these universal states in turn had its life cut short by an alien conqueror at an early stage of its history. We only know that, when the Achaemenian régime was abruptly replaced by the Seleucid and eventually, west of the Euphrates, by the Roman, the impact of an alien Hellenic culture, of which the Seleucid and the Roman Powers were the successive political instruments,

¹ This image is perhaps a reminiscence of a passage of Latin poetry (Lucretius: *De Rerum Natura*, Book V, ll. 1222-5) depicting the psychological effect produced by the descent from heaven, not of Peace, but of a thunderbolt:

Non populi gentesque tremunt, regesque superbi
 corripiunt divom percussi membra timore
 nequid ob admissum foede dictumve superbe
 pœnarum grave sit solvendi tempus adultum?

² Milton, John: *Ode on the Morning of Christ's Nativity*.

³ See I. i. 140-3. This presentation of Osirism, which had been adopted by the writer of this Study from J. H. Breasted: *The Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), pp. 29 and 140, is contested by Breasted's successor, J. A. Wilson, in his *The Burden of Egypt* (Chicago 1951, University Press), p. 32, n. 12.

⁴ See I. i. 143-4.

deflected both Judaism and Zoroastrianism from their original mission of preaching a gospel of salvation to all Mankind, and transformed them into weapons of cultural warfare in the Syriac Society's retort to the Hellenic Society's aggression.¹ If the Achaemenian Empire, like its post-Hellenic avatar, the Arab Caliphate, had run out its full course, we may conjecture that, under the auspices of a tolerant or indifferent Achaemenian Imperial Government, either Zoroastrianism or Judaism or some syncretism of these two higher religions would have anticipated the achievement of Islam, which—profiting by the indifference of the Umayyads and the conscientious observance, by the 'Abbasids, of the tolerance, prescribed by the *Shari'ah*, towards non-Muslims who were 'People of the Book'²—made gradual headway, uncompromised by the frustrating assistance of the civil arm, until the collapse of the 'Abbasid régime brought a landslide of voluntary mass-conversions among ex-subjects of the Caliphate seeking shelter, in the courtyard of the Mosque, from the storm of an approaching political interregnum.³ Similarly, under a Guptan Empire which was a reintegration of the original Mauryan Hindu universal state, the ousting of the philosophy of Buddhism by the post-Buddhaic higher religion of Hinduism was not only unopposed by a dynasty who were, themselves, adherents of the rising Hindu faith, but was also unimpeded by any left-handed stimulation of the outgoing philosophy through acts of official persecution that would have been alien to the intrinsically tolerant and syncretistic religious *ethos* of the Indic Civilization.⁴

In contrast to these cases in which a higher religion, profiting by the peace of a universal state, had been tolerated by the Imperial Government from first to last, there were other cases in which its peaceful progress had been interrupted by official persecutions that had either nipped it in the bud or had denatured it by goading it into going into politics and eventually taking up arms or, at the lightest, had compelled it to pay a heavy toll of suffering as the price of spoiling the Egyptians.

Western Catholic Christianity, for example, was almost completely extirpated in Japan by the Tokugawa régime in the seventeenth century of the Christian Era,⁵ and was effectively checked in China in the eighteenth century by the less drastic measures then taken against it by the Manchu Power.⁶ Shi'ism was crushed in the Ottoman Empire in A.D. 1514 by Sultan Selim the Grim.⁷ Islam was persecuted by the pagan Mongol *khāqāns*—partly because of the Muslims' steadfastness in refusing to abandon Islamic ritual observances that were offensive to Mongol tribal custom, and partly owing to the influence, in Mongol counsels, of Islam's Nestorian Christian enemies⁸—and, though this persecution was more than counter-balanced in the long run by a temporary political union, under Mongol rule, of China and Dār-al-

³ See V. v. 678.

⁴ See V. v. 706.

⁵ The faithful remnant was driven underground, like the Jews and Muslims in Catholic Spain and Portugal (see II. ii. 232-3 and 244-8 and IX. viii. 569).

⁶ See V. v. 365-7.

⁷ See I. i. 365 and 382-3 and V. v. 365.

⁸ For the adverse consequences of this influence for Islam, see II. ii. 122, n. 2, 237-8, and 449-52; V. v. 3, n. 3, and 250; in the present volume, pp. 256-7 below; IX. viii. 355; and X. ix. 36.

Islām which led to the permanent introduction of Islam into China,¹ Islam in China under the Mongols, like Western Catholic Christianity in China under the Ming and the Manchus, missed its possible destiny of becoming the universal church of the main body of the Far Eastern Society. Islam gained no substantial foothold in China outside the two far north-western provinces of Kansu and Shensi and the new south-western province of Yunnan which was added to China's patrimony by force of Mongol arms; and, even in these two lodgements, the Islamic community in China never became anything more than an alien minority which was goaded, by the precariousness of its position, into recurrent outbreaks of militancy.

This denaturing effect of official persecution, which thus left its mark in China on Islam, is more signally exemplified in the perversion of Sikhism in India in reaction to the sustained and violent persecution to which this possible embryo of a Hindu universal church was subjected by the Mughal Rāj.² In allowing itself to be provoked into militancy, Sikhism renounced its spiritual birthright and opted for the limited and uncreative role of becoming a local political community in a single province of the Hindu World, where, down to the time of writing, the height of its political success had been the dubious achievement of having once carved out one of the ephemeral successor-states of the Mughal Empire.

In contrast to the cases just cited, the untoward after-effects on Christianity of the trial of strength that was the prelude to its triumph over the Roman imperial régime were comparatively slight.³ During the three centuries ending in the conversion of Constantine, while Christianity was benefiting by the facilities unintentionally offered to it by the Roman Peace, it was never out of danger of falling foul of Roman policy; for, besides the suspicion of private associations of all kinds that haunted the Roman State in the Imperial Age,⁴ there was an older and more deeply graven Roman tradition of special hostility to private associations for the practice and propagation of foreign religions; and, though the Roman Government had relaxed this hardest policy in two notable instances—in its official reception of the worship of Cybele at the psychological crisis of the Hannibalic War⁵ and in its persistent toleration of Judaism as a religion, even when the Jewish Zealots forced Rome's hand and ultimately compelled her to obliterate the last vestiges of a Jewish state⁶—the suppression of the Bacchanals in the second century B.C. was an augury of what the Christians were to suffer in the third century of their era.⁷ Unlike the Sikh community under the Mughal

¹ See Broomhall, M.: *Islam in China* (London 1910, Morgan & Scott); de Thiersant, D.: *Le Mahométisme en Chine et dans le Turkestan Oriental* (Paris 1878, Leroux, 2 vols.); Devéria, G.: *Musulmans et Manichéens Chinois* (Paris 1898, Imprimerie Nationale); and the present Study, IV. iv. 496 and V. v. 116. This was an incidental consequence of the Mongols' general policy of intermixing the peoples and cultures of their empire (for an instance of this see V. v. 350-1).

² See V. v. 187 and 665-8.

³ These untoward after-effects are considered again, in a different connexion, on p. 439, below.

⁴ See p. 57, above.

⁷ See II. ii. 216.

Rāj, the Christian Church under the Roman régime resisted the temptation to retort to official persecution by perverting itself from a religious into a politico-military association; and it was duly rewarded for remaining substantially true to its own nature by becoming a universal church and an heir of the future. Yet the Christian Church did not come through this ordeal unscathed. Instead of reading and taking to heart the manifest lesson of the triumph of Christian gentleness over Roman force, she presented her discomfited persecutors with a gratuitous vindication and a posthumous moral revenge by taking to her bosom the sin which had consummated their failure. The habit of resorting to persecution as a would-be short cut to overcoming opposition to her practice and beliefs was adopted by the Christian Church before the close of the fourth century of the Christian Era¹ and clung to her thereafter. Even the desperate remedy of clutching at tolerance at the cost of losing hold of faith—an expedient in which Western Christendom had been experimenting since the latter part of the seventeenth century²—had not proved a lasting cure for this wantonly contracted spiritual disease.

Such sinister legacies, bequeathed to higher religions by universal states, are not, however, of the same order of significance as the benefits which are offered to a higher religion by the facilities that a universal state provides. It was within, and with the aid of, this political and social framework that Christianity, Islam, Hinduism, and the Mahāyāna won their way to becoming universal churches.

While the internal proletariat, as the creator of the higher religions, is thus the principal beneficiary on the spiritual plane from the dominant minority's impermanent yet momentous achievement of establishing a universal state, the benefits on the political plane are harvested by other hands; and this distribution of advantages arises from the very nature of the situation. The enforced peace of a universal state gives the internal proletariat its opportunity for spiritual prowess in so far as it debars it from the privilege of exercising political power and relieves it of the necessity of bearing arms; and even the empire-builders, bled white by the supreme effort of imposing peace through a knock-out blow that has been the climax of a crescendo of fratricidal warfare, lose the zest that has carried their forefathers to victory in their struggle for existence in the foregoing Time of Troubles. The military service once readily accepted as an honour and as an opportunity for ambition now comes to be shunned as an unwelcome burden; and, in looking about for stalwart and willing shoulders to which this load might be transferred, the imperial authorities are apt to draw an ever larger quota of their military recruits from the ranks of an untamed external proletariat.³ The psychology of peace under the auspices of a universal state thus unfits the rulers themselves for the task of retaining their own political heritage; and accordingly the political beneficiaries of this process of psychological disarmament that is induced by the moral climate of a universal state are neither the rulers nor the ruled; they are intruders from beyond the

¹ See IV. iv. 226-7.

² See IV. iv. 227-8 and V. v. 669-71.

imperial frontiers who may be either members of the disintegrating society's external proletariat or representatives of some alien civilization.

At an earlier point in this Study¹ we have, in fact, observed that the event which registers the extinction of a civilization—as distinct from the event which precipitates its antecedent breakdown and disintegration—is usually the occupation of the domain of the defunct society's universal state either by barbarian war-lords from beyond the pale or by conquerors coming from another society with a different culture, or in some cases by both kinds of invader, one following at the heels of the other. Barbarians overran the Empire of Sumer and Akkad, the Guptan Empire, the Empire of Ts'in and Han, the Roman Empire, the Arab Caliphate, 'the thalassocracy of Minos', and both 'the Middle Empire' and 'the New Empire' of Egypt.² The Neo-Babylonian Empire, which was the Babylonian universal state, was cut short by Iranian barbarians who were in the act of becoming converts to the Syriac Civilization and architects of the original Syriac universal state; and this Achaemenian Empire, in its turn, was cut short by Macedonian barbarians who had already become disciples and missionaries of Hellenism before the whirlwind campaign in which Alexander the Great overthrew the Achaemenian Power. The Mauryan Empire, which was the Indic universal state, suffered the Achaemenian Empire's fate, 150 years later, at the hands of an Hellenic successor of the Achaemenian Empire in Bactria; and the Empire of the Incas, which was the Andean universal state, was similarly cut short by militant apostles of Western Christendom whose leader emulated the demonic energy, but not the chivalrous generosity, of the Macedonian Alexander. At the break-up of the Ottoman Empire, which had provided an alien universal state for the main body of Orthodox Christendom, incipient barbarian invasions were overtaken, and were then either brought to a halt or changed in character, by the mightier march of Westernization: partly in the form of conquests by Western or Westernizing Powers, and partly through the cultural conversion of the subject peoples of the Empire and of the invading barbarians themselves.³ At the break-up of the Mughal Empire, which had provided an alien universal state for the Hindu World, incipient barbarian invasions were stopped dead by the restoration of the universal state in the form of a British Rāj.⁴

The benefits secured by barbarian or alien aggressors who have succeeded in taking advantage, for their predatory purposes, of the psychological climate induced by a universal state are palpable and, on a short view, imposing. Yet we have observed already,⁵ and shall be verifying in a later part of this Study, that the barbarian invaders of the

¹ In IV. iv. 56-119.

² The Hyksos barbarians who came in at the death of 'the Middle Empire' of Egypt had acquired *en route*, as we have seen, a tincture of the alien Sumeric culture, and this is one possible explanation of the fanatical fury with which the Egyptiac Society rose against them, drove them out, and restored a universal state that had already run its full course before the Hyksos had appeared on the scene (see VI A, Annex, pp. 574-6, below, and the references there given to previous passages in this Study that bear upon this point).

³ See IV. iv. 68-70 and 76-78.

⁵ In I. i. 58-62 and V. v. 194-337, *passim*.

⁴ See V. v. 304 and 305, n. 2.

derelect domain of a crumbling universal state are heroes without a future;¹ and Posterity would assuredly have recognized them as being the disreputable adventurers that they are, but for the retrospective glamour of romance and tragedy that is cast over their sordid escapades by their redeeming intuition of their fate and their marvellous capacity for writing their own epitaphs on their own terms in the language of high poetry.² As for the achievements of the militant missionaries of an alien civilization, these too, though seldom so short-lived as the triumphs of the barbarians, are, like them, delusive and disappointing by comparison with the historic achievement of an internal proletariat that has taken advantage of a *pax oecumenica* by founding, under its aegis, a universal church.

In two instances in which we know the whole story, we have seen that a civilization whose universal state has been prematurely cut short by alien conquerors is capable of going to earth, hibernating for centuries, biding its time, and eventually finding its opportunity to expel the intrusive civilization and resume the universal state phase of its history at the point where this has been interrupted. The Indic Civilization achieved this *tour de force* after nearly six hundred years, and the Syriac after nearly a thousand years, of submergence beneath an Hellenic flood; the monuments of their achievement were the Guptan Empire and the Arab Caliphate, in which they respectively resumed the universal states originally embodied in the Mauryan Empire and in the Achaemenian Empire.³ On the other hand the Babylonian and Egyptian societies were eventually absorbed into the body social of the Syriac, though the Babylonian Society succeeded in preserving its cultural identity for about six hundred years after the overthrow of the Neo-Babylonian Empire of Nabopolassar and Nebuchadnezzar by Cyrus the Achaemenid, while the Egyptian Society⁴ maintained itself for no less than two thousand years after the termination of its natural expectation of life had been signalled by the collapse of 'the Middle Kingdom' in which we have seen its original universal state.⁵

On the evidence of past history there are thus two alternative denouements to attempts on the part of one civilization to devour and digest another civilization by force. The evidence shows, however, that, even when such an attempt is ultimately successful, there may be a period of probation, lasting for centuries or even millennia, before the result is assured; and the Time-scale here revealed might incline twentieth-century historians to be chary about forecasting the outcome of the Western Civilization's latter-day attempts to swallow its contemporaries, considering how relatively short the time had been since even the oldest of these attempts had been inaugurated, and how little had yet been seen of the gradually unfolding story.

In the case of the Spanish conquest of the Central American World, for example, in which the alien conquerors had actually anticipated the

⁵ See pp. 49-50, above, and pp. 569-76, below.

establishment of a universal state by indigenous empire-builders, it might well have been supposed that, when the alien substitute, in the shape of the Spanish Viceroyalty of New Spain,¹ had in due course been supplanted by a Republic of Mexico which had sought, and gained, admission into the comity of Western states, the assimilation of the Central American Society into the body social of the Western Society had become an irreversibly accomplished fact. Yet the Mexican Revolution of A.D. 1821, which might thus have appeared to have completed the incorporation of the Central American into the Western World, had been followed by the Revolution of A.D. 1910, in which the buried but hibernating indigenous society had suddenly bestirred itself, raised its head, and broken through the crust of culture deposited by officious Castilian hands on the grave into which the *conquistadores* had thrust a body that they believed themselves to have slain. This portent from Central America raised the question whether the apparent cultural conquests of Western Christendom in the Andean World and elsewhere might not likewise prove, sooner or later, to have been no more than superficial and temporary.

The Far Eastern Civilization in China, Korea, and Japan, which had succumbed to the influence of the West within the last century before the time of writing, was manifestly far more potent than the Central American Civilization had ever been; and, if the indigenous culture of Mexico was reasserting itself after a four hundred years' eclipse, it would be rash to reckon that the Far Eastern Society was destined to be assimilated by the West or by Russia. As for the Hindu World, the inauguration of two 'successor-states' of the British Rāj in A.D. 1947 might be interpreted as a peacefully accomplished counterpart to the establishment of a Republic of Mexico by revolution in A.D. 1821, and at the time of writing it seemed possible that in this case, as in that, an act of political emancipation which had superficially set the seal upon the process of Westernization by bringing the emancipated state into the comity of Western nations, might prove in retrospect to have been the first step towards the cultural emancipation of a civilization that had been temporarily submerged by a Western tide.

The Arab countries, again, which had recently been gaining admission to the Western comity of nations as sovereign independent states,² had been able to achieve this ambition in virtue of their success in shaking off an Ottoman political ascendancy and an Iranic cultural veneer by which they had been overlaid for four centuries.³ Was there any reason to expect that the latent survival power of the Arabic culture, which had enabled the Arabs to resist assimilation to the kindred culture of a sister society, would not assert itself, sooner or later, against the influence of the far more alien culture of the West? And, if the permanent Westernization of the Arabic World was not assured, there was also no assurance that the Ottoman Turkish converts from the Iranic culture, or even the Greek, Serb, Ruman, Bulgar, Georgian, and Russian converts from the Western Society's sister civilization, Orthodox Christendom, would abide in their new cultural allegiance. We can merely speculate on the

¹ See xi, map 72.

² See IV. iv. 82 and 107.

³ See IV. iv. 113-14.

possibility that cultural conversions which, like those of the Aztecs, the Incas, and the Hindus, have been initiated by force of alien arms may prove less stable than conversions which have been entered into on the converts' own initiative, like those of the Irish,¹ the Scandinavians,² the Orthodox Christians,³ the Japanese,⁴ and the Jews⁵ to the culture of the West, or the assimilation of the Manchus to the Far Eastern Civilization in China.⁶

The general effect of this survey of the ultimate consequences of 'cultural conversions' is to confirm our conclusion that the sole sure beneficiary from the services afforded by a universal state is the internal proletariat. The benefits obtained by the external proletariat are always illusory, while those obtained by an alien civilization are apt to be impermanent.

(c) THE SERVICEABILITY OF IMPERIAL INSTALLATIONS

I. Communications

An Analysis of Imperial Institutions

Having now examined the effects of two general characteristics of universal states—their conductivity and their peace—we may go on to survey the services afforded to their beneficiaries by particular concrete institutions which they themselves deliberately create and maintain, but which are apt to find their historic mission in roles for which they had never been cast by their makers. These imperial institutions may be grouped under the three heads of installations, currencies, and corporations, and each of these heads may be subdivided. The principal installations set up by a universal state are its communications, its garrisons and colonies, its provinces, and its capital city. Its most important currencies are its official language and script, its legal system, and its money, weights and measures, and calendar. Its major corporations are its army, its civil service, and its citizen body. If we consider each of these institutions in turn, we shall find it serving some unintended beneficiary in some measure.

The Spider's Web

Communications head the list, because they are the master-institution on which a universal state depends for its very existence. They are the instrument not only of its military command over its dominions but

¹ The first act in the assimilation of the Irish was their voluntary decision, at the time of the Reformation, when their English rulers turned Protestant, to maintain their allegiance to a Catholicism which had been thrust upon them in the Early Medieval Age of Western history (see II. ii. 421-3). The second act was the captivity of the Irish, in the nineteenth century of the Christian Era, by the contemporary Western movement of Nationalism. (For recent Irish Linguistic Archaism as a symptom of Nationalism, see V. vi. 65-67 and 71.)

² See II. ii. 347-60 and V. vi. 64-65 and 71.

³ For the Westernization of the Modern Greeks, see II. ii. 226-7; V. vi. 68-70 and 71; and IX. viii. 161-84. For the deliberate attempt to transform the Russian Orthodox Christian universal state into a member of the comity of Western states, see IV. iv. 88-91.

⁴ See IV. iv. 88-91.

⁵ See II. ii. 252-4; V. vi. 70-71; and IX. viii. 286-8.

⁶ See V. v. 348-9 and 352.

also of its political control through overt imperial inspectors and unavowed secret service agents. For this imperial life-line does not consist merely of the physical media of travel. The highways offered ready-made by Physical Nature, in the shape of rivers,¹ seas,² and steppes,³ do not provide practicable means of communication except in so far as they are effectively policed;⁴ and the same political condition governs, *a fortiori*, the use of artificial or regulated inland waterways and man-made roads. Nor is the maintenance of public security enough in itself to make the potentialities of communication practically operative. In a geographical area so large as is the domain of even the least extensive universal state if measured by the standard of an individual human being's mobility even in a technologically efficient society, the traveller may be hard put to it to reach his destination unless he is given the privilege of using public means of transportation. In most of the universal states so far known to History, these means had taken the form of an imperial postal service; and the imperial postmaster-general at the seat of the central government, with his host of subordinates strung out along the roads radiating from the capital to the frontiers, had been apt to acquire the additional function of a chief of secret police whose most important duty, in the eyes of his masters, had been to turn his opportunities of intelligence to the central government's account by reporting on the conduct and ambitions of provincial governors and frontier commanders, and on the public opinion and temper of imperial troops and subject populations.

A public postal service seems to have been part of the machinery of government of the Empire of Sumer and Akkad. In its metropolitan territory of Shinar, the embankments of the irrigation canals appear to have served as highways for land-traffic.⁵ 'The New Empire' of Egypt, which established its authority over the derelict Syrian and Mesopotamian provinces of the Empire of Sumer and Akkad after an interlude of barbarian Hyksos rule, used the roads which it inherited here from its predecessors for keeping control over the native princelings by a service of diplomatic couriers and travelling inspectors. In the Achaemenian Empire we find the same installations apparently raised to a higher level of organization and efficiency—though this apparent superiority in

¹ In the geographical structure of an Egyptical universal state the natural waterway provided by the River Nile served as a spinal cord, and a corresponding service was performed by the rivers Euphrates and Tigris for the Empire of Sumer and Akkad.

² 'The [Mediterranean] Sea stretches in a belt across the middle of the Inhabited World and across the middle of your [Roman] empire; and round the sea the continents extend "grand and grandly" (*μεγάλοι μεγαλωστί κέκλινται*)—continually supplying your needs with consignments of their products' (Aristeides, P. Aelius: *In Roman*, §§ 10-11 in B. Keil's edition (*Aelii Aristidis Quae Supersunt Omnia*, vol. ii (Berlin 1898, Weidmann), p. 94)). For the role of the Mediterranean Sea in the life of the Roman Empire, see further pp. 216-20, below.

³ For the conductivity of the Steppe, see III. iii. 391-4. The centrally situated medium of communication which was provided for the Roman Empire by the Mediterranean Sea—as depicted by Aelius Aristeides in the passage quoted in the preceding footnote—was provided by the Great Western Bay of the Eurasian Steppe (see III. iii. 401) for the Nomad empires of the Royal Scythians, the Khazars, and the Golden Horde (see V. v. 281-9), and by the entire Eurasian Steppe for the short-lived Nomad Empire of the Mongol khāqāns who ruled from Qaraqorum (see p. 198, below).

⁴ See the passage quoted from Epictetus in V. vi. 3 and 142, and on p. 92, below.

⁵ See Woolley, L.: *Abraham* (London 1936, Faber), p. 122.

standard may be an illusion reflecting a mere difference in the amount of our information.

'The farther the bounds of the Empire were extended, the more powerful became the position of the provincial governors; and this made it the more necessary to create institutions for preserving the Empire's unity and for ensuring a prompt and unhesitating execution of Imperial commands. Instruments for holding the Empire together were the great roads converging on Susa and traversing the Empire in all directions in the track of the previously existing trade-routes. . . . These roads were measured in parasangs and were permanently maintained in good condition. The Imperial Highway¹ was provided, at intervals of about four parasangs on the average, with "imperial post-stations and excellent inns".² The provincial boundaries and the river crossings were guarded by strongly garrisoned fortresses (πύλαι)³ (the desert frontier of Babylonia, among others, was provided with defences of the same kind).⁴ At these points the traffic was subjected to searching supervision. All post-stations were manned by mounted couriers whose duty it was to convey imperial commands and official dispatches post-haste, travelling day and night without a break—"swifter than cranes", as the Greeks put it.⁵ There is also said to have been a system of telegraphic communications by beacon-signals. To keep the satraps under control, the Emperor would take every opportunity of sending out into the provinces high officials, like the Emperor's "eye" or his brother or son, with troops at their back. These would arrive, without warning, to inspect the administration and report abuses. Further safeguards against misconduct on the satraps' part were provided by the presence of the imperial secretary who was attached to the provincial governor,⁶ and of the commandants of fortresses and other military officers in his province, who all served as instruments of supervision. These checks were supplemented by a highly developed espionage system. The Emperor had a ready ear for denunciations.'⁷

This Achaemenian policy of utilizing the imperial communications system as an instrument for maintaining the central government's control over the provinces reappears in the administration of the Roman Empire, which eventually fell heir to the former Achaemenian dominions west of the Euphrates, and of the Arab Caliphate—a reincarnation of the Achaemenian Empire in which the Syriac universal state found its

¹ i.e. the Great North-West Road connecting Susa with Sardis and Ephesus (see xi, map 20). The central section of this Achaemenian Imperial Highway, between Assyria and Cappadocia, had originally been opened up, as early as the third millennium B.C., by Assyrian pioneer traders whose settlements in Cappadocia had subsequently been embraced in the Empire of Sumer and Akkad (see I. i. 110-11).—A.J.T.

² Σταβμοί τε πανταχῇ εἰσι βασιλῆϊσι καὶ καταλύσεις κάλυπται (Herodotus, Book V, chap. 52).

³ The corresponding installations were called κλεισούραι (i.e. 'clausurae') in the East Roman Empire and 'derbends' in the Ottoman Empire.—A.J.T.

⁴ See Xenophon: *Expedition Cyri*, Book I, chap. 5, § 5.—A.J.T.

⁵ Reminiscences of Herodotus's account of the Achaemenian system of communications, blending with the tenth verse of the seventh chapter of the Book of Daniel (quoted in the present Study, V. vi. 34), may have inspired Milton to write:

His state
Is kingly. 'Thousands at His bidding speed
And post o'er land and ocean without rest.
They also serve who only stand and wait.

The poet's application of this Achaemenian imagery is, of course, all his own.—A.J.T.

⁶ See Herodotus, Book III, chap. 128.—A.J.T.

second avatar after the long interruption caused by the intrusion of the Hellenic Civilization upon the Syriac World between the Macedonian conqueror Alexander's crossing of the Hellespont in 334 B.C. and the Roman Emperor Heraclius's withdrawal behind the Amanus in A.D. 636.¹ In the case of the Caliphate a twentieth-century historian had at his disposal a wealth of information; for a full and accurate account of the 'Abbasid road network and postal system had been extracted from the official records and preserved for Posterity in a corpus of treatises which was a notable monument of the classical Arabic literature,² while a picture of the Roman road network and postal system had been pieced together from archaeological and epigraphical evidence by Modern Western classical scholars.³

The Roman Imperial *Cursus Publicus* was instituted by Augustus himself—perhaps consciously on the Achaemenian pattern⁴—and the burden of providing the service, which was originally imposed on the local public authorities, appears to have been progressively taken over by the Imperial Treasury in the reigns of Hadrian and Septimius Severus, though this without ever ceasing to bear heavily on the populations of the territories through which the imperial highways ran.⁵ Official dispatches were carried overland by corps of *tabellarii* and *cursores*, and oversea by *naves tabellariae*.⁶ The Achaemenian inspiration of this Roman institution is betrayed in a characteristic use of couriers as spies. The emissaries of the Roman Imperial Government who went under the euphemistic names of *frumentarii* ('foragers') in the Age of the Principate and of *agentes in rebus* in the post-Diocletianic Age were counterparts, in Roman dress, of an Achaemenian emperor's 'eye'. Their administrative duty of superintending the conduct of the imperial postal service was coupled with the political duty of espionage.⁷

In the Caliphate under the 'Abbasid régime the administration of the public postal service was turned to account for purposes of intelligence and police.

'At the capital of each of the large provinces into which the mighty empire was articulated there was a postmaster (*Sāhib al-Barīd*)⁸ whose

² The Arabic texts of this corpus had been published by de Goeje, M. J., in his *Bibliotheca Geographorum Arabicorum* (Leyden 1870-94, Brill, 8 vols.). A masterly summary and appreciation of the facts was to be found in Le Strange, Guy: *The Lands of the Eastern Caliphate* (Cambridge 1905, University Press).

³ See Hirschfeld, O.: *Die kaiserlichen Verwaltungsbeamten bis auf Diocletian* (Berlin 1905, Weidmann), pp. 190-204, 'Die Reichspost', and pp. 205-11, 'Die Italischen Strassen'.

⁴ See *ibid.*, p. 190.

⁵ See *ibid.*, pp. 192-3.

⁶ See *ibid.*, pp. 200-4.

⁷ See Grosse, R.: *Römische Militärgeschichte von Gallienus bis zum Beginn der byzantinischen Themenverfassung* (Berlin 1920, Weidmann), pp. 105-6. The postal service itself must, all the same, have been efficient—at any rate during the halcyon days of an Antonine Indian Summer. Otherwise Aelius Aristides would hardly have ventured to write:

'An administrator sitting [in Rome] can govern the whole Inhabited World with the greatest facility by correspondence. The despatches are no sooner written than they are delivered, just as if they had travelled by air' (*In Romam*, edited by Keil, B., in *Aelii Aristidis Quae Supersunt Omnia*, vol. ii (Berlin 1898, Weidmann), p. 101 (Or. XXVI, § 33)).

⁸ This word *barīd*, which is used in Arabic to mean 'postal system', is derived from the Latin *verēda* meaning 'mail-cart'.—A.J.T.

duty it was to keep the Caliph continually informed of all affairs of any importance. The postmaster had even to keep an eye on the conduct of the governor and was thus a confidential agent of the Central Government's, appointed direct by them. The report of a Chief Postmaster of Baghdad, addressed to the Caliph Mutawakkil, has come down to us. . . . We even know the form of appointment of a postmaster. The Caliph commissions him therein to report from time to time on the conduct of the financial officials and of the administrators of the crownlands, on the state of agriculture, on the situation of the peasants, on the behaviour of the officials, and on statistics of the minting of gold and silver coin. He was also to be present when the troops were being reviewed and paid. It is clear that the postal service, as we understand it, was quite a secondary consideration.'¹

The primary consideration was what it had been under the Achaemenian Government.

'The postmasters . . . were the sensitive octopus-arms which the Court of Baghdad extended into the provinces. . . . The postal system was made to serve the purposes of espionage: in this far-flung empire the intelligence service was most efficiently organized. In the later parts of his work, Tabari gives the dates, not merely of the events themselves, but of the arrival at Court of the news of them.'²

The same institutions reappear in two empires built by representatives of an Iranic Muslim Civilization that was affiliated to the Syriac and had retained a memory of the parent society's achievements. Seventeenth-century Western observers of the Ottoman Empire avowed their admiration for the imperial highways—the like of which were not to be found in the Western Europe of that day—and for the courier service, staffed with mounted Tatars, who emulated the hard riding of Darius's Persian equerries. The contemporary empire of the Timurid Mughals in India never attained the Ottoman standard either in the material quality of its roads or in the effectiveness of its public police, but these shortcomings did not prevent it from operating an espionage and intelligence system in the Achaemenian and 'Abbasid tradition. Confidential news bulletins were systematically sent in from each province by an official reporter (*wāqi' ah nawī*) and were submitted to the Emperor by his *mīr bakhshī*.³ When the Mughal Power went to pieces in the eighteenth century of the Christian Era, this intelligence organization continued to function longer than most other parts of the dilapidated imperial administrative machine.

Napoleon, who was an active and ubiquitous builder of roads during the short life of the transitory universal state⁴ which he provided for an abortive Medieval Western city-state cosmos,⁵ was in this, as in so much of the rest of his work, making a conscious attempt to evoke a ghost of the Roman Empire; and the Petrine Russian Empire had deliberately set itself to acquire the Western technique which it used in its latter days for establishing and consolidating its hold over Transcaucasia, Trans-

⁵ This aspect of the Napoleonic Empire has been examined in V. v. 619-42.

caspia, the Oxus-Jaxartes Basin, and a Maritime Province on the Pacific coast of the Continent by railway-building on a scale that outstripped all contemporary achievements in the United States and Canada. But similar circumstances and requirements likewise called similar administrative machinery into existence in other universal states which could not have drawn their inspiration, even at second or third hand, from the practice and experience of imperial chanceries at Ur or Susa or Rome or Baghdad.

Ts'in She Hwang-ti, the revolutionary founder of a Sinic universal state, was a builder of roads radiating from his capital, which he used for making political inspections and carrying out statistical surveys.¹ The inspectorate was elaborately organized. An Inspector-General, with two deputies, in the capital was served by a numerous staff of subordinates both in the capital and in the provinces, and there were special inspectorates, besides, for 'subject barbarians' and 'subject states'.² The Incas, likewise, were builders of roads and fortresses.³ Like the Roman conquerors of Italy, the Incas, in their systematic northward conquests, used these instruments to consolidate each gain of ground, in preparation for the next advance.⁴ The completed system consisted of two main roads running parallel, south and north, one along the Andean Plateau and the other along the Pacific Coast, with transverse connecting roads at intervals. These roads were carried across the rivers by bridges of stone and wood, by suspension bridges of rope, or by cable and basket.⁵ There were store-houses strung along the route, and relays of post-runners⁶ were stationed at intervals of one and a half leagues. A message could travel from Cuzco to Quito—a distance of more than a thousand miles as the crow flies and perhaps half as much again by road—in as short a time as ten days.⁷ The organization of this service was attributed to the eighth Inca, Pachacutec (*imperabat circa* A.D. 1400-48).⁸ The travelling facilities were used by the Inca himself and by itinerant imperial inspectors, intendants, and judges.⁹

'The surveillance [of the Central Government over the provinces] was provided for by inspectors, drawn from the ranks of the *orejones*,¹⁰ who

¹ See Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), p. 168; Fitzgerald, C. P.: *China, A Short Cultural History* (London 1935, Cresset Press), p. 138; Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), p. 233. Ts'in She Hwang-ti imposed a standard measure for the axle-length of carts, in order that any cart might be able to travel over any of the deeply rutted roads in the loess country in the North and North-West. In the foregoing period of the Contending States, when each locality had had a customary axle-length of its own, through-traffic had been hampered by the necessity, at frequent intervals, of either changing the axles of the cart or else trans-shipping the freight to another cart of the right axle-gauge for the next stage of the journey (Fitzgerald, *op. cit.*, p. 138; Franke, *op. cit.*, vol. cit., p. 233).

¹⁰ The nickname given to the ruling minority in the Inca Empire by their Spanish conquerors (see V. v. 50-51).—A.J.T.

made general tours of the Empire every three years, and by secret agents of the Inca . . . who paid visits, incognito, to all districts. These agents' instructions were to observe, to listen to complaints, and to report, but it was not within their competence to take measures for the suppression of abuses. Under this system, several brothers of the Inca Tupac Yupanqui were successively appointed inspectors. . . . The duties of inspector-in-chief were performed by the Inca himself; he travelled over the Empire in his golden litter, and during the whole period of his visits—which were very long, considering that he sometimes remained absent [from the capital] for as much as three or four years—he would be hearing petitions and dispensing justice.¹

While the means of communication with which the Inca Empire equipped itself were thus assiduously used by the public authorities, including the Emperor in person, they were not at the disposal of private travellers—in contrast to contemporary practice in Central America, where travelling companies of merchants, organized in a guild, were continually extending the field of their private economic enterprise² in advance of the expansion of the Aztec Empire,³ like the Roman *negotiatores* who, in their irrepressible eagerness for profits, used to push their way in advance of the legions into perilous no-man's-lands,⁴ and linger there after the legions had retreated.⁵ This active international trade in private hands seems to have been part of the heritage of the Mexic Civilization from its Mayan predecessor.⁶ On the other hand no evidence had survived to show that the Aztec Empire had been prompted by memories of 'the First Empire' of the Mayas when it had turned its commercial travellers to account as sources of military and political intelligence⁷ or when it had constructed the installations with which it had confirmed its hold on its conquests in the manner of the contem-

¹ Baudin, op. cit., pp. 120-1. This particular duty afterwards devolved upon the Inca's alien successor the Spanish viceroy. 'The welfare of the Indians was presumed to be his special care, and he was expected to devote a part of two or three days each week to the consideration of Indian petitions' (Haring, C. H.: *The Spanish Empire in America* (New York 1947, Oxford University Press), p. 119).

⁴ As, for example, those who were massacred in Anatolia in 88 B.C. by Mithradates Eupator—to the number, it was said, of eighty thousand (see V. v. 69).

⁵ As, for example, those whom, in A.D. 448, the Constantinopolitan envoy Priscus found doing their business in Attila's ordu in the former Roman province of Pannonia (for Priscus's mission see V. v. 473-4).

⁶ See Gann, T., and Thompson, J. E.: *The History of the Maya* (London 1931, Scribner), pp. 200-1.

⁷ 'In the Aztec period the travelling merchants became a special class, and their security of body and property, preserved at first for the advantages which each town could derive from their wares, was guaranteed by the force of Aztec arms. . . . Having to move step by step, and to intimidate or win over town after town, [the Aztecs] needed patience and knowledge of geographical and political conditions. One reason for the honour in which merchants were held was the information of this character which they could furnish from their travels. . . . In time they performed an important political function, spying out towns to conquer and reporting on the tribute which could be exacted. There is a very modern touch about the economic and political functions of these merchants who so often brought military conquest in their train' (Vaillant, op. cit., pp. 122-3, 208, and 213).

It will be seen that these merchants played in the acquisition of the Aztec Empire the role that in the maintenance of the Achaemenian Empire was played by 'the King's Eye', and in the maintenance of the 'Abbasid Empire by the postmasters.

porary Inca Power. The Aztec Imperial Government built and maintained highroads, threw bridges of stone, wood, or rafts across the rivers, and operated on these thoroughfares an imperial postal service manned by relays of couriers at intervals of five or six miles.¹

In Japan the Great North-East Road,² running up the south-eastern side of the Main Island from the civil capital at Kyoto in the interior to the successive military capitals at Kamakura and Yedo, served first to secure the conquests made by the Far Eastern Civilization in Japan at the expense of the Ainu barbarians and afterwards to bring and keep Yamato under the domination of the Kwanto—as the new northern marches came to be called, after the name of the road by which they had been opened up.³ Under the Tokugawa régime, which provided the Far Eastern Society in Japan with its universal state, this trunk road and its branches ministered to the policy of the Shogun's government at Yedo as an instrument not only for keeping an eye on the impotent Imperial Court at Kyoto, but also for the more formidable task of keeping to heel the feudal lords all over the Empire—especially those 'Outside Lords' (*Tosama*) whose houses had once been rivals of the Tokugawa in the grim struggle for power at the climax of a Japanese Time of Troubles.

These *daimyō* were required by the Shogun to reside in Yedo, with their principal retainers, for so many months in the year, and to leave their wives and families there as hostages when they themselves were in residence in their fiefs, with the triple object of keeping them under supervision, loosening their personal hold on the fiefs from which they drew their political and military strength, and weakening them financially by putting them under social pressure to live, while in the capital, in a style beyond their means.⁴ The migration, twice a year, of these feudal lords, with their retinues, between their fiefs in the provinces and their residences in the capital was one of the distinctive features of Japanese life in the Tokugawa Age; and the grand trunk road and its ramifications were the media of communication for their perpetual coming and going. While the Government were interested in seeing the means of communication kept up sufficiently well to serve this police purpose, they were equally interested in seeing to it that they should not be kept up well enough to tempt disaffected feudal forces into planning a convergent march on the capital; and they 'deliberately refrained from building bridges and otherwise facilitating communications on the main lines of approach to Yedo'.⁵

The Grand Canal

In the main body of the Far Eastern World in China the long-distance transportation of foodstuffs in bulk came to be one of the besetting

³ See II. ii. 158-9.

⁴ See Sansom, G. B.: *Japan, a Short Cultural History* (London 1932, Cresset Press), p. 436; Sadler, A. L.: *A Short History of Japan* (Sydney 1946, Angus & Robertson), p. 217.

⁵ Sansom, *op. cit.*, p. 437. Perhaps their scholars had reminded them of the unintended and untoward service that the roads built by Ts'ing She Hwang-ti had once rendered to the rebels who had overthrown his régime a few years after his death (see pp. 99-100, below).

problems of public administration, owing to a tendency towards political unification under an oecumenical government seated in the North which persisted after the economic centre of gravity had shifted conclusively from the North to the Yangtse Valley.

'Commercial growth in China never reached a level which would enable it to overcome the localism and narrow exclusiveness of an agricultural economy. [The] regional groupings were highly self-sustaining and independent of each other; and—in the absence of machine industry, modern facilities of transport and communication and an advanced economic organisation—state centralisation in the modern sense was impossible. In the circumstances, the unity or centralisation of state power in China could only mean the control of an economic area where agricultural productivity and facilities of transport would make possible the supply of a grain tribute so predominantly superior to that of other areas that any group which controlled this area had the key to the conquest and unity of all China. It is areas of this kind which must be designated as the Key Economic Areas. . . .¹

'The Yangtse Valley grew in importance as a productive centre during the Eastern Tsin (A.D. 317–420) and the other Southern dynasties (A.D. 420–589), definitely assuming the position of the Key Economic Area from the time of the T'ang Dynasty (A.D. 618–907).² Politically, the centre of gravity still lay in the North. . . . This anomalous situation rendered the development and maintenance of a transport system linking the productive South with the political North a vital necessity. The link was provided by the Grand Canal,³ which engaged the attention of the best minds of China for more than ten centuries and demanded countless millions of lives and a large portion of the wealth of the country for its improvement and maintenance. . . .⁴

'Although traditionally the canal is ascribed to the genius and extravagance of Yang Ti [*imperabat* A.D. 605–18] of the Sui, it was not built in one period or by one emperor. Like the Great Wall, it was constructed in disconnected sections at different periods.⁵ Yang Ti of the Sui completed

² In the time of Han Yü, a writer on the subject of water control who lived from A.D. 768 to A.D. 824, 'Kiangnan' (i.e. the combined areas of the latter-day provinces of Kiangsu, Chekiang, Kiangsi, and Nganhwei) yielded nine-tenths of the total land-tax of the T'ang Empire (Chi, Ch'ao-ting, *op. cit.*, p. 125).

³ See xi, maps 46, 47, 54.—A.J.T.

⁴ Chi, Ch'ao-ting, *op. cit.*, p. 113.

⁵ Waterways for the transportation of troops, tribute, grain, and merchandise were already being constructed in the Sinic World before the close of the period of Chan Kuo, 'the Contending States', which was the second and climacteric bout of the Sinic Time of Troubles (see *ibid.*, p. 65).

Han Kuo, the earliest canal linking the Yangtse River with the Hwai River, was dug in the second decade of the fifth century B.C. by King Fu Ch'ai of Wu (see *ibid.*, pp. 65 and 117). This Yangtse-Hwai canal was straightened out, after the collapse of 'the United Tsin régime', by the Emperor Mo Ti of the refugee Tsin Dynasty in the South (*imperabat* A.D. 345–61) (see *ibid.*, pp. 112 and 117); and it was restored in A.D. 587, to facilitate the transportation of tax-grain, by Sui Yang Kien (Wên Ti), who, in the ninth decade of the sixth century of the Christian Era, united the North and South of the main body of the Far Eastern World in a single oecumenical empire (see *ibid.*, p. 117). This section was improved by Sui Yang Ti in A.D. 605 (see *ibid.*, p. 117).

The Pien Canal, linking the Hwai River with the Yellow River, is likewise recorded to have been in existence already during the Chan Kuo period of Sinic history (see *ibid.*, pp. 114–15); it appears to have been completed in A.D. 204 (see *ibid.*, pp. 100–1); and under the refugee Tsin it was used by Wang Chün for the conquest of Wu (see *ibid.*, p. 115). The Sui alinement of the Pien Canal was more direct than the preceding

it by linking the various waterways running in a north and south direction into a connected system¹ and adding long sectors both in the North and South.²

While the completion of the Grand Canal, in its original alinement from Hangchow via Loyang to Si-Ngan, was thus the work of Sui Yang Ti, the solution of the problem of provisioning Si-Ngan from Kiangnan was worked out, after the fall of Yang Ti and his house, by the public servants of the succeeding T'ang régime. Granaries were built *en route*—particularly at either end of the Yellow River gorge ('the San Men Gates'), where storage facilities were required in order to allow of a six-mile portage overland.³ This T'ang system of inland water communications was perfected between A.D. 764 and 780 by a public servant named Liu Yen, who, among other improvements, built five different types of boats for use on different sections;⁴ but seven-tenths of the works accomplished under the T'ang Dynasty had been carried out before the outbreak of the devastating rebellion of An Lu-shan (*saevebat* A.D. 755–66).⁵

This disaster was a premonition of a Time of Troubles that overtook the main body of the Far Eastern Society when the T'ang Dynasty finally went to pieces at the turn of the ninth and tenth centuries of the Christian Era.⁶ After this Time of Troubles had entered on its second and more violent bout in the reign of the Sung Emperor Huitsung (*imperabat* A.D. 1101–25),⁷ China relapsed into political disunity and,

one; it took off from the Yellow River at a point in the neighbourhood of Loyang, instead of at Kaifeng, and from this point it ran direct to the Hwai (see *ibid.*, p. 115); but in this Hwai–Yellow River section of the Grand Canal, as in the Hwai–Yangtse section, Sui Yang Ti still had the advantage of having had predecessors.

The Yangtse–Hangchow section was dug by Yang Ti in A.D. 610, and thereby a continuous waterway was established between Yangchow and Loyang, the former capital of the Eastern Ch'ou and the Posterior Han (see pp. 212–13, below), which was erected by Yang Ti into a subsidiary imperial capital. The main capital of the Sui Empire was Si-Ngan, on the site of the Prior Han Dynasty's capital Ch'ang Ngan (see pp. 212 and 213, below); and Yang Ti carried his through-waterway to Si-Ngan from the new 'key economic area' in the South by restoring a canal, cut by Han Wuti in the seventh decade of the second century B.C., which had connected Ch'ang Ngan directly with the Yellow River—by-passing the Wei River, which was difficult to navigate in the gorge through which it made its way out of 'the Country within the Passes' into the Lower Yellow River Plain (see Chi, Ch'ao-ting, *op. cit.*, pp. 81–82 and 119–20).

¹ These vast public works were carried out by correspondingly onerous *corvées*. One hundred thousand men and women are said to have been conscripted by Sui Yang Ti to dig his Yangtse–Hwai canal; one million to dig his Yellow River–Hwai canal (see Chi, Ch'ao-ting, *op. cit.*, pp. 117 and 116); and another million—again including women, to make good a shortage of men—to dig a branch taking off from the Yellow River in the Great Eastern Plain and linking up the main line of the Grand Canal with the Hai Ho Basin (see *ibid.*, p. 120). The terrible harshness and brutality with which the workers on the Yellow River–Hwai (Pien) canal were treated are described in an anonymous contemporary monograph (see *ibid.*, pp. 123–4). The means of communication created at this cost in human suffering served, when in existence, as instruments for enabling a ruling minority to intensify its exploitation of the masses. Hence the unpopularity of Han Wuti and Sui Yang Ti (see *ibid.*, p. 122). The first of the revolts that ended in the overthrow of the Sui Dynasty was provoked by Yang Ti's enterprise of digging his Yellow River–Hai Ho branch of the Grand Canal to bring supplies to Sui armies engaged in a war with the Sui Empire's neighbour the North-West Korean state of Koguryō (see Bingham, W.: *The Founding of the T'ang Dynasty: The Fall of Sui and the Rise of T'ang: A Preliminary Survey* (Baltimore 1941, Waverley Press), pp. 37–46).

therewith, the problem of long-distance grain transport automatically fell into abeyance; but, when unity was restored, and the Time of Troubles brought to an end, by Mongol empire-builders who established a Far Eastern universal state with its capital at Peking, this problem of grain transport presented itself again, and this time in geographical circumstances that made it more difficult to solve than it had been in the days of an oecumenical government seated 'beyond the passes' at Si-Ngan—which the T'ang, like the Sui, had chosen for their capital—and still more difficult than in the days, between A.D. 960 and the disastrous year A.D. 1124, when the Sung had ruled virtually the whole of China from Kaifêng¹—the most convenient of all possible sites in the Yellow River Basin for water communications with the South, lying, as it did, in the very middle of the Great Eastern Plain.

The Mongols had followed the lead of their forerunners the Kin in choosing Peking for their capital because this site lay just inside the northernmost limits of the cultivated land of China, within convenient proximity to the steppes on which the Nomad conquerors of China were at home. Unlike the Kin, however, who had never succeeded in pushing southward beyond the basin of the Yellow River into the basin of the Yangtse, the Mongols had proceeded to conquer the whole of China right down to Canton inclusive; and this achievement raised for them the questions how they were to administer this vast, populous, and wealthy domain from a capital located on its extreme northern verge and how they were to keep this capital supplied from a southern 'key economic area' which was more remote from Peking than it was from Kaifêng, Loyang, or even Si-Ngan. This problem was inherited from the Mongols by their indigenous Chinese supplanters the Ming, who soon found by experience that the military and political considerations telling in favour of Peking outweighed those considerations of cultural sentiment and economic convenience that had led the founder of the new dynasty to try the experiment of transferring the capital to the historic site of Nanking.² But a reunited China could not be governed from Peking without some effective medium of communication for maintaining the Imperial Government's political control over the distant Yangtse Basin and still more distant southern seaboard, and for bringing rice northward in bulk for the two purposes of paying in kind the taxes due to the Imperial Government from the rice-growing provinces and at the same time feeding the vast and increasing population of an economically eccentric capital. This problem was solved by a re-alignment of the Grand Canal which made Peking instead of Kaifêng its northern terminus.

From Peking southwards as far as the River Hwai, the Yüan (Mongol) Grand Canal was an entirely new enterprise, for Sui Yang Ti's branch, linking the Hai Ho with the Yellow River, had not been alined with the direct route between the Hai Ho Basin and the southern sections of the main line, and in any case the whole of the northern part of the Sui canal system had been wrecked by the retreating Sung in A.D. 1128, when they had breached the embankments of the Yellow River in order

See p. 213, below.

² See II. ii. 121-2.

to check the advance of the pursuing Kin invaders.¹ The cutting of the new northern section was started, from Peking southwards, in A.D. 1292, and the completed Yüan Grand Canal continued to be used, after the expulsion of the Mongols, by their successors the Ming and the Manchus,² as the Sui Grand Canal had continued to be used by the Sui's successors the T'ang and the Sung. The Grand Canal served, in fact, as the spinal cord of the Chinese body politic and body economic³ until the dissolution of the traditional structure of Chinese social life in the course of the nineteenth century of the Christian Era under the economic impact of the West.⁴

In all chapters of its history the Grand Canal was, of course, mainly a medium for the slow transport of commodities in bulk, and it could not take the place of roads as media for a postal service. Accordingly, when the main body of the Far Eastern World was politically united, an oecumenical network of roads, to carry an imperial postal service, had to be maintained side by side with an oecumenical system of inland water transport. The Manchus revived a postal system, once maintained by the Ming,⁵ which was perhaps ultimately derived from the system with which a Sinic universal state had been endowed by Ts'in She Hwang-ti.⁶

'All Roads Lead to Rome'

It will be seen that, in constructing and maintaining their impressive systems of communications, the makers and masters of universal states usually had a clear and precise idea of the purposes for which they were burdening their subjects with these costly public works. Yet the sequel shows that the most sagaciously organized system of imperial communications may be utilized by other parties than the Imperial Government—and this for purposes to which the official owners and operators of the system would have been either indifferent or hostile if they could have foreseen this unintended use to which their carefully designed installations were to be put.

This variation on the motif of the victory of the dark horse⁷ is piquantly illustrated in the history of the magnificent communications system of the Roman Empire.

The splendour of this achievement on the social and political plane is ungrudgingly admitted in a passage already quoted⁸ from the pen of a Greek Stoic philosopher, living and teaching near the beginning of the second century of the Roman Peace, who is at the same time sharply

¹ See Chi, Ch'ao-ting, op. cit., p. 140.

⁸ Epictetus: *Dissertations*, Book III, chap. xiii, §§ 9-13, quoted in V. vi. 3 and 142 (in the latter place, including the moral).

aware of the psychological and spiritual limitations of Caesar's power and, indeed, cites his potency in policing the Hellenic World only in order to bring out this contrast.

'You see that Caesar appears to provide us with a great peace, because there are no longer any wars or battles or any serious crimes of brigandage or piracy, so that one can travel at any season and can sail from the Levant to the Ponent.'

Towards the close of the same century the eulogy was repeated, without the philosopher's reservation, by a Greek man of letters of a school which had recognized the Roman Empire as the Hellenic universal state.

'The common saying that Earth is the all-mother and the universal home has been demonstrated by you Romans to perfection; for to-day Greek or barbarian, travelling heavy or travelling light, is at liberty to go where he pleases, at his ease; and, wherever he goes, he will never be leaving home behind him. The Cilician Gates and the narrow sandy passage through the Arab country to Egypt¹ have both alike lost their terrors. The mountains are no longer trackless, the rivers no longer impassable, the tribesmen no longer ferocious; it is a sufficient passport to be a Roman citizen or indeed a Roman subject; and Homer's saying that "the Earth is common to all men" has been translated into fact by you, who have surveyed the whole Inhabited World and have thrown all manner of bridges over the rivers and have hewn cuttings through the mountains until you have made the Earth *carrossable*—with your post-houses planted in the wilderness and your system and order spreading civilisation far and wide.'²

If the makers and the panegyrists of the Roman imperial system of communications could have foreseen the future, they would have found it intolerable no doubt, but not unintelligible in a world in which 'all roads' led 'to Rome', that the thoroughfares which in their time were bringing prisoners, petitioners, and sightseers to the Imperial City should one day bring barbarian war-bands or the armies of rival empires. They might even have taken a rueful pride in the thought that, in their impartial service to foes and friends alike, the Roman roads would still be bearing witness to the Empire's former greatness in those latter days of her adversity. These imperial highways certainly enabled, and possibly inspired, the barbarians to make straight for the heart of the Hellenic World.³

The Vandals, for instance, entered Spain within three years, and appeared before the walls of Carthage within twenty-four years, of their passage of the Rhine on the 31st December, A.D. 406. The Arabs arrived in Egypt within six years, at Carthage within sixty-four years, and all but in sight of the River Loire within ninety-nine years of their first raid across the Syrian *limes* of the Roman Empire in A.D. 633. And the Romans' Persian rivals for world dominion reached Calchedon, the

³ This strategy of the barbarian invaders of the Roman Empire is pointed out by Nilsson, M. P.: *The Minoan-Mycenaean Religion and its Survival in Greek Religion* (London 1927, Milford), p. 33.

Asiatic suburb of Constantinople, within twelve years, and Alexandria within sixteen years, of their crossing of the Mesopotamian frontier of the Roman Empire in A.D. 603.

The inland sea which the Romans had confidently styled *mare nostrum*¹ proved even more serviceable to barbarian raiders than the Empire's overland media of communication. Goths who had won a frontage on the north coast of the Black Sea by descending from the interior of the Continent and seizing the Roman Empire's local client state, the Bosphoran principality, took to the water in A.D. 254 and, forcing their way out through the Straits into the Aegean, sacked Athens in A.D. 268. A band of Franks, who had been planted by the Emperor Probus (*imperabat* A.D. 276-82) on the sea-coast of Pontus, to hold for the Empire against the Alans a frontier at the opposite extremity to the sector that was threatened by the Franks themselves from their native lair, seized ships and succeeded in exploring their way 'from the mouth of the Phasis to that of the Rhine'.² This Frankish exploit was subsequently surpassed by the Vandals, who, after establishing themselves in Carthage, likewise took to the sea and put Epictetus's limited homage to Caesar out of date by turning a Mediterranean that had been 'a Roman lake' since the morrow of the Battle of Actium into the naval arena that it had been at the climax of the foregoing Time of Troubles, when Sextus Pompeius was defying Augustus, or when the Cilician pirates were challenging the might of a Roman Republic that had overthrown all its peers, or when Carthage was contending with Rome for the dominion of the Hellenic World. Indeed the Vandals achieved what the Pompeians and Cilicians and Carthaginians had hardly dreamed of accomplishing. In A.D. 455 they captured Rome from the sea. Such a sensational reversal of maritime fortunes had not been witnessed in Mediterranean waters since, more than eighteen hundred years before, 'the thalassocracy of Minos' had been overthrown by Vandal-like Mycenaean and Goth-like Achaean sea-rovers.

If Romans of the generation of Domitian or of the seemingly halcyon Age of the Antonines could have foreknown these coming events, they might have been overcome by horror and indignation, yet they would hardly have been bewildered as they certainly would have been if they had been told that, by their time, the superb imperial system of communications had already fulfilled its historic mission by facilitating the journeys of a private Roman citizen of whom they had never heard. When Augustus imposed the Roman Peace on a Pisidia that had not been effectively subdued by either the Achaemenids or the Seleucids, he was unconsciously paving the way for Saint Paul, on his first missionary journey from Antioch-on-Orontes, to land in Pamphylia and travel inland, unmolested, to Antioch-in-Pisidia, Iconium, Lystra, and Derbe. And Pompey had swept the Cilician pirates off the seas in order that Paul might make his momentous last voyage from a Palestinian Caesarea

² Gibbon, Edward: *The History of the Decline and Fall of the Roman Empire*, chap. xii, following Panegyrici Veteres (the passage will be found on p. 145 of Bährens' edition) and Zosimus, *Historiae*, Book I, chap. lxxi, §§ 3-5. The audacious adventurers sacked Syracuse *en route*.

to an Italian Puteoli without having to brave man-made perils in addition to the ordeals of tempest and shipwreck.

If we think of Antioch-on-Orontes as the base of operations from which Saint Paul achieved his spiritual conquests, we shall realize how successful and enduring Paul's achievements were by comparison with the military and political enterprises of the House of Seleucus, which had operated from the same headquarters from the day when Seleucus Nîcâtôr had ousted his rival war-lord Antigonus Monophthalmus from this key position and had removed the rising city of Antigoneia to a more commanding adjacent site to which he had given the new name of Antioch.¹ The appeal 'Come over into Macedonia and help us',² which moved Saint Paul to deliver his triumphantly audacious assault upon the European shore of the Hellenic World's Aegean heart, had been heard, and responded to, by Seleucus Nîcâtôr at the height of his fortunes, in an hour when the overthrow of Lysimachus in succession to the overthrow of Antigonus had made him master of the lion's share of the Achaemenian heritage in Asia; and it had sounded again in the ears of Nîcâtôr's descendant Antiochus the Great, when, after emulating his ancestor's exploits by driving to the wall Lysimachus's Pergamene heirs, he was hovering, like Paul in a later age, in the Asiatic hinterland of the Hellespont. Yet the enterprise which Paul was to carry to so brilliant a conclusion on the spiritual plane had ended in both political and personal disaster for Seleucus I and Antiochus III.

Seleucus—impelled by homesickness to revisit at last the native land which he had not seen since he had crossed the Hellespont with Alexander fifty-three years before—had hardly recrossed the Straits and set foot again in Europe when he was treacherously assassinated by an unscrupulous adventurer; Antiochus, ambitiously aspiring to snatch the championship of the Macedonian cause against Rome out of the hands of Antigonus's descendant King Philip V of Macedon and to avenge, in his rival's stead, the honourable defeat which Macedonian arms had suffered at Cynoscephalae, only brought upon himself his ignominious military fiascos at Thermopylae and Magnesia, and had to pay the political penalty of surrendering all Seleucid possessions in Europe and Asia north-west of Taurus. Following in these inauspicious footsteps, Saint Paul, in his spiritual campaigns, succeeded where the Seleucidae had failed. In the Hellespontine city of Alexandria Troas, which had closed its gates against Antiochus,³ Paul succeeded in founding a Christian congregation.⁴ And the fatuous boast of Antiochus's swashbuckler Aetolian allies that they would pitch their camp on the banks of the Tiber⁵ sets a standard by which we may measure Paul's successful fulfilment of his prediction that he was to see Rome as well as

her Oriental and Greek dominions.¹ He reached Rome as a political prisoner, but, whatever the length of his sojourn there and in whatever way he may have met his end in This Life, it is certain that his presence and action in the Imperial City ensured the survival there of an infant Christian congregation that was to have a greater destiny than any other in the Hellenic World.²

The Roman Roads' Service to the Christian Church

If this contrast between Paul's success and the Seleucids' failure is mainly to be explained by the difference of the planes on which the Apostles of Jesus and the Successors of Alexander were operating, the no less striking contrast between Paul's success and the Mauryan Emperor Açoka's failure in a philosophic missionary enterprise in the same Mediterranean area may be ascribed in a large measure³ to the establishment of the Roman Peace in the Hellenic World between the Buddhist philosopher-king's and the Christian Apostle's day. Açoka has left us a notice of the philosophic missions which he sent to the realms of five of Alexander's successors in the second generation,⁴ but no record of his emissaries' activities has come to us from their mission field, and, whatever their fortunes may have been, they made no discernible effect upon the history of Mankind. In seeking to propagate the philosophy of Siddhārtha Gautama beyond the western limits of his own Mauryan Peace, Açoka was unlucky in his generation, for the Achaemenian Peace, which had proved so conductive a medium for Judaism and Zoroastrianism,⁵ and had perhaps conveyed to the Hellenic World the Zoroastrian and Indic elements that are to be found in Orphism,⁶ had been broken up by force of Macedonian arms two generations before Açoka's time, and the anarchy that racked the Syriac and Hellenic worlds, with little intermission, from this break-up of the Achaemenian Peace to the establishment of the Roman Peace was particularly unpropitious for missionary work.

On the other hand the Roman Peace proved as propitious a social environment for Paul's successors as it had been for Paul himself. In the latter part of the second century of the Roman Empire's existence, Saint

¹ See Acts xix. 21.

² Though Rome had been the queen of Christian cities in the history of Christianity so far, it would have been unwarrantable in A.D. 1952 to assume that she was destined to retain her historic primacy in perpetuity. The advent of Christianity was then still a recent event, even on that time-scale of the histories of civilizations which was so infinitesimally short by comparison with the age of the Human Race or with the aeons of geological and astronomical reckonings (on this point see I. i. 173, n. 2). At the time when these lines were being written, Christianity had hardly yet begun to retrieve the loss of its former Nestorian and Monophysite provinces by winning converts beyond the bounds of the two societies—those of Western and Orthodox Christendom—which were the daughter civilizations of the Hellenic Society. By the same date, however, the Western Civilization had already thrown the tentacles of its communications system and its technology round the whole habitable and traversable surface of the planet. If Christianity were to make as good a use of this opportunity as it had once made of the similar opportunity presented by the Roman Empire, there was no knowing where in the World its eventual centre of gravity would be found.

³ In large measure, yet only in part, for Açoka was handicapped in his spiritual enterprise by his political power. The ineffectiveness of political power as an instrument for propagating philosophies or religions from above downwards has been discussed in V. v. 646-712.

⁴ See V. v. 131-2.

⁵ See V. v. 124-5.

⁶ See V. v. 85-87.

Irenaeus of Lyon—a Christian Father who was an approximate contemporary of the pagan Greek man of letters Publius Aelius Aristides—was paying an implicit tribute to the Empire in extolling the unity of the Catholic Church throughout the Hellenic World.

‘Having received this gospel and this faith, . . . the Church, in spite of her dispersal throughout the World, preserves these treasures as meticulously as if she were living under one single roof. She believes in these truths as unanimously as if she had only one soul and a single heart, and she preaches them and expounds them and hands them down as concordantly as if she had only one mouth. While the languages current in the World are diverse, the force of the [Church’s] tradition is one and the same everywhere. There is no variety in the faith or in the tradition of the churches that have established themselves in the Germanies or in the Spains or among the Celts or in the East or in Egypt or in North-West Africa, or, again, of the churches that have established themselves at the World’s centre. Just as God’s creature the Sun is one and the same throughout the World, so likewise the Gospel of the Truth shows its light everywhere.’¹

This successor of Paul’s failed to recognize—or at any rate forbore to acknowledge—how much the Christian Church was indebted for her marvellous unanimity-in-ubiquity to the communications system of the Roman Empire. But the connexion was disagreeably evident two hundred years later, in an age when the Church had become the official partner of the Roman State, to a pagan historian bred in the city that had been the spiritual headquarters of Saint Paul and the political headquarters of the Seleucidae.

‘[The Emperor] Constantius [II],’² writes Ammianus Marcellinus of Antioch, ‘found the Christian religion uninvolved and straightforward and proceeded to muddle it up with old wives’ superstitions. As his delight in complicated theological hair-splitting was greater than his sense of responsibility for maintaining harmony, he provoked innumerable dissensions, and he added fuel to the galloping flames by organizing acrimonious debates. One consequence was that crowds of prelates made use of the public post-horses (*iumentis publicis*) for rushing to and fro on the business of these “synods”, as they call them. The prelates’ object was to wrench the whole practice of their religion into conformity with their own caprice; Constantius’s achievement was to ham-string the postal service (*rei vehiculariae succideret nervos*).’³

The sentiments of Ammianus, a Roman soldier of Greek birth writing history in the Latin tongue, would have been applauded by the Roman administrators who had called the imperial system of communications into existence and by the Greek men of letters who had eulogized it as its apogee. Though the waters of the Mediterranean Sea and the pavement of the chaussées leading inland from its shores were free for all comers to traverse at their own risk, exertion, and expense, the imperial postal service was not a facility provided by the Government for the

¹ Irenaeus: *Contra Haereses*, Book II, chap. x, § 2 (Migne, J.-P.: *Patrologia Graeca*, vol. vii, cols. 552–3), quoted already in V. v. 407, n. 4.

² Constantius II *imperabat* A.D. 337–61.—A.J.T.

³ Ammianus Marcellinus: *Res Gestae*, Book XXI, chap. xvi, § 18.

convenience of the public, but a burden imposed on the public by the Government for strictly official purposes;¹ and, before the bishops took the mail-carts by storm, the passes (*diplomata*) entitling private persons to travel by public post were issued very sparingly, and this only on warrants from the very highest authorities.² Itinerant second-century Greek lecturers who would have been happy to receive passes for themselves would have grudged them to itinerant fourth-century prelates if they could have foreseen the appearance of such strange personages above the historical horizon of their conventional-minded age. But the Roman system of imperial communications is not the only one that illustrates the irony of history.

The Beneficiaries of Means of Communication created by Other Universal States

The Empire of Sumer and Akkad was as hard hit by its own efficiency in this department of imperial administration as the Roman Empire was in the last chapter of the story. Its north-eastern highways³ eventually conveyed both the flood of Mitanni Nomad invasion which swept across Mesopotamia and over Syria into the Nile Delta⁴ and the contemporary infiltration of Kassite mountaineers into Shinar—a sluggish flow whose waters, eventually submerging Babylon, turned the latter-day capital of a Sumeric universal state into a cultural morass that it was to take the best part of a thousand years to reclaim.⁵ The corresponding north-western highway⁶ conveyed Hittite marauders from the Anatolian Plateau on the lightning raid in which they sacked Babylon *circa* 1595⁷ or 1531 B.C.⁷ The success with which the barbarians thus used the imperial thoroughfares of the Empire of Sumer and Akkad to break the Empire's power and to plunder its wealth was sensational, yet at the same time it was a performance which was to have little lasting effect on the fortunes of Mankind, as was evident in the perspective of some three and a half millennia of subsequent history. There was, however, another unintended beneficiary from these roads whose influence, under many masks, was still at work in the World in A.D. 1952; for it was the forerunners of this Sumeric

¹ See Hirschfeld, *op. cit.*, pp. 190-1 and 204.

² See *ibid.*, pp. 198-200.

³ See xi, map 11.

⁴ See I. i. 104-7.

⁵ The Babylonian Civilization which eventually arose on the derelict site of the Sumeric World must have been in full cultural health in the eighth century B.C., when it began to make major discoveries in the field of astronomy (see IV. iv. 23-24).

⁶ 'Astronomy was not a science at a fabulously early time; its beginnings as a science date back only to the late Assyrian period, its best-known devotees lived under the Achaemenid Persians, its greatest triumphs were under Seleucid or even Parthian rule. . . . The first advance is attributed to the Babylonian King Nabu-nasir, whose era, beginning 747 and remembered to late classical times, introduced a nineteen-year cycle of intercalation which was later modified but never abandoned in principle. Significant is the fact that the first eclipses quoted by Ptolemy date from exactly this time. Evidently there was a new emphasis on observation. . . . Scientific astronomy was primarily developed from practical considerations, and, in particular, from the need of adjusting the calendar' (Olmstead, A. T.: 'Babylonian Astronomy—Historical Sketch', in the *American Journal of Semitic Languages and Literatures*, vol. lv, April 1938, No. 2, pp. 114 and 117).

⁷ See xi, map 11.

⁸ The historical context, as well as the dating, suggested for the Hittite sack of Babylon in I. i. 111 and V. v. 263-4, had to be reconsidered in the light of archaeological discoveries made since the writing of the first six volumes of this Study (see the Note on Chronology in vol. x, on pp. 167-212, below).

imperial communications system that had conveyed the worship of Ishtar and Tammuz, the Mother and her Son, on the first stages of that long journey which—in diverging directions and through continual metamorphoses—was to carry this rudiment of a Sumeric higher religion over Syria to the shrine at Abydos on the banks of the Nile, and over Asia Minor to the Island of Heligoland among the waters of the North Sea.¹

When the Achaemenidae, establishing a wider empire on the site of Ur-Nammu's and Šulgi's, reconditioned the same north-western highway and extended it to the shores of the Aegean and the Hellespont, they, in their turn, were leading a lightning conductor into the heart of their dominions. Their magnificent installations opened the way for the Pretender Cyrus the Younger to march his invincible ten thousand Greek mercenaries from Sardis to Cunaxa,² and for Alexander to follow, from the Granicus to Arbela, the trail which the Ten Thousand had blazed for an Hellenic conquest of South-Western Asia. The lightning speed of Alexander's marches in the western and central provinces of the Empire bears witness to the excellence of the Achaemenian roads as well as to the endurance of the Macedonian troops and to their leader's own demonic energy.³ The political achievements of Alexander and his successors were, however, as negative and ephemeral as they were astonishing. While it took them no more than five years to break the Achaemenian Empire up, they never succeeded in putting the fragments together again. The true beneficiaries of the Achaemenian empire-builders' constructive work were two higher religions, Judaism and Zoroastrianism, and the tragically efficient destructive ability of the Macedonian *conquistadores* cleared the field, not for a Macedonian reproduction of the Achaemenian Empire, but for an influx of Hellenic culture.

When, after an interval of nearly a thousand years of Hellenic intrusion, the Syriac universal state, originally embodied in the Achaemenian Empire, was reconstituted at last in the shape of the Arab Caliphate,⁴ it was the turn of the north-eastern highway—now pushed forward again by Arab empire-builders up to the Transoxanian shore of the Eurasian Steppe⁵—to serve as the suicidally directed lightning conductor for a *Blitzkrieg* in the Nomadic style of warfare. The *coup de grâce* which the Empire of Sumer and Akkad had received from the Hittites, and the Achaemenian Empire from the Macedonians, pouring down the north-west highway from a barbarian reservoir in Europe, was administered to the Caliphate by Turks and Mongols breaking in from the Eurasian Steppe in the track of the Mitanni.⁶ Contemporaneously, other barbarian

¹ See V. v. 148-52 and IX. viii. 453.

² The efficiency of the Achaemenian system of communications is attested, not only by the ease and rapidity of Cyrus the Younger's south-eastward march, but by the necessity in which the Ten Thousand found themselves, on their subsequent retreat, of abandoning the Imperial Highway, and taking to the trackless mountains of Kurdistan, in order to shake off their pursuers (see Xenophon: *Expedition Cyri*, Book III, chap. v, §§ 7-18).

³ North-east of the Caspian Gates, Alexander had a very much rougher and slower passage. An explanation of this contrast has been offered in II. ii. 139-40.

⁴ See I. i. 73-77.

⁵ See II. ii. 141-2 and 378-84.

⁶ On this point see I. i. 104-6.

invaders of the Caliphate were sped on their way by other imperial thoroughfares. The North African coast-road from Alexandria to the Straits of Gibraltar,¹ which the Primitive Muslim empire-builders had opened up, and the road from the Straits of Gibraltar to the Rhône,² which they had taken over from the Roman Empire's Visigothic successor-state, served to carry the barbarian Arab Banu Hilāl and Sulaym from east to west, the Western Christian invaders of the Peninsular domain of Dār-al-Islām from north to south, and Berber war-bands—unsuccessfully disguised by the high-sounding names of 'Fātimids', Murābits, and Muwāhhids—both eastward to the Nile and northward to the Ebro. Here too, however, the lasting beneficiary from the imperial system of communications was not any barbarian invader. The historic mission of the wonderful organization described in the Corpus of Arab Geographers³ was to facilitate the propagation of Islam.

A few more illustrations of our theme may be cited to complete the tale. The thoroughfares traversing the Eurasian Steppe in all directions—from the Carpathians, Pamirs, and Kwenlung to Qāraqorum and Peking—that were opened up for the short span of about ninety years⁴ by the Mongol Empire, were to serve, not the Mongol empire-builders, but alien religious missionaries. These Mongol-made thoroughfares gave Western Catholic Christianity its first opportunity to attempt the conversion of China;⁵ they gave Islam two footholds within China's western borders;⁶ and they prepared the way for the eventual conversion of the Mongols themselves and their Calmuck kinsmen to the Tibetan Tantric form of Mahayanian Buddhism.⁷ The Grand Trunk Canal which was the *chef d'œuvre* among the public works of the Far Eastern universal state in China served to convey a second wave of Western Catholic Christian missionaries from the southern ports to Peking. The communications system of the Timurid Mughal Empire in India, which was too ramshackle to hold the Empire together, sufficed to carry contemporary Catholic missionaries on successive expeditions from Goa to Agra and made it possible for the Emperor Akbar to assemble at his court a mixed company of exponents of rival faiths whose seances in his presence inspired him to promulgate his own abortive *Din Ilāhī*.⁸ The roads efficiently provided by the Aztecs and the Incas enabled Cortés and Pizarro to overrun two new worlds with the lightning speed of a Macedonian Alexander, and thereby opened the way for Catholicism to make lasting spiritual conquests in these evanescent military *conquistadores'* wake. In the Sinic World, Ts'in She Hwang-ti's work was overtaken by the same nemesis.

"The construction of roads was a benefit to the Empire, but it proved a danger to the Ts'in Dynasty. When the great revolt occurred, the armies of the rebels found that the new roads served their purposes as well [as], or better than, those of the soldiers of Ts'in. For all the roads centred on the capital. The rebel armies were thus able to move swiftly and easily into the western hill country, hitherto so difficult of access, while the Ts'in

generals, endeavouring to cope with rebellion in all parts of China, were hampered by the lack of lateral communications.¹

During a Napoleonic occupation of Dalmatia that lasted less than ten years, the French empire-builders did their road-building so well for the benefit of a Hapsburg Monarchy which was to enter into the fruits of their labours that the subsequent spectacle of these fine public works which the French had left behind them startled the astonished Emperor Francis into exclaiming that it was a pity that the French had not stayed in Dalmatia a bit longer.²

*An Islamic Pilgrims' Way*³

There was one famous road, 'the King's Highway',⁴ which had played an historic part in the life of one empire after another. This thoroughfare ran north and south, along the border between Syria and the Syrian Desert, from the crossings of the Euphrates, at the point where the river bends nearest to the Mediterranean, through Damascus and Transjordan to the head of 'Aqabah, where the road branched westwards across the Desert of Sinai towards Egypt and south-eastwards into Arabia. This King's Highway had served successively the Empire of Sumer and Akkad, 'the New Empire' of Egypt, the Neo-Babylonian Empire, and the Achaemenian Empire. After the shattering of the Achaemenian Peace by Alexander, the Ptolemies and the Seleucids, holding opposite ends of the thoroughfare, had contended with one another for possession of the whole of it, and the Seleucids had won the contest only to give place to Rome—till the King's Highway had changed hands again from the Roman Empire to the Arab Caliphate and thereafter, in its southern sector, from the 'Abbasids' Fātimid successor-state to the Crusader Kingdom of Jerusalem.

In the course of its long and chequered history the King's Highway has been used, not only by its official masters of the moment, but by rebels, raiders, and rival Powers. The Elamite and Babylonian warlords who had twice taken this road in the eighteenth century B.C. in order to reimpose the long dormant authority of an Empire of Sumer and Akkad on the princelings of Syria had been pursued along their own highway on their return march, and been relieved of their booty, by an untamed band of Hebrew Nomads.⁵ In the eighteenth or seventeenth

¹ Fitzgerald, C. P.: *China, A Short Cultural History* (London 1935, Cresset Press), p. 138. This mistake of Ts'in She Hwang-ti's was avoided by the Tokugawa (see p. 87, above).

² See V. v. 636, n. 3.

³ See xi, maps 11, 14, 20, and 21A.

⁴ Num. xx. 17 and xxi. 22. See Wright, V. E., and Filson, F. V.: *The Westminster Historical Atlas of the Bible* (London 1946, Student Christian Movement Press), p. 40, fig. 25, for an aerial photograph of a section of this road in Transjordan.

⁵ See Gen. xiv. The historical events which here loom through a mist of tradition may perhaps be dated some time between the annexation of the Sumerian Empire of Isin by the Elamite State of Larsa circa 1799-1793 or 1735-1729 B.C. and the annexation of Larsa by the Amorite State of Babylon in 1762 or 1698 B.C. (see V. vi. 297). The account in Gen. xiv. 13-24 of Abraham's audacious but successful surprise attack on the plunder-laden army of the retreating imperialists is reminiscent of the attack by the Brygi on an Achaemenian army marching along the coast road from the Hellespont to European Greece circa 492 B.C. (Herodotus, Book VI, chap. 45) and of the similar attack by Thracians on a Roman army following the same route in 188 B.C. (Livy, Book XXXVIII, chap. 40).

century B.C. the King's Highway had carried a Palestinian barbarian Hyksos war-band to the north-eastern corner of Egypt, and perhaps also an advance guard of the Eurasian Nomad Mitanni to the north-western corner of Arabia, on the last stage of their long trek from the south-western shore of the great Eurasian Steppe.¹ In the fourteenth or thirteenth century B.C. the Children of Israel had been refused a passage along the southernmost section of the King's Highway by the Edomite successor-state of 'the New Empire' of Egypt,² and had forced a passage along another section in the teeth of opposition from an Amorite successor-state in the Peraea,³ on their way to carve out a domain for themselves on the western side of Jordan. In the ninth, eighth, and seventh centuries B.C. the independent principalities of Syria that had emerged from a dark age following the collapse of 'the New Empire' of Egypt and the overthrow of 'the thalassocracy of Minos' had fallen victims to Assyrian aggressors following on Chedorlaomer's track; and when the downfall of Assyria had seemed to promise them relief they had been cheated of it by the immediate substitution of Babylonian for Assyrian rule. On the eve of the overthrow of the Neo-Babylonian Empire by Cyrus the Achaemenid, the King's Highway had once again come to the fore in the play of international politics, and a would-be leader of an anti-Babylonian movement among the remnant of Judah had exhorted his countrymen to recondition this historic route in order to expedite the passage of Cyrus's liberating armies.

'The voice of him that crieth in the wilderness: Prepare ye the way of the Lord; make straight in the desert a highway for our God. Every valley shall be exalted, and every mountain and hill shall be made low; and the crooked shall be made straight, and the rough places plain.'⁴

'The road was to follow much the same route that Nabonidus', the last emperor of the short-lived Neo-Babylonian Empire,⁵ 'had taken east of Jordan and through Ammonitis, Northern and Eastern Edom.'⁶

At the break-up of the Achaemenian Empire's Seleucid successor-state, Nabataean intruders from Arabia, treading in the footsteps of the Children of Israel, had followed the King's Highway, without turning off it to pass over Jordan, till they had reached and occupied Damascus; and at the break-up of the Roman Empire the Primitive Muslim Arabs—taking the same war-path, and avenging, in a decisive victory at the passage of the Yarmuk, their discomfiture at Mu'tah in their first encounter with the Roman veterans of the last and greatest Romano-Persian War—had not only captured Damascus but had established

⁴ Isa. xl. 3-4. The technique of making military thoroughfares seems to have been borrowed by successive empire-builders from their predecessors, to judge by the remarkable correspondence between the Pentateuch Greek version of this passage of Deutero-Isaiah, quoted in the Gospels, and a passage in Plutarch's *Lives of the Gracchi* (chap. 28). These two passages have been compared in V. vi. 418-19, and it has there been pointed out that the correspondence cannot be due to any literary influence of either passage on the other.

⁵ Nabonidus *imperabat* 556-539 B.C.—A.J.T.

there the capital of an empire whose boundaries they had pushed out, within the next hundred years, to Farghānah on the one side and to the Atlantic coasts of Morocco and the Iberian Peninsula on the other. At the break-up of the Arab Caliphate the Crusaders, bursting into Syria through the Cilician Gates and by sea, had forced the passage of the Jordan in the reverse direction to that of the Israelites' trek, and had pushed their way southwards, down the southernmost stretch of the King's Highway, till they had reached the head of the Gulf of 'Aqabah and had thereby momentarily cut the land communications between the African and Asiatic domains of Dār-al-Islām.¹

This history of the King's Highway over a period of some three thousand years might look like a monotonous repetition of contests between successive universal states claiming legitimate sovereignty over the thoroughfare and outsiders disputing their title by force of arms. Yet the historic importance of the King's Highway lay in none of these episodes. This long-fought-over thoroughfare was to find its destiny at last as an Islamic Pilgrims' Way on which, year by year, a peaceful multitude of Muslims—converging from the far-flung outposts of Dār-al-Islām in Fez and Sarayevo and Vilna and Qāzān and Kāshghar—would make the Hajj, at first on foot or camel-back and latterly by train,² to the Holy Cities of the Hijāz.

The Mahāyāna's Transcontinental Royal Road

This pacific exploit of Islam was surpassed by the Mahāyāna, which laid one empire after another under contribution to prepare the way for its astonishing journey from the Ganges to the Yellow River round three sides of the Tibetan Plateau.³ When Cyrus II had opened a road from Oxus to Indus over the Hindu Kush in order to annex the Panjab to the Achaemenian Empire; when Chandragupta had carried Cyrus's high-land highway on south-eastwards, across the whole expanse of the plains of Hindustan, from Taxila to Magadha, in order to clinch his hold on

¹ This curiosity of historical geography had an effective precedent in the Völkerwanderung that followed the collapse of 'the Middle Empire' of Egypt and an Empire of Sumer and Akkad that had been momentarily re-established by Hammurabi, and it also had an abortive parallel in the Völkerwanderung that had followed the collapse of 'the New Empire' of Egypt and 'the thalassocracy of Minos'. In the eighteenth or seventeenth century B.C. an advance guard of the Hurrian highlanders, who had been set on the move by the impact of the Eurasian Nomad Mitanni, had established themselves in the highlands overhanging the Wādi 'Arābah (see Gen. xiv. 6). In the twelfth century B.C., when the main body of the Philistine refugees from the Aegean Basin and invaders of the Egyptian World had ensconced themselves in the coastal cities of the Shephelah, one war-band of Cherethite intruders from overseas had penetrated into the arid Negeb, south-east of Gaza, and had established themselves there at Ziklag (see 1 Sam. xxvii. 6 and xxx. 14). Possibly they had been attempting the feat, which the Crusader Kingdom of Jerusalem was momentarily to achieve in its day, of gaining possession of a land-bridge between the Mediterranean and the Red Sea. If that had been their objective, they had been foiled by the successful establishment of an Edomite successor-state of 'the New Empire' of Egypt in the Wādi 'Arābah and on the plateau to the east of it, whose Hurrite occupants the Edomite invaders had exterminated (see Deut. ii. 4-5, 12, and 22). See further IX. viii. 358, n. 1.

² The building of the Hijāz railway southwards from Damascus along the route of the King's Highway was begun in A.D. 1900 and was completed as far as Medina in A.D. 1908. Put out of action in the war of 1914-18, the Hijāz Railway remained derelict thereafter from Ma'ān southwards.

³ For this adventurous route see II. ii. 405, n. 1.

an Indic universal state which he had founded by expelling Alexander's feeble garrisons from Cyrus's and Darius's derelict Indian provinces; when the Greek princes of Bactria and their Kushan successors had taken an unintended advantage of Cyrus's and Darius's and Chandra-gupta's work in order to 'abolish the Hindu Kush' by establishing their rule from Farghānah to Bihar;¹ when the Prior Han, feeling their way westward beyond the north-western extremity of Ts'in She Hwang-ti's Wall and crossing the sand-sea in the Tarim Basin from oasis to oasis, had 'abolished the Tien Shan' by descending on Farghānah;² when the Posterior Han had contended for the possession of this coveted route with the Kushan Emperor Kanishka;³ not one of these empire-builders can have suspected that the mighty public works which each had believed himself to be carrying out for his own carefully calculated purposes were mere fragments of a grand design in which he and his rivals and adversaries, and his and their predecessors and successors, were each unconsciously performing their allotted task in the *corvée*. He would have been still more astonished to learn that this gigantic network of communications was being constructed by a press-gang of empire-builders for the benefit, not of some superlative secular empire of Pan-Asian dimensions, but of an Indic philosophy which was being transfigured into a religion⁴ as it travelled—along the road that captains and kings had prepared for it—towards its mighty mission field among the peoples of the Far East.⁵ This truth was, nevertheless, to be revealed by the course of history; and, where the Mahāyāna had shown the way, a procession of other religions—Manichaeism, Nestorianism, Islam, and Western Christianity⁶—was to follow as soon as facilities were unintentionally provided for them by other empire-builders: the T'ang whose political necromancy succeeded in evoking a ghost of the Sinic universal state to haunt a nascent Far Eastern World,⁷ and the Mongols who, after China had been crushed by the incubus of the T'ang's success, imposed on her an alien universal state⁸ which momentarily embraced, besides, all the other shores of the vast Eurasian Steppe.

The Challenge to Christianity in a Western Technology's 'Annihilation of Distance'

Our survey has brought to light so many cases in which a brilliantly planned and magnificently executed system of public communications has ultimately been turned to account by unexpected and unintended beneficiaries that we may tentatively regard this tendency as illustrating an historical 'law', and in A.D. 1952 this conclusion raised a momentous question about the future of the Westernizing World in which the writer of this Study and his contemporaries were living.

By the year A.D. 1952 the initiative and skill of Western Man had been engaged for some four and a half centuries in knitting together the whole habitable and traversable surface of the planet by a system of

communications that was unprecedented in the two features of being literally world-wide and being operated by a technique which was constantly surpassing itself at a perpetually accelerating pace. The wooden caravels and galleons, rigged for sailing in the eye of the wind, which had sufficed to enable the pioneer mariners of Modern Western Europe to make themselves masters of all the oceans, had given way to mechanically propelled iron-built ships of relatively gigantic size;¹ 'dirt-tracks' travelled by six-horse coaches had been replaced by macadamized and concrete-floored roads travelled by automobiles; railways had been invented to compete with roads, and aircraft to compete with all land-borne or water-borne conveyances. Concurrently, means of communication which did not require the physical transportation of human bodies had been conjured up, and put into operation on a world-wide scale, in the shape of telegraphs, telephones, and wireless transmission—visual as well as auditory—by radio. The movement of sea-borne and air-borne traffic had been made detectable at long range by radar. There had been no period in the history of any other civilization in which so large an area had been made so highly conductive for every form of human intercourse.

In the light of the histories of all other known civilizations, the development of this system of communications foreshadowed the eventual political unification of the society in which these technological portents had appeared. At the time of writing, however, the political prospects of the Western World were still obscure;² for, even though an observer might feel certain, in his own mind, that political unity would come about in some form sooner or later, neither the date nor the manner of this apparently inevitable unification was yet possible to divine. In a world which was still partitioned politically among sixty or seventy self-assertively sovereign parochial states, but which had already discovered the technique of flying and the 'know-how' of manufacturing the atom bomb, it was manifest that political unity might be imposed by the familiar method of the 'knock-out blow'; and it was also probable that, if peace was thus to be imposed in this case, as it had been in so many others, by the arbitrary fiat of a single surviving Great Power, the price of unification by force, in terms of moral, psychological, social, and political, as well as material, devastation, would be relatively still higher than it had been in other performances of this tragedy. At the same time it was possible that—even if political unification were inevitable and indeed indispensable—it might be achieved by the novel alternative method of voluntary co-operation, without coercion or catastrophe, which had been tried after the war of 1914-18 in the League of Nations and was being tried again after the war of 1939-45 in the United Nations Organization. The prospects of this great political experiment, as they appeared at a date rather more than half-way through the twentieth century of the Christian Era, are discussed in a later part of this Study.³ But, whether the political future of the Westernizing World of the day was to be rough or smooth, and whatever form of political

¹ See XI. ix. 364-74.

² See XII, *passim*, ix. 406-644.

³ In XII, *passim*, ix. 406-644.

unity was to be attained in this world by whatever road, it could be predicted with some confidence that the world-wide network of unprecedentedly efficient communications which the Western Civilization had already installed for its own purposes would find its historic mission in the familiar ironic role of being turned to account by unintended beneficiaries.

Who would draw the largest benefits in this case? In another context we have seen reason for expecting that, in this Western World that had come to embrace the whole surface of the planet, the barbarians of the external proletariat would play an even less significant part than they had played in the histories of other civilizations.¹ On the other hand the extant higher religions, whose domains had been linked up with one another, and with the dwindling tenements of pagan Primitive Man, by the West European technologist's ever closer-meshed spider's web, had already begun to take advantage of the fresh opportunities thus opened to them, without waiting for the establishment of a universal peace. Saint Paul, who had once travelled from the Orontes to the Tiber under the aegis of a *Pax Romana*, had been eagerly venturing forth on other seas still broader and stormier than the Mediterranean. On board a Portuguese caravel he had travelled on from Rome round the Cape of Good Hope on his second journey to India,² and farther afield again, through the Straits of Malacca, on his third journey to China.³ Trans-shipping to a Spanish galleon, the indefatigable Apostle had crossed the Atlantic from Cadiz to Vera Cruz, and the Pacific from Acapulco to the Philippines. Nor had Western Christianity been the only living religion to take this advantage of Western technique. While Western Catholic Christianity was reaching the Pacific coasts of China and Japan by sea, Eastern Orthodox Christianity, in the train of Cossack pioneers equipped with Western fire-arms, had been making the long trek from the River Kama to the Sea of Okhotsk;⁴ and these sixteenth-century and seventeenth-century missionary enterprises of Christianity in Asia had been emulated in Tropical Africa in the nineteenth century by Christianity and Islam in competition. It was not inconceivable that the Mahāyāna might one day recollect its marvellous journey over a succession of royal roads from Magadha to Loyang, and, in the strength of this buoyant memory, might turn such Western inventions as the aeroplane and the radio to as good account for its own work of preaching salvation as it had once turned the Chinese invention of the printing-press.⁵

The issues raised by this stimulation of missionary activities on a world-wide range were not just those of ecclesiastical 'geo-politics'. The

⁵ For the use of printing in China, from the ninth century of the Christian Era onwards, in the propagation of the Mahāyāna among the masses, see Carter, T. F.: *The Invention of Printing in China and its Spread Westward*, revised edition (New York 1931, Columbia University Press), pp. 17-19 and 39-46.

entry of established higher religions into new missionary fields brought up the question whether the eternal essence of a religion could be distinguished from its ephemeral accidents; the encounters of the religions with one another brought up the question whether they could live and let live side by side or whether one of them would supersede the rest.

The ideal of religious eclecticism had appealed to certain rulers of universal states—an Alexander Severus¹ and an Akbar²—who had happened to combine a sophisticated mind with a tender heart; and Akbar's decorous séances had been crudely and clownishly anticipated at the Court of the Mongol Khāqān Mangū.³ But in each of these instances the attempt to attain religious unity by the political device of confederation had been abortive, and a different ideal had inspired the pioneer Jesuit missionaries—a Francis Xavier and a Matteo Ricci—who were the earliest Apostles of any religion to grasp the opportunities opened for missionary enterprise by the Modern Western technician's titanic conquest of the oceans. These audacious spiritual pathfinders aspired to captivate for Christianity, in their own day, the Hindu and Far Eastern worlds, as Saint Paul and his successors had captivated the Hellenic World in theirs; but—endowed, as they were, with an intellectual genius that matched their heroic faith—they did not fail to recognize that their audacious enterprise could not succeed without fulfilling one exacting condition, and they did not shrink from accepting the consequences in their own missionary strategy and tactics.⁴ They perceived that a missionary, if he was to give himself a chance of success, must convey his message in terms—intellectual, aesthetic, and emotional—that would appeal to his prospective converts. The more revolutionary the message in its essence, the more important it would be to clothe it in a familiar and congenial presentation. But this would require that the message should be stripped of the incompatible clothing in which the missionaries themselves happened to have inherited it from their own cultural tradition; and that, in turn, would demand of the missionaries that they should assume the responsibility, and take the risk, of attempting to determine what the essence of their religion might be.

The crux of this policy was that, in removing a stumbling-block from

¹ See V. v. 549.

² See V. v. 700-1.

³ See V. v. 115. Mangū was not the only Eurasian Nomad ruler to anticipate Akbar in taking a comparative survey of living higher religions by listening to disputations in his presence between their rival spokesmen. The Khan of the Khazars, who ruled over a parochial steppe empire in the Eurasian Steppe's Great Western Bay (see III. iii. 428-30) is said (see Dvornik, F.: *The Making of Central and Eastern Europe* (London 1949, Polish Research Centre), p. 169, n. 92) to have listened to a disputation of the kind before opting for Judaism in the eighth century of the Christian Era (see II. ii. 410 and V. v. 285); and in the following century a successor of this royal Khazar convert's is said to have given the East Roman Orthodox Christian missionary Constantine-Cyril an opportunity of disputing in his presence with representatives of Judaism, Islam, and paganism. The familiarity of this practice is attested by the two celebrated stories of the disputation between Khazar advocates of Judaism, White Bulgarian advocates of Islam, and East Roman advocates of Orthodox Christianity at the court of the Russian war-lord Vladimir before he opted for the East Roman faith, and of the disputation between Wilfrid and Colman in King Oswiu's presence at Whitby in A.D. 664 (see II. ii. 335).

⁴ The policy of the Jesuits in China has been touched upon, by anticipation, in V. v. 366-7.

the path of the non-Christian societies which he was setting out to convert, a missionary would be placing another stumbling-block before the feet of his own co-religionists. On this rock the Early Modern Jesuit missions in India and China suffered an undeserved and tragic shipwreck. They were the victims of an unscrupulous jealousy on the part of rival missionaries of other orders and of a timid conservatism in high places in the Vatican. Yet the frustration of their noble and imaginative enterprise at the dawn of the unification of the Inhabited World (*Oikoumenê*) by Modern Western technique seemed unlikely to be the end of the story; for the underlying issue which they had raised was a crucial one for the destinies of all the higher religions.

If the local swaddling clothes in which Christianity had been wrapped when it came into the World in Palestine had not been masterfully removed by Paul of Tarsus, the Christian artists of the Catacombs at Rome and the Christian philosophers of the divinity school at Alexandria¹ would never have had their chance of presenting the essence of Christianity in terms of Greek vision and thought and thereby paving the way for the conversion of the Hellenic World. And, if, in the twentieth century of the Christian Era, Origen's and Augustine's Christianity could not divest itself of trappings acquired in those successive Syriac, Hellenic, and Western posting-stations at which it had once paused to rest on its historic journey, it would not be able to take advantage of the world-wide opportunity that had now been opened up for every living higher religion by the technical achievements of a Modern Western secular civilization. A higher religion that allows itself to become 'dyed in the wool' with the imprint of a temporary cultural environment is condemning itself to become stationary and earth-bound—to be the slave, and not the master, of the secular civilizations and their works. On the other hand any living higher religion that might save itself from this fate by taking Ricci's lesson to heart and putting his policy into practice would be opening for itself thereby a boundless field for new spiritual action. And, if Christianity itself were, after all, to embrace this manifest destiny, it might repeat in a latter-day *Oikoumenê* what it had once achieved in the Roman Empire.

In the spiritual commerce that had been served by Roman means of communication, Christianity had drawn out of, and inherited from, the other higher religions and philosophies, which it had thus encountered, the heart of what had been best in them. In a world materially linked together by the many inventions of Western technique, Hinduism and the Mahāyāna might make no less fruitful contributions than Isis-worship and Neoplatonism had once made to Christian insight and practice. And if, in a Western World too, Caesar's empire were to rise and fall—as his empire always had collapsed or decayed after a run of a few hundred years—an historian peering into the future in A.D. 1952 could imagine Christianity then being left as the heir of all the philosophies from Ikhnaton's to Hegel's and of all the higher religions as far back as the ever latent worship of a Mother and her Son who had started on

¹ For the significance of the interpretative work of Clement of Alexandria and Origen, see V. v. 366-7.

their travels along the King's Highway under the names of Ishtar and Tammuz.

2. *Garrisons and Colonies*

The Mixture of Motives in the Minds of Imperial Authorities

Whereas Imperial systems of communications are installed by their makers with the single-minded self-regarding aim of maintaining the imperial government's authority, imperial garrisons and colonies have a dual function. Like the public highways along which they are strung, they are, of course, designed primarily to preserve the universal state by whose rulers they have been planted; but in some cases they are also intended to serve the distinct purpose of preserving the civilization whose domain has been embraced within the universal state's frontiers.

Plantations of loyal supporters of the imperial régime—who may be soldiers on active service, militiamen, discharged veterans, or civilians—are an integral part of any imperial system of communications linking the capital of a universal state with its frontiers across intervening tracts of subject territory. The presence, prowess, and vigilance of these human watch-dogs provide the indispensable security without which the most efficient physical installations—roads, bridges, posting-stations, and the rest—would be of no practical use to the imperial authorities (as in fact they eventually fall out of use when the imperial system of security and defence breaks down). This imperial network of practicable communications in the shape of garrisoned roads does not consist merely of the thoroughfares radiating from the capital to the frontiers; the frontiers themselves are part and parcel of the same system; for even the most elaborately fortified frontier lines—such systems as the Military Frontiers of the Hapsburg Empire over against the Ottoman Empire during the century beginning in A.D. 1777¹ or the Roman *limites* in Germany and Britain or 'the Great Wall of China' itself—prove, on analysis, to be lateral highways, skirting the outermost verge of an empire's domain, along which the fortresses have been strung so close together that they have coalesced into a continuous chain.²

Some of these frontier garrisons—or lines of garrisons dressed in close order to hold a *limes* or a wall—are new installations, established by the universal state *in partibus barbarorum* where it has had no predecessors. Others, on the other hand, are replacements of garrisons formerly posted along the same line, for defence against the same barbarian or alien adversary, by parochial Powers that have perished in the fratricidal struggle that has ended in the imposition of a universal peace by a single survivor among the competitors. Thus Rome, in the acts of imposing her hegemony on the city-states of Etruria and extinguishing the Carthaginian and Macedonian Powers, was taking upon her own shoulders a

¹ See V. v. 463.

² 'The Great Wall' of China and 'the Roman Wall' in Britain between Tyne and Solway were each originally laid out as a chain of garrisoned fortresses strung along a road and connected by an embankment of earthwork which served as a demarcation line rather than as a military barrier. In both cases the construction of an actual wall of masonry, along the line of the embankment, was the last phase. (For the structural evolution of the Chinese Wall, see Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), pp. 240-2.)

responsibility for holding the former Etruscan frontiers against the barbarians of Northern Italy, the former Carthaginian frontiers against the barbarians of the Iberian Peninsula and North-West Africa, and the former Macedonian frontiers against the barbarians of South-Eastern Europe.¹ In the Sinic World the march state of Ts'in, which won the last round in the long strife of the Contending States, had to pay for its victory by taking over the frontiers previously held by the other two march states, Chao and Yen, against the Nomads of the Eurasian Steppe. The overthrow of these two frontier Powers left a gap in the defences of the Sinic World between the eastern terminus of the sectional anti-barbarian frontier of Ts'in and the Pacific coast of the Sinic World; and, in filling this gap, Ts'in She Hwang-ti, the founder of the Sinic universal state, had at least to double the length of the frontier against the Eurasian barbarians that had been held by his own predecessors.² In the Hindu World, likewise, the British Rāj had to take over the north-west frontier of the Sikh principalities against the highlander barbarians of North-Eastern Iran;³ and in the Egyptian World, when the alien empire of the Achaemenidae had conquered the Saïte Kingdom, the conquerors found themselves saddled with the defence of their Saïte victims' southern frontier at Elephantinë⁴ against the still independent Napatan Power in the southern portion of the Egyptian Society's domain.

In taking over the defence of derelict frontiers from extinguished parochial Powers, a universal state is, of course, acting in self-preservation as well as in the interests of the society over whose domain it has established its rule. But, besides planting garrisons along frontiers of which it finds itself the residuary legatee, a universal state may be moved to plant colonies in the interior, not for purposes of defence or police, but in order to repair ravages inflicted by the devastating struggle for power during a Time of Troubles before the imposition of the imperial peace.

It was this that was in Caesar's mind when he planted self-governing colonies of Roman citizens on the desolate sites of Capua, Carthage, and Corinth. In the course of the foregoing struggle for survival between the parochial states of the Hellenic World, the Roman Government of the day had deliberately made an example of Capua for her treacherous secession to Hannibal at a moment when Rome had been at the nadir of her fortunes,⁵ and of Carthage for the crime of having almost got the better of Rome in the struggle between them for world power, while Corinth had been arbitrarily singled out for the same treatment among the states members of an Achaean League whose declaration of war on Rome had endangered the existence of no state except the puny commonwealth that had so frivolously put itself in the wrong by assuming the role of the aggressor. Under the pre-Caesarean republican régime at

⁵ See II. ii. 19.

Rome, the conservative party had been stubbornly and bitterly opposed to the restoration of these three famous cities. They had succeeded in frustrating or undoing or arresting three attempts to recolonize Capua,¹ and one attempt to recolonize Carthage,² before Caesar succeeded in forcing through what amounted to a re-establishment of Capua in his agrarian law of 59 B.C., and thereafter re-established Carthage and Corinth in 45 B.C. over the dead body of the Roman Senatorial régime.

By the time that Capua had lain desolate for 153 years (211-58 B.C.) and Carthage and Corinth for a hundred, while Rome had been confirming her already unchallengeable supremacy, the ground of the opposition to rescinding the three penal sentences had, of course, long ceased to be the original motive of fear. The long-drawn-out controversy in Roman domestic politics over the treatment of the three cities had by that time become the symbol of a wider issue. Was the *raison d'être* of the Roman Empire the selfish interest of the particular Power that had succeeded in establishing it by conquest? Or did the Empire exist to serve the common weal of the Hellenic World of which it was a political embodiment? Caesar's defeat of the Senate was a victory for the more liberal, humane, and imaginative of these two views; and the praise which an English philosopher-statesman has given to the Romans *sans phrase* should be reserved—as it was by Greek men of letters in the Antonine Age—for the Roman Imperial régime which Caesar inaugurated.

'Never any state was . . . so open to receive strangers into their body as were the Romans; therefore it sorted with them accordingly, for they grew to the greatest monarchy. Their manner was to grant naturalisation (which they called "ius civitatis"), and to grant it in the highest degree—that is, not only "ius commercii, ius connubii, ius hereditatis", but also "ius suffragii" and "ius honorum"; and this not to singular persons alone, but likewise to whole families—yea, to cities, and sometimes to nations. Add to this their custom of plantation of colonies, whereby the Roman plant was removed into the soil of other nations, and, putting both constitutions together, you will say that it was not the Romans that spread upon the World, but it was the World that spread upon the Romans.'³

This striking difference in moral character between the régime which Caesar inaugurated and the régime which he superseded was not a peculiar feature of Roman and Hellenic history. A similar change of attitude towards the use and abuse of power had accompanied the transition from a Time of Troubles to a universal state in the histories of other civilizations and other empire-builders, and in a general way it would appear that the devastation of cities, destruction of communities, and uprooting of populations are characteristic crimes of the rulers of

¹ Gaius Gracchus's abortive colony projected in 123 B.C. and cancelled after his tragic death in 121 B.C.; Marcus Iunius Brutus's colony planted in 83 B.C. and uprooted in 82 B.C. by Sulla; and the abortive project embodied in an agrarian law introduced by Publius Servilius Rullus in 64 B.C. and withdrawn by its author next year (see Cicero's speech *In Rullum*, which helped to kill the bill).

² Gaius Gracchus's colony planted in 123 B.C.

³ Bacon, Francis: *The Essays, or Counsels Civil and Moral*, xxix: 'Of the True Greatness of Kingdoms and Estates'. Compare the dicta of Oswald Spengler's that have been quoted in the present Study, V, v. 620, n. 1, and p. 56, above.

contending parochial states, while it is a characteristic virtue of the governments of universal states that they attempt to repair the moral and material ravages perpetrated by their predecessors. But, though this historical 'law' may be discernible, it is far from being absolute or exact.

On the one hand we find Times of Troubles generating not only uprooted and embittered proletariats¹ but constructive and successful colonization enterprises on the grand scale—as exemplified by the host of Greek city-states that were planted far and wide over the former domain of the conquered Achaemenian Empire by Alexander the Great and his successors, and by the contemporary colonies of Latins and Roman citizens that were founded by Republican Rome to secure her conquests in Italy.² This constructive work of the Hellenic Time of Troubles was the foundation on which Caesar and his successors built in the subsequent Imperial Age—just as Caesar's liberality in conferring Roman citizenship, which was a revolutionary departure from the narrow-hearted policy of the Roman republican régime of the Post-Hannibalic Age, was a reversion to the more generous-hearted policy of the Republic in the age before that,³ at a time when the Roman governing class of the day had been inspired with confidence by its success in conquering Italy, and had not yet had its heart seared by having to face the formidable issue of world-power or downfall with which Rome was to be confronted in the next chapter of her history by her encounter with Carthage.

Conversely the change of heart on the part of a dominant minority, which is the moral and psychological counterpart of the institutional reform accomplished in the establishment of a universal state,⁴ is seldom so thorough or so steadfast that it does not occasionally relapse into the brutal practice of a foregoing Time of Troubles. The Neo-Babylonian Empire, which stood on the whole for a moral revolt of the interior of the Babylonian World against the brutality of its Assyrian marchmen,⁵ lapsed into uprooting Judah as Assyria had uprooted Israel, Damascus, and Babylon itself. The Achaemenidae, who permitted and assisted the Jews to return home to Judea from their Babylonish captivity, and who were welcomed as liberators by the Phoenicians,⁶

¹ See V. v. 58-194, *passim*.

H. M.: *The Cities of the Eastern Roman Provinces* (Oxford 1937, Clarendon Press); eodem: *The Greek City from Alexander to Justinian* (Oxford 1940, Clarendon Press); Beloch, K. J.: *Der Italische Bund unter Roms Hegemonie* (Leipzig 1880, Teubner); eodem: *Römische Geschichte bis zum Beginn der Punischen Kriege* (Berlin and Leipzig 1926, de Gruyter).

³ Salient examples of this policy are to be seen in the treatment of the Sabines and the Picentes. The Sabines were granted passive Roman citizenship immediately after their conquest by Rome in 290 B.C.; this was converted into active citizenship as early as 268 B.C., and a new Roman tribal constituency was created in 241 B.C. for Sabine voters. The Picentes, who were conquered after 290 B.C., were given passive Roman citizenship in 268 B.C., and this had been converted into active citizenship by 241 B.C., when a new Roman tribal constituency was created for Picentine voters (see Beloch, *Der Italische Bund*, pp. 32, 54-55, and 76).

⁴ For this change of heart, which gives the public servant and the philosopher a chance of repairing the ravages of the conqueror, the wastrel, and the hangman, see V. v, especially pp. 38-40 and 47-52.

⁵ See II. ii. 135-6 and IV. iv. 468-84.

⁶ See V. v. 123, n. 2.

uprooted the Greek city-states Samos, Barca, Miletus, and Eretria,¹ and colonized the inhospitable islands of the Persian Gulf with *déracinés* who appear to have been themselves of Iranian origin.² The Jews whom the Persians had repatriated encountered a new Nebuchadnezzar in the Seleucid King Antiochus Epiphanes, whose house was as well liked by the Babylonians as the Achaemenidae had been by the Jews,³ and they were uprooted for the second time—and this far more drastically than in their first experience at Nebuchadnezzar's hands—by a Roman Imperial Government which had manifested its intention of breaking with the inhuman policy of its republican predecessors when it had re-peopled the desolate sites of Capua, Carthage, and Corinth.

It is true that Nebuchadnezzar's prisoner of state, the ex-King of Judah, Jehoiachin, was released from prison (after he had languished there for thirty-seven years) by Nebuchadnezzar's successor Amel-Marduk;⁴ that the Achaemenidae showed concern for the welfare of the Greek communities which they had carried away captive;⁵ and that the Romans, in their dealings with the Jews, exercised almost superhuman self-restraint before the Zealots forced their hand in A.D. 66 and finally in A.D. 132.⁶ It must be noted, however, on the other side of the account, that the constructive colonization that is characteristic of a universal state is not easy to distinguish sharply from the destructive tearing up of social roots that is characteristic of a Time of Troubles; for, if the hallmark of a Time of Troubles is violence and coercion, it is also true that redistributions of population under the auspices of a universal state are not always, or altogether, voluntary. The selected colonists may be reluctant to make a change of domicile which may be judged by their rulers to be desirable in the public interest without being, on that account, acceptable to the men, women, and children who are required to undergo this ordeal. It is known that the Incas—in spite of the immensity of their prestige and the general benignity and efficiency of their administration—met with resistance, now and again, among loyal populations whom they were proposing to transplant.⁷ The Greek veterans whom Alexander the Great had planted in the recalcitrant Eurasian marches of the Achaemenian Empire, north-east of the Caspian Gates, four or five months' journey up country from the Greeks' beloved Mediterranean Sea, left their posts and drifted westwards again *en masse* as soon as they heard the news of Alexander's death; and we may guess that, if we knew the full story of the colonies planted by Rome, we should come across similar cases here.⁸ Moreover, a willing or even

⁴ See Jer. lii. 31-34; 2 Kings xxv. 27-30.

⁵ See Herodotus, Book IV, chap. 204; Book VI, chaps. 20 and 119.

⁶ See V. v. 68.

⁷ See Baudin, L.: *L'Empire Socialiste des Inka* (Paris 1928, Institut d'Ethnologie), pp. 134-5. In general, the Spaniards found the transplanted elements in the population of the Inca Empire more ready than the un-uprooted elements to leave their domiciles in the service of their new masters (op. cit., p. 135).

⁸ Though the Roman peasantry in the *Ager Romanus* in Italy south of the Appennines had been ruined and uprooted by the Hannibalic War and, after Carthage had

eager candidate for resettlement may have been the victim of social or political upheavals that have uprooted him from a home which he would never have left except under *force majeure*.¹ And in the third place a demand for new homes on the part of one element in the population of a universal state may require for its satisfaction the forcible uprooting of another element. Augustus found farms in Italy for his demobilized veteran soldiers by evicting a civilian peasantry;² and in resorting to this ruthless expedient he was following a precedent set by the reactionary war-lord Sulla in an age that had not yet been graced by a Caesarean clemency or an Augustan Peace.

capitulated, by a continuing drain of manpower to maintain the Roman armies of occupation in the former Carthaginian dominions in the Iberian Peninsula, the Roman settlers in the new Latin colony Bononia (Bologna)—founded in 189 B.C., twelve years after the conclusion of peace between Rome and Carthage—had to be bribed with allotments of land of 50 acres each for infantrymen (i.e. more than seven times the pre-war standard allotment of 7 acres) and 70 each for cavalry troopers (see Livy, Book XXXVII, chap. 57). Alarmed at having thus set a precedent that would rapidly use up even the vast tracts of public land available for colonization north of the Apennines, the Roman Government next tried the experiment of converting the bribe to colonists from an economic into a political currency. In founding the colonies Parma and Mutina (Modena) in 183 B.C., they reduced the size of the standard allotments to 8 acres and 5 acres respectively, but, in compensation, they allowed the colonists not only to retain their Roman citizenship but to incorporate themselves in local city-states with substantially the same powers of self-government as they would have enjoyed if they had been constituted as Latin communities instead of being allowed, as they were, to remain within the Roman body politic (see Livy, Book XXXIX, chap. 55). The new political precedent thus set at Parma and Mutina appears, however, to have alarmed the Roman authorities as much as the new economic precedent set at Bononia, and, in founding Aquileia in 181 B.C., they reverted to customary constitutional practice and gave the new colony the Latin status. They found, however, that, in order to induce even ruined Roman peasants to settle in the extreme north-eastern corner of the Po Basin and to pay for this drastic transplantation by forfeiting their Roman citizenship, they must again allot 50 acres to the private infantry soldier and, this time, 70 to the centurion and no less than 140—a veritable estate—to the cavalry trooper (see Livy, Book XL, chap. 34).

¹ For example, the colonists from Italy south of the Apennines who were planted in the Po Basin by the Roman Government between 190 and 173 B.C. had been uprooted by the Hannibalic War and its aftermath. The host of landless agricultural labourers whom the Gracchi planted on public land, of which the state had resumed possession for the purpose, was a product of the continuing consequences of the same great social catastrophe—and so were the veterans of the semi-private armies raised by Marius, Sulla, Caesar, the Second Triumvirate, and finally Augustus after the elimination of his two colleagues. An economic interpretation of History would account for the Roman civil wars of the century preceding the establishment of the Augustan Peace as being a desperate device for endowing by force a landless rural proletariat which had failed to obtain satisfaction for their needs by the peaceful methods of Tiberius Gracchus. In effect the armies that fought the civil wars were trade unions of unemployed agricultural workers, and the war-lord politician who raised an army to back him was a labour boss. The understanding between the war-lord and his soldiers was that, if they were to succeed in bringing him into political power by winning a civil war for him, he on his part would use his power to reward their services by planting them on the land in Italy—no matter by what methods or at whose expense. This incentive explains the relative ease with which armies were raised by a succession of Roman war-lords from Marius to Augustus inclusive, in contrast to the difficulty of recruitment during the hundred years between the end of the Hannibalic War and the beginning of Marius's career. (This point has been touched upon, by anticipation, in V. v. 62-3.)

² The individual exemption of the poet Virgil from this grievous injustice that was being inflicted on his neighbours is the celebrated theme of his First Eclogue. If we can shake off the spell that the poetry casts over us and see the picture through Meliboeus's instead of Tityrus's eyes, we shall be less impressed with the young Octavian's capricious act of generosity towards one man of genius than with the harsh rule that was broken by this facile exception. Meliboeus's fellow sufferers were legion; Tityrus's companions in good fortune were an insignificant minority. The *beau rôle* conferred on Augustus by Virgil's magic words was cheaply bought and ill deserved.

Incaic Examples of Divers Types of Resettlement

Notwithstanding these overlaps and inconsistencies, it is still broadly true that a relatively constructive and humane colonization policy is one of the distinguishing marks of a universal state.

The most extensive, scientific, and beneficent application of such a policy among the instances on record is the system worked out by the Incas.¹ During the relatively short period of little more than a century which intervened between the foundation of the Andean universal state and its overthrow by the Spaniards, if we date its foundation from the accession of the Inca Pachacutec (*imperabat circa* A.D. 1400–48),² the Incas redistributed the population of their dominions on so large a scale that, according to the testimony of subsequent Spanish observers, there remained hardly a valley or a village in all Peru where there was not a settlement of *mitimaes*, as these deportees were called. This high-handedly systematic manipulation of human communities as though they were pawns on a chessboard is said to have been initiated by Pachacutec himself.³

The resettlements fell into four classes,⁴ of which only one was penal, while one was for military and two were for economic purposes.

Rebellious populations were compulsorily exchanged with loyal populations,⁵ who received as their reward what was meted out to the rebels as their punishment.⁶ But these penal and precautionary deportations in the Assyrian style seem to have been much less characteristic of the Inca régime than those falling within the other three categories. Military colonies, recruited from populations that were both loyal and martial, were settled along the frontiers,⁷ where they were employed in agriculture and on public works as well as on their military duties. The honourableness of their status was advertised by the gift of wives, garments, and valuables which they received from the Inca. These military colonies in the marches had their counterpart, in the interior, in civilian settlements of small groups of families which corporately performed the function of permanently domiciled inspectors or spies.⁸

Of the two types of resettlement for economic purposes, one began with transfers of surplus population from overpopulated to underpopulated districts, and developed—through a practice of requiring the settlers to contribute to the food-supply of their original homes—into a systematic linking together of economically complementary districts (e.g. a highland district with a lowland one) with a view to an interchange of products.⁹ Settlers of this class were treated by the Govern-

¹ This has been touched upon by anticipation in V. v. 90, n. 2.

² See IV. iv. 103.

³ See Baudin, op. cit., p. 135, n. 2.

⁴ Described in Baudin, op. cit., pp. 132–4.

⁵ After the conquest of the warlike and recalcitrant Karas of Ecuador, loyal elements were drafted into their country to hold them in check (Baudin, op. cit., p. 135).

⁶ 'As has been well said, what the Magyars received as punishment was bestowed upon the non-Magyars as reward' [after the *émeute* of A.D. 1848–9 in the Danubian Hapsburg Monarchy] (Seton-Watson, R. W.: *The Southern Slav Question* (London 1911, Constable), p. 35, quoted in V. v. 293, n. 2).

⁷ For example, a military march was organized in Chile over against the unconquered Araucanians (Joyce, T. A.: *South American Archaeology* (London 1912, Lee Warner), p. 224).

⁸ See Baudin, op. cit., p. 135.

⁹ This type of resettlement and interchange seems to have been an officially organized

ment with studied consideration. They were granted long terms of exemption from all taxation. They were also exempted from the jurisdiction of the local authorities in the districts in which they were planted, and were allowed to form autonomous communities administered by headmen of their own. In addition it was arranged that their kinsmen who had been left at home should come periodically to help them in their agricultural labours at the busy seasons of the year.¹ The second type of resettlement for economic purposes was designed to raise, not the quantity of production, but its quality, and in this case the resettlement was not by whole communities but by single families. Selected families of specially skilful cultivators were settled in districts where the standard of agricultural technique was low, and, conversely, skilled families of artisans were drafted away from centres where there was a surplus of skilled workmanship.

'To sum up, the Inca regulated all displacements of population; he installed good husbandmen where there was a dearth of them, he provided instructors for populations that lacked them, he planted restless and stiff-necked communities in the neighbourhood of submissive ones; he distributed his subjects over the different regions under his rule with a sovereign hand, as though they had been pawns on a chessboard, and brewed together the peoples under his rule in order to unify his empire.'²

These different types of resettlement for divers purposes, which were combined and co-ordinated in the Empire of the Incas, have partial counterparts in the institutions of other universal states.

Penal Deportations

A classical case of penal deportation is the treatment of Judah by Nebuchadnezzar (*imperabat* 605-562 B.C.) when this little but never negligible highland principality overlooking the southernmost sector of the coast road between Damascus and Pelusium³ persistently refused to acknowledge that, in forcing the Saïte Power to withdraw from Asia once for all in 605 B.C.,⁴ the Neo-Babylonian Empire had become the legitimate heir to all its Assyrian predecessor's rights and titles in the

and systematically applied version of practices that had grown up piecemeal and haphazard before the establishment of the Inca Empire. For example, Aymará settlers from the highlands had already migrated to the coastal lowlands, not under governmental auspices, but under the spur of economic need, and in their new settlements they had maintained commercial relations with their former fellow countrymen. Conversely, the Chincha and Chimú lowlanders had already acquired landed property in the highlands, which they used for pasturing llamas in order to obtain a wool-supply for their clothing industry (Baudin, *op. cit.*, p. 133). There was also an interchange of products between the highlands and the tropical forest-clad lowlands to the east of them, on the western fringe of the Amazon Basin (see Markham, Sir C.: *The Incas of Peru* (London 1910, Smith Elder), p. 199).

¹ This practice of mutual aid survived the overthrow of the Inca imperial régime by which it had been fostered. An instance in which it operated for the benefit of a community that had been the victim of Spanish atrocities is recorded by the Spanish historian Cieza de Leon (see Markham, *op. cit.*, p. 166).

² Baudin, *op. cit.*, pp. 135-6.

³ This road—which followed the present track of the Hijāz Railway from Damascus to Haifa, running down the gorge of the Yarmuk and along the Vale of Esdraelon to Megiddo, where it found its way between Mount Carmel and the Hill Country of Ephraim and so descended into the Shephelah—was a variant of the southernmost section of 'the King's Highway' (see pp. 100-2, above), from which it branched off in the Hawrān.

⁴ See 2 Kings xxiv. 7.

former Assyrian dominions and dependencies between the Middle Euphrates and the Desert of Sinai. King Jehoiachin's recalcitrance was punished in 597 B.C. by the deportation to Babylon of the contumacious king himself, the royal family, the members of the court and administrative service, 7,000 fighting-men, and 1,000 metal workers and other artisans, the total number of deportees amounting to about 10,000 souls in all.¹ The subsequent rebellion of Zedekiah, whom Nebuchadnezzar had set on the throne of Judah, in Jehoiachin's stead, to play the part of a quisling, was punished in 586 B.C. by the execution of Zedekiah's sons before their father's eyes, the blinding and relegation to Babylon of the rebel king himself, the burning of Jerusalem—including private houses as well as public buildings—and a second deportation which was perhaps larger and less discriminating than that of 597 B.C.²

Ts'in She Hwang-ti's penal deportations seem to have been more sweeping than Nebuchadnezzar's—even allowing for the difference in scale between the Sinic World of the third century B.C. and the Babylonian of the sixth. The founder of the Sinic universal state deported no fewer than 120,000 families of feudal notables from the conquered and extinguished parochial states that had once been rivals and adversaries of Ts'in, and planted them in the citadel of Ts'in, 'the Country within the Passes' (the latter-day Province of Shensi).³ This tide of compulsory migration from the East and South to the North-West was crossed by another flowing in the opposite direction, if we are to credit the statement that Ts'in She Hwang-ti clinched his hold on the ex-barbarian territories that he was annexing in the South-East and South by colonizing them with deported criminals.⁴ There are parallels in the Achae-

¹ See 2 Kings xxiv. 14-16.

² Eduard Meyer estimates the numbers deported in 586 B.C. at something between 30,000 and 50,000 (*Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 175). This estimate appears to be based on the record, preserved in the Book of Nehemiah, chap. vii, of the numbers that returned from Babylonia to Judaea in 538 B.C. after Nebuchadnezzar's sentence of deportation had been rescinded by Cyrus. The total given in this document amounts to no less than 42,360 free persons and 7,337 slaves, and the figures are convincing, since they are the sum total of thirty-nine precise items, while there is also a note of one group that was of doubtful legitimacy and of another that was definitely rejected. All the same, Eduard Meyer's estimate for the deportation of 586 B.C. seems hazardingly high in the light of the information (fragmentary and ambiguous though it is) in the second Book of Kings and in the Book of the Prophet Jeremiah. Even in 586 B.C. Nebuzar-adan, Nebuchadnezzar's captain of the guard, 'left of the poor of the people, which had nothing, in the land of Judah, and gave them vineyards and fields at the same time' (Jer. xxxix. 10; cf. 2 Kings xxv. 12); and this statement means, on the face of it, that the agricultural population of Judah was not only left undisturbed, even in 586 B.C., but was given possession of the former property of the executed or deported notables. Even the deportation of 586 B.C. may have been confined to the inhabitants of Jerusalem, and we cannot be certain that the urban population was deported *en masse* even on this second occasion. 'Now the rest of the people that were left in the city, and the fugitives that fell away to the King of Babylon, with the remnant of the multitude, did Nebuzar-adan . . . carry away' (2 Kings xxv. 11; cf. Jer. xxxix. 9) has to be taken with a grain of salt considering that the same authority declares that Nebuchadnezzar had 'carried away all Jerusalem' in 597 B.C. (2 Kings xxiv. 14). Moreover, a quite incompatible set of figures, on a far smaller scale, is given from some different source in Jer. lii. 28-30: 3,023 persons deported by Nebuchadnezzar in 597 B.C.; 832 deported by Nebuchadnezzar in 586 B.C.; 745 deported by Nebuzar-adan in 581 B.C.; making only 4,600 souls in all.

menian Government's policy of marooning *déracinés* on the islands of the Persian Gulf¹ and in the Muscovite Government's policy of granting toleration to religious dissenters from the Orthodox Faith when these consented to serve the interests of the Muscovite empire-builders by going out as pioneers into the wilderness to prepare the way for future advances of the Muscovite Empire's frontiers.²

Garrisons along the Frontiers

A classical example of a chain of military garrisons strung along a frontier is afforded by the Roman Empire, which held by this means its two cross-country *limites* in Germany and Britain, its three river lines along the Rhine, the Danube, and the Euphrates, and its two desert frontiers over against the Syrian Desert and the Sahara. This Roman institution was reproduced, whether consciously or not, with remarkable similarity in the Military Frontier over against the Ottoman Empire³ that was the *raison d'être* of the Danubian Hapsburg Monarchy.⁴

The Hapsburg frontiersman⁵ was liable to military service from the age of eighteen onwards,⁶ but, like the Roman legionary cantoned on the military frontiers organized by Augustus, he was also a cultivator of the soil on regimental lands corresponding to the Roman *prata legionum*. During the static last phase of the Hapsburg-Ottoman frontier, after the 'Osmanlis had been expelled from their conquests in Hungary and Croatia-Slavonia, but before they had ceased to be a formidable military power, a continuous strip of Hapsburg territory, extending from the Adriatic coast of Croatia, between Fiume and Dalmatia, to the south-western extremity of the Carpathian Mountains, where these overhang the north bank of the Danube at the Iron Gates,⁷ was kept administratively separate from the Crownlands through which it ran, and was articulated into a number of local regimental districts under the direct control of the military authorities at Vienna.⁸ The Hapsburg Military Frontier was organized along this line in A.D. 1777⁹ and was reabsorbed into Croatia-Slavonia between the years 1871 and 1881,¹⁰ when both the military and the political situation had been transformed by the cumulative effect of the departure of the Turkish military garrisons from Belgrade and the other Ottoman fortresses in Serbia in A.D. 1867, the

² See II. ii. 222.

³ *Vojna Krajina* in the Serbo-Croat language that was the mother tongue of a majority of the troops composing the garrisons in the last phase of this Hapsburg military installation.

⁴ The Danubian Hapsburg Monarchy took shape after the overthrow of the Kingdom of Hungary at the Battle of Mohacz in A.D. 1526 in order to provide Western Christendom with a new and more effective anti-Ottoman carapace (see II. ii. 177-90 and V. v. 325-8).

⁵ In Serbo-Croat, *granichar* (see V. v. 462-3).

⁶ See Seton-Watson, R. W.: *The Southern Slav Question* (London 1911, Constable), pp. 22-23.

⁷ The Hapsburg-Ottoman frontier came to rest along this line in the peace settlement concluded at Belgrade in A.D. 1739.

⁸ A list of eleven such districts will be found in Seton-Watson, op. cit., p. 373. The territories of the six most easterly Grenzregimenten, and the Czaikistenbataillon cantoned in the angle between the Danube and the Tisza, are shown in the map inset in the bottom right-hand corner of Plate 75 of Spruner, K. von, and Menke, T.: *Hand-Atlas für die Geschichte des Mittelalters und der Neueren Zeit*, 3rd edit. (Gotha 1880, Perthes). The name 'Czaikisten' ('boatmen') is derived from the Turkish word *qayyq*.

⁹ See Seton-Watson, op. cit., p. 44.

¹⁰ See *ibid.*, p. 93.

Austro-Hungarian *Ausgleich* of 1867 and Hungaro-Croatian *Ausgleich* of A.D. 1868, and the evaporation of the last vestiges of Ottoman power from the regions adjoining the Hapsburg frontier as a result of the Russo-Turkish War of 1877-8 and the consequent grant, at the Berlin Conference of 1878, of independence to Serbia and Rumania, autonomy to Bulgaria and Eastern Rumelia, and a mandate to Austria-Hungary to occupy Bosnia-Herzegovina.¹ It is one of the more interesting curiosities of history that, for some 350 years from first to last—reckoning to the morrow of the Berlin Conference from the morrow of the Battle of Mohacz—so close a replica of the Roman system of frontier defence should have been installed by Hapsburg Emperors who laid claim to *Caesarea Majestas* over against Ottoman Pādīshāhs styling themselves *Qaysar-i-Rūm*.

By comparison with either the Danubian Hapsburg Monarchy's or the Roman Empire's problems of frontier defence,² 'the New Empire' of Egypt had a simple task when once it had tacitly abandoned the attempt to retain an effective hold over its Asiatic dominions.³ Thereafter, it was in a position to seal its frontiers against attack from any quarter by maintaining one fortress at the north-eastern corner of the Delta barring the coast road from Asia, a second fortress at the north-west corner of the Delta barring the coast road from North-West Africa, and a third at some point on the Upper Nile to block invasions from farther upstream. In a different context⁴ we have noticed that the north-eastern frontier fortress, Ramses, actually became the capital of the Empire in the thirteenth century B.C., when this frontier was being subjected to cumulative pressure from the Nomads of the North Arabian Steppe, the Hittite Power from beyond the Taurus, and 'the Sea Peoples' pouring out of the Aegean Basin in a *Völkerwanderung* precipitated by the collapse of 'the thalassocracy of Minos'.

After the Libyan barbarians had succeeded in gaining by 'peaceful penetration' the entry into Egypt which had been denied them when they had sought to break in by force of arms,⁵ and had subsequently demonstrated their incapacity to serve the Egyptian Society as a military caste by their utter ineffectiveness when, at the turn of the eighth and seventh centuries B.C., the Assyrians and the Ethiopians had borne down, from opposite quarters, upon the heart of the Egyptian World,⁶ the founder of the Saïte Power, Psammetichus I (*regnabat* 663-609 B.C.), who eventually succeeded in getting rid of both invaders, perceived that he must find more mettlesome troops than the official defenders of

¹ See p. 17, above.

² The Roman Empire's problem was aggravated by the Empire's failure to carry its European land-frontier forward to the short line across the waist of Eastern Europe, between the north-west corner of the Black Sea and the south-east corner of the Baltic, and its further failure to maintain its Asiatic land-frontier along the short line across the waist of South-Western Asia, between the head of the Persian Gulf and the south-west corner of the Caspian Sea (for the European frontier see V. v. 591-5; for the Asiatic frontier see I. i. 390).

³ Egyptian rule in Syria seems to have ceased to be more than nominal by the time of the infiltration of the Israelites, which appears to have taken place in the thirteenth century B.C. The existence of the Egyptian régime is ignored in the Hebrew tradition (see V. v. 611, n. 3).

⁵ See IV. iv. 422, n. 3; V. v. 269-70 and 353.

⁴ In II. ii. 113.

⁶ See II. ii. 116.

the country to garrison the frontiers, if Egypt was to be preserved from the fate of again becoming a battlefield for neighbouring Powers. At the cost of alienating the established Libyan military caste, and perhaps even provoking some of their number to emigrate from the Saïte dominions to new cantonments offered them by the rival Ethiopian Power on its own southern frontier between the White and Blue Niles,¹ Psammetichus recruited Greek and Jewish mercenaries² to man his three frontier-fortress Daphnê-by-Pelusium, Marea barring the approaches from the Western Desert, and Elephantinê at the First Cataract,³ where the frontier between the Saïte and Napatan Powers, between whom the Egyptiac World was now partitioned, settled down about 655 B.C.⁴

When the Saïte Power was extinguished by Cambyses, the Achaemenian Government continued to maintain the two fortresses of Daphnê and Elephantinê.⁵ Persian garrisons were posted at both places,⁶ but at Elephantinê an economy was made in the employment of Persian manpower by taking over and retaining the Jewish military colony which the Saïtes had planted there.⁷

¹ For the expansion of Ethiopia up-river, see II. ii. 117. For the story of 'the Deserters', see Herodotus, Book II, chap. 30.

² The Ionian Greeks' exploits in the Saïte Government's service in the seventh and sixth centuries B.C. have been touched upon, in another context, in IV. iv. 21. The Greek inscriptions carved upon the two southern colossi of the Great Temple at Abu Simbel prove that Greek troops in Saïte service were at least once employed in an expedition against Ethiopia in the reign of Psammetichus II (*regnabat* 593-588 B.C.), but there seems to be no evidence of their having shared with the Jewish military colony at Elephantinê the duty of permanently garrisoning the southern frontier of the Saïte dominions. The reception of Jewish settlers on Egyptiac ground had precedents of very long standing in Egyptiac history. Whatever may be the truth about the Israelite tradition of a sojourn of Israel in the north-eastern marches of 'the New Empire' of Egypt, there is documentary evidence that under 'the Middle Empire', in the sixth year of the reign of the Emperor Senwosret II (i.e. in the year 1892 B.C.), a 'barbarian chief' called Ebsha, with thirty-seven 'Amu followers from the desert, made application to the Imperial Warden of the Eastern Desert for permission to settle on Egyptiac territory (Meyer, E.: *Geschichte des Altertums*, vol. i, Part II, 3rd ed. (Stuttgart and Berlin 1913, Cotta), pp. 283-4).

⁵ See Herodotus, Book II, chap. 30.

⁶ See Herodotus, loc. cit.

⁷ Modern Western archaeological enterprise had unearthed a cache of documents, written on papyrus in Aramaic, which threw a flood of light on the life and fortunes of this community under the Achaemenian régime during the fifth century B.C. This information had been sifted and interpreted by Eduard Meyer in *Der Papyrusfund von Elephantinê* (2nd ed.: Leipzig 1912, Hinrichs) and by A. van Hoonacker in *Une Communauté Judéo-Araméenne à Eléphantine en Égypte aux VI^e et V^e siècles avant J.-C.* (London 1915, Milford). This Jewish community was treated by the Achaemenian Government with studied consideration. For instance, Cambyses spared their temple at Elephantinê when he destroyed the temples of the Egyptians (Meyer, p. 36; van Hoonacker, p. 42). In 410 B.C. the Egyptian priests of the local temple of Khnum took advantage of the absence of the Governor-General of Egypt, Arsham, on a visit to Susa to induce the local Persian commandant Widarnag (*Graecè* Hydarnes) to destroy the Jewish temple. The Jewish community's protest at this outrage appears to have moved the Achaemenian Government to put Widarnag and his son to death (Meyer, op. cit., pp. 78-79; van Hoonacker, op. cit., pp. 40-42 and 45-46). The Achaemenian Government had as good reasons for retaining and conciliating the Jewish military colony at Elephantinê as it had for mistrusting and disbanding the Greek garrison at Daphnê. The Greeks were the Persians' rivals for the immense prize of domination over the Egyptiac, Syriac, and Babylonian worlds, which had been left exhausted, and incapable of defending themselves against any vigorous aggressor, by the appalling after-effects of the last and most ferocious bout of Assyrian militarism (see IV. iv. 475-6). The Jews were the Achaemenids' protégés, whom they had liberated from the yoke of the Neo-Babylonian Empire and allowed to return home from their Babylonish

A Persian frontier garrison of which the Achaemenidae were justly proud was the isolated outpost at Doriscus, on the Thracian coastal road from the Hellespont to Continental European Greece, which, after the disastrous outcome of Xerxes' attempt in 480-479 B.C. to unite the Hellenic World under Achaemenian rule by force of arms, was the sole surviving fragment of the pre-war Achaemenian province between the Hellespont and the Strymon styled 'Those beyond the Sea' in the official lists.¹ This vestige of a lost dominion was preserved for the Empire, in the teeth of Athenian sea-power and in defiance of repeated assaults, for perhaps not less than half a century after the disasters of 480-479 B.C., by the valour of its commandant Mascames and his descendants.²

While we are thus informed about the Achaemenian garrisons at Doriscus and Elephantinê, we have no record of any corresponding installations for the defence of the north-east frontier of the Empire over against the Eurasian Steppe, though this frontier, on which Cyrus himself had met his death, must always have been the most critical and most important of all in the estimation of the Government at Susa.³ This silence may be due to an accidental gap in our knowledge; but it is also possible that the north-eastern frontier was not in fact guarded by imperial frontier garrisons of the kind familiar on the west because its defence was provided for otherwise. On its Sogdian sector this frontier was screened by a military alliance with a Nomad horde in Farghānah described in the official lists as 'the Hauma-(?)drinking Saka' (Saka Haumavarga, *Graecè* Amyrgioi);⁴ and, behind this screen of barbarian *foederati*, a defence in depth that would undoubtedly be more effective than any fixed garrisons could be for foiling Nomad raids was afforded by the presence of a warlike feudal nobility throughout the broad territories, running back from the north-east frontier to the Caspian Gates, that constituted the imperial marches in this quarter. This mobile feudal cavalry based on almost impregnable castles was master, like its counterpart in a Medieval Western Christendom,⁵ of the local military situation.

captivity to Judaea. Moreover, in Egypt the Jews, though they had originally been planted at Elephantinê by a native Egyptian régime, were as odious as the Persian conquerors themselves in the sight of the native Egyptian population in the fanatical temper that was invariably aroused in Egyptian hearts by alien domination (see V. v. 351-3; pp. 5-6 and 49-50, above; and Meyer, op. cit., p. 75). The Jewish colony at Elephantinê fell a victim to this temper in the end, if there is truth in the conjecture that it was finally wiped out by massacre during the Egyptian nationalist revolt against Achaemenian rule that was led by Amyrtaeus II in 404 B.C. (see van Hoonacker, op. cit., pp. 51-52). This Jewish garrison at Elephantinê under the Achaemenian régime has a counterpart in the cluster of Bosniak garrisons, planted in A.D. 1520 by the 'Osmanli conqueror of Egypt, Selim I, who held for the Ottoman Empire the Nubian march, between the First and the Third Cataract, which it had taken over from the extinguished Mamlūk régime (see Budge, E. A. Wallis: *The Egyptian Sudan, Its History and Monuments* (London 1907, Kegan Paul, 2 vols.), vol. ii, pp. 207-8; Toynbee, A. J.: *Survey of International Affairs*, 1925, vol. i (London 1927, Milford), p. 236).

¹ See pp. 682-4, below.

² See Herodotus, Book VII, chaps. 105-6. It is to Xerxes' credit that he singled Mascames out for appointment to this post in place of the previous commandant installed by Darius.

³ On this point see II. ii. 138-9.

⁴ See pp. 644-5, below.

⁵ The trouble which this feudal nobility in the north-eastern marches of the Achaemenian Empire gave to Alexander the Great has been noticed above in II. ii. 139-40.

When the Arab Caliphate re-established the Syriac universal state of which the Achaemenian Empire had been the first embodiment, and took over from its own immediate predecessors, the Sasanidae, the responsibility for defending the north-eastern borders of the Syriac World, the Arab empire-builders garrisoned Khurāsān—which had been the frontier province since the submergence of the Oxus-Jaxartes Basin under a flood of Eurasian Nomad invasion in the second century B.C.¹—with Arab tribal cantonments of the kind that they had already established in the interior of their dominions;² and, when, in the eighth century of the Christian Era, the north-eastern frontier of the Caliphate was carried forward from Khurāsān to Farghānah, the political reunion of the Oxus-Jaxartes Basin with the rest of the Syriac World was confirmed by the establishment of similar Arab cantonments in the newly conquered territories.³ The north-western frontier of the Caliphate was not stabilized until the Umayyads' ambition to complete their conquest of the Roman Empire had been quenched by the disastrous ending, in A.D. 718, of their second attempt to capture Constantinople and by the overthrow of the Umayyad Dynasty itself twenty-two years later. After the 'Abbasids had transferred the capital of the Caliphate from Damascus, within short range of the East Roman frontier, to the more distant site of Baghdad, the north-western marches were stabilized and organized by Hārūn-ar-Rashīd (*imperabat* A.D. 786–809). The forward zone, in which the two principal military centres were Tarsus⁴ and Malatīyah,⁵ became known as the Thughūr ('the barrier fortresses'),⁶ the rearward zone as the 'Awāsīm ('the [places] that give protection').⁷

The Ottoman Empire practised on the grand scale the policy, followed by the Achaemenian Empire at Elephantinē, of drawing on loyal peoples who were not themselves members of the ruling nationality for the purpose of frontier defence, and thereby kept down to a minimum the proportion of their own admirable professional army⁸ that had to be locked up in garrisons and so withdrawn from active service in the field. On their critical eastern frontier over against the Safawī Power, the 'Osmanlis induced the local Kurdish tribal chiefs to serve as wardens of the Ottoman marches by investing them with the insignia of Ottoman feudatories without requiring them to give up their own ancestral

Our records do not tell us whether these barons were the native aristocracy of the North-East Iranian peoples, or whether they were incomers of Persian origin who had been endowed with fiefs in these territories at the time when the Achaemenian Power had salvaged them from Nomad occupation (see II. ii. 138).

¹ The consequent segregation of the Oxus-Jaxartes Basin from the main body of the Syriac World between the Saka conquest in the second century B.C. and the Arab conquest in the eighth century of the Christian Era has been noticed in II. ii. 141, with n. 2.

² For the cantonments in Khurāsān, see Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), pp. 256–9, and the present Study, II. ii. 141, n. 3. The cantonments in the interior are dealt with on pp. 130–1, below.

hereditary tenures.¹ And, with the same audacious disregard for Human Nature's sensitiveness to climate which the Incas showed in interchanging the populations of the Andean Plateau and the Pacific coastal plain, the 'Osmanlis planted Bosniaks in Nubia in the sixteenth century of the Christian Era to hold a new frontier there,² and Circassians in Transjordan in the nineteenth century to guard an old Ottoman frontier against the Arab Nomads of the Hamād.

The policy by which the 'Osmanlis enlisted the services of the Kurds for the defence of their frontier against the Safawis has an almost exact counterpart in the Manchus' policy towards the Mongols. The Manchus roped these elusive Nomads into their system of frontier defence against the Zungar Calmucks and the Russians by giving the Mongol tribes the nominal status of 'banners' (i.e. units of the Manchu Government's regular standing army), without attempting in practice to interfere with the traditional Mongol tribal organization.³ In this light-handed treatment of the Mongol tribesmen the Manchu Imperial Government was applying to them a policy which its predecessor the Ming Imperial Government had previously applied to the Imperial Manchus' own tribal ancestors; for the original nucleus of the Manchu state had been a Manchu war-band which the Ming had organized into a feudatory statelet in order to use it as a frontier garrison of barbarian *foederati*.⁴

Garrisons in the Interior

In turning our attention from garrisons on the frontiers to garrisons in the interior of a universal state, we shall find, as might be expected, that, the more efficient the defence of the frontiers and the more successful the pacification of the subject peoples inside them, the smaller, in general, are the forces that an imperial government finds it necessary to maintain for the preservation of internal law and order.

In the Roman Empire Augustus was so successful in dealing with pockets of recalcitrant barbarism within the vast area embraced by his new frontiers along the Rhine, the Danube, and the Euphrates that by the end of his reign three legions sufficed to keep in order the highlanders of North-Western Spain,⁵ and nine colonies of time-expired soldiers to overawe Pisidian highlanders who had defied successive attempts of Achaemenids, Seleucids, Attalids, and Galatians to subdue them.⁶ The newly subjected Alpine peoples seem to have required no

¹ See I. i. 389-90. In the Mughal Empire the Rājput chiefs were given a similar status *de facto*.

² See p. 119, n. 7, above.

³ See Lattimore, O.: *The Mongols of Manchuria* (London 1935, Allen & Unwin), pp. 145-6 and 148-51, quoted in the present Study, V. v. 315, n. 3.

⁴ See Michael, F.: *The Origin of Manchu Rule in China* (Baltimore 1942, Johns Hopkins University Press), p. 39.

⁵ See Sutherland, C. H. V.: *The Romans in Spain, 217 B.C.-A.D. 117* (London 1939, Methuen), p. 150. One of these three legions was withdrawn with impunity by Claudius soon after A.D. 43 (op. cit., p. 177), and another by Vespasian in A.D. 71 (op. cit., pp. 190 and 191-2). The single remaining legion sufficed to keep the Roman peace in Spain thenceforward.

⁶ Augustus's Roman military colonies in and round Pisidia were Pisidian Antioch (an originally Seleucid foundation which was reinforced with a Roman military colony in or before 27 B.C.); Olbasa, Comama, Cremna, Parlais, Lystra, Germe, and Ninica, all founded in 6 B.C.; and Isaura of uncertain date (see Hahn, L.: *Röm und Romanismus im Griechisch-Römischen Osten* (Leipzig 1900, Dieterich), pp. 93-94). Claudius found it necessary to add Claudiopropolis, Seleucia Sidera, and Iconium (Hahn, op. cit., p. 148).

garrisons at all. In the heyday of the Roman Peace the only garrison on the road between Rome and the Upper Rhine via the Riviera and the Rhône Valley was a battalion, perhaps 1,200 men strong, at Lyon; and this was merely one of the *Cohortes Urbanae* ('Metropolitan Battalions')—an armed police force that could hardly be counted as part of the Roman combatant army.¹ A sister-battalion at Carthage was the only garrison, in the opposite direction, between Rome and the frontier of the Empire in the desert hinterland of North-West Africa. In the latter days of an Antonine 'Indian Summer', it could be declared that

'The cities are free from garrisons, and mere battalions (*μόραι*) and squadrons (*ἑταῖαι*) are sufficient to provide for the security of whole nations. Even these units are not posted in large numbers in every city in each national territory. They are scattered so thinly over the countryside in such small numbers that there are many nations that do not know where their garrison is posted. . . .

'Yet [in spite of your devotion to the arts of peace,] you have not made the mistake of depreciating the god of War. . . . Nowadays, however, Arēs dances his unceasing dance on the banks of the frontier rivers, and he keeps his arms unsullied by the stain of blood.'²

Less secure or less well-ordered régimes have to devote a higher proportion of their military resources to the preservation of internal peace. When Hammurabi (*imperabat circa* 1792–1750 or 1728–1686 B.C.) had succeeded in restoring the Empire of Sumer and Akkad after a 260-years-long eclipse,³ he sought to safeguard the results of his efforts by building fortresses⁴ and by endowing his army with fiefs of land in order to keep it in being.⁵ Similar measures were taken for the same purpose by the Achaemenidae.

In addition to the detachments of troops which they posted at river-crossings, mountain-passes, and other strategic points on the roads connecting the capital with the frontiers,⁶ the Achaemenian Government maintained standing garrisons in fortresses in the interior.⁷ All these units were under the command of the Central Government and not of the Governor of the province within whose boundaries their posts happened to lie.⁸ The Achaemenian Crown was also generous in rewarding distinguished services by the grant of appanages in conquered territories,⁹ and, whether as a fortuitous or as a designed result of this policy, an Iranian feudal nobility like that in the north-eastern marches¹⁰ struck root in other parts of the Empire where the mass of the population

was non-Iranian.¹ Cappadocia, from the north-western slopes of Taurus to the coast of the Black Sea, became in this way a New Iran on a small scale;² and the top dressing of Iranian population and culture that was deposited under the Achaemenian régime continued to make its presence felt after the Achaemenian Empire's downfall. The Iranian barons in Cappadocia managed to avoid being conquered by either Alexander or any of his Macedonian successors; and two of the leading local Iranian feudal houses succeeded, with the support of their peers, in founding here, on this distant Hittite ground, two of the three earliest of the Achaemenian Empire's Iranian successor-states.³ The greatest statesman whom these dynasties produced, Mithradates Eupator, King of Pontic Cappadocia (*regnabat* 115–63 B.C.), almost succeeded in undoing all that Alexander the Great had done⁴ and achieving all that Xerxes had failed to achieve. And, though both the Iranian dynasties of Cappadocia sought and obtained admission, at an early date, into the comity of Hellenic states, the Cappadocian kingdoms were slower than Transjordan or Bactria in accepting anything more than a tincture of Hellenic culture. It was not till the fourth century of the Christian Era that Cappadocians, educated at Athens, won a tardy distinction as Greek men of letters who found their field of action in the Christian Church.

The policy of planting the interior of a universal state with feudal barons of the ruling nationality was applied, with a thoroughness unknown to the Achaemenidae, by the architects of the Ottoman Empire.⁵

The Ottoman network of military fiefs extended over all the European provinces of the Empire, the provinces in Asia Minor in which the predominant element in the population was Muslim and Turkish-speaking, and some of the provinces beyond the Taurus in which the population was Muslim and Arabic-speaking.⁶ It was in fact almost ubiquitous except for Ottoman Kurdistan, where the native hereditary chiefs were incorporated into the Ottoman feudal system only nominally,⁷ and Egypt, where the Ottoman conquerors tolerantly—but, as it turned out, unwisely—allowed the Mamlûks to perpetuate themselves under

¹ See Meyer, *op. cit.*, vol. cit., p. 37.

² The success with which an Iranian feudal nobility struck root here may perhaps be accounted for partly by the presence in Cappadocia of an earlier stratum of Iranian population—the sediment left by the invasion of the Cimmerian Nomads (see III. iii. 404 and 431, n. 1, and the present volume, pp. 606–10, below)—and partly by the physical similarity between the Anatolian and the Iranian Plateau, which would make a settler from Media or Persis feel at home in Cappadocia.

³ The third was the principality of Media Atropatênê (Azerbaijan).

⁴ See V. v. 69.

⁵ Convenient summaries of our information about the Ottoman feudal system will be found in Bélin, F. A.: 'Du Régime des Fiefs Militaires dans l'Islamisme et particulièrement en Turquie' (*Journal Asiatique*, vi^e série, tome xv, Paris 1870) and in Tischendorf, P. A.: *Das Lehnswesen in den Moslemischen Staaten, insbesondere im Osmanischen Reiche* (Leipzig 1872, Giesecke & Devrient). The principal Ottoman sources on which these Western scholars draw are the treatise of 'Aynî 'Alî (written circa A.D. 1606, when an attempt was being made to retrieve the Ottoman feudal system from the decay into which it had fallen by that date) in Ahmed Vefik Efendi's edition, and a *Mémoire sur les Causes de Décadence de l'Empire* written in A.D. 1630 by Khoja Beg (alias Kuchi Bey) and translated by Behrmauer in the *Zeitschrift der Deutschen Morgenländischen Gesellschaft* for 1861, pp. 272–332 (see Bélin, *op. cit.*, pp. 237–8).

⁶ While effective in Syria and the Jazīrah, the Ottoman feudal system was very imperfectly established in the province of Baghdad (see Bélin, *op. cit.*, pp. 259–89).

⁷ See p. 121, above.

Ottoman rule.¹ The military obligation incumbent on a fief-holder was to reside on his fief,² to serve personally in the field, and to bring with him a retinue of men-at-arms (*jebeli-ler*), whose number was determined by the officially registered annual value of his fief in terms of money,³ whenever the feudal force of his province was called up for active service by the Central Government. In all provinces the fiefs were on two standard scales;⁴ but any fief-holder who distinguished himself might be rewarded by the grant of an additional 'portion', the tenure of which was personal to the recipient and automatically terminated at his death.⁵ Though in both Rumili and Anadolu there were fiefs that were hereditary freeholds,⁶ this was exceptional. In general the indispensable condition for legal investiture with even the smallest fief was the receipt, from the Pādishāh himself, first of a waiting-ticket of candidature⁷ and then of a warrant of appointment—and this whether the fief in question was officially registered in the 'ticket' or the 'non-ticket' category (*teskereli* or *teskeresiz*).⁸

When the Ottoman feudal system was in its heyday, the fief-holders were recruited from two sources only: from the sons of deceased fief-holders and from the issue of members of the Pādishāh's slave-household, who were invested with fiefs as a consolation prize to compensate them for the personal hardship inflicted on them by the rigid rule debarring the grandsons of administrative officials and of troopers in the household cavalry ('Sipāhīs of the Porte'),⁹ and the sons of all public slaves of lower categories, from being admitted into the slave-household themselves.¹⁰ No allowances were paid to the sons of a fief-holder in their father's lifetime, but the father might retire in favour of one of his sons, and, if the father died in battle, a 'portion' might be given to his son as a retaining fee while he was a candidate for a vacant fief.¹¹ The rules governing the assignment of 'portions' and the award of fiefs to sons of fief-holders were worked out by Sultan Süleymān the Magnificent¹² (*imperabat* A.D. 1520-66). He ruled that more than one son of a deceased fief-holder might be enfeoffed.¹³ Sons of fief-holders offering themselves as candidates were, however, required to substantiate their claim to be their fathers' sons.¹⁴ Süleymān rather grudgingly admitted, under strict

¹ See III. iii. 30-31.

² See Tischendorf, *op. cit.*, p. 95.

³ See *ibid.*, p. 87. In the province of Anadolu the fief-holders themselves were exempt from personal service and were required merely to send men-at-arms (see Bélin, *op. cit.*, p. 254).

⁴ The holders of the larger fiefs (*timars*) were known as *timarjy-lar*, those of the smaller fiefs (*zi'āmet*s) as *zā'im-ler*.

⁵ See Bélin, *op. cit.*, p. 240; Tischendorf, *op. cit.*, pp. 37-38. Conversely, any excess of the actual income of a fief over its registered value had to be surrendered by the fief-holder to the Treasury, which applied it to the creation of a separately bestowable 'portion' (see Tischendorf, *op. cit.*, p. 87).

⁶ See Bélin, *op. cit.*, pp. 253-4; Tischendorf, *op. cit.*, pp. 98-99.

⁷ See Tischendorf, *op. cit.*, p. 95. During the period of probation the candidate had to serve in the field as a volunteer who had 'staked his head' (*serden geçdi*) on a forlorn hope (see Bélin, *op. cit.*, pp. 232-3).

⁸ See Bélin, *op. cit.*, p. 251.

⁹ These privileged members of the Pādishāh's slave-household must not be confused with the provincial feudal cavalry, who were also known as sipāhīs.

¹⁰ On this point see the present Study, III. iii. 34, n. 2.

¹¹ See Tischendorf, *op. cit.*, pp. 37-38 and 95; Bélin, *op. cit.*, p. 250.

¹² See Tischendorf, *op. cit.*, p. 44.

¹³ See *ibid.*, p. 47.

¹⁴ See *ibid.*, p. 40.

control and limitations, a father's right to bequeath to his son a fief of the *yurd* or *oĵāq* category of tenure.¹ He did not show the same hesitation about giving protection to the peasantry (*ra'īyeh*) by whom the fiefs were cultivated and the rents paid. He affirmed their right to bequeath their holdings to their children, and he made it illegal for fief-holders to bestow vacant peasant holdings upon their own relatives.² The peasant was thus deliberately given a security of tenure which was no less deliberately withheld from the holder of the fief on which the peasant lived and worked.³ All these regulations were enforced by a strict system of official control. The records of the fiefs were kept in provincial registers, and these were called in and examined at the Porte by Süleymān when he made his general review of the Ottoman feudal system.⁴

As a basis of Ottoman military and political power, this feudal system was second in importance only to the Pādishāh's slave-household itself; and, though, after the death of Süleymān, the feudal system was affected by the general decay of the Ottoman body politic which then set in, determined efforts were made, some seventy years later, to bring the system back to its former level of efficiency. During the years A.D. 1632-7, in the reign of Sultan Murād IV (*imperabat* A.D. 1623-40),⁵ musters of fief-holders were held, and fiefs found vacant were given to members of the Pādishāh's slave-household in lieu of pay.⁶ The two fundamental institutions of the Ottoman Empire were finally abolished by the same reforming hand. After destroying the Janissaries in A.D. 1826,⁷ Sultan Mahmūd II (*imperabat* A.D. 1808-39) liquidated the feudal system as well. The fiefs were reabsorbed into the public domain, and the living fief-holders were pensioned off, under the terms of the *Khatt-i-Sherīf-i-Gülkhāneh* of A.D. 1839.⁸

While the Ottoman feudal system was more highly organized than the Achaemenian, both institutions alike were of secondary importance—both for the defence of the imperial frontiers and for the maintenance of the Imperial Government's authority in the interior of the Empire—by comparison with the garrisons and mobile formations of professional troops in the Imperial Government's service. By contrast, the Mughal Imperial Government, which made similar efforts to maintain a professional force drawing its pay from the Imperial Treasury and therefore directly subject to the Emperor's control, found itself unable to prevent this Imperial Army from disintegrating into a host of feudal contingents, each virtually at the disposal of its own commander in consequence of their coming to be paid out of provincial land-revenue assigned to their commanders for collection by them without this revenue any longer passing into and out of the Imperial Treasury on the way.

While even the later Mughal emperors did succeed in keeping up a

¹ See Tischendorf, *op. cit.*, p. 47.

² See *ibid.*, p. 49.

³ Ottoman fief-holders had no political authority over their peasants, and a peasant had the right to prosecute his feudal lord in the qādi's court (see Bélin, *op. cit.*, p. 189).

⁴ On this occasion Süleymān confirmed in their holdings any *ra'īyeh* whom he found in actual occupation of fiefs.

⁵ For Murād IV's herculean efforts to put the Ottoman Empire on its feet again, see V. vi. 207.

⁶ See Tischendorf, *op. cit.*, p. 105.

⁷ See III. iii. 49-50 and IX. viii. 239.

⁸ See Bélin, *op. cit.*, p. 294; Tischendorf, *op. cit.*, p. 110.

small body of artillerymen, matchlockmen, and cavalry organized and commanded, as well as paid, by the imperial authorities themselves,¹ the Imperial Government, as early as Akbar's day, depended for the recruitment and maintenance of the greater part of its cavalry on *bloc* grants of divers grades of salary to office-holders (*mansabdārs*) who, in return, were required to produce proportionate numbers of troops. Even when these *mansabdārs* were paid their salaries—as Akbar made a point of paying them—out of the Imperial Treasury, the Imperial Government seems to have failed to secure from them the upkeep of their full stipulated quotas of men-at-arms; and, after Akbar's death, his successors lapsed into the slovenly and perilous practice—traditional among pre-Mughal Central Asian Muslim *conquistadores* in India—of compounding for the payment of the *mansabdārs*' salaries by assigning to them the right to collect particular local allotments (*jāgīrs*) of provincial revenue up to an equivalent value. In thus signing away its own right to collect the local revenue, the Imperial Government was in effect relinquishing its hold on the local administration as well; and the effect of a widespread grant of *jāgīrs* was thus no less pernicious for the political integrity of the Mughal Empire than it was for the military efficiency of the Mughal Imperial Army.²

The deadliness of Feudalism in the history of the Mughal Empire in India throws into relief, against a foil of Mughal inefficiency, the masterliness of the Tokugawa Shogunate in Japan. A traditional institution that was the death of the Mughal Empire was deliberately adopted by the Tokugawa as the basis for the establishment of an oecumenical peace after a Time of Troubles; yet the Tokugawa régime's experience in Japan was just the opposite of the Mughal régime's in India. In Japan, down to the moment when the internal play of forces was suddenly upset by the impact of the Western Civilization in the nineteenth century of the Christian Era, the local feudal lords, so far from progressively shaking off the Central Government's control, found themselves caught more and more tightly in its toils as time went on.

Immediately after the inauguration of their rule the Tokugawa were so successful in insulating the Japanese Archipelago from contact with the outside world that, for some two and a half centuries ending at the appearance of Commodore Perry's squadron in Yedo Bay in A.D. 1853, they were not called upon to provide for frontier defence. But their very success in relieving Japan from foreign pressure must have reduced almost to vanishing-point, in Japanese minds, one powerful motive for loyalty to the Tokugawa régime, and this must have added to the intrinsic difficulty of the Tokugawas' crucial political problem of maintaining their domination over the great feudal lords who had submitted to their suzerainty only under *force majeure*, and then only at the

Blochmann's note on the Mughal *mansabdārs* on pp. 236-47 of vol. i of his translation of the *Ayn-i-Akbari* (Calcutta 1873, Baptist Mission Press); Irvine, W.: *The Army of the Indian Moghuls* (London 1903, Luzac), chaps. 1, 2, and 6; Smith, V. A.: *Akbar the Great Mogul, 1542-1605*, 2nd ed., revised (Oxford 1919, Clarendon Press), pp. 360-7; Moreland, W. H.: *India at the Death of Akbar* (London 1920, Macmillan), pp. 65-68.

eleventh hour. Some of these lords had been more powerful than the Tokugawa themselves had been until the eve of the establishment of their ascendancy; many of them could boast of a much more illustrious past; and even under Tokugawa overlordship they still retained much of their former wealth and prestige.¹ To hold them in check and gradually reduce their power was a delicate and difficult task. In another context² we have noticed the device of requiring the periodic residence of the *daimyō* and their families at the Shogun's capital at Yedo. Another method of 'belling the cat' was to make Feudalism itself serve as an instrument for keeping Feudalism in order.

'The Shogunate . . . depended for its supremacy on the balance of power of its possible opponents. The *daimyōs* were by this time divided into three classes: first, the Related Houses (*Shimban* or *Kamon*), sons of Ieyasu [the first Tokugawa Shogun] and their descendants; second the Vassal Clans (*Fudai*), hereditary vassals of his house and their descendants; the third, Outside Feudatories (*Tozama*), or lords who did not come under this head. The *Bakufu* [i.e. the Shogunal Government] arranged that all the strategic positions should be held by the first two classes,³ and that the "Outside Lords" should be so placed that they were separated by these, and adjacent to unfriendly neighbours. Thus these "Outside Lords" mutually checked each other and were in turn restrained by the hereditary vassals. The Related Houses also might in an emergency be controlled by the hereditary vassals, and both these classes were finally overawed by the Shogun's personal bodyguard, the *Hatamoto*, whose interests were entirely bound up with those of the *Bakufu*. How successful was this system that Ieyasu put together with such shrewdness can be seen from the fact that from this day till the latest period of the Shogunate in 1850 there was not a single rebellion of any of these feudatories.'⁴

While the Achaemenian institution of a feudal system thus found its classic application in Japan under the Tokugawa Shogunate, the Achaemenian institution of imperial garrisons posted at key-points in the interior of the Empire was likewise unconsciously reproduced, in a more thoroughgoing form, in a Far Eastern universal state in China under the Ming régime and its Manchu successor. The Ming planted garrisons of hereditary professional troops throughout their empire—not only along the frontiers over against the Eurasian Steppe and the Manchurian forests, but also along the coasts (which were harried by Japanese pirates) and along the vital inland waterway of the Grand Canal.⁵ In the interior of the Empire the military districts occupied by such garrisons were thinly scattered enclaves in the territory under ordinary civil administration;⁶ but the south-western corner of Manchuria, outside the Great

¹ See Sansom, G.: *Japan, A Short Cultural History* (London 1932, Cresset Press), p. 436.

² See p. 87, above.

³ 'The hereditary vassals, though not so rich in estates as the great *Tozama*, were assigned lands at points of strategic importance, commanding the main highways and towns, or so situated with relation to the domains of possible enemies of the Shogun as to threaten their flank or rear should they ever venture to march upon Yedo' (Sansom: op. cit., p. 436).

⁶ See *ibid.*, loc. cit.

Wall but inside the Willow Palisade, which had been a Chinese-inhabited country since the Age of the Contending States, was mapped out into military districts exclusively.¹ The original nucleus of the Manchu state that was to be the Ming's successor had, as we have observed,² been a local Manchu tribe whom the Ming had fitted into their military system; and this system was the model followed by the architect of the Manchu Power, Nurhachi.³

The organization of the Manchu military establishment in 'banners' on the Ming pattern preceded the beginning of the Manchu conquest of the Chinese-inhabited country between the Willow Palisade and the Great Wall.⁴ A social and administrative, as well as a military, revolution was carried out in A.D. 1601 when the Central Government of the nascent Manchu Power registered its subjects, organized them in 'banners' for civil as well as military purposes, and decreed that this new order was to override all traditional feudal claims and ties.⁵ After the subsequent Manchu conquest of China, these 'banners' were the units out of which a Manchu Imperial Government reigning in the former Ming Imperial Government's stead constituted the garrisons that it stationed in Peking, the imperial capital, and in the Chinese provinces inside the Great Wall, as well as outside the Great Wall in both the Chinese-inhabited and the Manchu-inhabited zone of the Dynasty's previous domain. In the standard 'banner' of the Manchu Imperial Government's professional army after the Conquest, one battalion of Manchu troops was brigaded with one of Chinese and one of Mongols;⁶ but there were some 'banners' in which the Manchu component had no Chinese or Mongol complement. The standard garrison consisted of detachments⁷—corresponding to the *vexilliones* of the Roman Imperial military organization—drawn from four 'banners' in each case originally and afterwards from eight; but there continued to be some garrisons of less than eight units, while some were raised to a still higher number, though the maximum was always less than sixteen.⁸

Sedentary barbarians, like the Manchus,⁹ find less difficulty than Nomads, like the Mongols, in assuming the role of an imperial people. The antecedent attempt of the Mongols to impose an alien peace on China on their own account had been markedly less successful than the Manchus' repetition of the enterprise, in which the Mongols had to be content to serve as the Manchus' junior partners. It is true that the Mongols were handicapped not only by their Nomad background but

¹ See *ibid.*, pp. 30-31.

⁴ See *ibid.*, p. 63.

⁵ See *ibid.*, p. 64.

⁶ These Mongol battalions of hereditary professional soldiers, individually recruited, in the 'banners' of the Manchu imperial army must be distinguished from the so-called Mongol 'banners', which were the war-bands of the Mongol tribes under Manchu suzerainty (see p. 122, above).

⁷ See Michael, *op. cit.*, pp. 65-66.

⁸ See Lattimore, O.: *The Mongols of Manchuria* (London 1935, Allen & Unwin), pp. 146-8, and eudem: *Manchuria Cradle of Conflict* (New York 1932, Macmillan), p. 32. The military organization of the Manchus has been touched upon, by anticipation, in V. v. 315, n. 3, and 447.

⁹ For the social and economic background of the Manchu restorers of a Far Eastern universal state in China, see II. ii. 122, n. 2; III. iii. 16, 19, and 423, n. 1; and V. v. 315.

by a taint of Far Eastern Christian culture which provoked the demonic uprising of the Chinese against them,¹ and we have seen that the Libyan Nomads, who were undefiled—or unredeemed—by any such alien cultural tincture, were suffered by a hyper-sensitively anti-alien Egyptiac Society not only to drift into the Egyptiac World but to remain there without bringing down upon their heads any counter-stroke from the hands of the population on whose labours they had settled down to live as parasites.² The Libyans, however, made the fatal mistake of severing their connexion with an ancestral Nomadic way of life in which their martial qualities had been bred. They spread themselves over the Egyptian countryside³ and, in so doing, forfeited their strength, like Sampson when he allowed Delilah to shear his locks.⁴ This Libyan mistake was not repeated by the Primitive Muslim Arab Nomad warriors when they burst into the Roman and Sasanian empires, broke down the seven-centuries-old political partition between them,⁵ and thereby re-established a Syriac universal state that had been originally embodied in the empire of the Achaemenidae.⁶

The Arab empire-builders realized that, if they were to retain a lasting hold over the vast dominions which they had so swiftly won, they must preserve the martial qualities of their badawī soldiery and must also keep their garrisons in *partibus agricularum* in close and constant touch with the reservoir of badawī man-power on the Arabian steppes. Their device for meeting both these requirements was to plant permanent cantonments (*jundās*) of badawī professional troops (*muqātilah*)⁷ along the borderline between the Desert and the Sown, as the sea-faring empire-builders of a thalassocracy control their overseas dominions from the sea-ports linking them with the metropolitan territory across the water.⁸

The first four Arab Muslim cantonments of this type were planted, along the borderline between the Syrian Steppe and Syria, in Trans-jordan, at Damascus, at Homs (*alias* Hims, *alias* Emesa), and at Qinnasrīn.⁹ These four garrisons were located in existing centres of

¹ See V. v. 348–51.

² See IV. iv. 422, n. 3; V. v. 269–70 and 352–3.

³ The only districts in which the Libyan intruders did not plant themselves were those reserved for the temple-states which were established by their confederates the Egyptiac priesthood.

⁴ An elaborately dressed side-lock was part of the insignia of a Libyan warrior.

⁵ See I. i. 75–76.

⁶ See I. i. 76–77.

⁷ Also called 'migrants' (*muhājirah*), because they had left their ancestral tribes or oases in order to become members of one of these newly constituted military communities (see Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), p. 16).

⁸ The typical structure of a thalassocracy is illustrated on the Aegean scale by 'the thalassocracy of Minos' and by the Athenian Empire that grew out of the Delian League, and on the Oceanic scale by the British Empire. The British conquered India from three maritime bases: the river-port of Calcutta, the sea-port of Madras, and the inshore island of Bombay. The transfer of the political capital of the British Indian Empire from Calcutta to New Delhi in A.D. 1912 was a step towards the renunciation of British rule over India (on this point see pp. 194–5, below).

⁹ See Ahmad Al-Balādhuri: *Kitāb Futūh-al-Buldān*, English translation by Hitti, P. Kh., vol. i (New York 1916, Columbia University Press), p. 202. Quinnasrīn was constituted into a separate *jund* by the Caliph Yazid (*imperabat* A.D. 680–3). It had previously been included in the Jund of Homs. Balādhuri, in this passage, leaves it uncertain whether there was or was not also a Jund of Filastīn (i.e. Cis-Jordanian Palestine).

population, but their counterparts on other coasts of the desert were all laid out on previously unoccupied sites.¹ 'Irāq was overawed from cantonments at Basrah (*conditum* A.D. 635) and Kūfah (*conditum* A.D. 636) on the right bank of the Euphrates, where the Arab garrisons were not insulated by any water-barrier from their Arabian source of reinforcement.² A corresponding site on the right bank of the Nile, just above the head of the Delta, was chosen for Fustāt (*conditum* A.D. 641), 'the camp' from which the Arabs dominated Egypt. North-West Africa was dominated from Qayrawān (*conditum* A.D. 670) on a site, at the meeting-point between the low-lying arid south-eastern zone and the mountain-ribbed fertile north-western zone of Ifrīqiyah, which corresponded topographically to the sites of the cantonments dominating Syria.

Owing to the acquisition of the Caliphate and foundation of a dynasty by an Arab war-lord—the Umayyad Mu'āwiyah—who had started his career, and made his fortune, as governor of Syria, the Arab cantonments, not only on the desert coasts of Syria, but on those of 'Irāq, Egypt, and North-West Africa as well, were garrisoned by Syrian Arab troops.³ The basis of military organization was tribal. Ziyād, whom Mu'āwiyah appointed as his governor, first of Basrah and then of Kūfah as well, tried to reorganize the military colony at Kūfah on non-tribal lines, but he seems to have achieved no permanent success in this, and in his parallel reorganization at Basrah he did not even make the attempt.⁴ Tribal loyalties and rivalries were the governing factors in the life of the Arab cantonments throughout the Umayyad Age; and the resulting disunity and disorder, which was chronic and irrepressible, was no doubt one of the causes of the downfall of the Umayyad dynasty and of the eventual decay and disappearance of the cantonments themselves.

¹ See Wellhausen, *op. cit.*, p. 17.

² Wāsit ('the centre') was planted by Al-Hajjāj on the far side of the Euphrates, on an island between two arms of the Shatt-al-Hayy; but this aptly named military centre for the Syrian garrison of 'Irāq was not laid out till A.D. 702, and by that time Arab rule over 'Irāq had long since been securely established.

³ See Wellhausen, *op. cit.*, pp. 155-6. These troops were 'Syrian' for the most part in the sense of being drawn from those badawī Arab armies, recruited in Arabia, that happened to have been directed to the Syrian theatre of the Primitive Muslim Arab wars of conquest and to have remained in Syria, after its subjugation, under the command of Mu'āwiyah. There were also, however, Syrian Arab troops whose connexion with Syria was less casual. Before the Muslim Arabs had invaded Syria, there had been two Arab infiltrations—one in the last century B.C. and the second since the latter part of the fourth century of the Christian Era—and, since the sixth century, the wardenship of the Arabian marches of Syria had been entrusted by the Roman Government to the Christian Arab dynasty of the Banu Ghassān (see I. i. 73, n. 1, and VIII. viii. 50-51). Alone among the peoples conquered by the Primitive Muslim Arabs, the Christian Arabs already established in the conquered territories were compelled (except for the Banu Taghlib in 'Irāq) to embrace Islam (see Wellhausen, *op. cit.*, pp. 14-15) and were thereby compulsorily included in the ruling element in the Arab Empire. The Umayyad Caliphate might be described as an aggrandisement of the Ghassānid principality, and we may guess that the Syrian garrisons of the Umayyad cantonments were, to quite a large extent, of Ghassānid origin (see Wellhausen, *op. cit.*, p. 83). Analogously the abortive Caliphate of 'Alī b. Abī Tālib, who established his seat of government at the Arab cantonment of Kūfah, on the desert border of 'Irāq, might be described as an aggrandisement of the rival pre-Muslim Arab principality of the Lakhmids who had served as wardens of the Arabian marches of the Sasanian Empire, considering that Kūfah had been planted in the immediate vicinity of Hirah, the Lakhmids' former capital (see VIII. viii. 51, n. 1).

⁴ See Wellhausen, *op. cit.*, p. 79.

Civilian Settlements

The installation of standing military garrisons along the frontiers and in the interior of a universal state by the empire-builders can hardly fail to bring civilian settlement in its train. The Arab military *muhājirah* were allowed to bring their wives and children with them to the cantonments in which they settled.¹ The Roman legionaries, though debarred from contracting legal marriages during their term of active service, were permitted in practice by the military authorities to enter into permanent marital relations with concubines and to bring up families; and, after their discharge, they were able, by an easy process of law, to convert a concubinate into a legal marriage and to obtain retrospective legitimization for their children born out of wedlock. Moreover, the auxiliaries, who, unlike the legionaries, were recruited from among the Roman Empire's subjects, and not from among its citizens, seem to have been given the franchise upon their discharge at the end of the full statutory term of service, and sometimes earlier.² Thus the Roman *canabae*³ and Arab cantonments became nuclei of civilian settlements which, in turn, became sources of recruitment for the garrisons round which they had gathered. The growth of the civilian element in the Arab cantonments was given a further impetus when the Caliph 'Umar II (*imperabat* A.D. 717-20) granted to members of the non-Arab subject population who became converts to Islam the option of migrating to an Arab cantonment from their home town or village.⁴ On these analogies we may infer that the Turkish Muslim civilian population, which amounted, at the beginning of the nineteenth century, to a considerable proportion of the total population of the Ottoman provinces in Europe, and this not only in the towns but also on the land, was a by-product of the Ottoman military fiefs which, by that date, had been in existence in these provinces for about four hundred years on the average. And we may guess that a Persian civilian population had been generated in Cappadocia by the Persian feudal baronies there before the Achaemenian régime was brought to its premature close.

Besides arising as undesigned by-products of military establishments, civilian colonies are also planted by empire-builders as an end in themselves. For example, the North-East Anatolian districts in which the Achaemenidae had granted appanages to Persian barons were colonized by the 'Osmanlis with Albanian converts to Islam, on whose loyalty they

¹ See Wellhausen, *op. cit.*, p. 16.

³ See Rostovtzeff, M.: *The Social and Economic History of the Roman Empire* (Oxford 1926, Clarendon Press), p. 51.

⁴ In this ruling, 'Umar was deliberately rescinding the practice of the celebrated governor of 'Irāq, Hajjāj (*proconsulari munere fungebatur* A.D. 691-713), who had forbidden converts to migrate and had even forcibly repatriated those who had done so. Under 'Umar's ruling, migration presumably became the rule, as the theoretical alternative of remaining on the land and continuing to pay, under the less offensive name of 'rent', the tribute (*kharāj*) due from non-Muslims was hardly likely to be attractive to many converts (see Wellhausen, *op. cit.*, p. 175). The fiscal considerations that inclined the earlier Umayyad Caliphs, first and foremost Mu'āwiyah I, to refrain from encouraging the conversion of the Arab Empire's non-Muslim subjects are discussed by Lammens, S.J., le Père H.: *Études sur le Règne du Calife Omayyade Mo'āwīyah I^{er}* (Paris 1908, Geuthner), pp. 424-6.

could count for helping them to hold these anti-Safawī marches.¹ In the commercial centres in the heart of their dominions—Constantinople, Smyrna, Salonica, Sarayevo—the 'Osmanlis settled civilian communities of refugee Sephardi Jews from Spain and Portugal.² In the Roman Empire, not only military cantonments but civilian settlements—of which Caesar's colonies of Roman citizens at Capua, Carthage, and Corinth may be regarded as the exemplars³—were planted by Caesar, Augustus, and their successors.

Caesar himself may have been the founder of the Roman colonies in three ports of entry—Dyrrhachium (Durazzo), Buthrotum (Butrinto), and Dyme—from Italy to Continental European Greece; in two other Greek cities—Dium and Philippi—which commanded respectively the southern and the eastern exit from the province of Macedonia;⁴ and in four Anatolian ports—Lampsacus, the Bithynian Apamea, Heraclea Pontica, and Sinope—on the coastal shipping route through the Hellespont to the mouth of the Phasis.⁵ Augustus reinforced these three groups of Roman civilian colonies by adding Byllis and Patrae to the first, Pella and Cassandrea to the second, and Alexandria Troas and Parium to the third. He did something to repair the ravages of his civil war with Sextus Pompeius⁶ by founding other Roman civilian colonies in Sicily, and he made a momentous new departure in policy when in 15 B.C. he planted two Roman civilian colonies in Syria:⁷ one at Berytus (Bayrūt)⁸ and the other at Heliopolis (Ba'lbak). Claudius added a Roman colony at Ptolemais in Palestine to Augustus's Syrian foundations, and broke new ground in two regions—Cappadocia and Thrace—which had both hitherto shown an exceptional imperviousness to Hellenism. After suppressing the native client kingdom in Thrace which had been ruled for Rome by the princes of the Odrysae, Claudius founded a colony of Roman citizens at Apri, where the Great East Road running from Dyrrhachium and Apollonia through Thessalonica and Philippi forked

¹ One of these Albanian settlements in North-Eastern Anatolia, Vezir Köprü, gave birth to the Köprülü family whose eventual flowering, in a crop of distinguished statesmen, was one of the causes of the rally of the Ottoman Empire in the latter part of the seventeenth century of the Christian Era (see V. vi. 208, with n. 3, and 299).

² For the motives of this deed of humanity and stroke of statesmanship, see II. ii. 244-6.

³ For the long-drawn-out conflict between opposing policies and political ideals which was the historical background of these three foundations, see pp. 109-10, above.

⁴ For the plantation of Macedonia with Roman colonies and municipia under the early Principate, see *The Cambridge Ancient History*, vol. xi (Cambridge 1936, University Press), pp. 567-8.

⁵ See Hahn, L.: *Rom und Romanismus im Griechisch-Römischen Osten* (Leipzig 1906, Dieterich), pp. 60-61.

⁶ See V. v. 71 and V. vi. 239.

⁷ See Hahn, op. cit., pp. 92-94. Another civilian settlement of Roman citizens planted by Augustus on Asiatic ground was his Roman colony at Tralles, founded in 26 B.C. (ibid.).

⁸ This Syrian outpost of the Latin-speaking world was so successful in preserving its Latin character that it became a centre for the study of Roman Law. Justinian treated the academy of law at Berytus as the peer of those at Constantinople and Rome (see Cumont, F., in *The Cambridge Ancient History*, vol. xi, pp. 626-7, and Collinet, P.: *Études Historiques sur le Droit de Justinien*, vol. ii: 'Histoire de l'École de Droit de Beyrouth' (Paris 1925, Recueil Sirey)). According to Collinet, op. cit., vol. cit., pp. 20-22, the law school at Berytus owed its rise to the Imperial Government's practice—established at some date before A.D. 196—of using Berytus, in virtue of its being the easternmost Latin-speaking community in the Empire, as its depot for the distribution, in the Oriental provinces, of the texts of new laws.

on its divergent ways to the Hellespont and the Bosphorus. In Cappadocia, which Tiberius had brought under direct Roman administration, Claudius founded a Roman colony at Archelais, just within the western borders of the province. Vespasian followed up Claudius's initiative in Thrace by founding a Roman colony at Deultum under the name of Flaviopolis, and Claudius's initiative in Palestine—where Vespasian blasted away the Jewish obstruction to Hellenization which Antiochus Epiphanes had failed to overcome—by reinforcing Ptolemais on the coast with two new Roman colonies in the interior: one at Emmaus and the other at Samaria, which Vespasian renamed Flavia Neapolis.¹

The Roman Imperial Government did not, however, confine its programme of civilian colonization to the establishment of colonies of the ruling Latin nationality. While it did set itself systematically to Latinize—and thereby indirectly Hellenize in Latin dress—the barbarians on whom it had imposed its peace in the Danubian territories beyond the former northern frontiers of Macedonia² and in the West European and North-West African territories whose political destinies had been decided by Rome's victory in her struggle with Carthage,³ the foundation of Roman colonies on Greek or Oriental ground was in this quarter only a side-line of Roman Imperial policy. In European Greece and in all parts of the Empire lying to the east of it the predominant aim of Roman Imperial statesmanship was to preserve and complete the Hellenizing work of Alexander the Great and his successors; and this aim was pursued with a steadiness and effectiveness which were tardily recognized and rewarded when, in the second century of the Imperial Peace, the Empire was at last acclaimed by Greek men of letters as an embodiment, on an oecumenical scale, of the Platonic ideal of the rule of the philosopher-king.⁴

The exemplar of this Hellenizing aspect of the Roman Imperial Government's policy of internal colonization was the synoecism by Augustus, *more Alexandrino*, of a new Greek city on the grand scale under the name of Nicopolis to adorn the scene of his crowning victory at Actium and to keep its memory alive by periodical celebrations in honour of the event. Trajan's foundation of a Greek city of the same name in the Trans-Haeman fringes of the province of Thrace⁵ was evidence of the sincerity of the Roman Government's intention to make Thrace a replica of Greek-speaking Macedonia and not of Latin-speaking Moesia.⁶ This Hellenization of Thrace in Greek dress at Roman

¹ See Hahn, *op. cit.*, pp. 148-9.

² See II. ii. 163-4.

³ See I. i. 40.

⁴ See V. v. 343-4, and pp. 41-44, above. Aelius Aristides goes so far as to suggest that Alexander's enduring achievement lay in his having served as Rome's forerunner:

'The only achievement and memorial, worthy of his genius, that Alexander left behind him was the city on the coast of Egypt that bears his name; and it is his merit that he founded Alexandria for you Romans, in order that she might be yours, and that you might be masters of the city which is the greatest in the World, next to your own'—(Aristeides, P. Aelius: *In Roman*, edited by Keil, B., in *Aelii Aristidis Quae Supersunt Omnia*, vol. ii (Berlin 1898, Weidmann), p. 99 (Or. XXVI, § 26). Cp. p. 119 (§ 95)).

⁵ The grounds for believing that Nicopolis-ad-Istrum was originally included in the province of Thrace, and not in that of Lower Moesia, are given by Mommsen, Th.: *The Provinces of the Roman Empire*, English translation, vol. i (London 1886, Bentley), p. 307, n. 2.

⁶ For the spread of the Latin language all the way down the right bank of the Danube, see IV. iv. 326, n. 2.

hands was consummated by Hadrian when he gave his own name to the Greek city that he founded on a site which, under a Nomad-minded Odrisian régime, had been crying out, unheeded, for synoecism ever since the time, five hundred years back, when the sister-city of Philippopolis had been duly founded by the father of Alexander the Great. Planted, as it was, at the junction of the River Hebrus with its principal tributary, on the military road to the Bosphorus from Aquileia and Sirmium, Adrianople provided Thrace with the convenient urban centre that it had lacked hitherto.¹

This practice of diffusing Hellenism in the Roman Empire by means of the foundation of city-states was reproduced in the Spanish Empire of the Indies; and the Medieval Spanish institution which was thus propagated in the Americas in an Early Modern Age of Western history was in truth a renaissance of the Hellenic institution that had originally been propagated in Spain by Roman *conquistadores* from Italy.² Like the Hellenic cities planted in the post-Alexandrine Age by Macedonian empire-builders in South-West Asia and Egypt and by Roman empire-builders round all the shores of the Mediterranean, these Spanish cities in the Americas had individual founders;³ they were laid out on the rectangular plan that, in the history of Hellenic town-planning, had been inaugurated in the fifth century B.C.⁴ by Hippodamus's layout of the Peiraeus; and each *civitas* had a rural *territorium* 'attributed to' it, to use the Roman technical term.⁵ In the more settled regions of the Spanish Empire these municipal *territoria* were conterminous; and, in the undeveloped regions on the fringes, some of them were of vast extent.⁶ By A.D. 1574 about a hundred Spanish city-states had already been founded within the area of the Incaic Empire's former domain.⁷ 'The Spanish American provinces, therefore, were in many instances a collection of municipalities, the latter . . . being the bricks of which the whole political structure was compacted.'⁸

If these Spanish colonial city-states thus resembled the post-Alexandrine Hellenic colonial city-states in serving as the cells of an intrusive alien régime's administrative and judicial organization, they likewise resembled them in enjoying little more than a simulacrum of local self-government; for they had no sooner been founded than the Crown took into its own hands the appointment of the municipal officers.⁹ Above all, they resembled their Hellenic prototypes in being parasitic.

'In the Anglo-American colonies the towns grew up to meet the needs

¹ Though Adrianople was thus marked out by its geographical position for playing the part of a capital city, it had not so far achieved its manifest destiny except during the century ending in A.D. 1453, when it had been the seat of government of the Ottoman Empire. There had, on the other hand, been two periods in which Adrianople had had the misfortune to find itself serving as a frontier fortress: first during the three centuries ending in the annexation of Eastern Bulgaria by the East Roman Empire in A.D. 972 (see IV. iv. 389) and again since the carving of the autonomous principalities of Eastern Rumelia and Bulgaria out of the body of the Ottoman Empire in A.D. 1878 (see p. 17, above).

of the inhabitants of the country: in the Spanish colonies the population of the country grew to meet the needs of the towns. The primary object of the English colonist was generally to live on the land and derive his support from its cultivation; the primary plan of the Spaniard was to live in town and derive his support from the Indians or Negroes at work on plantations or in the mines. . . . Owing to the presence of aboriginal labour to exploit in fields and mines, the rural population remained almost entirely Indian.¹

The Spanish empire-builders' Inca predecessors' practice of linking together districts that were geographically far apart and at the same time economically complementary² has counterparts in the economy of both the Roman Empire and the Arab Caliphate.

The vacant public land which the Roman Government acquired in the Po Basin through the conquest of the country between the years 197 and 173 B.C. and the concomitant eviction of the more recalcitrant of its native Gallic and Ligurian inhabitants³ was not all transferred to individual ownership through the foundation of Latin and Roman colonial communities of freeholders and the grant of freeholds to other settlers individually (*viritim*). Tracts were also granted to corporations domiciled in Italy south of the Appennines—both ecclesiastical corporations, such as the sorority of the Vestal Virgins and other colleges of priests belonging to the established public service of the Roman State,⁴ and political corporations in the shape of self-governing city-states that were incorporated in, or externally associated with, the Roman body politic.⁵

¹ Haring, *op. cit.*, pp. 160 and 159. ² See pp. 114-15, above. ³ See V. v. 569-74.

⁴ See Hyginus: *De Condiçionibus Agrorum* (in *Die Schriften der Römischen Feldmesser*, ed. by Blume, F., Lachmann, K., and Rudorff, A., vol. i (Berlin 1848, Reimer), p. 117) and Siculus Flaccus: *De Condiçionibus Agrorum* (in *op. cit.*, pp. 162-3).

⁵ The self-governing communities incorporated in the Roman body politic were colonies and municipia of Roman citizens; those externally associated with it were Latin city-states, whose relations with the Roman State were governed by custom, and *civitates foederatae* which were bound to Rome by written treaties, the terms of which varied in accordance with the particular circumstances in which each community had entered into permanent political association with Rome. Cis-Appennine city-states of both classes received corporate grants of land in the Po Basin from the Roman Government—presumably as a recompense for services rendered by the military contingents from these states in the Roman armies by which the Po Basin had been conquered from its native inhabitants. The aggregate extent of their holdings must have been considerable, to judge by the part that they played in the opposition of the various vested interests to the Gracchan policy of reasserting the Roman State's right of eminent domain over all Roman public land that had not been assigned in freehold to individual proprietors (see Appian of Alexandria: *Studies in Roman History*, 'The Civil Wars', Book I, chap. x, § 6, and chap. xix, § 1, where πόλεις ἰσοπολιτεῖες signifies *municipia civium Romanorum*, πόλεις ἀποικοὶ the *coloniae Latinae*, and Ἰταλιῶται the citizens of *civitates foederatae*).

Both the ecclesiastical and the municipal corporations that possessed these endowments of land in the Po Basin appear to have turned them to account by letting them to tenants. The ecclesiastical tenancies ran for either one-year or five-year periods (Hyginus: *De Condiçionibus Agrorum*, in *Die Schriften der Römischen Feldmesser*, ed. cit., vol. i, p. 117). We have two glimpses of the management of the municipal estates in the collected correspondence of Cicero. In a letter written in 46 B.C. (*Ad Familiares*, Book XIII, Letter 11), Cicero introduces to his correspondent, Decimus Iunius Brutus, governor of Cisalpine Gaul, the three commissioners whom the municipal authorities of Arpinum (Cicero's own home town) are sending out with instructions 'to inspect the properties let out on lease (*vectigalia*) which they possess in the Province of Gaul, to collect the rents due from the tenants (*colonis*), and generally to examine and deal with the situation there'. In a letter written in 45 B.C. (*Ad Familiares*, Book XIII, Letter 7), Cicero asks his correspondent Cluvius to intercede with Caesar on behalf of the municipality of Atella in the matter of that community's agricultural property let out on lease (*de agro vectigali municipii*), which was threatened with confiscation. According to Cicero these rents were

In the Arab Caliphate under the Umayyad régime we find a parallel to the Inca practice which is almost exact from the geographer's standpoint though perhaps not so close from the sociologist's. Just as the Incas established economic partnerships between lowland districts and highland districts, so the Umayyads endowed the two cantonments of Basrah and Kūfah not only with arable land on the adjoining plains of 'Irāq (the fabulously productive 'Black Earth': *As-Sawād*), but also with meadow-land, pasture, and forest in 'the Highlands' (*Al-Jibāl*) through which the Great North-East Road wound its way up towards the frontier of the Syriac World over against the Eurasian Steppe.¹ The difference between the Umayyad and the Inca application of the same device lies in the motive, which in the Umayyads' case seems to have been primarily military and only incidentally economic. The frontier garrisons which the Arab empire-builders pushed forward up the Great North-East Road,² first into Khurāsān and eventually into Transoxania,³ were originally recruited, and subsequently reinforced, by drafts from the cantonments at Basrah and Kūfah;⁴ and the grant to these

an important item in the budgets of the municipalities to which they were payable. In the first of the two letters here cited, he writes that the people of Arpinum depend on this source of income for 'all their ways and means of providing for public worship and keeping public buildings, both religious and secular, in a sound state of repair'. In the second letter he goes so far as to write that 'the municipal finances of Atella are entirely dependent on this source of income'.

Evidence of a grant of forest and pasture land in the Po Basin to the *civitas foederata* Aquinum, situated in the distant basin of the Liris (Garigliano), is preserved in the name 'Saltus Galliani qui cognominantur Aquinates' (meaning 'Estates, situate in Cisalpine Gaul, of the city-state of Aquinum') which was borne by one of the self-governing municipalities of Roman citizens in the eighth of the eleven regions into which Augustus grouped the city-states of Italy (see the list in Plinius Secundus, C.: *Historia Naturalis*, Book III, chap. xv (xx), § 116). At some date between the end of the first quarter of the second century B.C. and Augustus's day, the tenants and squatters on this estate must have been incorporated as an autonomous community.

¹ For example, the revenues of the city and district of Dinawar were payable to the cantonment of Kūfah, and those of Nihāwand to the cantonment of Basrah (Le Strange, Guy: *The Lands of the Eastern Caliphate* (Cambridge 1905, University Press), pp. 189 and 197).

² See xi, map 37.

³ See p. 121, above.

⁴ In the Arab military occupation of Khurāsān, it was Basrah, not Kūfah, that played the predominant part, and this fact was unhappily reflected in the transplantation to Khurāsān not only of the Basran soldiery but of the inter-tribal feuds that were Basrah's heritage from a pre-Islamic Arabia (see Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), pp. 247, 256, and 131). The Basran Arab garrisons in Khurāsān were not deterred from pursuing these inter-tribal feuds either by the numerical preponderance of the native Iranian population or by the proximity of the Eurasian Nomad adversary on the farther side of the frontier. Ziyād—whom the Caliph Mu'āwiyah appointed governor not only of Basrah and Kūfah but of all Arab dominions beyond them, as far as Khurāsān inclusive, which were dominated from the cantonments on the Euphrates by way of the Great North-East Road—sent large numbers of Basran and Kufan Arab families to Khurāsān (see *ibid.*, p. 79). Further drafts of 25,000 men each from the two cantonments were sent to Khurāsān by Ziyād's son Rabi', on whom his father's governor-generalship was conferred by Mu'āwiyah after Ziyād's death. By the end of the seventh century of the Christian Era there was in Khurāsān an Arab population of about 200,000, including about 40,000 fighting-men (see *ibid.*, p. 266). The military and political dependence of the greater part of the Iranian Plateau on a Power installed on the plains of 'Irāq, which was a salient feature in the administrative organization of the Umayyad Empire, has its counterpart in the similar situation after the overthrow of the Achaemenian Empire, when the successors of Alexander were contending for the fragments of the carcass. In that struggle, Seleucus Nicator emerged as one of the victors largely owing to his ability to dominate, from his base at Babylon, all the former Achaemenian dominions lying to the north-east and east of Babylonia, save for an easternmost fringe which he was constrained to cede to Chandragupta in exchange for a park of war-elephants.

two Arab military corporations in 'Irāq of estates on the Iranian Plateau—whose productive resources were thus laid under contribution for the benefit of Basrah's and Kūfah's war-chests—was an economic reflection of the military fact that the outlying garrisons protecting the Iranian provinces of the Caliphate were detachments from the two great nurseries of soldiers cantoned on the distant borderland between the Euphrates and the Arabian Steppe.

The Inca practice of transporting individually selected skilled workers and their families, in order to improve the quality of production in economically backward districts, has counterparts—economically comparable, though incomparably brutal and indiscriminate from the human standpoint—in both Hellenic and Syriac history. The scientific agricultural exploitation, with imported slave labour, of the coastlands of the Western Mediterranean from the fifth century B.C. onwards and of the seaboard of Lower 'Irāq in the ninth century of the Christian Era has already been noticed in this Study in another context.¹ There are indications that the Incas may have brought artificers from the culturally maturer lowland region of Chimú to raise the standard of workmanship in their own highland capital at Cuzco.² This was certainly the purpose of the Mongols in carrying Chinese, Russian, and Western Christian craftsmen away captive from the extremities of the Old World to its heartland when they were trying to transform Qaraqorum from an encampment of Nomads into a city fit to be the capital of a world empire.³ Ts'in She Hwang-ti may have had the same end in view in bringing selected settlers from other parts of his empire to recruit the population of Hien-yang,⁴ when he was making an imperial capital out of a city that had hitherto only had to serve as a capital for the parochial state of Ts'in.⁵ On the other hand Nebuchadnezzar, in deporting to Babylon from Jerusalem 'all the craftsmen and smiths',⁶ was probably more concerned to deprive Judah of her armaments industry—and thereby render it impossible for her to make any further attempt at armed insurrection against the Neo-Babylonian régime⁷—than he was to improve the age-old craftsmanship of Babylon, whose practitioners would have felt that they had little to learn from a handful of artisans picked up from a rustic highland principality in a remote corner of the empire.

A type of internal colonization which is apt to become prominent in the last phase of the history of a universal state is the plantation of barbarian husbandmen on lands that have come to be depopulated either as a result of raids perpetrated by these barbarians themselves (or by neighbours of theirs in their former homes in the no-man's-land beyond the *limes*) or as a result of some social sickness, native to the

⁵ The successive changes in the location of the capital of the Sinic universal state are dealt with below on pp. 210-13.

⁶ 2 Kings xxiv. 14 and 16, cited already on p. 116, above.

⁷ This had unquestionably been the motive of the Philistines when, in the eleventh century B.C., they had placed a ban upon the practice of the metallurgical industry in the subjugated territory of Israel (see I Sam. xiii. 19-22).

depopulated empire itself, which has laid it open to barbarian attack by sapping its powers of resistance.

A classic example is presented in the picture of a post-Diocletianic Roman Empire in the *Notitia Dignitatum*, which records the presence of a number of German and Sarmatian barbarian corporate settlements on Roman soil in Gaul, Italy, and the Danubian provinces. The technical term *laeti*, by which these barbarian settlers were known, is derived from a West German word¹ denoting semi-servile resident aliens; and we may infer that the Romans' *laeti* were the descendants of defeated barbarian adversaries of the Roman Imperial Government who had been punished or rewarded for past acts of aggression by being coerced or coaxed into migrating permanently to become peaceful cultivators of the Promised Land on the inner side of the *limes* which they had formerly devastated as raiders. From the Roman Government's standpoint this arrangement would serve the dual purpose of employing the barbarians to repair the damage that they themselves had inflicted and of giving them at the same time an interest in keeping the peace for the future instead of continuing to break it. The *laeti* were cautiously planted in the interior of the Empire, not in the immediate neighbourhood of the *limites*,² and in Gaul, at any rate, each settlement of *laeti* was attached to a particular Gallic canton and was required to pay its land-tax to the municipal authorities, not to the Imperial Treasury.³ In its gazetteer of the western portion of the Empire the *Notitia Dignitatum* mentions twelve *praefecturae* of German *laeti* attached to divers Gallic cantons⁴ and twenty-two *praefecturae* of Sarmatian *laeti* in Gaul and Italy,⁵ as well as a settlement of Sarmatae and Taifali Gentiles in the Gallic canton Pictavi⁶ and a Gens Marcomannorum, administered by a tribune, in the Middle Danube province of Pannonia Prima.⁷

'The Melting-pot'

Our survey of garrisons and colonies installed by builders of universal states has perhaps borne out our contention that these systematic transfers of population—which are characteristic of the universal state phase in the decline of a civilization—are on the whole much more humane, in execution as well as in design, than the capricious and vindictive uprooting of individuals and communities which is characteristic of the antecedent Time of Troubles. At the same time our survey has brought to light the truth that these two morally diverse processes produce similar social results. And the cumulative effect of the empire-builders' statesmanship, following upon the war-lords' atrocities,⁸ is to

⁸ The successive types of 'saviours with the sword' whose sequence punctuates the stages of the decline and fall of a civilization have been reviewed in V. vi. 178-213.

intensify and accelerate a process of pammixia and proletarianization¹ that is characteristic of Times of Troubles and universal states alike.

Permanent military garrisons installed on the frontiers of universal states become 'melting-pots' in which the dominant minority of a disintegrating society fuses itself with both the external and the internal proletariat. In an earlier part of this Study² we have observed that, on the organized military frontier of a civilization over against outer barbarians, the wardens of the marches and the opposing barbarian war-bands tend, with the passage of time, to become assimilated to one another first in military technique and equipment and eventually also in culture and *éthos*. But, long before the dominant minority of a disintegrating society has been barbarized by hostile contact, across the frontier, with the external proletariat, it will have been vulgarized by fraternization, within the frontier, with the internal proletariat.³ For empire-builders who have gained their position by emerging as sole survivors from a struggle for existence between the parochial states of their world do not often preserve either sufficient manpower or sufficient zest for the profession of arms to be able to contemplate holding and defending their hardly won empire unaided.

In this quandary their first recourse is to reinforce their own military strength by enlisting, not barbarians from beyond the pale, but subjects of the empire who have not lost their martial virtues. While they seldom push this policy to the extreme to which the Achaemenidae went when they took over into their own service the Jewish military colony that had been installed in the Egyptian frontier fortress of Elephantinê by their Saïte predecessors,⁴ they frequently raise new military formations from among their subjects and brigade these with the troops of their own ruling nationality. Thus Augustus and his successors manned the immensely long frontiers of the Roman Empire, which Augustus had staked out, by brigading with the Roman legions *auxilia* recruited from Roman subjects who were not Roman citizens.⁵ The detachments of Arab professional soldiery from Basrah and Kūfah, which were posted in Khurāsān to hold the north-east frontier of the Umayyad Empire, enlisted the help of the warlike native Iranian inhabitants of the province and fraternized with their new comrades-in-arms, in contrast to the aloofness of the parent cantonments on the Euphrates from the subject civilian population of 'Irāq.⁶ Khurāsānī Arab officers adopted the Iranian custom of surrounding themselves with a *comitatus* of picked Iranian fighting-men, and they also raised separate Iranian military formations under Iranian officers.⁷ The local Iranians, on their side, had good reasons for responding favourably to these bids for their co-operation that were made to them by their Arab conquerors.

'As a result of the conquest, their position, on the whole, changed only slightly, and this hardly for the worse. The defence of Khurāsān against enemies from outside—that is, against the Turks—was conducted by the

⁷ See pp. 118-19, above.

Arabs more successfully than it had been managed under the Sasanian régime. . . . The *Mawālī* (as non-Arabs who had become converts to Islam and become adopted members of the Arab tribes were called in Khurāsān, as elsewhere) fought shoulder to shoulder with the Arabs against their traditional national enemy, the Turks. They also fought for Islam against their own Sogdian kinsmen, in so far as the latter were Islam's enemies and the Turks' confederates. . . . The domestic life of Khurāsān was not interfered with by the Arabs very much. They left the administration to the *marzbans* and *dihqans* and did not impinge upon the subject population except through these native intermediaries. Even in the garrison towns and in the seats of administration the native authorities continued to play their part side by side with their Arab colleagues. For one thing, they had to collect the taxes, for the due payment of which, on the agreed scale, they were responsible to their conquerors. However, the burden of taxation had doubtless weighed as heavily on the *misera contribuens plebs* under the Sasanian régime.¹ The Iranians were also left undisturbed in the practice of their religion; in the agreements providing for payment of tribute it is always assumed that they are going to retain their ancestral faith. . . . They appear, all the same, to have had no very serious attachment to Zoroastrianism. . . . The attraction of Islam for the Iranians was in the first instance not so much on account of its intrinsic merits as for the sake of the material advantages which it had to offer. They used it as a means of diminishing the gulf between themselves and the ruling class and of obtaining a share in their privileges by "going Arab". They adopted Arabic names and secured admission into an Arab tribe.²

Even the Manchus—who, as mere restorers of their Mongol predecessors' empire-building work in China, had not to pass through the ordeal that is the usual price of founding a universal state—did not attempt to hold, with their own unaided strength, the vast and populous domain of which they had made so easy a conquest. In the 'banners' of which their garrisons were composed, their general practice was, as we have seen,³ to brigade a Chinese and a Mongol with each Manchu battalion.

Our records, fragmentary though they are, give us vivid glimpses, here and there, of 'the melting-pot' at work. A piece of first-hand evidence for the mutual assimilation of the Chinese 'bannermen' in Manchu service and their Manchu fellow soldiers has been quoted in this study at an earlier point.⁴ At Elephantinē under the Achaemenian régime—which was particularly liberal⁵ in giving openings to non-Persians—the Jewish military unit constituting the garrison had on its strength not only some soldiers of Babylonian origin but also at least one

¹ According to Wellhausen, *op. cit.*, p. 310, Khurāsān was not exempt from the general rule that land-tax continued to be payable, both by native converts to Islam and by Muslim Arabs who had become local landowners, on land originally belonging to the native non-Muslim population. On the other hand, according to the same authority, *op. cit.*, p. 19, non-Muslim subjects of the Caliphate who performed military service for frontier defence were exempted from taxation.—A.J.T.

Chorasmian.¹ It is remarkable that this soldier should have found his way to the First Cataract of the Nile from his native land in the delta of the Oxus, at the opposite extremity of the Achaemenian Empire. It is still more remarkable that this representative of the high-spirited Iranian peoples of the north-eastern marches, who were to offer such a stubborn resistance to Alexander the Great,² should not have felt it beneath his dignity to serve shoulder to shoulder with Syrians in a regiment of mercenaries.

In the civil life of this Jewish military colony, Babylonian influence was strong, though the colony had originally been founded by the Neo-Babylonian Empire's Saïte rivals and adversaries, and though it is probable that the Saïtes had recruited at least the first nucleus of the force from among those 'die-hards' in Judah who had preferred to be refugees in Egypt rather than deportees in Babylonia.³ The marriage contracts, for example, that had survived from the community's archives were Babylonian rather than Israelite in form, and this Babylonizing tendency in Elephantinian Jewish personal law had been strong enough to raise the general status of women above the customary Jewish level of that age.⁴ One medium through which this Babylonian influence had seeped in was the Aramaic language and alphabet of the Jewish community at Elephantinê, which were identical with those in use in contemporary Babylonia and Assyria.⁵ The tincture of Babylonian polytheism in the Yahweh-worship of the Elephantinê community⁶ suggests that there may have been Babylonian elements in the community itself; and this, in turn, suggests that the original nucleus may have been a mixed band including refugees from Samaria as well as from Judah,⁷ since the Samaritans were a hybrid community in which a remnant of Israel was mingled with deportees from Babylonia whom the Assyrian warlord Sargon had planted in place of the Israelites whom he had deported to 'the cities of the Medes'.⁸ These facts and probabilities indicate that Achaemenian Elephantinê was a 'melting-pot' indeed; and, on this analogy, we may picture the corresponding role of the Arab military cantonments in the Umayyad Empire.

'[The non-Arabs] went over to Islam in large numbers, and such conversions were particularly numerous among the masses of Iranian prisoners-of-war in Kûfah and Basrah.'⁹

This non-Arab element in the cantonments was continually reinforced by the effect of 'Umar II's ruling that non-Arab converts in the provinces

¹ See Meyer, *op. cit.*, p. 28, and van Hoonacker, A.: *Une Communauté Judéo-Araméenne à Elephantinê en Égypte aux vi^e et v^e siècles avant J.-C.* (London 1915, Milford), p. 5.

must migrate to a cantonment if they wanted to avoid the alternative of continuing, after their conversion, to pay the tax imposed on non-Muslim subjects of the Empire.¹ All non-Arab converts had to obtain affiliation to some Arab tribe or clan,² and this institution of clientship

¹ For this ruling, see p. 132, above.

² See Wellhausen, *op. cit.*, p. 45. For example, the soldiers of a Persian cavalry force in Ahwāz which deserted to the Arabs and turned Muslim *en masse* appear to have settled first in Basrah as clients of the Banu Tamīm and afterwards to have transferred their allegiance to the Banu S'ad. Besides these Persian Asāwirah, there were Sindi deserters from the Persian army known as Zutt (i.e. Jāts), and others known as Sayābijah and Andaghār. Under the Sasanian régime these Zutt had had their pastures on the borders (*tufūf*) of 'Irāq over against the North Arabian Steppe, while the Sayābijah had been settled on the coast of the Persian Gulf, and the Andaghār in the desert borderland between Kirmān and Seistan. These three peoples were all now settled at Basrah as clients of the Banu Tamīm, and they afterwards transferred their allegiance to the Banu Hanthalah (see Balādhuri, *op. cit.*, Part (ii), pp. 105-107, 109, and 111). We also hear of a Persian family from Umān migrating to Basrah via Yamāmāh (see *ibid.*, p. 100), and of the inhabitants of the Persian city of Qazwīn surrendering to the Arabs on terms, accepting Islam, and settling in Kūfah, under the name of Hamrā' ad-Daylam, as clients of Zuhrah b. Hawiyah (see *ibid.*, p. 10). Prisoner-converts from Bukhārā were settled by 'Ubaydallah b. Ziyād at Basrah (see *ibid.*, p. 111).

Some of the Zutt and Sayābijah deserters from the Persian army were transplanted in A.D. 669 or 670 by the Caliph Mu'awiyah I from Basrah to Antioch (see *ibid.*, pp. 110-11, and vol. i (New York 1916, Columbia University Press), p. 250). When the Arabs conquered Sind, another batch of Zutt, whom the conquerors had uprooted from their native pastures, seem to have been sent to Syria by Hajjāj (*proconsulari munere fungebatur* A.D. 691-713) and eventually to have been sent on by the Caliph Walid I (*imperabat* A.D. 705-15) to join the previous batch of Zutt deportees at Antioch (see Balādhuri, *op. cit.*, Part (ii), p. 111, and vol. i, p. 250)—whence some, again, were sent on by the Caliph Yazīd II (*imperabat* A.D. 720-4) to Massīṣah (Mopsuestia) in Cilicia (see Balādhuri, *op. cit.*, vol. i, p. 259). But the bulk of Hajjāj's deportees from Sind—who included representatives of other Sindi tribes besides the Zutt, and who were 'accompanied by their wives, their children and their buffaloes' (Balādhuri, *op. cit.*, Part (ii), p. 109)—seem to have been settled by Hajjāj in 'Irāq, in the Kaskar district. Here their numbers were subsequently recruited, according to Balādhuri (*ibid.*, p. 109), by runaway black slaves and by contumacious clients of an Arab tribe and an Arab grandee; and in the reign of the 'Abbasid Caliph Ma'mūn (*imperabat* A.D. 813-33) they broke out into a rebellion which it took him and his successor Mu'tasim (*imperabat* A.D. 833-42) the best part of twenty years to quell. According to Mas'ūdī (in his *Tanbih*, Baron Carra de Vaux's translation, p. 455) these ninth-century Zutt insurgents in the marches of South-Western 'Irāq were the descendants of immigrants from Sind who had migrated to 'Irāq in large numbers across Kirmān, Fars, and Khūzistān. Whether there had or had not been a voluntary immigration as well as a compulsory deportation of Zutt to 'Irāq from Sind, we may take it that, in the course of the first two centuries of Arab rule, man-power from Western India had, in one way or another, been flowing into a South-Western Asia that, on the eve of the Arab conquest, had been depopulated by the two last and most devastating of the Romano-Persian wars.

After the capitulation of the 'Irāqī Zutt insurgents in A.D. 834, Mu'tasim deported some of them to Jalūlah and Khāniqīn, astride the Great North-East Road, and the rest to 'Ayn Zarbah (*Graecē* Anazarbus) in Cilicia, in the valley of the River Jayhān (*Graecē* Pyramus) to the north-east of Massīṣah (see Balādhuri, *op. cit.*, Part (ii), p. 110, and vol. i, p. 264, and the other authorities cited by M. J. de Goeje in *Mémoires d'Histoire et de Géographie Orientales*, No. 3: 'Mémoire sur les Migrations des Tsiganes à travers l'Asie' (Leyden 1903, Brill), pp. 30-31). These were not the first Zutt to be settled at 'Ayn Zarbah; for Zutt from 'Ayn Zarbah had already been drafted by Hārūn-ar-Rashīd (*imperabat* A.D. 786-809) to reinforce the garrison of the neighbouring Cilician fortress Kanīsat as-Sawdā' (see Balādhuri, *op. cit.*, vol. i, p. 264). Thereafter, in A.D. 855, the East Romans descended on 'Ayn Zarbah and carried off into East Roman territory, to the north-west of the Taurus Range, the Zutt deportees there, together with their women and children and buffaloes (Tabarī III, 1426, cited by de Goeje in *op. cit.*, p. 31). This thrice deported detachment of the Zutt were the advance guard of the Gypsies of Orthodox and Western Christendom. We may guess that they were reinforced by their kinsmen at Massīṣah and Antioch after the reconquest of Cilicia and Northern Syria by the East Roman Empire in the tenth century of the Christian Era.

It will be seen that the Arab Caliphate played a part in the dissemination of the Gypsies that corresponded to the part played by the East Roman Empire in the dissemination of the Paulicians (see IV. iv. 624-34).

made the relation between non-Arab and Arab Muslims intimate, even though it did not place the two categories of Muslims on a footing of equality with each other. The resulting social fusion went far. Even at Basrah and Kūfah, at least as much Persian as Arabic was spoken in the markets,¹ and in Khurāsān the process naturally went farther still. In the Khurāsānī army which, under Abu Muslim's leadership, overthrew the Umayyad régime in the great insurrection of A.D. 747-50, even the Arabs were predominantly Persian-speaking.² The Khurāsānī Arab officer who caught and killed the fugitive Umayyad Caliph Marwān in Upper Egypt in the summer of A.D. 750 gave the word of command in Persian when he ordered his troops to attack.³

In the Roman Empire, likewise, the military cantonments and civilian colonies acted as social 'melting-pots'.⁴ The ferment must have been particularly active in the Roman colony planted in 45 B.C. by Caesar at Corinth,⁵ since the Roman citizens whom Caesar settled here were freedmen;⁶ and these 'stepsons of Italy'⁷—as Publius Scipio Aemilianus had once called the free populace of the city of Rome to their face, in contemptuous allusion to the servile source to which so many of them owed their origin, even as early as Aemilianus's day—were drawn from all quarters of the Hellenic World and its hinterlands. In their settlement at Corinth, Caesar's freedman-colonists were merely consummating a process of pammixia of which they themselves were earlier products.

Who are the Beneficiaries?

In promoting this process of pammixia and proletarianization in the body social of a universal state, for whose benefit do civilian colonies and military garrisons chiefly operate?

There have been cases in which the beneficiary has been an alien civilization. For example, the transfers of population on the grand scale, to which the Incas' subjects had been broken in by their rulers' benevolently high-handed policy, prepared the ground for the more revolutionary acts of the Incas' Spanish supplanters and successors. The Spanish authorities were adopting Incaic practice in attempting to regroup the subject 'Indian' population into new local communities⁸ and in retaining and protecting the village headmen⁹ whom the foregoing Incaic régime had installed.¹⁰ The Spanish Viceroy of Peru, Francisco de Toledo (*proconsulari munere fungebatur* A.D. 1569-81) was said also to have been consciously and deliberately following Incaic precedent when he organized a system of universal compulsory conscription for

¹⁰ See p. 115, above.

civilian labour, under which 'the Indians' were called up in rotation for periods of three or four months' service at a time in numbers that kept one-seventh of the total labour force perpetually mobilized;¹ and the long-suffering native peasantry that was thus periodically rounded up² like Ottoman *ra'îyeh* to meet the Spanish colonists' seasonal demands for labour were also placed, when at home, at the disposal of Spanish *encomienderos*.³ These Spanish counterparts, in the Andean countryside, of the Persian barons whom the Achaemenidae planted in Cappadocia were not the only agents of a Western Christian cultural penetration of the Andean Society under the newly imposed alien régime. The Spanish self-governing municipalities founded at key-points in the Andean World had as potent an effect as the Greek self-governing city-states that were founded in Egypt and South-Western Asia by Alexander and his successors;⁴ and these municipalities, like the *encomienderos*, were beneficiaries of an antecedent Incaic Imperial régime which had schooled an uprooted and regimented Andean population to become docile 'Indians' for *conquistadores* from the Old World.

In the European interior of the Western World a quarter of a millennium later, the main body of the Western Society was the beneficiary of the short-lived universal state which was provided for the mouldering remains of a Medieval Western city-state cosmos by the Napoleonic Empire. The stagnation into which the life of Flanders, Western Germany, and Northern Italy had sunk since the Medieval Western city-state cosmos's decay⁵ was stirred into fresh and vigorous movement by the intrusion of semi-alien French garrisons; and, brief though this disturbing French visitation was, it had the decisive and historic effect of drawing back into the main stream of Western life the waters of a branch that had become a backwater.⁶ The impact of the Napoleonic soldiery, and of their more polished forerunners under the *ancien régime*, on the mustily vegetating society of eighteenth-century Frankfurt and Düsseldorf has been vividly depicted in two masterpieces of German literature.⁷

Such cases, however, as these are as rare as they are interesting, and it is evident that an alien civilization is not the normal beneficiary from the colonies and garrisons that have been installed by a universal state. On the other hand, the barbarians beyond the pale of a civilization derive conspicuous benefits from cantonments screening a universal state's

¹ See Haring, op. cit., p. 64.

² See p. 112, n. 7, above.

³ An exact account of the *encomienda* will be found in Haring, op. cit., pp. 44-45 and 62. The strictness with which, at least in juridical theory, the rights of the Crown on the one hand and of the peasants on the other hand were safeguarded in the terms on which an *encomienda* was granted to a Spanish *conquistador* is reminiscent of the limitations on the rights of Ottoman fief-holders (see pp. 124-6, above).

⁴ See p. 135, above.

⁵ See III. iii. 344-50.

⁶ See V. v. 619-42.

⁷ In Goethe's *Dichtung und Wahrheit*, Book III, there is an account of the impression made on Goethe in his childhood by the French 'town major', Count Thorane of Grasse, who was billeted in Goethe's father's house after the occupation of Frankfurt by the French Army on the 2nd January, 1759. In Heine's *Reisebilder*, in 'Das Buch Le Grand', there is an analogous picture of the impression made on Heine in his childhood by the French drummer who was billeted in Heine's father's house in Düsseldorf. The Jewish child was captivated by the French plebeian, as the Frankfurter patrician child had been by the French aristocrat.

outer frontiers; for the education which the barbarians gradually acquire from these military outposts of a civilization—first as adversaries and later as mercenaries of the imperial power—makes them capable, at the moment when the empire collapses, of swooping across the fallen barrier and carving barbarian successor-states out of derelict imperial provinces. This adventure and its sequel have been discussed in previous parts of this Study¹ and are dealt with further below.² At this point it is only necessary to remind ourselves that the barbarians' triumphs are as short-lived as they are sensational.³ The transfers and mixtures of population in a universal state produce deeper effects, with more important historical consequences, on the relations between the dominant minority and the internal proletariat.

In both the Roman Empire and the Arab Caliphate, for example, the relative positions of these two social factions had undergone a revolutionary change to the dominant minority's disadvantage—though this without any commensurate gain for the internal proletariat—long before the barbarians succeeded in founding their ephemeral successor-states. In the Arab Caliphate this internal social revolution expressed itself politically in the substitution of the 'Abbasid for the Umayyad régime after the short and sharp civil war of A.D. 747–50. In the Roman Empire the political expression of the corresponding social revolution was the replacement of an Augustan 'principate' by a Diocletianic despotism after a long-protracted bout of disorder which, in its most acute phase, rankled into outright anarchy.⁴ In both cases the revolution was provoked by the disillusionment of the internal proletariat with a formal enfranchisement which had not made them genuine equals of the dominant minority; in both cases the insurgent internal proletariat succeeded in depriving the dominant minority of the power and privileges which they had retained till then *de facto*; and in both cases, again, the ruin of the dominant minority did not achieve the revolutionists' aim of setting the victorious internal proletariat in their former masters' seat. Equality, indeed, was attained, but on the level of a common servitude to a new master in the shape of a totalitarian régime.

This ironical turn of events through which History cheated the proletarian insurgents of the fruits of their victory was a consequence of the violence with which the revolution had been carried out. This recurrence of disorders characteristic of a Time of Troubles put to rout the social rally that had been achieved through the foundation of a universal state. Therewith, the temporarily arrested disintegration of a declining civilization was set in motion again, and the social effort thenceforth fruitlessly expended on the forlorn hope of saving the life of a civilization that was by that time *in extremis* took such a tremendous toll from the society's fast-dwindling energies that no margin remained for allocation to individual liberties—not even on the restricted scale of inordinate privileges for a small minority. The totalitarian régime, which was a last

¹ In V. v. 194–337 and 459–480.

² In VIII. viii, *passim*.

³ On this point, see I. i. 58–62 and VIII. viii. 45–87.

⁴ The period of disorder lasted from the death of the Emperor Marcus Aurelius in A.D. 180 to the accession of Diocletian in A.D. 284. The chapter of anarchy ran from the murder of Alexander Severus in A.D. 235 to the official triumph of Aurelian in A.D. 274.

desperate and swiftly bankrupt expedient for staving off social dissolution, demanded, and exacted to the uttermost farthing, the surrender of the individual's residual treasure of personal freedom.

The Triumph of Equality and Despotism in the Arab Caliphate

The dissatisfaction of the non-Arab converts to Islam¹ with their treatment under the Umayyad régime had substantial grounds. For example, non-Arab prisoners-of-war

'secured by conversion their personal freedom,² but not the full status of citizens and members of the army, and therefore not the privileges which this status carried with it: they became *Mawālī*, i.e. clients of an Arab clan. It was only on these terms, as subordinate hangers-on of Arab clans, that converts obtained admission to the ranks of the theocracy; for Islam by itself did not suffice to produce this result. The theocracy was in reality a specifically Arab state, an imperium exercised by the Arabs over the conquered peoples.'³

Even the Khurāsānī Iranians whom the local Arab military colonists had accepted as their comrades-in-arms⁴

'were not looked upon by the Arabs as being fully their peers. If they served in the army they had to fight on foot and not on horseback, and if they distinguished themselves they were regarded with mistrust. They did receive pay and a share in prize-of-war, but no regular salary. Their names did not appear on the military salary-roll (*diwān*). Though they were adopted into the Arab tribes, they were still distinguished, as "peasants", from the "tribesmen". And, though they were Muslims, they were not exempted from the tax payable by subjects.'⁵

In their natural dissatisfaction with an Umayyad régime under which they were kept in this ambiguous, uncomfortable, and irritating position, the Iranian converts to Islam found allies in members of the Arab ruling race who were hostile to the Umayyads on religious grounds; and a series of attempts on the part of these two different dissident elements to make common cause, against a régime that was obnoxious to both, resulted eventually in the Umayyads' overthrow.

The first attempt—an unsuccessful one—was made under the auspices of Sabaism, an extreme form of the Shi'ah which glorified the Caliph 'Alī at the cost of tampering with a fundamental tenet of Islam.⁶ This sect struck root in some of the Arab clans in the cantonment of Kūfah, which 'Alī had made the seat of his government; it gained adherents among the numerous Persian freedmen there; and in the anarchy let loose by the civil war between the adherents of 'Alī and those of Mu'āwiyah the Sabaïtes momentarily succeeded in overthrowing the ruling Arab aristocracy of Kūfah and substituting a Sabaïte régime

¹ See V. v. 449-50 and 501, n. 2.

² 'It was, however, only customary, and not obligatory, to grant their freedom to prisoners-of-war if they accepted Islam.'

³ Wellhausen, *op. cit.*, p. 45.

⁴ See the passage quoted from Wellhausen, *op. cit.*, on pp. 140-1, above.

⁵ Wellhausen, *op. cit.*, pp. 309-10.

⁶ See *ibid.*, pp. 42 and 312-13. The Sabaïtes perverted the Islamic belief in the singleness and transcendence of God by introducing the doctrine that the prophets were successive vehicles of the spirit of God, and that 'Alī was the next of these avatars in succession to Muhammad.

under which the invidious distinction of status between Arab Muslims and non-Arab converts was abolished.¹ After the collapse of a movement that was too heretical to succeed, the Iranian converts found more effective allies in less extreme representatives of the Shi'ah and in the hyper-orthodox and militantly anti-Umayyad Kharijites (*Khawārij*), who condemned 'Alī himself for his half-heartedness in the cause of God.² Seeds of both Kharijism and Shi'ism were carried from Kūfah to Khurāsān by the drafts of Kūfan fighting men that were sent to reinforce the garrisons on the North-East Frontier;³ and, after the Umayyads and their Syrian Arab war-bands had enjoyed nearly a century of ascendancy over all other elements in the Empire, they were overthrown at last by Khurāsānī Iranian converts to Islam with Arab co-operation and largely under Arab leadership.⁴

The anti-Umayyad movement in Khurāsān which came to a head in A.D. 747 in the armed insurrection of Abu Muslim at Merv, and which ended in the replacement of the Umayyads by the 'Abbasids, had been set on foot, about A.D. 720, by agitators from Kūfah who had been Iranian converts by descent and shopkeepers and artisans by profession.⁵ Abu Muslim himself appears to have been of the same origin,⁶ while the nucleus of his rebel army was mainly recruited from peasant Iranian converts in the Merv oasis.⁷ But, though the targets of the insurgents' attack were the Arab representatives of the Umayyad régime, Khurāsānī Arabs were in a majority among Abu Muslim's lieutenants and the insurgents were not consciously working for the cause of Iranian nationalism; the insurrection was an *union sacrée* of Iranian and Arab Khurāsānī Muslims in the cause of Islam;⁸ yet its very success inevitably transformed it into an Iranian *revanche* for the Arab conquest of the Sasanian Empire a hundred years back.

The Khurāsānī conquerors took full advantage of the admirable network of roads which the Umayyads had inherited from the Sasanidae and from the Romans and from those Powers' Achaemenian predecessors. While it had taken the Primitive Muslim Arabs nineteen years (A.D. 634-51/2) to conquer the Sasanian dominions from the Euphrates to Merv, and the Macedonians five years (334-330 B.C.) to conquer the Achaemenian dominions from the Hellespont to the scene of Darius's death beyond the Caspian Gates,⁹ it took the Khurāsānīs

¹ See Wellhausen, op. cit., p. 43.

² For the *Khawārij* see Wellhausen, op. cit., pp. 40-41. In the Primitive Islamic community this faction—whose name means 'the Withdrawers'—took the same line towards the political-minded supporters of both 'Alī and Mu'āwiyah as the synonymous 'Pharisees' took towards the Maccabees in the second century B.C. They differed, however in their consequent tactics, for the *Khawārij* took to militancy while the Pharisees persevered in non-violence (see V. v. 73).

³ See Wellhausen, op. cit., p. 310.

⁴ See *ibid.*, p. 323.

⁵ See pp. 137-8, above.

⁶ See *ibid.*, pp. 315 and 320.

⁷ See *ibid.*, p. 331.

⁸ See *ibid.*, pp. 320 and 333-4. In the recently conquered province of Tukhāristān, adjoining Khurāsān on the north-east, Arab conquerors and native Iranians likewise made common cause in this crisis, and likewise accepted a non-Arab as their leader because the Arab aspirants to leadership could not agree among themselves. But this *union sacrée* in Tukhāristān was directed not against the Umayyads but against the Khurāsānī rebels (see *ibid.*, p. 334). This loyalty of the recently conquered Iranians of Tukhāristān to the Umayyad régime is reminiscent of the loyalty of the recently conquered Sikhs in the Panjab to the British Rāj in the crisis of the Indian Mutiny.

⁹ See II. ii. 140.

less than three years to sweep over the Umayyad dominions from Merv to the point in Upper Egypt where they caught and killed their quarry the Umayyad Caliph Marwān. The capitulation, in the summer of A.D. 749, of the Syrian Arab garrison of Nihāwand—the fortress commanding the Great North-East Road at an easily defensible point on the western brow of the Iranian Plateau—retrieved the disgrace of the catastrophic defeat of the Persians by the Arabs on the same spot in A.D. 641 or 642. The crushing defeat of Marwān himself by a mere detachment of the Khurāsānī forces in a ten days' battle (*commisum* 16th–25th January, A.D. 750) on the banks of the Greater Zāb wiped out the older score of the equally crushing defeat that had been inflicted in this neighbourhood in 331 B.C. on the last Darius's last army by Alexander's expeditionary force. In bursting out of Asia into Egypt, and obtaining the allegiance of all the former Umayyad dominions in Africa up to the Atlantic coast of Morocco, the Khurāsānī adherents of the 'Abbasids surpassed the feat of the Sasanian army which had occupied Alexandria in A.D. 619, but had exhausted its impetus some distance short of Carthage,¹ in the course of the last and worst of the Romano-Persian wars. Indeed, they achieved the ambition of the Achaemenid conqueror Cambyses, whose intention of following up his conquest of Egypt by a naval expedition against Carthage had been frustrated by the refusal of the indispensable Phoenician contingent in his fleet to carry out an order to subjugate their colonial kinsmen.²

The brilliant victory of the Khurāsānīs in the civil war that swept across the dominions of the Caliphate in A.D. 747–50 was decisive in its negative results. The Umayyad régime and the hegemony of the Syrian Arab military cantonments, of which the régime had been an expression, were overthrown once for all,³ and the Khurāsānīs ostensibly reigned in their stead under the banner of the 'Abbasids.

'The Khurāsānīs had won for the 'Abbasids their victory and they took their own share of the spoils. In a certain sense they became the heirs of the Syrians, though their relation to the Government was not the same.

¹ See p. 93, above.

² 'Cambyses gave orders to his fleet to sail against Carthage, but the Phoenicians refused to obey. They submitted that they were bound by solemn engagements and that they would be guilty of a crime if they made war on a daughter-community. This unwillingness of the Phoenicians [to lend themselves to Cambyses' designs against Carthage killed the project, since] the remainder of the fleet was inadequate for the task. So, thanks to their Phoenician kinsmen, the Carthaginians escaped subjugation at Persian hands; for Cambyses felt it impolitic to try to coerce the Phoenicians, considering that they had come under Persian sovereignty voluntarily and that the naval power of the Persian Empire depended entirely on them' (Herodotus, Book III, chap. 19). For the relations of the Phoenician city-states to the Achaemenian Imperial Government, see V. v. 123, n. 2.

³ See Wellhausen, *op. cit.*, p. 347. As this authority here points out, the success of the subjects of the Caliphate in throwing off the yoke of the Arab cantonments on the borders of the Desert and the Sown had the effect of breaking those links between the subject territories of the Caliphate and the reservoir of badawī Arab military man-power on the Arabian Steppe which had been forged with such care and skill by the original Arab empire-builders. 'The ancient home of the Arabs now "went native" (*verwilderte*) again so completely that it actually became a dangerous business to make the pilgrimage.' Cp. Caetani, L.: *Studi di Storia Orientale*, vol. iii (Milan 1914, Hoepli), p. 50. In the post-Syriac interregnum *circa* A.D. 975–1275, in which the 'Abbasid Caliphate foundered, the Nomads of Arabia played the role, not of upholders of the tottering empire, but of invading barbarians on all fours with the Berbers and the Turks (see III. iii. 445–6).

They were called the *Shi'ah* ('the Party'), the *Ansār* ('the Helpers')¹ or the *Abnā'-ad-Dawlah* ('the Sons of the New Era').² They held in their hands the external power; they had a military organization. . . . They constituted the Caliph's standing army, and the Caliph lived in the midst of these guards of his. Baghdad was in fact laid out, not as an oecumenical capital, but as a cantonment for the Khurāsānīs in which the Caliph could reside at a safe distance from Kūfah. In this cantonment they still maintained their links with their home,³ and the predominance which they had won in the service of the 'Abbasids, both as a party and as a military force, became a predominance of their nation and their country—Eastern Iran—over the rest of the Empire.⁴

This ostensible hegemony was retained by the Khurāsānī garrison of Baghdad for rather more than a century before the military control over the central government of the 'Abbasid Caliphate passed into the hands of a Turkish slave-bodyguard recruited from the Eurasian Steppe beyond the pale of both Khurāsān and Transoxania; and, in terms of the nationality of the founders of successor-states, the general Iranian political ascendancy in the 'Abbasid dominions may be reckoned to have lasted for more than three centuries, if we place to its credit the Transoxanian Iranian successor-state established by the Sāmānids,⁵ and if we take as the terminal date the overthrow of the Daylamī Iranian Buwayhids by the Turkish Saljūqs in A.D. 1055–6.⁶ Compared with the ephemeral subsequent triumphs of the barbarian war-bands that came in at the death of the Caliphate—an ill-assorted mob of Turks and Mongols, Arabs and Berbers, Normans and Franks—the Iranian ascendancy in

¹ The original *Ansār* had, of course, been the people of Medina who had invited the Prophet Muhammad to come and rule over them. Under this name they had been distinguished from the *Muhājirīn* who were the Prophet's Meccan fellow refugees. Now that the name *Muhājirīn* had come to signify the Arab military settlers in the cantonments, the adoption of the name *Ansār* by the Khurāsānīs had an obvious political connotation.—A.J.T.

² Wellhausen notes (op. cit., p. 347) that the original meaning of *dawlah* was 'new era' and that it was the choice of this term by the 'Abbasids to describe their régime that led to its acquiring the general meaning of 'government' or 'dynasty'. Wellhausen also draws attention to the affinity between the title 'Sons of the Kingdom' and the language of Matt. xvii. 25; 'Of whom do the kings of the Earth take custom or tribute? Of their own children, or of strangers?'—A.J.T.

³ The geographical situation of Baghdad in relation to the Iranian Plateau corresponded exactly to that of Basrah and Kūfah in relation to the Arabian Steppe. Baghdad was laid out on a site as near to the heart of 'Iraq as a Khurāsānī garrison could find itself without placing a river barrier between itself and its sources of . . . North-Eastern Iran. The 'geopolitical' significance of the sites of Basrah and Kūfah has been noticed on p. 131, above. When Hārūn-ar-Rashīd (*imperator* A.D. 786–809) organized the North-Western March of the Caliphate over against the East Roman Empire (see p. 121, above), he planted Khurāsānī garrisons at Adana, Tarsus, and 'Ayn Zarbah, *alias* Anazarbus (Ahmad Al-Balādhuri: *Kitāb Futūh-al Buldān*, English translation by Khitti, P. K., vol. i (New York 1916, Columbia University Press), pp. 260, 262, and 264).

⁴ Wellhausen, op. cit., p. 348.

⁵ See II. ii. 142, above. Iranian successor-states of the 'Abbasid Caliphate arose to the west as well as to the east of the 'Abbasid metropolitan province of 'Irāq. The Zanātā Berber Kharijite principality which held the hinterland of Ifriqiyyah from A.D. 761 to A.D. 908 was founded by a Persian adventurer named Rustem, and the ancestor of the so-called 'Fātimids' was said to have come from Ahwāz in the Iranian province of Khūzistān (see I. i. 355). The Ikshid, who in A.D. 935 founded for himself and his heirs a successor-state in Egypt and Syria by carrying out the 'Abbasid Government's mandate to suppress the previous local successor-state ruled by the Tulunids, was a Transoxanian Iranian princeling. His ancestral principality was Farghānah (see Lane-Poole, S.: *A History of Egypt in the Middle Ages*, 2nd ed. (London 1914, Methuen), pp. 81–82).

⁶ See I. i. 356.

the more palmy days of the 'Abbasid Era was long-lived and historically important. On the other hand it was unsubstantial by comparison with the antecedent Arab hegemony which had been brought to an end by the Khurāsānī insurrection of A.D. 747-50. The effective immediate heir of the Syrian Arab cantonnments in Syria and 'Irāq was not the Khurāsānī cantonnement at Baghdad but the 'Abbasid totalitarian régime—which did indeed inaugurate a 'new era' when it supplanted its comparatively easy-going Umayyad predecessor.

'The change of dynasty brought with it a transformation of the inward nature of the régime. . . . The Arabs had imposed themselves, by right of conquest, as a ruling nobility over against the populations which they had subjugated. . . . Under the Umayyads this primitive system persisted in essentials. . . . Under the 'Abbasids it vanished—along with the distinction of classes which was its pre-supposition. The 'Abbasids did not, like the Umayyads, stand on the shoulders of a strong aristocracy of which they themselves were members; the Khurāsānīs, on whom their power was based, were not their kinsmen; they were merely their tools. The whole Muslim community stood in a uniform relation to the 'Abbasids, without any gradations of a natural order in the political standing of different elements; the dynasty alone possessed the divine right to rule as heirs of the Prophet. There were no impediments to prevent them from shaping the régime in accordance with technical considerations, as might seem best for efficiency and also for the interests of the dynasty itself. They succeeded in bringing greater order into the administration, especially in the departments of taxation and justice; they were zealous in giving a hearing to, and taking action on, the complaints of subjects who appealed to them as a court of supreme instance.¹ But they suppressed the general living interest in politics—which had formerly been part and parcel of religion—far more thoroughly than had proved practicable for the Umayyads. . . . The State shrank to the dimensions of the Court. . . . And the Court comprised a

¹ This 'Abbasid and likewise Caesarean *arcanum imperii* was also taken to heart by the 'Abbasids' Sāmānīd successors in the North-East. It was remembered of the Sāmānīd prince Ismā'il b. Ahmad, surnamed 'Al-'Ādil' ('the Just') (*dominabatur* A.D. 892-907) that, even in the depth of winter, when the ground was under snow, he would sit motionless on horse-back, armed cap-à-pie, in open court, in order to render himself continually accessible to petitioners.

'I have read, in the works of our forefathers, that it was the usual practice for the Kings of Persia to have a lofty scaffold erected and to station themselves there on horse-back, to enable them to distinguish, among the multitude assembled on the plain, all petitioners complaining of oppression, and so to give themselves the opportunity of doing justice. The reason for this custom was that, when a prince remains inside a palace with doors, barriers, vestibules, corridors and curtains, perverse and ill-intentioned persons can obstruct the entry of petitioners and prevent them from reaching the royal presence. . . .

'Ismā'il b. Ahmad had a practice, when the cold was most severe and when the snow was falling most heavily, of repairing, unattended, to the Great Square [at Bukhārā] and remaining there on horseback till the moment of the dawn prayer. It might happen, he used to say, that some victim of injustice might come to my Court to inform us of his needs, and he might have neither money to cover his expenses nor a roof to shelter him. Because of the rain and the snow, they would not allow him to reach my presence; but, when he knew that I was here, he would come to find me, would obtain satisfaction, and would return home re-assured and rejoicing in complete security.'

This Sāmānīd royal practice, thus described by Hasan Abu 'Alī Nizām-al-Mulk in his *Siyāsat-Nāma*, chap. 3, *ad initium* and *ad finem* (on pp. 12 and 26 of the French translation by Schefer, Ch.: *Sīasset Namēh* (Paris 1893, Leroux)), was still being followed, some nine hundred years later than Ismā'il b. Ahmad's day, in the Transcaucasian Kingdom of Georgia on the eve of its annexation by Russia, according to a self-complacently contemptuous allusion in the work of a Modern Persian (see de Maistre, J.: *Lettres et Opuscules Inédits*, vol. i (Paris 1851, Vaton), p. 215).—A.J.T.

throng of civil servants who were no longer identical with the officers [of the military establishment].¹ Most of these civil servants were creatures and favourites of the sovereign. Freedmen were preponderant among them. Under the previous régime freedmen may have enjoyed the ruler's confidence and exercised a corresponding influence; they now attained to the highest positions in the public service.² They were raised from the dust, to be hurled down into the dust again. . . . It was not birth, but the Caliph, that made people's fortunes. . . . The aristocracy was replaced by a Court hierarchy of officials, distributed between recognized grades and kept under one another's surveillance. At the top stood the Wazîr, who was the head of the Caliphial Chancery and eventually became the visible *alter ego* of a Caliph who no longer appeared in public.³

The Triumph of Equality and Despotism in the Roman Empire

This masterly portrayal of the features of the 'Abbasid régime in which it presented so striking a contrast to its Umayyad background could be adapted with little change to portray the corresponding revolution in the Roman Empire which substituted the Diocletianic despotism for the Augustan 'Principate'. The Augustan régime, like the Umayyad Caliphate, had respected in large measure the liberties of an 'ascendancy'⁴ as against the Imperial Government at the price of tolerating the maintenance of this 'ascendancy's' privileged position as against the subject population of the Empire. In the Roman Empire under the Principate, as in the Arab Caliphate in the Umayyad Age, these privileges were partly positive and partly negative.

An inner circle of Roman families whose members enjoyed a customary right of entry into the Senate actually shared with the Emperor—who tactfully described himself as 'Leader of the House' (*Princeps Senatus*) in the administration of the Roman dominions. A number of pacific provinces in the interior had been handed back to the Senate by Augustus; and, in the provinces which the Emperor continued to keep in his own hands, with the important and significant exception of Egypt, the governorships were reserved in practice for senators, who were reconciled by the splendour of these posts to the indignity of having to hold them as the Emperor's servants. The senatorial class also staffed the senior posts in the Imperial Army. And, though the administration of Egypt was not the only sphere in which the Emperor delegated the realities of power to non-senatorial agents, the authority still left to the senatorial class was considerable in reality and even more imposing in its carefully-kept-up appearances.

A wider circle of Roman citizens who were not of the senatorial class but who were domiciled in Italy enjoyed a monopoly of the right to serve in the Imperial Guard—the nine 'praetorian' ('headquarters') battalions

¹ Compare the segregation of the civil and military services under the Diocletianic régime in the Roman Empire.—A.J.T.

² Compare the corresponding transformation of the freedmen-stewards of Caesar's private household into virtual ministers of state (see V. v. 452-3). In the Roman Empire this political consequence of social *Gleichschaltung* occurred at an early stage of 'the Principate'.—A.J.T.

³ Wellhausen, op. cit., pp. 348-50.

⁴ In the sense in which the term came to be used of the Protestant dominant minority in Ireland under the British Crown from the Tudor Era down to the establishment of the Irish Free State.

that were permanently quartered in the City of Rome itself—and further possessed the valuable negative privilege of being exempt from direct taxation. Under the Principate this 'ascendancy' of an inner circle within the Roman citizen body occupied a position not unlike that of the Syrian Arab soldiery on the salary-rolls of the Arab cantonments in the Caliphate under the Umayyad régime. Like the Syrian Arabs, these specially privileged Roman citizens were a small minority of the total population of the Empire; and, just as, in the Caliphate, there came, as time passed, to be an ever larger body of converts to Islam whose conversion proved not, after all, to have made them the peers of their Arab masters, so likewise in the Roman Empire there was an ever larger body of legally naturalized citizens who found themselves still outside the privileged circle.

In the Roman Empire, as in the Caliphate, and indeed for the same reasons, the formal status of membership in the ruling community was easier for members of the subject population to obtain than were the substantial advantages that had originally been associated with that status automatically. The ring of senatorial families was reluctant to see the value of their privileges depreciated by a widening of their circle. Caesar's revolutionary act of making Roman senators out of the uncouth notables of recently conquered Gallic cantons raised so fierce a storm that Augustus beat a retreat in the interests of his policy of reconciling the Senate to the Principate, and it was not till A.D. 48 that it became practical politics for the Emperor Claudius to enrol senators from among the notables of the Aedui, a Gallic canton that had already been Rome's ally before Caesar's conquest.¹ The Roman Imperial Treasury, for its part, was as reluctant to see its sources of revenue diminished as a result of progressive extensions of the Roman franchise to non-citizen subjects of the Empire as the Umayyad Treasury was to suffer a similar loss through the progressive conversion of non-Muslim subjects of the Caliphate to Islam.²

The immunity from direct taxation which was enjoyed under the Principate by Roman citizens domiciled in Italy dated from the morrow of the Third Romano-Macedonian War (*gerebatur* 171–168 B.C.);³ and at that date the entire Roman citizen body had occupied a territory embracing less than half of Italy south of the Appennines.⁴ When the

¹ See *The Cambridge Ancient History*, vol. x (Cambridge 1934, University Press), p. 377.

² All treasuries are apt to think alike, but the Umayyad Treasury was actually the historical heir to the Roman Treasury's tradition. At the time of the conquest the Primitive Arab Muslim Government had taken on the existing inland revenue organization as a going concern—including the official personnel as well as the records and the practice—in both their ex-Roman and their ex-Sasanian dominions. Ruling, as they did, from Damascus, the Umayyads were influenced by the Roman fiscal tradition predominantly.

³ Having destroyed in that war the last surviving Great Power in the Hellenic World apart from the Roman Commonwealth itself, the Romans felt that the consequent decrease in their own military and political liabilities, and increase in the external sources of their public revenue, made a combination of new circumstances that justified them in ceasing to impose direct taxation on themselves. They did not, however, abolish the tax of 5 per cent. on the manumission of slaves, which had been introduced as early as 357 B.C. and which had a social as well as a fiscal purpose. This tax remained in force under the Empire (see Hirschfeld, O.: *Die Kaiserlichen Verwaltungsbeamten bis auf Diocletian*, 2nd ed. (Berlin 1905, Weidmann), pp. 106–9).

⁴ A map displaying the areas in Italy that were included in the territory of the Roman

Roman citizenship had been subsequently conferred, first on all previously alien Italian communities south of the River Po,¹ and then on all communities between the Po and the Alps,² the exemption from direct taxation had accompanied the conferment of the franchise as a matter of course. When, however, under the Principate, the still expanding body of Roman citizens burst even the generous bounds that had been assigned to Italy by Augustus and came to constitute an appreciable and increasing element in the population of the provinces as well, the Imperial Treasury took alarm, and laid down the new doctrine that the immunity from direct taxation which had been one of the attributes of Roman citizenship since 167 B.C. was applicable only to citizens domiciled in Italy; all persons domiciled in provincial Roman territory were now deemed to be liable to direct taxation even if they happened to be Roman citizens;³ the only exception to this ruling was in favour of Roman citizens domiciled in the territory of a Roman municipality, outside Italy, on which 'Italian status' (*ius Italicum*)⁴ had been expressly conferred; and the Imperial Government was very sparing in its grant of this boon: it was obtained by few non-Italian communities of Roman citizens beyond those which were at least partially of Italian origin.⁵

The Roman Treasury could, and did, thus create a class of non-privileged provincial Roman citizens, but it could not prevent this class either from harbouring resentment or from steadily growing in numbers until it found itself strong enough to sweep away by main force the privileges which a favoured minority of the citizen body had so long retained for itself.

The non-privileged element in the Roman citizen body in the Age of the Principate was recruited from various sources. The military policy, inaugurated by Augustus, of insisting that the Roman legionary infantry of the line should continue to be composed exclusively of Roman citizens but should be stationed henceforward mainly on the frontiers and wholly outside Italy⁶ ensured, when combined with legal facilities for legitimizing

State between the end of the Hannibalic War and the secession, in 90 B.C., of a confederacy of Italian states hitherto externally associated with the Roman Commonwealth will be found in Beloch, J.: *Der Italische Bund unter Roms Hegemonie* (Leipzig 1880, Teubner), *ad finem*.

¹ By the *Lex Plautia Papiria* of 89 B.C.

² By Caesar in 49 B.C.

³ It will be seen that this Roman Treasury ruling was identical with the Umayyad Caliph 'Umar II's ruling, noticed on p. 132, above, that a non-Arab convert to Islam must migrate to one of the Arab military cantonments in order to qualify for obtaining the comparatively favourable fiscal treatment that Arab Muslims enjoyed.

⁴ See *The Cambridge Ancient History*, vol. xi (Cambridge 1936, University Press), pp. 455-6. This *ius Italicum* had a juridical as well as a fiscal aspect. Roman citizens not domiciled in territory possessing this status were thereby debarred, not only from the right of exemption from direct taxation, but also from the right of owning land in freehold as *ager privatus ex iure Quiritium*.

⁵ 'Italian status' was, for example, possessed by the Roman 'colony' of Vienna Allobrogum (Vienna) in the province of Gallia Narbonensis, in spite of the fact that the Roman citizens inhabiting this titular Roman colony were Latinized natives and not settlers from Italy. Yet Vienna was the only municipality in the province that did possess this *ius Italicum*, though, at an early stage in the history of the Principate, Narbonensis as a whole had become almost as thoroughly Latinized in language and culture as the Transpadane fringe of Italy itself. The less exceptional phenomenon of the possession of the *ius Italicum* by a Roman community situated outside Italy but composed of settlers of Italian origin is illustrated by the case of Lugdunum (see Arnold, W. T.: *Studies of Roman Imperialism* (Manchester 1906, University Press), pp. 99 and 107-8).

⁶ See II. ii. 20 and p. 117, above.

the legionaries' children retrospectively,¹ that a warlike population of Roman citizens, who could have the last word in Imperial politics if ever they awoke to a realization of their power, should establish itself on the Empire's fringes. Where militarily suitable citizen recruits for the legions were not forthcoming in sufficient numbers (as, for example, in the Anatolian areas of recruitment for the eastern legions), it is probable that militarily suitable non-citizens were naturalized *ad hoc* in order to make them eligible for enrolment,² and it is also probable that soldiers enrolled in the non-citizen formations called *auxilia* could obtain naturalization as Roman citizens upon their discharge from the service, if not before.³

Moreover, as the civilian population of one ex-barbarian province after another became Latinized in language and culture, naturalization was granted wholesale by a regular series of stages. The first stage was to confer on a subject community the political status of a city-state externally associated with the Roman Commonwealth on the customary terms traditionally called the *ius Latinum*. A citizen of a Latin community who was elected by his fellow citizens to a local magistracy thereby acquired Roman citizenship automatically, and this door of entry into the Roman citizen body came to be known as the *Latium Minus* after the institution (perhaps in Hadrian's reign)⁴ of a *Latium Maius* which automatically conferred the Roman citizenship on a citizen of a Latin community who was elected to his local town council.⁵ There were even non-Latin communities—for example, the Gallic canton of the Aedui—whose elected local magistrates became Roman citizens *ipso facto*.⁶ Through all these avenues the body of non-privileged Roman citizens was steadily recruited under the Principate for nearly a quarter of a millennium⁷ till,

¹ See p. 132, above.

² See Parker, H. M. D.: *The Roman Legions* (Oxford 1928, Clarendon Press), p. 170. Aelius Aristides seems, in a passage in his *In Romam* (Keil's edition, vol. ii. pp. 112–13 (§§ 75–78)), to imply that, in his day, *all* recruits for the Imperial Army were non-citizens who were enfranchised when they were enrolled.

⁵ See Arnold, *op. cit.*, p. 99, n. 2.

⁶ See *ibid.*, p. 111.

⁷ It will be seen that the ascendancy of a privileged minority lasted nearly twice as long in the Roman Empire under the Principate as in the Arab Caliphate under the Umayyad régime. This notably greater longevity is perhaps to be explained by the fact that in the Roman case the ascendancy was exercised less crudely and was monopolized less exclusively. The Augustan settlement was a compromise between the monstrously harsh and predatory tyranny which the masters of the Roman State had exercised over the Hellenic World during the last century and a half of the Roman Republican régime and the drastic dictatorship on behalf of the 'under-dog' that had been the ideal, and the death, of Caesar; and the Caesarean element in the genius of the Principate tended to gain ground at the expense of the oligarchic element. For example, the area of recruitment for the Praetorian Guard, which appears to have been confined to Central Italy when Augustus founded the corps (see Tacitus: *Annals*, Book IV, chap. 5), was progressively extended, first up to the limits of Italy within Augustus's boundaries, and later to communities of Roman citizens in adjacent provinces (e.g. Macedonia and Noricum) and in Baetica. There was a corresponding tendency to extend the area of recruitment for the Senate; and, though Senators of non-Italian origin were required by the Emperor Trajan to re-invest one-third of their property in Italian real estate, the proportion was reduced to one-fourth by Marcus Aurelius (see *The Cambridge Ancient History*, vol. xi (Cambridge 1936, University Press), pp. 212, 370, and 419). This policy of gradually widening the privileged circle was eventually applied to the Principate itself. Of the five emperors, from Nerva to Marcus inclusive, whose successive reigns covered the 'Indian Summer'

in the year A.D. 212, the Emperor Caracalla took the logical concluding step of conferring Roman citizenship on all—or, at any rate, all but an insignificant residue—of the still unenfranchised subjects of the Empire by his celebrated *Constitutio Antoniniana*.¹

This superficially liberal measure might perhaps have been expected to exorcise the danger of a social revolution; for, after all, the inferior form of Roman citizenship that did not carry the *ius Italicum* with it was nevertheless something well worth having. Whatever its fiscal and juridical shortcomings may have been, it was undoubtedly a palladium of civil liberties—as was found by Saint Paul when he put its efficacy to the test on three critical occasions in his missionary career.² Yet the *Constitutio Antoniniana* did not avert the upheaval of A.D. 235–74, and may actually have played some part in bringing it to pass. For on the one hand it did not diminish, and possibly increased, the financial burdens of its beneficiaries;³ and on the other hand it made the inequity of privileges still enjoyed by a minority *de facto* more glaring now that all inhabitants of the Empire had become Roman citizens *de jure*.

The first stroke in the battle against privilege had indeed been struck already by Caracalla's father and predecessor Septimius Severus. This professional soldier of colonial Phoenician origin⁴ had been able to seize a vacant imperial throne thanks to finding himself in command of the frontier defence force nearest to Rome at a moment when the Praetorian Guards had unpardonably abused their trust by assassinating an excellent emperor and proceeding to sell the purple by auction to a worthless bidder. When Severus marched on Rome at the head of his Pannonian legions, the Praetorians proved to be as unwarlike as they were murderous and corrupt. They submitted tamely to a sentence of disbandment and banishment, and the provincial war-lord who had thus given these privileged Italian guardsmen their deserts not only cashiered the men but made a complete break in the basis of recruitment of the corps. It was recruited thenceforth from the *élite* of the legions (in practice, from soldiers of the Danubian legions and of one eastern legion, the Sixth

of Hellenic history, two (Trajan and Hadrian) came from Baetica, one (Antoninus Pius) from Narbonensis, while the family of a fourth (Marcus) was of Baetican origin. The only Italian among the five was Nerva, the first—and the least estimable—in the series. No doubt this progressive widening of the privileged inner circle of the Roman citizen body delayed the revolt of the ever-growing mass of Roman citizens of inferior status. Conversely, in the Sinic universal state the ascendancy of the victorious empire-building principality of Ts'ing was overthrown only twelve years after the establishment of the *Pax Sinica* because it had immediately been made intolerable by the inhumanly revolutionary policy of Ts'ing in She Hwang-ti.

¹ See V. vi. 7, with n. 4.

² In dealing with the magistrates of the Roman colony of Philippi (see Acts xvi. 37–39); in dealing with Claudius Lysias, the Roman military tribune in command of the castle at Jerusalem (see Acts xxii. 23–xxiii. 31); and in dealing with two successive Roman procurators of Judaea: Antonius Felix and Porcius Festus (see Acts xxiii. 31–xxvi. 32).

³ It is possible that one of the motives and effects of the *Constitutio Antoniniana* was to extend to all inhabitants of the Empire the special taxes—death duties (at the merciful rate of a mere 5 per cent.), a general sales tax (at the rate of 1 per cent.), a special tax on sales of slaves (at the rate of 4 per cent.)—which Augustus had imposed on Roman citizens domiciled in Italy as a device for diminishing the inequality in the distribution of the burden of taxation between this minority and the rest of the inhabitants of the Empire (for details see Hirschfeld, O.: *Die Kaiserlichen Verwaltungsbeamten bis auf Diocletian*, 2nd ed. (Berlin 1905, Weidmann), pp. 93–105).

⁴ Severus's home town was the Punic city of Leptis in Tripolitania.

Ferrata). Severus also stationed at Albano, within one short march of Rome, the second of his three new *Legiones Parthicae*. The commanders of these new legions were not of senatorial rank, and the soldiers were probably for the most part Roman citizens from Illyricum and Thrace.¹

After this decisive demonstration of the military impotence of a still privileged minority, the sequel was almost a foregone conclusion. The upheaval of A.D. 235-74 was a revolt of the provinces against Italy, of the non-senatorial classes against the Senate, and of the uncultivated masses against the heirs of the Hellenic culture; and on all three battlefields the former 'ascendancy' was decisively defeated.² The 'ascendancy' did not, indeed, allow itself to be deposed without a struggle. The successful organization of armed resistance to the intolerable Thracian soldier Maximinus was a last triumph of the *concordia ordinum* and *consensus Italiae* that had been the political ideals of Cicero. But the discomfiture of the Senate was made manifest by the exclusion of senators from all military command, direct or indirect, by act of the Emperor Gallienus (*imperabat* A.D. 253-68);³ and it was sealed when Florianus, the brother of the last senatorial occupant of the imperial throne,⁴ was rejected by the Senate itself as a candidate for the succession in favour of the capable Illyrian soldier Probus. This liquidation of the long-respected partnership of the Senate in the government of the Empire was accompanied by a violation of the equally long-respected immunity of Italy from direct taxation. After the devaluation of the currency during the anarchy, the primitive practice of raising a levy in kind (*annona*) for the support of the army and the civil service was applied to Northern Italy as well as to the provinces. After this progressive *Gleichschaltung* of Italy with the provinces and of the Senate with the rest of the inhabitants of the Empire, the inauguration of a totalitarian régime by the Illyrian soldier-statesman Diocletian was inevitable and indispensable.⁵ This was the political price that had to be paid for long overdue

¹ See Parker, H. M. D.: *A History of the Roman World from A.D. 138 to 337* (London 1935, Methuen), pp. 60 and 80-84. There is, of course, an almost exact analogy between this measure of Severus's and the substitution, by the 'Abbasids, of a Khurāsānī garrison at Baghdad for the Syrian Arab garrisons at Basrah, Kūfah, and the four cantonments on the desert border of Syria itself.

² The social and cultural aspects of this great revolution in the Roman Empire have been imaginatively apprehended and brilliantly portrayed by M. Rostovtzeff in *The Social and Economic History of the Roman Empire* (Oxford 1926, Clarendon Press). The scholarly author of this magnificent piece of historical work has incurred some criticism on the ground that he has read into the history of the Roman Empire in the third century of the Christian Era his own experience of the Russian revolution of A.D. 1917. It is possible, perhaps, that here and there Rostovtzeff may have been carried by this analogy beyond the limits of the evidence; but it is certain that his illuminating and instructive interpretation of a momentous passage of history would not have enriched our whole understanding of History, as it has done, if Rostovtzeff had not lived through that experience as a human being and had not possessed the imaginative power to turn it to account as an historian.

³ This was a portent, considering that the Emperor who pronounced these aristocrats no longer fit for military command was himself a man of culture. Yet the process of pushing the Senate out of public life, which was thus carried a long step farther by Gallienus, had been covertly set in train by his far more cultivated predecessor Augustus (for Gallienus's measures, see Parker, *op. cit.*, pp. 178-80).

⁴ For the significance of the reign of Florianus's brother and predecessor Tacitus (*imperabat* A.D. 275-6), see V. vi. 55.

⁵ The complete exclusion of senators from the civil service as well as from military command, and the extension of liability to imperial taxation to Cis-Appennine as well as

acts of social justice by which, in reaction against an invidious former discrimination between classes, every Roman citizen in a Roman World in which virtually the whole population had now been enfranchised was made eligible henceforward for appointment to any post, up to the highest, in the Roman Imperial Army¹ and Civil Service.

The Utilization of Imperial Garrisons and Colonies by Higher Religions

In the sequel to this genuine social but illusory political triumph of an internal proletariat over an 'ascendancy', we have still to discover who were the beneficiaries in the long run; for we have already ascertained that the immediately resulting totalitarian régime was transitory and that the subsequent 'heroic age' of the barbarians was ephemeral. The truth would appear to be that while the internal proletariat was not appreciably more successful than any of the other competitors for the spoils of a disintegrating civilization in so far as it was competing with them in their own currency of material power—economic, political, and military—it did achieve an enduring and momentous success in so far as it placed its treasure in the spiritual enterprise of propagating a higher religion. The ultimate beneficiaries from the organized redistribution and intermixture of population that precipitated a social revolution in both the Roman and the Arab Empire were Christianity in the one case and Islam in the other.

The military cantonments and frontier garrisons of the Umayyad Caliphate manifestly served Islam as invaluable *points d'appui* in that extraordinary deployment of latent spiritual forces by which Islam transfigured itself, and thereby transformed its mission, in the course of six centuries. In the seventh century of the Christian Era, Islam had burst out of Arabia as the distinctive sectarian creed of one of the barbarian war-bands that were carving out successor-states for themselves in provinces of the Roman Empire; by the thirteenth century of the Christian Era, Islam had become a universal church providing shelter for sheep left without their familiar shepherds through the collapse of the 'Abbasid Caliphate at the dissolution of the Syriac Civilization.²

Time and again it looked, on the surface, as if Islam had been cheated of this spiritual destiny by being successfully exploited for political and social ends.

'The original driving-force behind the insurrection of the Khurāsānīs was Islam and not [Iranian] nationalism . . . [but] the nationality of the victors asserted its preponderance over [the cause of] Islam. . . . The international [fraternity of] Islam was a mask for the triumph of the Iranian cause over the Arabs. . . . This was inherent in the situation, though not in the original design.'³

Trans-Appennine Italy, do not appear to have taken place before the Diocletianic reorganization. This was the logical fulfilment of the piecemeal reforms of Septimius Severus and Gallienus.

¹ In the post-Diocletianic Roman Army there were no distinctions of class (see Grosse, R.: *Römische Militärgeschichte von Gallienus bis zum Beginn der Byzantinischen Themenverfassung* (Berlin 1920, Weidmann), p. 196). The classless military hierarchy established by Diocletian and Constantine at the turn of the third and fourth centuries of the Christian era lasted, substantially unchanged, until the seventh century (see *ibid.*, p. 107).

² This transfiguration of Islam has been touched upon already in V. v. 127-8, 230, and 673-8.

³ Wellhausen, *op. cit.*, pp. 334 and 348.

In the next chapter of the story it looked, again on the surface, as if the 'Abbasids had been still more adroit than the Khurāsānīs in making Islam serve their purpose.

'The 'Abbasids took credit for having brought Islam—which they accused the Umayyads of having repressed—into its due position of dominance. They professed a desire to bring to life again the extinct tradition of the Prophet. They gathered round themselves in Baghdad the doctors of the Islamic Law from Medina, which had been their headquarters hitherto, and they constantly took legal opinions from them; for the 'Abbasids made a point of handling political questions in juristic form and of seeing that decisions were taken on the basis of the Qur'ān and the Sunnah. In reality, though, they made Islam subservient solely to their own ends. They domesticated the doctors of the Law at their court and secured the stamp of their approval for even the most discreditable of their own measures. [In fact,] they made the pious opposition innocuous by the very act of leading it to victory.'¹

Yet this 'Abbasid statecraft, in spite of all its cunning, was no more successful in the long run than Iranian nationalism in harnessing Islam to the service of a political purpose. The 'Abbasid Caliphate itself was merely the last phase of a universal state, and, as such, it was *ex officio* condemned to death before it was born, notwithstanding the mirage of immortality with which it managed to delude its audacious assailants as well as its loyal supporters.² When the Mongol war-lord Hūlāgū took and sacked Baghdad in A.D. 1258, 'the Caliphate that had created Baghdad, and for five hundred years had made it a magnificent centre of art, science and letters, was forever extinguished; but Islam did not die'.³ It not only retained the allegiance of the ex-subjects of the defunct 'Abbasid Empire; it also took their savage conquerors captive. In spite of the tincture of Nestorian Christianity with which Hūlāgū, like other Chingisids of his generation, was imbued,⁴ his descendants who governed, after him, the appanage of the Mongol Empire which Hūlāgū had established in the derelict domain of the Caliphate, from Merv to the east bank of the Euphrates, did not remain pagans or become outright Nestorians or succumb to the Lamaistic form of the Tantric Mahāyāna which proved so attractive to the main line of the House of Chingis in China and which eventually won the allegiance of those Mongols and Calmucks who had stayed at home on their native steppes;⁵ the Mongol Il-Khans of Hūlāgū's line became converts to Islam, and they did not even follow the frequent practice of barbarian converts by adopting the religion of a conquered population in a distinctively heretical version.⁶ After playing with the Shi'ah as they had previously played with Nestorianism, the Il-Khans finally embraced Islam in its Orthodox Sunni form, though this was the form in which it was followed by the Il-Khans' arch-enemies the Mamlūks and by the Mamlūks' puppet 'Abbasid Caliphs at Cairo.⁷

⁴ Hūlāgū himself had a Nestorian Christian wife (see II. ii. 238 and 451).

⁵ See IV. iv. 497; V. v. 137 and 309-10.

⁶ For this practice see V. v. 229-30 and 235.

⁷ See I. i. 363-4.

Within little more than a hundred years of the sack of Baghdad by Hülāgū the example thus set by his house had been followed by the eastern as well as the western branch of the House of Chaghatāy, which dominated the sedentary Muslim population of the Upper Oxus-Jaxartes Basin from the Central Asian Steppe between the Zungarian Gap and the Sea of Aral.¹ The House of Jūjī ('the Golden Horde'),² which dominated the sedentary Muslim populations on the Lower Oxus and the Middle Volga from the Great Western Bay of the Eurasian Steppe between the Sea of Aral and the Carpathians, was finally converted within the same period under the influence of its allies the Mamlūks.³ Even the dissident 'qāzāq' Nomads who hovered out of range of the Golden Horde's long whip-lash on the steppes of Western Siberia⁴ followed the Golden Horde's lead in embracing Islam; and the Mongol Khāqāns in the Far East, who had no penchant towards Islam themselves,⁵ helped Islam to win new outposts on the north-western and south-western fringes of China.⁶ Meanwhile, Islam continued to make spiritual conquests of comparable magnitude in other quarters: in India, in Indonesia, in Tropical Africa.⁷ And thus, so far from dying at the death of the Baghdādī 'Abbasid Caliphate, Islam lived on to become, by the fourteenth century of its own era, one of the four principal higher religions of a World that in that age was being unified on a literally oecumenical scale by the world-wide expansion of the Western Civilization.

What was the secret of Islam's power to survive the death of its founder, the downfall of the Primitive Arab empire-builders, the decline of the Arabs' Iranian supplanters, the overthrow of the 'Abbasid Caliphate, and the collapse of the barbarian successor-states that established themselves, for their brief day, on the Caliphate's ruins? The explanation was to be found in the spiritual experience of the converts to Islam among the non-Arab subjects of the Caliphate in the Umayyad Age. 'Islam, which they had originally adopted mainly for external reasons [of social self-interest], struck root in their hearts as well, and was taken by them more seriously than by the Arabs themselves.'⁸ A religion which thus succeeded in winning loyalty in virtue of its intrinsic religious merits was not doomed to stand or fall with the political régimes which had successively sought to exploit it for non-religious purposes; and this spiritual triumph of Islam was the more remarkable considering that such exploitation for political ends had proved fatal to other higher religions and that Islam had thus been placed in jeopardy not only by its founder's successors but by Muhammad himself, when he had migrated

¹ For the successive conversions of the Western and the Eastern Chaghatāy to the Sunni form of Islam, see II. ii. 145.

² See III. iii. 429.

³ The bond of this friendship was a commercial one. The most lucrative export from the domain of the Golden Horde was the supply of slaves, drawn from the martial races inside and beyond the Golden Horde's borders, through which the Mamlūks of Egypt recruited their own ranks. The Golden Horde was finally converted to Islam in the reign of Uzbek Khan (*regnabat* A.D. 1312-40). The individual conversion of Uzbek's predecessor Baraqa Khan (*regnabat* A.D. 1256-66), like that of the Il-Khan Ghazan in 1295, had been a premature flash in the pan.

⁷ Wellhausen, *op. cit.*, p. 309.

from Mecca to Medina and had become a brilliantly successful statesman instead of remaining a conspicuously unsuccessful prophet.¹ In this *tour de force* of surviving its betrayal by its own founder, Islam had borne witness, through the ages, to the spiritual value of the religious message which Muhammad had brought to Mankind, and to the disinterestedness and sincerity of the messenger himself during the heart-breaking and hazardous thirteen years of his thankless mission to his own countrymen at Mecca.

Thus, in the history of the Caliphate, the carefully considered policy of the empire-builders in planting garrisons and colonies and regulating the transfer and intermingling of populations had the unintended and unexpected effect of expediting the career of a higher religion: and corresponding effects were produced by the same causes in the history of the Roman Empire.²

In the Age of the Principate the most conspicuously active conductors of religious influences were the military garrisons along the frontiers, and the religions that were propagated the most rapidly along these channels were the Hellenized Hittite worship of the 'Iuppiter' of Dolichê and the Hellenized Syriac worship of the originally Iranian divinity Mithras. We can follow the transmission of these two religions from the Roman garrisons on the Euphrates to those on the Danube, on the German *limes*, on the Rhine, and on the Wall in Britain, and the spectacle recalls the contemporary journey which the Mahāyāna, in the last stage of its long trek from Hindustan round the western flank of the Tibetan Plateau,³ was making from the Tarim Basin to the shores of the Pacific along the chain of garrisons guarding the frontier of a Sinic universal state over against the Nomads of the Eurasian Steppe. In the next chapter of the story the Mahāyāna succeeded in penetrating from the north-western marches of the Sinic World into the interior and thereby becoming the universal church of the Sinic internal proletariat⁴ and eventually one of the four principal higher religions of a latter-day Westernizing World. The destinies of Mithraism and of the worship of Iuppiter Dolichênus were more modest. Bound up, as they had come to be, with the fortunes of the Roman Imperial Army, these two military religions never recovered from the blow dealt to them by the Army's temporary collapse during the turbulent transition from the Augustan Principate to the Diocletianic Autocracy; and, as far as they had any permanent historical significance, it was as forerunners of Christianity and tributaries to the ever-growing stream of religious tradition fed by the confluence of many waters in the bed which Christianity dug for itself as it poured over the Roman Empire along a different channel.

While Iuppiter Dolichênus and Mithras used the frontier garrisons of the Roman Empire as their stepping-stones in a north-westward march which brought them in the end from the banks of the Euphrates to the Empire's opposite extremity on Tyneside, Saint Paul made a corresponding use of colonies planted by Caesar and Augustus in the

interior of the Empire as stations on the successive missionary journeys which culminated in his last voyage to Rome itself. On this first journey he sowed seeds of Christianity in the Roman colonies Antioch-in-Pisidia and Lystra;¹ and on his second in the Roman colonies Troas, Philippi, and Corinth as well, while on his third journey he revisited these and other scenes of his previous labours. Paul was, of course, far from confining his activities to places in which Roman colonies had been planted. In the course of his third missionary journey, for instance, he established his headquarters for two years at Ephesus and from that centre systematically evangelized the province of Asia.² Nor did all the Christian congregations founded by him in Roman colonies distinguish themselves particularly in the subsequent history of Christianity. Corinth, however, where Paul stayed for eighteen months³ when he revisited it on his second journey, continued to play an important part in the life of the Church in the post-Apostolic Age, and we may conjecture that the prominence of the Christian community here was due, not only to the unique geographical situation of Corinth at the cross-roads of overland and maritime lines of communication, but also to the cosmopolitan character of the settlement of Roman freedmen that had been planted here by Caesar.⁴ While the social origin of the population among which Paul had made his Corinthian converts goes far to explain the moral laxity with which the Apostle had to contend, we may also conjecture that the business ability and the world-wide connexions of this brood of twice-uprooted *déracinés* had something to do with the energy which the Church of Corinth displayed in the next chapter of its history.

The most signal example, however, of a Roman colony being turned to Christian account is not Corinth but Lyons, for the advance of Christianity from colony to colony did not come to a stop when it had reached the metropolis and did not cease with the death of Saint Paul. 'Never was the rise of a great city less accidental and less arbitrary than in the case of Roman Lyons.'⁵ Planted in 43 B.C. on a carefully chosen site, in the angle formed by the confluence of Rhône and Saône—a node of land and water communications that rivalled the situation of Corinth itself—Lugdunum was a Roman colony not only in name but in fact; and this settlement of Roman citizens of genuinely Italian origin on the threshold of the vast tracts of Gallic territory that had been added to the Roman Empire by Caesar's conquests had been designed to radiate Roman culture through this Gallia Comata as it had already been radiated through a Gallia Togata by the older Roman colony of Narbonne. Lugdunum, as we have seen, possessed the coveted *ius Italicum*⁶ and was the seat of the only Roman garrison between Rome itself and the Rhine.⁷ Moreover, it was not only the administrative centre of one of the

¹ It is uncertain whether the Roman colony planted at Iconium by the Emperor Claudius (*imperabat* A.D. 41–54) was in existence at the time of Paul's first or second passage through the place, but it must have been established by the date of his third missionary journey.

three gigantic provinces into which Gallia Comata had been divided; it was also the official meeting place of 'the Council of the Three Gauls', where the representatives of the sixty or more cantons comprised in these three provinces assembled periodically round an Altar of Augustus erected here by Drusus in 12 B.C.¹ In fact, Lugdunum had been deliberately called into existence to serve particularly important Roman imperial purposes. Yet by A.D. 177 this Roman colony had come to harbour a Christian community of sufficient vitality to provoke a massacre; and here, as elsewhere, the blood of the martyrs was the seed of the Church;² for it was as bishop of Lugdunum during the immediately following quarter of a century that Irenaeus—a Greek man of letters of possibly Syrian origin—worked out the earliest systematic presentation of Catholic Christian theology.

Thus, when the Principate, and the 'ascendancy' of which it was the instrument, collapsed in the third century of the Christian Era, the ultimate beneficiary of this political and social revolution was neither the insurgent mass of previously unprivileged Roman citizens nor the Diocletianic autocracy nor Iuppiter Dolichēnus nor Mithras but the Christian Church.

Christianity in the Roman Empire, Islam in the Caliphate, and the Mahāyāna in the Sinic universal state each took advantage of the garrisons and colonies installed by secular empire-builders for their own purposes; yet these unintended religious consequences of orderly redistributions of population were not so signal as those of Nebuchadnezzar's relapse into Assyrian methods of barbarism; for, in carrying Judah away captive, the Neo-Babylonian war-lord did not merely foster the progress of an existing higher religion but virtually called a new one into existence.

Ἄνδρες ἀνάσπαστοι, φύλον τάλαν, αἰνὰ παθόντες,
οὓς πάρος ἐκ ριζῶν Μῆδος ὑπερφίαλος
Ἀσσύριός τ' ἀγέρωχος ἀνέσπασε νηλεῖ θυμῷ,
χαίρετ'. ἐγὼ δ' ὑμῖν ὀψιγενὴς ἔταρος.
κάμῃ κατέπληξεν τοῖος μόρος· ἀλλὰ χαρῶμεν,
ἡμεῖς γὰρ Μεγαλοῦ φίλτατα τέκνα Θεοῦ.
ἡμεῖς τοῖο προφῆται· ἀπήμονας οὐκ ἐμύησεν
μάρτυρας ἀνθρώποις εἴλετο τοὺς τάλανας.

3. Provinces

The Mixture of Motives in the Minds of Imperial Authorities

Like the garrisons and colonies which the builders of universal states distribute over their dominions, the provinces into which they carve these dominions up have two distinct functions: the preservation of the universal state itself and the preservation of the society for whose body social a universal state provides the political framework. But, whereas in the installation of garrisons and colonies the function of maintaining

¹ See Arnold, *op. cit.*, p. 86.

² The passage in which this famous phrase of Tertullian's occurs has been quoted in V. vi. 202, n. 3.

the political supremacy of the empire-builders is, as we have seen, the predominant one, we shall find that, in the organization of provinces, the two functions play less unequal parts—though of course their relative weight will vary, *ad hoc*, according to the particular train of historical events through which a universal state has been brought into existence.

The alternative possible functions of an imperial province can be aptly illustrated from the histories of the Roman Empire and the British Rāj in India.

For example, the Roman provinces of Africa, Macedonia, and Bithynia-et-Pontus owed their origin wholly to the Roman State's concern for its own self-preservation. The Romans installed their own administration there not at all for the benefit of their new subjects, but in order to prevent the resurrection of three rival Powers—the Carthaginian Empire and the Kingdoms of Macedon and Pontic Cappadocia—which had proved such formidable and persistent antagonists of Rome that she did not feel her hard-won victory secure till she had erased them once and for all from the political map. On a similar reckoning, the ex-Carthaginian dominions in the Iberian Peninsula were organized into the two Roman provinces of Nearer and Farther Spain,¹ and the ephemeral conquests of King Tigranes of Armenia at the expense of the last of the Seleucidae into the Roman province of Syria, in order to make sure that these strategically important but politically derelict territories should not again fall into hostile hands. On the other hand, when the Romans accepted invitations to undertake the direct administration of the dominions of the client kingdom of Pergamum, and afterwards to take over Cyrenaica and Cyprus, which had been dependencies of the client kingdom of Egypt, they were tempted, no doubt, by the bait of immediate windfalls for the Roman Treasury and of future profits for Roman tax-farmers, investors, and traders; but, though their motives may have been self-seeking, they were in fact undertaking here a public service from which the previous local rulers were seeking relief because they no longer felt equal to continuing to discharge it themselves.

An element of public spirit in a larger cause than the direct political self-interest of Rome herself is less ambiguously apparent in the creation of the Roman province of Cilicia, which in its original extension embraced the fastnesses of all the wild highlanders of South-Eastern Anatolia. When the Romans had taken over the heritage which the last of the Attalids had bequeathed to them some thirty years before,² they had deliberately excluded these unremunerative and burdensome territories from their new province of Asia, and they had thereby created in the expanding no-man's-land between the south-eastern boundary of Roman Asia and the north-western boundary of the fast dwindling dominions of the expiring Seleucidae a breeding-ground for pirates who

¹ 'Why did the Roman Government, whose policy at that time evidently did not contemplate the acquisition of countries beyond the sea, not rid itself of so troublesome a possession? . . . They could not abandon Spain without putting it into the power of any adventurer to revive the Spanish empire of the Barcides' (Mommson, *Th.: The History of Rome*, English translation, vol. ii (London 1888, Bentley), p. 213).

² King Attalus III of Pergamum had died in 133 B.C.; the original Roman province of Cilicia was created in 102-101 B.C.

rapidly extended their activities all over the Mediterranean. The Roman Government's assumption of administrative responsibility for this uninviting no-man's-land that had become a pirates' lair was followed up by the Roman People's successive commissions to Publius Servilius, to Marcus Antonius, and to Pompey to sweep the pirates off the seas,¹ and this series of measures signified Rome's recognition and acceptance of imperial responsibilities. The same motive inspired the restoration of order in Cilicia and the subsidiary operations by which the Romans deprived the pirates of their insular stronghold in Crete and brigaded the island with Cyrene to form a single Roman province.² In the mind of Augustus a broad concern for the welfare of the Hellenic World as a whole was evidently combined with the narrower motive of providing for the military security of the Roman State when he extended the area of the province of Hispania Tarraconensis by subduing the wild highlanders of North-Western Spain, and when he carried the frontiers of the Empire up to the line of the Danube at the cost of saddling Rome with the responsibility for administering the vast ex-barbarian territories included in his new provinces of Rhaetia, Noricum, Pannonia, and Moesia.

Similar illustrations of the diversity of the functions that the provincial organization of a universal state may perform are afforded by the history of the British Rāj in India. While the annexations of territory at the expense of the Muslim war-lord Tipu Sahib of Mysore, the Marāthā states in the Deccan and Central India, and the Sikh principalities in the Panjab were mainly dictated by considerations of military and political security for the British Rāj itself, the annexations in the Ganges Basin, from Bengal to Delhi inclusive, were to some extent forced upon the British East India Company by the decay of the Mughal Empire; and, though no doubt the momentous British decision to take over the administration of Bengal was prompted, like the Roman acceptance of the bequest of the last Attalus, by the prospect of lucrative profits for British empire-builders, one of the effects of this self-seeking British act was to meet the Hindu World's need to be delivered from the anarchy that had arisen through the creation of a political vacuum in the place that the Mughal Empire had formerly occupied. Augustus's annexations of barbarian territory in the joint interests of the Roman Empire and the Hellenic World likewise find their counterpart in British annexations of tribal territory on the North-West frontier of India; and the risk of military disaster to which empire-builders expose themselves in their search for 'natural frontiers' is exemplified in the outcome of the First Anglo-Afghan War as well as in the results of Crassus's attempt to subdue the

¹ A Roman 'province' in the original meaning of a frontier command had been created in the western and northern fringes of this no-man's-land *circa* 102-101 B.C. (see Mommsen, Th.: *The History of Rome*, English translation, vol. iii (London 1888, Bentley), p. 140, n. *; *The Cambridge Ancient History*, vol. ix (Cambridge 1932, University Press), p. 442; Jones, A. H. M.: *The Cities of the Eastern Roman Provinces* (Oxford 1937, Clarendon Press), p. 202) and was called 'Cilicia' though it appears to have included neither Cilicia Tracheia nor Cilicia Pedias. Servilius received his commission in 79 B.C., Antonius his in 74 B.C., and Pompey his in 67 B.C.

² Cyrenaica was bequeathed to Rome by Ptolemy Apion in 96 B.C. and was definitively organized as a Roman province in 74 B.C. Crete was annexed in 67 B.C.

Parthians and Augustus's attempt to move the North-West European frontier of the Roman Empire forward from the Rhine to the Elbe.

While the histories of the Roman Empire and of the British Rāj in India thus indicate that the two main alternative functions of the provincial organization of a universal state are to maintain the supremacy of the empire-building Power and to fill a political vacuum arising in the body social of the disintegrating society through the destruction or collapse of its former parochial states, the relative importance and the reciprocal relations of the two functions vary widely from case to case.

There is, no doubt, a general tendency for the function of filling a vacuum to become increasingly important with the passage of time, as the memory—and the loyalty evoked by the memory—of the extinguished parochial states grows fainter, while those that have been allowed to survive as clients of the victorious empire-building Power are progressively rotted by the general process of social disintegration that is still creeping on under the veneer of an oecumenical peace. In the Roman Empire, for example, this tendency had resulted,¹ within a century of the establishment of the Augustan Peace at the Battle of Actium, in the conversion into provinces of all client states except three on the eastern frontier,² though it was a seldom broken tradition of Roman statesmanship³ to shrink from the burden of administering alien subject territories and to confine even unavoidable annexations to a minimum area.⁴ *Pari passu*, and this likewise against the grain of traditional Roman policy, the Roman Government found itself constrained, in the administration of its provinces, to leave less and less of the responsibility in the hands of local organs of self-government, and to take more and more of it upon the shoulders of the imperial civil service.⁵

This latter process likewise occurred in the administrative history of the British Rāj in India; on the other hand, the process of annexation did not take the same course here as in the history of the Roman Empire. While they were in the act of empire-building, the British conquerors of India showed less hesitation than the Roman conquerors of the Hellenic World in making sweeping annexations of territory and undertaking wide responsibilities for direct administration. The British-administered

¹ This point has been touched upon already on p. 58, above.

² The Nabataean Principality, Commagênê, and Armenia Minor.

³ The most flagrant breaches—in the shape of unprovoked annexations—were made by the radical imperialists who annexed Gallia Narbonensis in 120 B.C., by Caesar when he invaded and conquered the rest of Gaul, and by Trajan when he extinguished the Nabataean Principality, not, apparently, on account of any incompetence in the native administration, but because he wished to bring this territory under his own direct control as an overture to his ambitiously aggressive attack on the Parthian Empire. On the other hand, Trajan's creation of the new province of Dacia out of the conquered dominions of a dangerous enemy of Rome was in the same category as Pompey's creation of the province of Bithynia-et-Pontus.

⁴ For instance, the Roman province of Africa, within its original boundaries, did not include the whole of the former dominions of Carthage in North-West Africa; the western districts were given to Rome's client state Numidia. Similarly, when the Romans created their province of Asia out of the former dominions of the Attalids, they gave some districts to their surviving client states in Anatolia and left others derelict (see p. 164, above). Again, Pompey's new province of Bithynia-et-Pontus embraced only the semi-Hellenized western parts of the former dominions of Mithradates Eupator.

⁵ See pp. 58–60, above.

territories in India were expanded in three successive waves. The first wave (A.D. 1757-66) brought under British rule Bengal, Bihar, and the Northern Circars along the north-west shore of the Bay of Bengal; the second (A.D. 1790-1818) brought the Carnatic, the Upper Ganges Basin, and the Western Deccan; the third (A.D. 1843-9) brought the Indus Basin. In the course of this expansion, all other parts of India were lassoed in an encircling belt of British-administered territories and were reduced to the status of client states; and, under Lord Dalhousie's régime, the annexations of the client states of Satára in A.D. 1848, Jhansi in 1853, Nagpur in 1854, and Oudh in 1856 seemed to portend a rapid extension of direct British rule over the whole of the rest of the peninsula. On the other hand, after the mutiny of the Indian units in the British East India Company's Army in A.D. 1857-8, it became the general policy of the British Government of India to keep the surviving client states intact; and, though this new rule was not invariably observed, nevertheless the annexation of the Kingdom of Oudh, which had been reminiscent of the Roman Emperor Tiberius's annexation of the Kingdom of Cappadocia, was, after all, not followed up by the progressive extinction, *more Romano*, of the remaining Indian client states.

The extent to which the founders of a universal state are tempted to resort to the devices of annexation and direct administration as measures of insurance against the danger of a resurgence of the victorious empire-builders' defeated rivals depends, no doubt, on the degree of the loyalty and regret that the abolished parochial states continue to evoke in the minds of their own former masters and subjects after their overthrow by the empire-building Power; and this, in turn, depends on the pace of the conquest and on the antecedent history of the society in whose domain the universal state has established itself. Victorious empire-builders have most reason to fear a violent undoing of their work when they have established their rule at one stroke and when they have imposed it on a world of parochial states long accustomed to enjoy and abuse a status of sovereign independence.

In the Sinic World, for example, effective political unity was imposed for the first time (at any rate, in recorded history) by the empire-building state of Ts'in within a period of no more than ten years (230-221 B.C.). Within that brief span of time, King Chêng of Ts'in overthrew the six other till then surviving parochial states Han, Chao, Wei, Ch'u, Yen, and Ts'i,¹ and thereby became the founder of a Sinic universal state under the title of Ts'in She Hwang-ti. But, in bringing to this sudden end the long-drawn-out struggle for existence in which the contending states of the Sinic World had been engaged since the beginning of the Sinic Time of Troubles, Ts'in She Hwang-ti could not extinguish with equal rapidity the political selfconsciousness and *esprit de corps* of the former ruling elements in the six states that had survived, side by side with Ts'in, until this last swift round in the contest. The political reunification of the Egyptiac World by Mentuhotep, the ruler of the

¹ See Fitzgerald, C. P.: *China, A Short Cultural History* (London 1935, Cresset Press), p. 70, and Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), pp. 198-9.

march-state of Thebes who became the founder of 'the Middle Empire',¹ seems likewise to have been achieved by a sudden stroke;² and, here too, the victorious empire-builder and his successors had still to reckon with disaffection on the part of nomarchs who had been resubjected by force to an oecumenical authority without having ceased to regret the parochial independence which they had enjoyed in the anarchic sequel to, and reaction against, the inordinately centralized régime of 'the Old Kingdom'.³

The political unification, under the Napoleonic Empire, of the relics of an abortive Medieval Western city-state cosmos in Northern Italy, Western Germany, and the Low Countries⁴ was also rapidly accomplished, if we reckon that it was begun by the French Revolutionary armies that invaded the Southern Netherlands and the Rhineland in the autumn of A.D. 1792 and was completed on a raft in the River Niemen on the 25th June, 1807, at the personal encounter between Napoleon and the Russian Emperor Alexander I in which the two emperors partitioned between them the European end of the Old World; and, though the French empire-builders had little recalcitrance to contend with among the subjects of the statelets which they had suddenly and uncereemoniously swept out of existence, since the once exuberant political vitality of the city-states of Western Christendom had long since sunk into a coma, Napoleon felt his hold on these easily subjugated territories insecure so long as he had not finally disposed of the surrounding Great Powers that had been the peers and competitors of France in the pre-Napoleonic Balance of Power.

The Persian empire-builders who founded the Achaemenian Empire had to cope, like Ts'in She Hwang-ti, with persisting prior parochial loyalties, which flared up into energetic and widespread rebellion upon the assassination of Gaumata in 522 B.C.,⁵ when it might have been expected that an established oecumenical peace would have been accepted passively, if not actively welcomed, by populations who, for three hundred years, had had their parochial patriotism pounded out of them by unflagging blows from an Assyrian flail.

This identical problem of having to guard against a resurgence of parochial political feeling was handled by the empire-builders on similar lines in all four cases. They sought to break these traditional parochial loyalties by erasing the traditional parochial frontiers from the political map and replacing the overthrown parochial states by artificially created imperial provinces with new boundaries and a new administrative régime which would ensure the due subordination of the provincial governors to the central government of the parvenu universal state.⁶

¹ See I. i. 137 and 140, n. 2; II. ii. 112; IV. iv. 85; V. v. 267 and 530; and V. vi. 190.

² Possible evidences of the rapidity of Mentuhotep's rise to fortune are the indications (if these are the correct interpretations of the archaeological data) that, in the course of his reign, he changed his style and title and remodelled his mortuary temple on more sumptuous lines than those of the original plan (see Meyer, E.: *Geschichte des Altertums*, vol. 1, Part II, 3rd ed. (Stuttgart and Berlin 1913, Cotta), pp. 257-8; see further Winlock, H. E.: *The Rise and Fall of the Middle Kingdom in Thebes* (New York 1947, Macmillan), pp. 28-32).

³ See Meyer, op. cit., vol. cit., pp. 226-30 and 262-4.

⁴ See II. ii. 104; III. iii. 344-7; and V. v. 619-42.

⁵ See pp. 599-604, below.

⁶ These deliberately revolutionary redrawings of the political map are instances of

Administrative Policy in the Sinic Universal State

The issue was sharply formulated in the entourage of the Emperor Ts'in She Hwang-ti, and the radical solution was advisedly adopted by a personal decision of the Emperor, as the result of a clash between opposing schools of policy that has been dramatized by the historian Sse-ma Ts'ien in the form of a tournament of set speeches in the Imperial Council.¹ By whatever processes the issue may have been fought out, it is certain that the radical policy prevailed and that in 221 B.C. Ts'in She Hwang-ti ratified the redistribution of the whole territory of his newly established universal state, including not only the dominions of Ts'in's six former rivals and recent victims but also those of the victorious empire-building state as well, into thirty-six military commands (*chün*), which were each sub-divided into a number of prefectures (*hsien*).² Each military command had a civilian administrator as well as a military governor, and the prefectures were administered by civilian prefects.³

In applying this non-feudal provincial system to the whole of his empire, Ts'in She Hwang-ti was extending to the territories of the six states which he had just subjugated a régime that had been in force in his own ancestral state of Ts'in for more than a hundred years past. As far back as the year 350 B.C. the entire territory of Ts'in, within its frontiers at that date, had been redistributed into thirty-one *hsien* by the radical reformer Shang Yang.⁴ This recasting of the internal administrative map had been one of a number of interrelated political and social innovations which had transformed Ts'in from a feudal state of the same type as its contemporaries and rivals in the Sinic World into a centralized bureaucratic and almost 'totalitarian' state of a new pattern; and it had been this political reformation that had enabled Ts'in, from that time onwards, to gain the upper hand over its antagonists in the Sinic arena in a progressive series of successes which had culminated in Ts'in She Hwang-ti's own sensational and conclusive achievement of overthrowing

the psychological phenomenon of Futurism, which has been illustrated already in the political field in V. vi. 107-11.

¹ Renderings of this debate, as presented by Sse-ma Ts'ien, will be found in Fitzgerald, C. P.: *China, A Short Cultural History* (London 1935, Cresset Press), pp. 139-40; Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), pp. 229-30; Bodde, D.: *China's First Unifier: A Study of the Ch'in Dynasty as seen in the Life of Li Ssü* (Leiden 1938, Brill), pp. 78-79.

² These two units of non-feudal local administration under the direct authority and control of a central government were not new inventions of Ts'in She Hwang-ti's radical-minded minister Li Sse. They had been made use of in the administration of the former parochial states of the Sinic World from an early stage in the Sinic Time of Troubles. *Hsien* are first heard of in the State of Ts'in itself in 688 B.C., *chün* in the State of Wei (the successor-state of Ts'in) circa 400 B.C. *Hsien* may have originated as a form of administration for territories conquered by one of the Contending States from another, *chün* as military marches of Sinic states against their Eurasian Nomad neighbours. The radical innovation that was confirmed in 221 B.C. was not the invention of these two units of non-feudal administration but the sudden application to the whole of the Sinic World of a system of non-feudal administration, which had previously been exceptional, in place of a feudal system which had been the general rule (for these points see Bodde, op. cit., pp. 134-43 and 238-46).

³ See Bodde, op. cit., p. 135; Franke, op. cit., vol. cit., p. 230.

⁴ See Bodde, op. cit., p. 143. For this important statesman's life and work, see Duyvendak, J. J. L.: *The Book of Lord Shang* (London 1928, Probsthain).

six rival states in ten years and thereby unifying the Sinic World politically.

In assuming, however, that he could impose abruptly on the rest of the Sinic World a régime that was commended by its proven success in his ancestral state of Ts'in, Ts'in She Hwang-ti was leaving out of his reckoning certain significant differences between Ts'in and her defunct competitors. The statesmen who had carried out these sweeping local reforms in Ts'in with such successful results had been working on an exceptionally malleable human material. In the first place Ts'in was a march-state of the Sinic World,¹ and in the hard school of their perpetual struggle for existence against the outer barbarians the people of Ts'in had been broken in to adapting themselves to any social or technical innovations that might be necessary for securing their own survival. In the second place Ts'in, in virtue of being 'the Country within the Passes', was secluded by physiographical barriers from the rest of the Sinic World, and was culturally backward by comparison with the heart of the Sinic Society on the plains of the lower basin of the Yellow River.² Her relation to her western neighbours was like that of Macedon in the fifth and fourth centuries B.C. to the Hellenic city-states beyond the passes of Tempe and Volustana, or like that of Piedmont,³ in the medieval and early modern ages of Western history, to Lombardy, Venetia, the Romagna, and Tuscany. Like Macedon, Ts'in was culturally plastic, and she thus escaped the cultural ossification which overtook her more cultivated neighbours.

The peoples at the cultural centre of the Sinic World were naturally predisposed to idolize a culture of which they themselves were the principal originators and exponents, and they had latterly been encouraged in this foible by the philosophers of the Confucian school, whose founder had diagnosed the social sickness from which the Sinic Society was suffering in its Time of Troubles as being due to a neglect of traditional rites and practices, and had prescribed as the sovereign remedy a return to the supposed social and moral order of the early Sinic Feudal Age as idealized in retrospect by Confucius himself.⁴ This sentimental Confucian canonization of a half-imaginary past had made little impression on the people of Ts'in. The only one of the Sinic philosophical schools of the Confucian and post-Confucian Age that had made its influence felt effectively 'within the passes' was the irreverent ruthless school of the Legists, and it was this radical spirit that had inspired the work of the series of great statesmen from other parts of the Sinic World who had found their field for action in Ts'in, beginning with Shang Yang from Wei⁵ (*decessit* 338 B.C.), who had laid the foundations of Ts'in's greatness,⁶ and ending with Li Sse of Ch'u (*vivebat*

¹ See II. ii. 118.

⁴ See Fitzgerald, *op. cit.*, pp. 140-1.

⁵ i.e. the Wei which was one of the three successor-states of the former state of Tsin, though Shang Yang traced his ancestry back to the princely house of the older state of Wei, still nearer to the heart of the Sinic World (see Fitzgerald, *op. cit.*, p. 99).

⁶ See Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), pp. 183-4.

280-208 B.C.), Ts'in She Hwang-ti's minister, who had raised Ts'in to the pinnacle of power.

The sudden imposition of the institutions of this uncultivated and unfamiliar march-state of Ts'in upon Sinic communities who had been conquered by her through force of arms, without ceasing to regard her as a semi-barbarian stepdaughter of the Sinic family of cultivated peoples, was bound to arouse violent resentment among the *ci-devant* feudal aristocracy of the extinguished states. After having lost the power and status that had been theirs under the régime of parochial independence, they were now deprived of all hope of retaining some vestige of their former position through being taken into the service of the newly established Sinic universal state. In these days of their adversity and impotence, these *chün tze* rallied under the standard of the Confucian school of philosophy whose founder's theories and counsels had been ignored during his lifetime by their predecessors; but Ts'in She Hwang-ti's only retort to this *union sacrée* between the aristocratic and the philosophical devotees of conservatism was to take the offensive against philosophy as well as against feudalism. A petition from the conservatives for the re-establishment of feudal principalities under princes of the House of Ts'in seems to have given the occasion for the famous measure of cultural *Gleichschaltung* known as 'the Burning of the Books'.¹

In thus recklessly closing every safety-valve, Ts'in She Hwang-ti was inviting an explosion, and the first Ts'in emperor's death in 210 B.C. was followed in 209 B.C. by the outbreak of a general revolt, and in 207 B.C. by the capture of the capital of the Ts'in empire² and extinction of the Ts'in dynasty itself by one of the rebel leaders, Liu Pang.³ Ts'in She Hwang-ti's radicalism had thus defeated its own ends; yet this victory of the violent reaction against the revolutionary work of the founder of the Sinic universal state did not, after all, result in a restoration of the *ancien régime*. It was significant that both Ch'êng Shê, the bold initiator of the revolt, and Liu Pang, the rebel who gave the Ts'in Power its *coup de grâce* by capturing its capital, were peasants from outlying southern provinces,⁴ not feudal aristocrats from the centre of the Sinic World; and, in the subsequent struggle among the victorious rebels for possession of the spoils of their joint victory, the peasant Liu Pang again emerged as the victor over his cultivated aristocratic opponent Hsiang Yü, whose ancestors had held an hereditary office in the military hierarchy of the former parochial state of Ch'u.

Liu Pang, unlike either Hsiang Yü or Ts'in She Hwang-ti, succeeded

¹ The connexion is pointed out by Fitzgerald, op. cit., p. 141. 'The Burning of the Books' has been cited already in this Study, as an illustration of Futurism, in V. vi. 111.

² The seat of government had remained at Hsien Yang, the city 'within the passes' that had been the parochial capital of Ts'in before her conquest of the rest of the Sinic World in 230-221 B.C.

³ In this context English students of history will recall that the restoration of the monarchy in England in A.D. 1660 followed within two years of Oliver Cromwell's death and within five years of his remapping of the Kingdom, in A.D. 1655, into ten military commands under major-generals in place of the traditional feudal organs and institutions of English local self-government.

⁴ Ch'êng Shê (*alias* Ch'êng Shêng) was a native of the former state of Ch'u in the Middle Yangtse Basin; Liu Pang came from a coastal district, north of the mouth of the Yangtse, in the northern part of the latter-day province of Kiangsu.

in founding a stable and enduring régime because he did not attempt to re-establish either the anachronistic feudal order or Ts'in She Hwang-ti's revolutionary substitute for it. Liu Pang's policy was to feel his way gradually towards Ts'in She Hwang-ti's Caesarean goal through an Augustan semblance of compromise.

In the short interval between the collapse of the Ts'in Power in 207 B.C. and the general recognition of Liu Pang as sole master of the Sinic World in 202 B.C. the experiment of attempting to restore the *ancien régime* had been tried and proved unworkable.¹

Under Hsiang Yü's auspices, a legitimate scion of the House of the former parochial state of Ch'u had been invested with the oecumenical style and title and ceremonial prerogatives of the ancient Imperial House of Ch'ou, which Ts'in She Hwang-ti's grandfather had suppressed in 256-249 B.C.; and the other extinguished states, with the exception of Ts'in, had likewise nominally been restored. In order to make sure that Ts'in should not again establish its domination over the rest of the Sinic World, it had been broken up, as a measure of security, into four fragments.² Three of these, covering between them the ancient domain of the state, had been granted to high officers of the Ts'in army who had deserted to Hsiang Yü in good time. The fourth, consisting of recently annexed ex-barbarian territories on the north-western fringes of the Yangtse Basin (in the latter-day provinces of Southern Shensi and Szechuan) had been assigned by Hsiang Yü to Liu Pang as a scurvy reward for his embarrassingly valuable services.³ Naturally the other rebel leaders had also had to be rewarded with grants of territory, and these new lordships had had to be carved out of the historic dominions of the nominally restored states of the previous era. The parvenu warlords, as well as the restored representatives of the old houses, had taken the title of king (*wang*), and the king-maker, Hsiang Yü, had styled himself 'suzerain king' (*pa wang*), with the intention of managing this travesty of the pre-Ts'in dispensation in the name of the nominal emperor of the parochial House of Ch'u.

This makeshift arrangement had been neither a genuine restoration of the old régime nor an alternative instrument for furnishing the Sinic World with the sorely needed oecumenical peace that Ts'in She Hwang-ti had effectively provided at an exorbitant price. On the surface the cause of the immediate breakdown of Hsiang Yü's attempt at a settlement had appeared to be the personal antagonism between Hsiang

¹ For the details see Franke, op. cit., vol. cit., pp. 257 and 259-61; Fitzgerald, op. cit., pp. 149-50.

² Compare the Romans' experiment of breaking up the Kingdom of Macedon into four autonomous republics in 167 B.C., after the Third Romano-Macedonian War (see Livy, Book XLV, chaps. 29-30). It was not till after the Macedonian insurrection of 149-148 B.C. that the Romans resigned themselves to the necessity of converting Macedon into a province under direct Roman administration.

³ As this new 'Kingdom of Han' (so called after the Han River which flows into the Yangtse at Hankow) lay 'within the passes', Hsiang Yü was nominally honouring the preliminary agreement that had been made between the restored King of Ch'u and the rebel leaders that whichever of the latter should be the first to penetrate the passes and overthrow the Ts'in Power on its home ground should become King of 'the Country within the Passes'. Liu Pang had qualified for winning this prize by his capture of Hsien Yang, and by rights he should have received the entire territory of the state of Ts'in within its frontiers of 230 B.C., and not merely an outlying semi-barbarian march.

Yü and Liu Pang. A deeper cause had been the bankruptcy of the old feudal aristocracy who had been the mainstay of the historic parochial states. They had not only been decimated in the particularly murderous last round of fratricidal wars that had ended in the victory of Ts'in over all her competitors; their spirit had been further broken by Ts'in She Hwang-ti's subsequent massacres and deportations;¹ and, above all, they had been discredited in the eyes of the vast peasant majority of the population of the Sinic World by the plight to which the anarchy of the Contending States had brought the Sinic Society in the last phase of its Time of Troubles.

With both Ts'in She Hwang-ti's and Hsiang Yü's failures in mind, Han Liu Pang and the succeeding emperors of his dynasty followed a Fabian policy of hastening slowly.² In the first act Liu Pang duly conferred fiefs on his most deserving lieutenants, and even left undisturbed the existing fief-holders of Hsiang Yü's régime who had managed to come to terms with the victor. But, one by one, the enfeofed generals were degraded and put to death, while other fief-holders were frequently transferred from one fief to another and readily deposed, without ever being given a chance of establishing any dangerously close personal relation with their temporary subjects. In 144 B.C. Liu Pang's successor Hsiao Ching changed the law of succession for fief-holders by abolishing primogeniture and decreeing that their fiefs should be divided among their sons, and the consequent rapid subdivision of their domains reduced them to final impotence.

Meanwhile Liu Pang had taken effective measures for maintaining and progressively increasing the preponderance of the Imperial Power. The parochial kingships, though they were now no more than shadows of their former selves, were strictly reserved, nevertheless, for members of the Imperial House; the entire 'Country within the Passes' was kept by the Emperor under his own direct administration; and, in the rest of the Han Empire, he retained enough of Ts'in She Hwang-ti's provincial organization to reduce the autonomous kingdoms and fiefs to the position of dwindling enclaves within a steadily expanding network of imperial provinces. Thus, in effect, Ts'in She Hwang-ti's ideal of a universal state controlled from the centre through a hierarchy of artificially mapped out units of local administration was once more translated into fact within a hundred years of Ts'in She Hwang-ti's death; and this time the achievement was definitive, because the Fabian statesmanship of Han Liu Pang and his successors had given the Imperial Government time to create the human instrument for lack of which the first Ts'in emperor's grandiose design for an oecumenical provincial organization had come to grief.

A centralized government cannot be operated without a professional civil service, and, in contrast again to Ts'in She Hwang-ti,³ the Han Dynasty succeeded in building up a civil service that was acceptable,

¹ See pp. 116-17, above.

³ See pp. 351-3, below.

and therefore effective,¹ by entering into an alliance with the Confucian school of philosophy, which had originally associated itself with the feudal régime and had been driven still farther in that direction by Ts'in She Hwang-ti's intransigence.² The failure of Ts'in She Hwang-ti's régime had discredited the Legist school of philosophy, in whose spirit it had been conceived, without rehabilitating the prestige of the Confucian advocates of the old feudal order, and Han Liu Pang, who shared the anti-Confucian feelings of Ts'in She Hwang-ti, inclined, during the *laissez faire* overture to his long-term policy, towards the passive philosophy of Taoism.³ Yet, before the close of his reign, Liu Pang (*imperabat* 202-195 B.C.) had thought better of his earlier hostility towards Confucianism and had himself initiated⁴ that *rapprochement* between the Han Dynasty and the Confucian School which was consummated when his successor Wuti (*imperabat* 140-87 B.C.) made the somewhat debased Confucianism of the day into the official philosophy of the Sinic universal state.⁵

Han Liu Pang and his successors weaned the Confucian philosophers from their former alliance with the old narrow military aristocracy of birth by opening the public service to a new and broader-based aristocracy of cultural merit as measured by proficiency in the Confucian lore. This historic innovation was introduced in a decree promulgated by Liu Pang in 196 B.C.⁶ The result was the creation of a new class of public servants—the Confucian litterati—with as strong a vested interest in the preservation of the Empire of the Han as the hereditary feudal nobility had had in the maintenance of the former parochial states. The transition was made so gradually and was managed so skilfully that the new aristocracy inherited the old aristocracy's historic appellation—*chün tze*—without any overt recognition that a momentous social and political revolution was taking place.

Administrative Policy in 'the Middle Empire' and in 'the New Empire' of Egypt

Our relatively abundant information about the vicissitudes of the political struggle which ended in the definitive victory of bureaucracy over feudalism in the Sinic World may help us to piece together the fragmentary surviving record of the similar struggle, in the Egyptian World, between the nomarchs and the central government of 'the Middle Empire'.

There is, to begin with, a remarkable parallel between the external careers of the respective founders of the Sinic and the Egyptian universal state, Ts'in She Hwang-ti and one of the Mentuhoteps. Either achieved a dramatic personal success—starting as the ruler of a parochial principality and ending as an oecumenical emperor. Both of them enjoyed long reigns: Ts'in She Hwang-ti was on the throne for thirty-six

¹ For the details see Franke, op. cit., vol. cit., pp. 272-6; Fitzgerald, op. cit., p. 153. See also the present Study, pp. 355-7, below.

² See p. 171, above.

³ See the passage from a paper by Dr. Hu Shih quoted in V. v. 418.

⁴ See the anecdote quoted from Hu Shih, op. cit., in V. v. 654.

⁵ See V. v. 655.

⁶ German translation in Franke, op. cit., vol. cit., pp. 274-5.

years (246–210 B.C.) all told, and this Mentuhotep for fifty-one (*circa* 2061–2010 B.C.).¹ Yet their deaths were followed, after brief intervening reigns of one or two nonentities, by the extinction of their houses and the foundation of new dynasties;² and thus, in spite of achievements that might have been expected to make the fortune of the empire-builder's race for many generations to come, either monarch was virtually the last of his line. This apparent paradox is explained in Ts'in She Hwang-ti's case by the known facts that have been considered above; and, on this analogy, we might hazard the guess that a Mentuhotep brought the same catastrophe upon his house by making the same mistake of trying to force the pace too fast in asserting the authority of his newly established oecumenical government over the defeated yet still formidable representatives of a previous parochial régime. At any rate, we find the founder of the succeeding Twelfth Dynasty Amenemhat I (*imperabat circa* 1991–1962 B.C.) and his successors apparently avoiding a frontal attack on the status of the parochial nomarchs, yet at the same time working steadily to reduce their power by stages.

The deposition of particular nomarchs who found themselves on the losing side in the civil war through which Amenemhat I appears to have won the Imperial Crown³ may have set a precedent for his subsequent practice of overriding the customary right of hereditary succession and transferring the government of nomes from the old princely houses to his own nominees.⁴ Historic families that retained their principalities were tactfully allowed to save their face by keeping up their state, and the most magnificent of their tombs are the last in the series.⁵ But Modern Western archaeologists had not discovered any such tombs that were of later date than the reigns of Senwosret II (*imperabat circa* 1897–1879 B.C.) and Senwosret III (*imperabat circa* 1878–1843 B.C.), and the inference was that the power of the nomarchs had been finally broken, at the latest, by the reign of Amenemhat III (*imperabat circa* 1842–1797 B.C.). The administrative vacuum created by this progressive reduction in the power of the nomarchs was perhaps⁶ filled by the organization of 'the Middle Empire' into three provinces: 'the North' embracing the Delta, 'the South' embracing the Nile Valley from the head of the Delta to the northern boundary of the Theban march, and 'the Head of the South' embracing the Theban march itself within the boundaries of the principality which Mentuhotep had inherited from

¹ See Winlock, H. E.: *The Rise and Fall of the Middle Kingdom in Thebes* (New York 1947, Macmillan), p. 22. This Mentuhotep's conquest of Heracleopolis—which had the effect of uniting the Egyptian World, as the Sinic World was united by Ts'in She Hwang-ti's conquest of Ts'i in 221 B.C.—is dated 1252 B.C. by Winlock in *op. cit.*, p. 28. Winlock's reconstruction of this passage of Egyptian history is commended by J. A. Wilson in *The Burden of Egypt* (Chicago 1951, University of Chicago Press), p. 127. On the other hand, E. Drioton and J. Vandier, in *L'Égypte* (Paris 1946, Presses Universitaires de France), pp. 234 and 271–2, contest the identification of a Nebhaptre Mentuhotep who united the Egyptian World with a Nephherure Mentuhotep who enjoyed a long reign over an Egyptian universal state.

² Compare the similar sequels to the deaths of Alexander the Great and Oliver Cromwell.

³ See Meyer, E.: *Geschichte des Altertums*, 3rd ed., vol. i, Part II (Stuttgart and Berlin 1913, Cotta), p. 265.

⁴ See *ibid.*, p. 269.

⁵ See *ibid.*, p. 276.

⁶ Eduard Meyer's reconstruction, followed here, had been challenged by some later scholars.

his forebears before he had brought the rest of the Egyptiac World under his rule.¹

When this Mentuhotep's empire-building work was repeated some five hundred years after his day by the founder of 'the New Empire', Amosis, the seat of power, which the Twelfth Dynasty had quickly transferred from Thebes to the neighbourhood of Memphis, remained this time at Thebes for two hundred years,² and this different location of the political centre of gravity seems to have been reflected in a difference in the grouping of provinces. Under 'the New Empire' two out of the three former provinces of 'the Middle Empire', the Delta and the Nile Valley to the north of the Theban march, which had been united under the rule of the Hyksos, were perhaps brigaded by their Theban 'liberators' in a single province governed by 'the Intendant of the North' or 'of Memphis', while the Theban march was placed under an officer of equal rank, styled 'the Intendant of the Southern Capital', and was divided, perhaps for symmetry's sake, into two sub-provinces, one to the north of the imperial city and the other to the south of it.³

Administrative Policy in the Napoleonic Empire

The Napoleonic Empire was overthrown by external forces at so early a stage of its existence that there was little time for the consequences of Napoleon's internal administrative policy to begin to work themselves out. This policy was identical with Ts'in She Hwang-ti's. Starting his career by becoming the ruler of an empire-building parochial state, and finding the home territory of this state newly remapped into artificial administrative divisions in place of the historic territorial units of a past feudal age, Napoleon proceeded to remap the Belgian, Dutch, German, Italian, and 'Illyrian' territories that had been annexed to France outright, or been externally associated with her like the Napoleonic Kingdom of Italy, into departments on the pattern of those of Revolutionary France herself. Before the reaction to this drastic policy had time to declare itself, the Napoleonic Empire came to a premature end because Napoleon was not content with the immense achievement of having won for France that hegemony over the derelict domain of an abortive Medieval Western cosmos of city-states⁴ for which she had been contending inconclusively with the other Great Powers of an Early Modern Western World for some three hundred years past.⁵

Napoleon insisted on setting France the further and more formidable task of establishing her supremacy over the whole of an expanding Western World that had come to include the overseas economic dependencies of Great Britain in one direction and the continental hinterland of the Russian Empire in the other; and this task proved too heavy for

¹ For these three provinces, see Meyer, *op. cit.*, vol. cit., pp. 274-5. The march-state of Thebes in the Egyptiac World, like the march state of Ts'in in the Sinic World, had played no part in the history of the civilization during its growth stage and had emerged from its original obscurity only in the course of a Time of Troubles which it had eventually brought to an end by imposing its own rule upon all its rivals.

² See pp. 215-16, below.

³ See Meyer, E.: *Geschichte des Altertums*, vol. ii, Part I, 2nd ed. (Stuttgart and Berlin 1928, Cotta), pp. 59-60. This reconstruction, too, had subsequently been challenged.

⁴ See III. iii. 344-7.

⁵ See III. iii. 311 and IV. iv. 283.

France's strength.¹ We are left to conjecture whether, in the Napoleonic Empire, the same revolutionary administrative policy would have provoked the same explosive reaction as in the empire of Ts'in She Hwang-ti if Napoleon had not brought his empire to grief by invading Russia in A.D. 1812; and, in the nature of the case, such facts as we have to go upon are insufficient to yield us a conclusive answer; yet, such as they are, they do strongly suggest—for a reason that has been considered at earlier points in this Study²—that, even if the Napoleonic Empire had avoided bringing destruction on itself at the hands of foreign Powers, it would have failed sooner or later to secure the acquiescence of its non-French subjects in a thoroughgoing administrative assimilation of the annexed or dependent territories to the French core of the Napoleonic body politic.

The governing fact in the situation was that France herself was not one of those dead-alive successors of the city-states of Medieval Western Christendom which she had just succeeded in gathering together under her rule; the vigour and enterprise which France had displayed in this notable piece of empire-building work were characteristic of the lively Modern Western World in which these mouldering débris of an unsuccessful medieval experiment were embedded. Napoleonic France was a member of this wider and more energetic society, and her membership in it not only led her on into over-ambitious military adventures that resulted in the loss of her newly established dominion over a smaller and tamer world; it also made France the carrier of Modern Western political ideas and ideals that ran clean counter to the spirit and objective of her empire-building enterprise.

The political service that France was performing for the wreckage of an abortive new order in Medieval Western Christendom, which had missed its destiny and broken down as far back as the fourteenth century, was to build the fragments of that shattered world into a universal state; and this service was not unacceptable to Germans, Flemings, and Italians of the generation and outlook of Goethe, who felt themselves stifled by the atmosphere of a Frankfurt, Bruges, or Venice in decay and were eager to escape from it by becoming citizens of the World, without shedding a tear over the extinction of decrepit statelets whose parochial independence had long since lost all meaning and value for their subjects. On the other hand, the political gospel to which France had given her own allegiance, and which she was preaching to her non-French subjects by example, was not Oecumenicalism but Nationalism, and this was the political lesson that the younger generation of Germans, Italians, and Belgians learnt—through both attraction and repulsion—from their intercourse with the very Frenchmen who were the agents of French imperialism. The portent of the German national uprising against French imperial rule in A.D. 1813 makes it evident that, even if the Napoleonic Empire had escaped or survived Napoleon's Russian adventure, the uniform departmental organization of the Napoleonic French administration would have provoked—in the name of the very principles of the French Revolution—the same disruptive national

¹ See V. v. 626-33.

² In IV. iv. 283-4 and V. v. 633-42.

movements that were to break a post-Napoleonic Hapsburg hegemony over Italy and Germany within little more than half a century after the Battle of Leipzig. Indeed, the nationalist reaction against a continuance of the drastic process of absorption into the French body politic might have been more vehement than the actual reaction in the 'liberated territories' against a rickety post-Napoleonic restoration of a sluggish *ancien régime*.

Administrative Policy in the Achaemenian Empire

In the administrative history of the Achaemenian Empire the sequence of policies was the inverse of the course of events in the Sinic universal state under the successive régimes of Ts'in and Han. The policy of the first founder, Cyrus II, was not unlike that of Han Liu Pang. He styled his empire 'the Realm of the Lands', and he made it his endeavour to reconcile the conquered peoples to Achaemenian rule by governing each of them as far as possible, at least in outward form, through its own peculiar political institutions.¹ Even the demonic Cambyses, who rode rough-shod over the Egyptians' religious susceptibilities, showed extreme consideration towards the Phoenicians.² This policy of deliberate administrative *laissez faire* was proved inadequate by the widespread and obstinate insurrections that broke out in 522 B.C. at the news of the assassination of Cambyses' successor on the imperial throne, who had professed himself to be Cambyses' brother Smerdis; for Smerdis had been the last male representative of the Cyran branch of the Achaemenidae; and, when the assassin Darius, representing the Ariaramnan branch of the house, had succeeded in restoring order and re-establishing the Empire at the cost of almost superhuman exertions, he sought to insure himself and his successors against a repetition of a catastrophe in which the Empire had all but perished by organizing his dominions, behind the façade of the Cyran dispensation, into twenty artificial taxation districts³ under central control.

The easy-going genius of the Achaemenidae refrained from pushing this new Darian dispensation to the degree of uniformity and centralization that was aimed at in the departmental organization of the Napoleonic Empire or in the network of *chiün* and *hsien* into which the Sinic World was remapped by Ts'in She Hwang-ti. Though Darius's successor Xerxes put an end to the constitutional existence of the Babylonian monarchy in form as well as in fact by refusing to repeat, on New Year's Day 484 B.C., the annual ceremony of 'taking the hands of Bel' that was the traditional warrant and sanction of legitimate sovereignty over Marduk-Bel's city,⁴ Darius and his successors were as careful as the

¹ See p. 582, below.

² As is illustrated by the anecdote quoted on p. 140, n. 2, above.

³ This was the original number according to the list in Herodotus, Book III, chaps. 80-94. See further pp. 582-4, below.

⁴ See Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), pp. 129-30, cited in the present Study, V. v. 123, n. 2. Darius himself had long-sufferingly observed the traditional procedure, in spite of Babylon's having revolted twice during the period of anarchy after Cambyses' death. Xerxes' deliberate discontinuance of the traditional rite was followed immediately by the third and last revolt of Babylon against Achaemenian rule.

Ptolemies and the Caesars were, after them, to rule Egypt in the style of a legitimate Pharaoh;¹ and, though, in the interior of the empire as reorganized by Darius, Cilicia² was the only surviving client state that was allowed to retain a juridical status of sovereign independence,³ there were many smaller principalities, temple-states, and city-states that retained their autonomy as enclaves within the territories under direct administration. Indeed, within the taxation district labelled 'Athurā' ('Syria'), the Phoenician city-states were invested with minor empires of their own.⁴

It was likewise characteristic of the spirit of the Achaemenian régime that the viceroys (satraps) retained extensive powers even under the stricter Darian dispensation.⁵ An imperial secretary who presumably reported direct to the Central Government was, however, attached to each of them⁶ and appears to have been a member, *ex officio*, of the provincial council, mainly consisting of local Persian notables, whose concurrence the governor had to obtain in the more important of his acts of state. Moreover, in some of the more inveterately nationalist-minded viceroyalties—e.g. in Media, Armenia, Babylon-cum-Beyond the River, and West Anatolia—the likelihood of either a traitorous viceroy or an insurgent pretender being able to carry the whole country with him must have been decidedly diminished by the dissection of these four viceroyalties into four, three, two, and two taxation districts respectively.⁷

Administrative Policy in the Arab Caliphate

In contrast to the four instances, examined above, in which a provincial organization was introduced in a universal state as a means of combating persistent parochial opposition to the establishment of an oecumenical régime, a classical example of the opposite situation, in which a provincial organization was required for the filling of an administrative vacuum, is afforded by the Arab Caliphate. The Arab conquests were comparable, in point of speed, to Ts'ing She Hwang-ti's, Mentuhotep's, Napoleon's, and Cyrus's; for it took the Arabs only nineteen years (A.D. 633–51)⁸ to conquer the whole of the Sasanian Empire up to Merv, inclusive, on the north-east, as well as not much less than half of the surviving dominions of the Roman Empire up to

¹ It must be added that the tactfully treated Egyptians remained as irreconcilable to Achaemenian rule as the unceremoniously treated Babylonians.

² Erroneously reckoned in the Herodotean list as the fourth taxation district. The effects of this error on Herodotus's presentation of the administrative geography of the Achaemenian Empire are discussed on pp. 594–7, below.

³ Beyond the frontiers of the territory under direct imperial administration there were friendly peoples in treaty relations with the Imperial Government who were allowed to retain a juridical status of equality with their imperial ally in consideration of their service to the Empire in screening it from the assaults of outer barbarians. Two such allied peoples were 'the Hauma(?)drinking Saka' in Farghānah and the Arabs astride the road up the Euphrates from Babylonia to Syria and along the shore of the Mediterranean Sea from Syria to Egypt (see pp. 644–5 and 658–9, below).

⁴ See V. v. 123, n. 2.

⁵ For their powers and functions see Meyer, *op. cit.*, vol. cit., pp. 52–54.

⁶ See p. 82, above.

⁷ See pp. 582–3, below.

⁸ The Arab conquests are here reckoned to have begun with the campaigns of A.D. 633, and not with the reconnaissance of A.D. 629 which ended so disastrously for the Muslims at Mu'tah.

the Amanus Range on the north and up to the approaches to Carthage on the west.¹ Yet, in spite of the abruptness of the imposition of their rule, the Arab empire-builders were not confronted with any widespread vigorous movements to restore pre-existing régimes.²

The Arabs' administrative task was easy in this respect because the vast populations which they had so swiftly subjugated had by that time been broken in by more than eleven centuries' experience of being ruled by successive foreign empire-builders,³ till they had grown accustomed to submitting passively to any new masters who might assert their title to rule by overthrowing their predecessors. Moreover, throughout this long period of time in most parts of this wide area, the dominant tendency had been for local self-government and parochial autonomy to give place to direct imperial rule, and this imperial administration itself had tended to become more and more centralized. This tendency had been only partially and temporarily counteracted by the break-up of the Achaemenian Empire and the planting of autonomous city-states on provincial territory by the successors of Alexander and by the Romans in their wake. The Sasanian Persian and Diocletianic Roman régimes which were the Arab Caliphate's immediate predecessors had been more highly centralized, not only than their own respective immediate predecessors the Arsacid hegemony and the Roman Principate, but than any of the other imperial régimes that had followed one another in South-West Asia and Egypt since the days of the Achaemenidae. Thus the mapping out of the Arab Caliphate into provinces was called for, not to meet the challenge of any rival political order, but to carry on an oecumenical system of government which, in virtue of its long monopoly, was the only practical possibility in the field. It is not surprising that the provincial organization of this resuscitated Syriac universal state should have borne, in its best days under the early 'Abbasid Caliphs, a striking resemblance to the provincial organization with which the original Syriac universal state had been endowed by Darius the Great.⁴

¹ Carthage itself was momentarily occupied by the Arabs for the first time in A.D. 697 and was not definitely conquered by them till perhaps as late as A.D. 703, though they had established themselves in Tripolitania as early as A.D. 647 (see Becker, C. H.: *Islamstudien*, vol. i (Leipzig 1924, Quelle & Meyer), p. 118).

² Successful resistance to the imposition of Arab rule was put up only in a few natural fastnesses: in the ex-Sasanian territories between the Elburz Range and the south coast of the Caspian Sea; in the coastal highlands of Syria; and, after the later Arab conquest of the Visigothic successor-state of the Roman Empire in the Iberian Peninsula, in a strip of territory between the Asturian Mountains and the south coast of the Bay of Biscay which was a miniature counterpart of Daylam and Tabaristan (the geographical similarity of these two regions has been noticed already in II. ii. 446-7). The most sensational of these resistance movements was that of the Mardaïtes in Syria, who managed to hold their own within short range of the four or five Arab cantonments there and within a stone's throw of the Umayyads' capital city, Damascus, itself. The Mardaïtes, however, seem to have drawn their strength and their *moral* largely from the support which they received from the Roman imperial authorities. Their movement was one of infiltration from a base in unconquered Roman territory, and they were sufficiently under the Roman Government's control for it to be able to undertake to withdraw them as part of the *modus vivendi* into which it entered with the Caliph 'Abd-al-Malik in A.D. 688.

³ Reckoning from the date of Darius's administrative reorganization of the Achaemenian Empire in the last quarter of the sixth century B.C.—but Syria and Egypt had had a still longer training in the hard lesson of political submissiveness (see V. v. 118 and IX. viii. 90-97).

⁴ A statistical comparison of the areas and assessments of the provinces of the 'Abbasid

Financial Functions of Provinces

A synoptic view of the provincial systems of the divers universal states that have come under consideration in the present chapter brings to light three main functions—a financial, a judicial, and a military—for which a province may serve as the local agency of an oecumenical government. The relative importance of these different functions will be found to vary widely from case to case, in accordance with historic differences in the policies of the respective empire-builders, in the degree of their ability to carry their policies into effect, and in the temper and traditions of their subjects; and there are cases in which one or more of these normal functions has been altogether in abeyance.

The essential and never dormant function is the financial one. Even the Primitive Muslim Arab conquerors of Roman and Sasanian territory, barbarians though they were, appreciated from the outset the importance, in their own interests, of maintaining as a going concern the existing financial administrative machinery—built up gradually through a continuous practice extending over many generations—of surveys, censuses, assessments, collections, and, above all, trained personnel for carrying all these administrative procedures out. Accordingly the Arabs left undisturbed at their posts the host of inland revenue officials whom they found in operation on either side of the former Romano-Persian frontier; and they wisely allowed them to continue to keep their books in Greek and Pehlevi till the reign of the Caliph 'Abd-al-Malik (*imperator* A.D. 685–705),¹ by when the lapse of half a century had made the conquerors' language and alphabet sufficiently familiar to their subjects to make it possible to transpose the official book-keeping into Arabic without throwing the financial service into confusion and bringing the collection of revenue to a standstill.²

Yet, although the provincial organization of a universal state seems always to be used for some financial purpose, the respective roles of the provincial administration and the central government in the control of finance vary within very wide limits. In both the Arab Caliphate and its prototype the Achaemenian Empire each province was financially autonomous. The provincial government not only carried out the collection of all revenue within its own boundaries; it retained, for provincial use, all receipts beyond a fixed tribute payable to the imperial treasury. On the other hand the financial administration of the British Indian Empire and the Roman Empire was highly centralized, and the imperial treasury here kept in the hands of its own revenue service both the collection of revenue in the provinces and the payment of charges for provincial administration—thus using the provinces as mere organs of the central government for financial purposes.

Caliphate, as recorded by the classical Arab geographers, with those of the taxation-districts of the Achaemenian Empire, as recorded by Herodotus, might yield interesting results.

¹ See V. v. 501, with n. 3, and p. 242, below, where an error in vol. v, p. 501, n. 3, is corrected.

Judicial Functions of Provinces

The judicial function of provincial governors had likewise varied in importance. This was a prominent feature of a provincial governor's duties in both the Achaemenian and the Roman Empire. Indeed, in the acts of Christian martyrs, in which this aspect of a Roman provincial governor's duties is in the foreground in the nature of the case, the governor is frequently referred to simply as *iudex*. In the government of British India the criminal law was administered, above the level of the petty cases dealt with by village headmen or *panchayats*, by salaried magistrates who, *more Romano*, were usually revenue and administrative officers as well as judges; but civil law at the same level, and criminal as well as civil law at all levels higher than that, was here administered, in accordance with a principle already established in the government of the United Kingdom, by a judiciary separate from, and independent of, the administrative service.¹ Even in the loosely organized Achaemenian Empire there appears to have been a bench of imperial judges whose importance in the scheme of imperial government is indicated by the facts that they were recruited from the leading Persian noble houses and that, if they were discovered to have taken bribes, they were arraigned before the Emperor himself and were punished by him with the utmost severity.² In the Roman Empire, again, the judicial discretion of a provincial governor in cases to which Roman citizens were parties was limited by the citizens' right of appeal to Caesar; and this procedure had the curious result that the Praetorian Prefect, who had originally been simply the Commander of the Emperor's bodyguard, in course of time became the president of a central court of final appeal through which the Emperor's prerogative was exercised.³ Under the Diocletianic constitution this court of appeal was decentralized like the imperial office itself, and the Empire was divided into four praetorian prefectures, each presided over by a prefect of its own who had the last word in all judicial business within his area.

Military Functions of Provinces

The military function of provincial governors had varied in scope and character even more widely than the judicial and the financial.

In the Achaemenian Empire the standing army maintained and controlled by the central government was very small by comparison with the size of the total population and area of the Achaemenian dominions. It consisted merely of a bodyguard attached to the emperor's person and of garrisons stationed at key points along the imperial lines

¹ See the *Report of the Indian Statutory Commission*, vol. i (London 1930, H.M. Stationery Office = Cmd. 3568), pp. 292-7.

² See Herodotus, Book V, chap. 25, and Book VII, chap. 194.

³ Compare the analogous evolution in the Achaemenian Empire by which the Hazarapatish (*Graecè* Chiliarch), who had originally been the commander of the Emperor's bodyguard of a thousand men, became something like the president of a council of ministers (see Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 43, and Junge, P. J.: 'Hazarapatish: Zur Stellung des Chiliarchen der Königlichen Leibgarde im Achämenidenstaat', in *Klio*, vol. xxxiii (Neue Folge, vol. xv) (Leipzig 1940, Dietrich), pp. 13-38).

of communication.¹ The title 'hazarapatiš' (commander of one thousand troops'), borne by the imperial officer who eventually came to perform the functions of a head of the civil administration,² indicates that the imperial bodyguard had originally been only 1,000 men strong; and, even if the *corps d'élite* known as 'the Immortals', who served in Xerxes' expeditionary force in 480-479 B.C., were a standing professional force and not merely the cream of a Persian national militia, their number was in any case fixed at no more than 10,000.³ Allowing for the partial recruitment of the imperial garrisons from non-Persian sources⁴ and further for the possibility that the original 1,000 Persian picked troops were included in the eventual 10,000 and that these were not all Persians,⁵ it will still seem improbable that any considerable number of additional Persian troops can ever have been raised from the thinly populated home territory of the ruling nation in the highlands of Pārsa (*Graecè* Persis, the latter-day Fars) after more than one half of its area, and perhaps not much less than one half of its population, had been detached from Pārsa by Darius I through his act of degrading the dissident Asagartiyā in Kirmān and dissident Yautiyā and Maciyā in Lāristān to the status of subject peoples.⁶ Accordingly, when the Achaemenian Imperial Government was called upon to make a serious war effort, it had to draw very largely on provincial militias, and these again were recruited not merely from the local Persian settlers but from the native populations as well.

The training, inspection,⁷ and command of these provincial militias were responsibilities of the provincial governors, and the military power which these prerogatives placed in their hands was not effectively kept in check by the presence, within their domains, of a few imperial garrisons under the central government's control—as was demonstrated by the ever-increasing frequency and formidableness of the rebellions on which provincial governors ventured. The Mughal Empire paid the same penalty for lapsing into the slovenly practice—against which Akbar had set his face in vain—of providing for the payment of the imperial officers (*mansabdārs*), charged with the maintenance of contingents of troops, by assigning to them provincial land revenue which they were empowered to collect for themselves, instead of collecting the revenue on its own account and paying the *mansabdārs* out of the Imperial Treasury.⁸ In the Ottoman, unlike either the Mughal or the Achaemenian, Empire the central government had at its disposal a

¹ For these garrisons see p. 123, above.

² See p. 182, n. 3, above, and p. 344, below.

³ See Herodotus, Book VII, chap. 83.

⁴ See p. 119, with n. 7, above.

⁵ On the evidence of the friezes at Susa, A. T. Olmstead holds (see *A History of the Persian Empire* (Chicago 1948, University of Chicago Press), p. 238) that the Ten Thousand were recruited from among the Medes and the Elamites as well as the Persians.

⁶ See pp. 583, 622-3, and 637, below.

⁷ There would appear to have been periodic musters—presumably for inspection and perhaps also for manœuvres—to judge by the formula 'commander of all the forces whose appointed place of assemblage is the Plain of Castolus', which was part of the terms of appointment issued by Darius II to his son Cyrus in 408 B.C. according to Xenophon: *Expeditio Cyri*, Book I, chap. ix, § 7 (cp. op. cit., Book I, chap. i, § 2, and eundem: *Historia Graeca*, Book I, chap. iv, § 3). See further this Study in the present volume, p. 674, with n. 3, and IX. viii. 548, n. 1.

⁸ See p. 127, above.

professional army which, in its best days, was admirably disciplined, mobile, and efficient;¹ yet in wartime the Ottoman Empire, too, had to draw heavily upon provincial forces, and, though, as we have seen,² the central government exerted itself to keep under its own control the assignment of the fiefs by which the provincial feudal cavalry was maintained, the feudal contingent of each province was commanded in wartime by the provincial governor.

In the Roman Empire during the Principate, all units of the professional army except the Emperor's Praetorian Guard and the so-called *Cohortes Urbanae* ('Metropolitan Battalions')³ were under the command of provincial governors; but, in the Augustan constitution, this arrangement did not carry with it that decentralization of military power which was a dangerous weakness of the Achaemenian, Mughal, and Ottoman Empires. At this stage of its history the Roman Empire enjoyed such a decided ascendancy over both the enemy beyond the frontiers⁴ and recalcitrant tribesmen in patches of the interior that it was able to keep its troops concentrated in a small fraction of the imperial territory, and this mainly along the borders. In his division of the control over the provinces between himself and the Senate, Augustus was careful to retain in his own hands all provinces in which troops had to be stationed, and the governors of these provinces were the Emperor's own appointees and military subordinates. Constitutionally, therefore, the whole Imperial Army, wherever stationed, remained under the Emperor's own undivided command, and normally this control was effective—though the civil wars of A.D. 69 and A.D. 193–7, in which governors of different imperial provinces who were *ex officio* deputy chiefs of rival army-groups fought one another for the prize of the vacant imperial office, were portents of the greater bout of anarchy, arising from this inherent weakness in the constitution of the Principate, in which the Empire itself was to come within an ace of destruction in the third century of the Christian Era.

By the time when Diocletian (*imperabat* A.D. 284–305) undertook the reorganization of the Roman Empire, the terrible experience of the two preceding generations had demonstrated the danger of combining the civil government of a province with the local military command, even when local commands were constitutionally subordinate to an imperial commander-in-chief and when this dangerous combination of powers was confined to one of two categories of provinces. In Diocletian's day it was no longer practically possible to maintain the distinction between military and civilian provinces which had been of the essence of Augustus's system, for by this time the frontier defences of the Empire had broken down and, in the new military situation, if the Empire could be defended at all, it could be defended only in depth by mobile forces which might need to operate in any part of the imperial territory. These two considerations led Diocletian and his successors to take a radical new departure. They set up a small number of high military commands each embracing a wide area and covering, between them, the whole of

¹ See III. iii. 32–44.

⁴ See p. 320, below.

the Empire,¹ but they confined the powers of this professional military hierarchy to military affairs and placed the civil administration—from governorships of provinces² up to praetorian prefectures inclusive—in the hands of a professional civil service. This division of powers continued till the break-up of the Empire in the fifth century of the Christian Era in the west and in the seventh century in the east and centre.³

In the Sinic World the experience of the last and most appalling round of the warfare between the Contending States led Ts'in She Hwang-ti, in founding a Sinic universal state, into the path that was to be followed in another society by Diocletian when he refounded the Roman Empire. Though Ts'in She Hwang-ti chose an historic institution of military government—the *chün*—as the major unit of provincial administration for his dominions,⁴ he separated the civil administration of his *chün* from the military command and placed the two offices in different hands, while the *hsien*—which in Ts'in She Hwang-ti's system became a subdivision of the *chün*—seems to have been under exclusively civilian control.⁵ This division of civil and military powers was, of course, the antithesis of the traditional Sinic feudal régime, yet, like other radical and provocative innovations introduced by the first Ts'in emperor, it ultimately prevailed. The permanent victory of this new principle of Sinic administration was assured when, in consequence of the eventual alliance between the Han Dynasty and the Confucian school of philosophy, the Confucian scholar, selected individually for intellectual merit, replaced the feudal warrior, inducted by right of birth, as the typical representative of the Sinic governing class. And a principle thus established in the Sinic Society in the last chapter of its history was resuscitated—after the social interregnum in which the Han Empire foundered—in the affiliated Far Eastern Society in China.

The Utilization of Provincial Organizations by Alien Civilizations

Who had been the principal ultimate beneficiaries from the systems of provincial administration which universal states had set up?

Conspicuous benefits had been secured by intruders of alien culture. The provincial organization of the Achaemenian Empire, for instance, was taken over and turned to good account by the Hellenic successor-states into which the Achaemenian dominions were partitioned at the turn of the fourth and third centuries B.C. after the overthrow of the Empire by Alexander the Great; and when, in the second decade of

¹ See pp. 322-3, below.

² Under the Diocletianic régime the provinces were reduced in size and were increased in number, by comparison with the administrative map of the Roman Empire under the Principate, owing to a progressive transfer of business that had once been handled by local organs of municipal self-government to the shoulders of imperial officials.

³ When a ghost of the Roman Empire was conjured up in the Orthodox Christian World by Leo Syrus in the eighth century of the Christian Era, this division of civil and military powers was not one of the imperial institutions that were revived. It had proved too complicated an arrangement to weather the storms of a political interregnum, and, even before the crash had come in the centre and the east, the first steps towards a reversal of the Diocletianic policy had been taken here and there by Justinian (*imperabat* A.D. 527-65). See Bury, J. B.: *A History of the Later Roman Empire* (London 1889, Macmillan, 2 vols.), vol. ii, chap. 13.

⁴ See p. 169, above.

⁵ See Bodde, D.: *China's First Unifier* (Leiden 1938, Brill), p. 135.

the second century B.C., an Hellenic ruler of the ex-Achaemenian province of Bactria emulated Alexander's feat by overrunning the Indic universal state that had been established by Chandragupta Maurya, the provincial organization that had been worked out during the preceding 137 years (322-185 B.C.) by Chandragupta himself and his Mauryan heirs¹ was no doubt similarly serviceable to the Hellenic princes who ruled North-Western India for the next hundred years.²

The British Rāj in India was indebted in the same way to the foregoing Mughal Rāj, particularly in the financial sphere;³ for, though so many Mughal institutions, good and bad alike, had perished during the century of anarchy that had followed Awrangzib's death in A.D. 1707, the military adventurers—Indian, Afghan, and West European—who had since been contending for the spoils of a derelict Mughal heritage had all been careful—like the barbarian Arab conquerors of the Sasanian and Roman Empires—to preserve an imperial administrative machine for the collection of revenue that was the irreplaceable source of pay for their troops. Accordingly the British empire-builders, when they came on the scene, were not faced with the task of rebuilding from the foundations in the revenue department. Thanks to the legacy which they here inherited from their Mughal forerunners, the organization, information, experience, and, above all, the habits which are indispensable conditions for success in the administration of finance were to a large extent at British disposal as going concerns; and one of the most effective of the devices by which the British made themselves masters of India was the employment of a financial leverage for bringing into British hands the command of the troops and the administration of the territories of successor-states of the Mughal Empire that became the Honourable East India Company's allies.

'Our participation in Indian wars began when the English lent a military contingent to assist some native potentate. The next stage came when we took the field on our own account, assisted usually by the levies of some prince who made common cause with us, and whose soldiery were undisciplined, untrustworthy, and very clumsily handled. . . . What was needed was a body of men that could be relied upon for some kind of tactical precision and steadiness under fire; but for this purpose it was of little use even to place sepoys under European officers unless they could be regularly paid and taught to obey one master. So the system soon reached the stage when the native ally was required to supply not men but money,⁴ and the English undertook to raise, train, and pay a fixed number of troops on receiving a subsidy equivalent to their cost. . . . Large sums had been

¹ The fragmentary information about this aspect of the Mauryan Empire is presented in Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), pp. 163-4.

² The scanty information about the provincial organization of the Greek successor-states of the Mauryan Empire is sorted out, with a masterly hand, by Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), pp. 230-43 and 259.

³ The administrative and financial organization set up by the Mughal Darius, Akbar (*imperabat* A.D. 1556-1605), is set out in Moreland, W. H.: *India at the Death of Akbar* (London 1920, Macmillan), p. 33.

⁴ In the Hellenic World of the fifth century B.C. the requirement of money instead of ships was the process by which the Athenians converted a Delian League under Athens' leadership into an Athenian Empire under Athens' thumb.—A.J.T.

hitherto spent by the native princes in maintaining ill-managed and in-subordinate bodies of troops, and in constant wars against each other; they might economise their revenues, be rid of a mutinous soldiery, and sit much more quietly at home, by entering into contracts with a skilful and solvent administration that would undertake all serious military business for a fixed subsidy. But, as punctuality in money matters has never been a princely quality, this subsidy was apt to be paid very irregularly; so the next stage was to revive the long-standing practice of Asiatic governments: the assignment of lands for the payment of troops.¹

This method of extending direct British rule in India was applied by Lord Wellesley (*proconsulari munere fungebatur* A.D. 1798-1805) with special vigour to the two important successor-states of the Mughal Empire whose respective rulers were the Wazir of Oudh and the Nizām of Hyderabad, and the territory thus acquired by the British Rāj from Oudh was of crucial importance.

'The result of Lord Wellesley's somewhat dictatorial negotiations was that the Wazir ceded all his frontier provinces, including Rohilcund, to the Company, the revenue of the territory thus transferred being taken as an equivalent to the subsidy payable for troops. . . . Oudh was thenceforward enveloped by the English dominion. This most important augmentation of territory transferred to the British Government some of the richest and most populous districts in the heart of India, lying along the Ganges and its tributaries above Benares to the foot of the Himalayan Range. It consolidated our power on a broader foundation, brought a very large increase of revenue, and confronted us with the Marattha chief Sindia along the whole line of his possessions in Upper India.'²

While the British in India were entering into the heritage of an empire that had collapsed a hundred years before, and the Hellenic supplanters of the Mauryan and Achaemenid empires overthrew régimes that were already in decay, the Spanish *conquistadores* of the Andean World seized an Incaic Empire that was still intact, and they profited from this piece of good fortune notwithstanding the blind brutality and pride which moved them to destroy so many Inca institutions that were valuable in themselves and would have also served the interests of the new masters of the Andean World. The paternal totalitarian éthos of the Inca régime had been faithfully reflected in its system of provincial administration. A hierarchy of administrative units—based on the natural social unit of the family and the natural geographical unit of the valley—ascended through communes, departments, and provinces to the four viceroyalties, reminiscent of the praetorian prefectures of a Diocletianic Roman Empire, from which this Andean 'Realm of the Four Quarters' took its name.³ Though this elaborate system was too delicate a tool to fit the alien conqueror's rough hand, the habit of obedience that had been inculcated into the population of the Empire by the minutiae of Incaic administration made these subjects most accommodatingly submissive

¹ Lyall, Sir A.: *The Rise and Expansion of the British Dominion in India* (London 1894, Murray), pp. 244-5.

² Lyall, *op. cit.*, p. 247.

to the more rudimentary administrative methods of the Inca's Spanish supplanters.

The inability of the Spanish *conquistadores* to derive substantial advantage from the administrative system which they found on their hands is characteristic of barbarian conquerors. The German and Sarmatian invaders of the western provinces of the Roman Empire were similarly unable to take advantage of the Diocletianic organization. The signal exception which proves the rule is the success of the Arab invaders of Roman Syria and Egypt in preserving the Roman financial system as a going concern, and this goes far to explain the Arabs' unparalleled achievement of transforming one of the barbarian successor-states of the Roman Empire into an avatar of the Syriac universal state that had once been embodied in the Empire of the Achaemenidae. The administrative receptivity of the Primitive Muslim Arabs has its counterparts in the less striking achievements of the Arsacid 'Parthian', Saka, and Kushan barbarian supplanters of Hellenic empire-builders on former Achaemenian ground in South-West Asia east of Euphrates and on former Mauryan ground in North-West India.¹ But these were all exceptional cases, and, for the most part, the barbarian invaders of universal states had failed to profit from their victims' work in the field of provincial administration.

The Utilization of Provincial Organizations by Churches

On the other hand, the provincial organization of a universal state had more than once been turned to ecclesiastical account.

When the Egyptiac Emperor Thothmes (Tuthmosis) III (*imperabat circa 1490-1436 B.C.*) organized the priests of the parochial divinities of the nomes into a Pan-Egyptiac ecclesiastical corporation under the presidency of the Chief Priest of Amon-Re at Thebes,² we may guess that he was extending to the ecclesiastical field the existing political structure of 'the New Empire' of Egypt; for 'the New Empire' was a resuscitation of 'the Middle Empire' after an interregnum of Hyksos barbarian ascendancy, and, as we have seen,³ 'the Middle Empire' had succeeded, step by step, in extinguishing the autonomy of the once virtually independent nomarchs and eventually bringing the nomes under the direct administration of the imperial government. One of the moves made by the emperors of the Twelfth Dynasty on their road to this objective had been to enter, over the heads of the nomarchs, into direct relations with the priests of the local shrines and to purchase their alliance by sending officials of the Imperial Office of Works to repair and improve their temple buildings at the charge of the Imperial Treasury.⁴ Thothmes' historic act set the coping-stone on the construction of this mutually profitable partnership between the local priesthoods and the Imperial Crown.

The hierarchical organization of the local Egyptiac priesthoods into a

¹ See V. v. 442-3.

² See I. i. 145, n. 5; IV. iv. 421; and V. v. 530-1.

⁴ See Meyer, E.: *Geschichte des Altertums*, vol. i, Part II, 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 274.

Pan-Egyptiac ecclesiastical corporation under a supreme pontiff, on the initiative and under the patronage of the secular Imperial Power, has a parallel in the position accorded to the Magi in the Sasanian Empire (*stabat* A.D. 224¹–641 or 642²). The fundamental difference in structure between the Sasanian Persian Monarchy and the Arsacid 'Parthian' régime which it supplanted lay in the Sasanids' effective assertion of the central government's authority. Provincial governors, appointed by the Sasanian Emperor, now replaced the hereditary local kinglets³—seldom effectively under the control of their Arsacid overlord and often in overt rebellion against him—of whom the founder of the Sasanian Empire, Ardashir I, had himself been one before he carried a successful rebellion to its logical conclusion by slaying his master and seizing his throne. This Sasanian centralization of the civil administration of South-West Asia east of Euphrates was reflected in the corresponding organization of the Zoroastrian Church under Ardashir I's auspices and, according to tradition, on his initiative. Ardashir not only made Zoroastrianism the established church of his empire; he organized the Magian priesthood of the imperial religion into a hierarchy⁴ rising from the local Magi (*Mōghān*), through the Chief Magi (*Mōghān Mōghān*) of eminent shrines and their superiors the Archimagi (*Mōbadhān*), to a supreme Archimagus (*Mōbadhān Mōbadh*) who was the ecclesiastical counterpart of the Sasanian Emperor himself.⁵ This organization had a territorial basis: the empire was divided and subdivided into the equivalents of Christian archbishoprics, bishoprics, and parishes, each under the jurisdiction of an ecclesiastic of the corresponding rank.

Though Ardashir's and Thothmes' acts of state wear the appearance of creations *ex nihilo*, this is doubtless partly an illusion arising from the scantiness of our information about their antecedents. We do know that the Egyptiac priesthood to which Thothmes gave an oecumenical organization had previously ensured its own survival by coming to terms with the perhaps intrusive Sumeric worship of Osiris in an *union sacrée* against the alien religion of the Hyksos;⁶ and the Magi—an ancient ecclesiastical caste which had originated in the pre-Zoroastrian age of Iranian paganism—had shown a similar resourcefulness in capturing the revolutionary higher religion founded by Zarathustra after they had come to the conclusion that they could neither stamp it out nor prevent its spread.⁷ The Magi had also succeeded in commending Zoroastrianism (in the hardly recognizable form in which it had emerged from the Magian crucible) to

¹ The probable date of the overthrow of the last Arsacid king of kings, Artabanus V, by Ardashir I of the House of Sāsān.

² The date of the Battle of Nihāwand, after which the Sasanian Government was virtually non-existent, though the last Sasanian Emperor, Yazdagird III, survived as a fugitive in Khurāsān till A.D. 651 or 652.

³ This unbridled local autonomy had been so characteristic a feature of the Arsacid régime that this whole episode of South-West Asian history came to be known, in the Arabic version of the Sasanian tradition, as the age of the *mulūk-at-tawā'if* (the parochial princelings who were mere 'kings of shreds and patches').

⁴ See Christensen, A.: *L'Iran sous les Sassanides* (Copenhagen 1936, Levin & Munksgaard), pp. 112–13.

⁵ A second order of ecclesiastics, the *Hērbadhān*, who were specialists in ritual, were similarly brigaded together under a supreme *Hērbadhān Hērbadh* (Christensen, *op. cit.*, p. 114).

⁶ See I. i. 140–5.

⁷ See V. v. 542 and 705, n. 1; and V. vi. 43, n. 4.

the Arsacid princes of the Azerbaijānī line (*regnabant* A.D. 10/11–224) who had been the Sasanids' immediate predecessors; and, though these latter-day Arsacids had not gone to the length of making Zoroastrianism the official religion of their state, the captivation of these ex-barbarians by the Magi was a more remarkable achievement than this ecclesiastical corporation's alliance with the Sasanidae. In the act of supplanting the Arsacids, the Sasanidae had virtually committed themselves to Zoroastrianism in advance by claiming to be the legitimate successors of the Achaemenidae, since the personal adherence of the great emperors of the Achaemenian Dynasty to the religion of Zarathustra was one of the few facts of pre-Alexandrine Iranian history of which a lively recollection had been preserved in the folk-memory of the Iranian people during the long ascendancy of an alien Hellenic culture.

Thus both the Magi and the Egyptian Priesthood had known how to help themselves before their fortunes were made by a stroke of the secular arm, and, in the sequel, both ecclesiastical corporations demonstrated their capacity to survive the state that had called them into existence. The Chief Priest of Amon-Re at Thebes, Hrihor,¹ actually took over the Egyptian Imperial Crown in the eleventh century B.C. from the last decrepit secular pharaohs of 'the New Empire';² and, though nothing came of this attempt to keep 'the New Empire' in being through a personal union of the supreme temporal and ecclesiastical offices, the Pan-Egyptian ecclesiastical corporation instituted by Thothmes III did continue to maintain itself—and, in doing so, to preserve the distinctive character of the Egyptian Society—for some fifteen hundred years after the Theban priest-king Hrihor's day, under successive alien ascendancies and native Egyptian reactions against them, until at last, under Roman rule, its close-grained fabric yielded to the solvent of Christianity. As for the Zoroastrian Church, it failed to emulate the tenacity of the Egyptian priesthood on its native soil; when the Sasanian Empire was overthrown, the Magian hierarchy fell with it; yet, though Zoroastrianism did not succeed in holding its own at home, it did achieve the even more difficult feat of preserving its identity in diasporá, and the credit for this was largely due to the perennial adaptability of the Magi, who retained their hold over their flock, and thereby kept this flock together, by making the most of their role as executors of a ritual and doctors of a religious law after they had lost their ecclesiastical lordship over a territorial empire.³

¹ According to recent findings of Modern Western Egyptologists, Hrihor himself was not a priest by profession but was a military adventurer who had usurped the Chief Priesthood of Amon-Re of Thebes without being properly qualified to hold it (see Edgerton, W. F.: 'The Government and the Governed in the Egyptian Empire', in the *Journal of Near Eastern Studies*, vol. iv, July 1947, No. 3 (Chicago 1947, University Press), pp. 152–60). Edgerton makes this statement on p. 153 on the authority of Kees, H.: 'Hrihor und die Aufrichtung des Thebanischen Gottesstaates', in *Nachrichten von der Gesellschaft der Wissenschaften zu Göttingen*, Phil.-Hist. Klasse, Neue Folge, Fachgruppe 1, 2. Band (1936–8), pp. 1–20). If this is the fact, it is a further testimony to the potency of the office in Hrihor's day. If it had not been the most favourable 'jumping-off ground' within Hrihor's reach for going on to usurp the Pharaonic Crown, the Chief Priesthood of Amon-Re would hardly have excited the cupidity of a soldier of fortune.

² See II. ii. 116, n. 1; IV. iv. 421 and 515–17; and p. 692, below.

³ There was, of course, a remarkable similarity between the Zoroastrian and the Jewish response to the identic challenge of exile and dispersion.

The Christian Church showed still greater initiative and independence in turning to its own account the provincial organization of the universal state within whose framework it arose.¹ In building up its body ecclesiastical it availed itself of the city-states that were the cells of the Hellenic body social and of the Roman body politic. From the days of Saint Paul and his fellow pioneers in the Christian mission field, city-states were the primary units of the Church's territorial structure, and, as the traditions of the Hellenic Civilization gradually died out, a city came to mean a town that was the seat of a Christian bishop, instead of meaning a town possessing institutions of civil self-government and chartered as a municipality of the Roman Commonwealth. A local bishop whose see was the administrative centre of a Diocletianic Roman province came to be recognized by the bishops of the other cities of the same province as their superior; such metropolitans or archbishops, in their turn, acknowledged as their primate the bishop whose see was the administrative centre of one of those groups of provinces which, in the Diocletianic system, were known as *dioceses*;² and bishops, metropolitans, and primates alike paid ecclesiastical allegiance to regional patriarchs, who corresponded hierarchically to the Diocletianic praetorian prefects, though there was no correspondence at this level, as there was at the lower levels, between the areas of ecclesiastical and civil jurisdiction. In the Diocletianic Empire the west and centre were partitioned between three praetorian prefectures, while the east, from the Lower Danube to the First Cataract of the Nile, and from Thrace and Cyrenaica to Mesopotamia, was united in a single vast circumscription. In the Christian ecclesiastical organization, on the other hand, the Diocletianic Praefecture of the East was eventually divided between the four patriarchates of Alexandria, Jerusalem, Antioch, and Constantinople, while the circumscriptions of the other three praefectures were united in the single vast ecclesiastical domain of the Patriarchate of Rome.

This territorial organization of the Christian Church was not called into existence by the fiat of any Roman Thothmes or Ardashir; it was built up by the Church itself in the days when, in Roman official eyes, Christianity was a *religio non licita*; and all but the top story—whose architecture was implicit in the structure of the lower tiers—was in existence by the time of the conversion of Constantine. In virtue of this original independence of the secular imperial régime whose territorial organization it had thus adapted to its own purposes, the Roman-inspired territorial structure of the Christian Church was able to survive the Roman Empire's disappearance. In Gaul, for example, where a tottering Roman imperial régime had sought at the eleventh hour to rehabilitate itself on a novel basis of local support by instituting periodic regional congresses of notables, the Church, after the Empire had faded

¹ The preservation of the lineaments of an obsolete Roman political map in those of a surviving Christian ecclesiastical map is examined further on pp. 693-5, below.

² Though this technical term of Diocletianic Roman administration had been adopted as the designation of the 'diocese' of a Christian bishop, this usage was historically incorrect, since the standard domain of a bishopric was the territory of a city-state or canton, whereas the *dioceses* of the Roman Empire each contained several hundreds of territorial units of that order of magnitude.

out of existence, took its cue from this secular precedent by convening regional congresses of bishops;¹ and, though in many regions once included in the Roman Empire the Church's structure had eventually weathered away like its secular prototype, the indebtedness of the Church to the Roman Empire in this administrative sphere, as well as its ability to survive its Roman model, was apparent on the face of a latter-day map.

On the medieval ecclesiastical map of France, for example, an historian could discern in the mosaic of bishoprics the boundaries of the city-states of Gallia Togata and the cantons of Gallia Comata, while the archbishoprics preserved the outlines of the Diocletianic subdivisions of the four Augustan provinces Narbonensis, Aquitania, Lugdunensis, and Belgica. Even the five patriarchates, which were the precarious superstructure of the Christian ecclesiastical pyramid, were all still in existence—four in Eastern Orthodox hands and one in Western Catholic hands—at the time when these lines were being written; and, though the areas of their circumscriptions, and the distribution and nationality of their ecclesiastical subjects, had undergone vast changes during the fifteen centuries that had elapsed since the date of the Fourth Oecumenical Council (*sedebat Chalcedone*, A.D. 451), their mortifying losses had been partially offset by gains that could never have been foreseen at the time when the patriarchates had first taken shape.

For example, the Patriarchate of Rome had lost its African sees to Islam, its South-East European sees to Eastern Orthodoxy, and its North European sees to Protestantism, but it had won hundreds of new bishoprics and millions of new subjects overseas in the Americas and the Indies. The four Eastern Patriarchates within their own historic bounds had suffered losses—to Monophysitism first and to Islam in the sequel—that were far more severe than the corresponding reverses of the Papacy; yet, in drawing up the balance-sheet of fifteen centuries of chequered history, they could still take heart from two signal achievements. They had preserved, as between themselves, their unity of rite and creed without sacrificing their independence of one another as units of ecclesiastical administration; and they had jointly called into existence a number of new sister churches that in rite and creed were at one with the four patriarchates and with one another, while enjoying in the sphere of ecclesiastical administration the same independence as the patriarchates themselves. Thanks to this liberality, this ecclesiastical commonwealth of Eastern Orthodox churches had never yet provoked a secession such as the ecclesiastical autocracy of the Roman Church had brought upon itself in a Protestant Reformation or the secular British Empire in an American Revolutionary War. The British Empire might indeed take credit for having learnt its lesson and converted itself into a commonwealth of fully self-governing communities of equal status; but this wisdom after the event could merely exorcise the danger of further

¹ See Burns, C. Delisle: *The First Europe* (London 1947, Allen & Unwin), pp. 541-2, for an illuminating comparison between an imperial rescript, issued at Constantinople on the 17th April, 418, in the names of the Emperors Honorius and Theodosius II, and a letter, dated the 23rd August, 546, written by Pope Vigilius.

secessions; it could not induce an independent United States to return to the British fold. The Commonwealth of Eastern Orthodox churches had risen to a higher level of statesmanship in being wise in time and thereby managing to retain within its circle the giant Church of Russia to champion the cause of Eastern Orthodoxy in an age when the onset of Western Nationalism, following the inroads of Islam and Monophysitism, had reduced to shadows of their former selves the once mighty patriarchates of Constantinople, Alexandria, Antioch, and Jerusalem.

4. *Capital Cities*

'Laws' governing the Migration of Capital Cities

The seats of the central governments of universal states show a decided tendency to change their locations in course of time, and this is one of the clearest indications that, whatever may have been the motives and intentions of the founders of a universal state, the true *raison d'être* of their handiwork is not the kingdom, power, or glory of the empire-builders but the welfare of their subjects.

Empire-builders usually begin by ruling their dominions from a seat of government convenient to themselves: either the established capital of their own fatherland, which they have transformed from a parochial into a universal state by overthrowing its rivals and imposing its peace on an entire society; or else some new site on the fringe of the subjugated territories, at a point where these are particularly accessible from the empire-builders' home country. But, as time goes on, the experience of imperial administration or the pressure of events is apt to lead either the original empire-builders or successors of theirs who take their empires over or rebuild them after a temporary collapse to transfer the imperial capital to a new site which is commended by its convenience, not for the original empire-building Power, but for the empire itself as a whole. This new oecumenical outlook will, of course, suggest different new locations in different circumstances. If the first consideration is administrative convenience, the capital is likely to shift to some point, enjoying good facilities for communication, that is geographically central.¹ On the other hand, if the most urgent demand is for defence against some barbarian or alien aggressor, the new capital may gravitate towards the particular sector of the imperial frontiers on which the hostile pressure is heaviest at the time.²

We have seen that the founders of universal states are not always of the same origin. Sometimes they are representatives of a civilization which is foreign to the society for whose political needs they are providing. Sometimes the empire-builders are barbarians who have become morally alienated from the society which they are supplying with a universal state, but have nevertheless continued to gravitate towards it. Frequently the empire-builders are marchmen who have vindicated their claim to be members of the society by defending its borders

¹ This point is made by Ibn Khaldūn: *Muqaddamāt*, translated by de Slane, Baron McG. (Paris 1863-8, Imprimerie Impériale, 3 vols.), vol. ii, pp. 308-9.

² This last-mentioned determining factor in changes in the locations of capitals of universal states has been examined already in II. ii. 112-208.

against outer barbarians before turning their arms against the interior of their own world and forcibly endowing it with an oecumenical peace. Such marchmen empire-builders are indeed true heirs of the civilization which they salvage from a Time of Troubles; yet, in the sight of their co-heirs for whom they have performed an invidious social service, they are sometimes hardly distinguishable from those outer barbarians with whom the marchmen have become familiar through the intercourse of border warfare. Lastly there are cases—apparently rather rare—in which the empire-builders have been neither aliens nor barbarians nor marchmen but ‘metropolitans’ from the interior of the world on which they have conferred the boon of political unity.

In universal states founded by aliens or barbarians the imperial capital is apt to start on the edge of the empire and to travel towards the interior. When the empire-builders are marchmen the same tendency sometimes asserts itself, but in this situation there are sometimes counter-pulls which tend to hold the capital in its original location. A margrave-emperor may find himself still tied to his ancestral base of operations in the back-woods by the continuance of pressure from the barbarians whom it is his first duty to keep at bay; and, if he does now succeed in disposing of this barbarian menace once for all by mobilizing against it the total resources of the society which he has united under his imperial rule, this very success may have the effect of extending his dominions so far afield into former barbarian territory that his seat of imperial government at the headquarters of his former march is consequently relegated to the interior of his expanded empire. In universal states founded by metropolitans the capital is, of course, likely to be located from the beginning at some point in the interior which is convenient for oecumenical administration, but nevertheless it may be drawn away towards a frontier if a threat of aggression from that quarter comes to be the imperial government’s paramount concern. It is evident that the changes in the location of the seats of government of universal states are subject to certain ‘laws’ of political geography, but that the operation of these ‘laws’ is modified, in practice, by such complicated combinations of historical contingencies that particular cases have to be examined and analysed *ad hoc*.

Migrations of the Capital Cities of Alien Empire-builders

The operation of the ‘law’ governing the location of capitals of universal states founded by alien empire-builders is illustrated in the history of the British Rāj in India.¹ Reaching India, as they did, from overseas, and coming there to trade with the inhabitants before they ever dreamed of ruling over them, the English established their first footholds on Indian ground in the seaports Calcutta, Madras, and Bombay; and, of these three British maritime commercial settlements, Calcutta became the first political capital of British India because the East India Company happened to acquire the political dominion over the two great provinces Bengal and Bihar, in the hinterland of Calcutta, some forty or fifty years before they began to make any comparable acquisitions of territory in the

¹ See xi, map 53.

hinterlands of Madras and Bombay. Calcutta continued to be the capital of British India for more than a hundred years after the design of bringing all India under British rule had been first conceived by Wellesley (*proconsulari munere fungebatur* A.D. 1798-1805) and for more than sixty years after this ambition had been achieved. But the gravitational pull of a politically unified sub-continent eventually proved strong enough to draw the seat of the British Indian central government away from Calcutta, where it had been located for the convenience of a British thalassocracy, and to attract it to Delhi,¹ which was the natural site for the capital of a continental empire including the basins of both the Ganges and the Indus.

Delhi was, of course, not merely a natural site; it was also an historic one. The Mughal predecessors of the British rulers of India had governed India from Delhi since the days of Shāh Jahān (*imperabat* A.D. 1628-59),² and before Shāh Jahān's day they had governed it from the neighbouring city of Agra,³ which was situated, like Delhi, on the banks of the Upper Jumna. The Mughals, like the British, had been aliens in the Hindu World on which they had imposed a universal state, but, unlike the British, they had never tried to govern India from a site on the threshold across which they had made their entry. It is true that the Mughals had arrived in India as fugitives from their own country; yet, when once they had placed the barrier of the Hindu Kush between themselves and their Uzbeq pursuers, they might have been tempted to establish their seat of government on some site in the highlands of North-Eastern Iran, where the climate, scenery, and fruits would have resembled those of their lost but lovingly remembered Farghānah. It is noteworthy that Bābur and his successors never in fact cast Kābul for the role of an imperial capital. As soon as they found themselves strong enough to descend upon the plains of the Panjab and Hindustan, they not only conquered them; they also immediately planted their seat of government on the sultry banks of the Jumna, in the heart of their newly acquired dominions. On the administrative map of the Mughal Empire, Kābul was merely the local capital of the north-western march and was never the overland equivalent of the maritime capital at Calcutta from which India was ruled by British hands for a century.

The Spanish *conquistadores* who established a universal state in Central America and took possession of a universal state in the Andean World were alien intruders from overseas like the British conquerors of India,

¹ The transfer of the capital of the British Indian Empire to Delhi in A.D. 1912 has already been touched upon in II. ii. 132.

² See II. ii. 131, with n. 3, for the establishment of the capital of the Mughal Empire at Delhi from the reign of Shāh Jahān onwards and for the previous history of Delhi, first as a frontier fortress of the Hindu World against Muslim aggression and afterwards as the capital of successive Muslim rulers of Hindustan from the Muslim conquest of the Ganges Basin at the turn of the twelfth and thirteenth centuries of the Christian Era down to the replacement of a Lōdī Afghan by a Mughal Turkish rāj in the sixteenth century.

³ Akbar's attempt to establish a new capital *ex nihilo* at Fātihpūr Sikri was no more successful than his attempt to launch a new higher religion, the Dīn Ilāhī (for these two failures of Akbar's, see II. ii. 131, n. 3, and V. v. 699-704). It is noteworthy that Ikhnaton, who likewise tried and failed to launch a new religion of his own invention, also made a similarly unsuccessful attempt to establish a new capital city at Tall-al-Amarnah (see p. 215, below).

but, in the location of their seats of government, the Spaniards did not make the move from an original capital on the coast to a subsequent capital in the interior; in this matter they went to opposite extremes in the two new worlds of which they made themselves masters. In the Andean World they laid out a maritime capital at Lima which they never abandoned in favour of the inland capital at Cuzco from which the Andean Realm of the Four Quarters had previously been ruled by the Incas. In Central America, on the other hand, they never attempted to govern their dominions from the seaport which they laid out at Vera Cruz. They immediately located their seat of government in the interior on the site of Tenochtitlan—the highland capital of the Aztecs who were in the act of building a Central American universal state when the Spaniards suddenly came on the scene and usurped the Aztecs' role.

Why did the Spaniards thus adopt opposite policies in two at first sight similar situations? The Mexican Plateau may have attracted them by its resemblance to their native plateau of Castile; yet, if that was the decisive consideration, why did it not lead them to pass over Lima, as they passed over Vera Cruz, and locate their Andean seat of government in the highland city of Cuzco, which was the existing capital from which the Andean universal state was actually being governed by the Incas at the time of the Spaniards' arrival? The explanation of this apparent inconsistency may lie in a difference in the previous historical roles of the respective environs of Vera Cruz and Lima. The lowlands lying between the Mexican Plateau and the shores of the Gulf were no longer playing a great part in the life of the Mexic Civilization. By contrast, the lowlands lying between the Andean Plateau and the shores of the Pacific Ocean had been the cradle of the Andean Civilization and had lost none of their economic or cultural importance since their political incorporation into an Andean universal state established by Inca empire-builders from the highlands.¹ Thus, in consulting their own convenience by abandoning the highland capital of the Incas at Cuzco and establishing their own seat of government in the seaport of Lima, the Spaniards were at the same time selecting a site in the cultural heart of the Andean World.

We may even raise the question whether the Incas themselves might have been impelled to transfer their seat of government from their ancestral capital at Cuzco to some site in the coastal lowlands if their dominion had endured for its natural term instead of having been abruptly brought to an end by the Spanish conquest not more than a hundred years after the establishment of an Andean universal state by the Inca Pachacutec (*imperabat circa* A.D. 1400–48). The decisive act in the elevation of the Inca Empire into an Andean universal state had been Pachacutec's conquest of the lowland states along the seaboard; and, with the passage of time, this epoch-making addition to the Empire's domain might well have affected its administrative structure. In the empire which Pachacutec put together and Pizarro took over, Cuzco was not more centrally situated than Lima; for the Incas had won their way by serving as marchmen, and their ancestral city had become an

¹ See I. i. 121–3 and II. ii. 103, n. 2.

imperial capital without ceasing to be a frontier fortress guarding the eastern brow of the Andean Plateau against the fierce and aggressive barbarians of the Amazonian tropical forest.¹ If the Incas had been given a longer time to harvest the experience of administering an empire in which highlands and lowlands were linked together, it seems not unlikely that they might have followed up their scientific redistribution of population² by a transfer of the seat of their central government. Indeed, before the Spaniards arrived, the Incas had already built two imperial palaces on the coast.³

The Ottoman dominion over Orthodox Christendom and the Mongol dominion over China were established, like the Mughal Rāj in India, by invasion overland, and not, like the British Rāj in India or the Spanish Empire in the New World, by assault from across the sea; yet, in the location of their capital cities, their histories followed the British and not the Mughal pattern.

The 'Osmanlis started their empire-building operations from a base just beyond the eastern borders of the Orthodox Christian World within the limits to which Orthodox Christendom had been reduced by the turn of the thirteenth and fourteenth centuries of the Christian Era,⁴ and, as the 'Osmanlis' dominions expanded, their seat of government travelled *pari passu*. First it moved from Eskişehir, 'the old city' just within the north-western rim of the Anatolian Plateau, to Yenisehir, 'the new city' in the lowlands within range of the Sea of Marmara. In A.D. 1326 it moved on to Brusa. In A.D. 1366 it leapt the Dardanelles and entered the Balkan Peninsula, into which the centre of gravity of the Orthodox Christian World had already shifted since the Saljūq Turkish conquest of the interior of Anatolia in the later decades of the eleventh century of the Christian Era.⁵ The first location of the Ottoman capital in the Balkan Peninsula was at Adrianople, but this was only a halting-place and not its final destination.⁶ The Ottoman Sultan Mehmed the Conqueror (*imperator* A.D. 1451-81), who completed the political unification of the main body of the Orthodox Christian World under Ottoman rule, was also the statesman who brought the Ottoman seat of government to its final resting-place at Constantinople, the former capital of the East Roman Empire and the cultural metropolis of Orthodox Christendom. Constantinople did not lose the status which Mehmed the Conqueror had conferred upon her till after the Ottoman Empire itself had been snuffed out of existence through the reconstitution of an Anatolian remnant of Mehmed the Conqueror's realm into a Republic of Turkey on the 29th October, 1923. In virtue of Article 2 of the Constitution of the 20th April, 1924, Constantinople forfeited juridically to Ankara the role of being the official seat of government of this Turkish successor-state.⁷

⁵ See II. ii. 79-80 and 152.

⁶ See p. 135, n. 1, above.

⁷ Since the autumn of 1919 Ankara had, of course, been the *de facto* provisional seat of the revolutionary Kemalist movement out of which the Republic of Turkey had sprung.

The progressive advance of the capital of the Ottoman Empire towards the heart of the Orthodox Christian World has a parallel in the series of stages by which the capital of the Mongol Khāqāns followed the China-ward course of Mongol conquest. The first signal successes in Chingis Khan's career were his conquests of the Karāyits and Naimans,¹ the two Nestorian Turkish Nomad peoples whom the Mongols found in occupation of the choicest portion of the High Steppe² in the basin of the River Orkhon. By a long-established tradition the Orkhon Basin was the domain of the paramount Nomad community on the High Steppe,³ and, when the Mongols acquired this paramountcy in their turn by the customary right of conquest, and then proceeded to extend their rule over a number of sedentary societies round about, their first essay in living up to their newly attained dignity and making use of their newly acquired wealth was to lay out a permanent capital for themselves in the Orkhon Basin at Qāraqorum.⁴ For the translation of this dream into reality, skilled artificers were uprooted from their distant homes in China, Russia, and Western Christendom and were carried away captive to beautify the Khāqān's rising city on the Steppe;⁵ but before the work was finished it was made of no avail by the triumph of Mongol arms on the Chinese front.

The Mongol Khāqān Qubilāy (*imperabat* A.D. 1259-94) achieved what had proved beyond the strength of the Mongol conquerors' Kin and Khitan forerunners. He conquered not merely Northern China but the whole continental domain of the Far Eastern Society, including the Yangtse Basin and the southern seaboard; and the gravitational pull of this Far Eastern sub-continent, now once more politically united, immediately made itself felt in the location of the Mongol Khāqān's capital. In A.D. 1264 Qubilāy began to recondition Peking—the site in the north-east corner of China, just inside the Great Wall, where the previous Kin conquerors of Northern China had placed their seat of government⁶—and in A.D. 1267 he moved his own capital to Peking from Qāraqorum.⁷ Though Qubilāy's head dictated this move, his heart remained homesick for its ancestral pastures, and the semi-Sinified

¹ See V. v. 250 and 309.

² The Great Eurasian Steppe consisted of two areas which were geographically distinct, though both had been theatres of one uniform Nomad way of life. There was the High Steppe (the Alexandrian Hellenic geographer Ptolemy's *Scythia extra Imaum*) on the immense plateau which was bounded on the west by the Altai and Tien Shan Mountains, and there was the Low Steppe (Ptolemy's *Scythia intra Imaum*) which extended westward from the Tien Shan to the Carpathians. The two areas were in communication with one another through the Zungarian Gap between Tien Shan and Altai.

³ This position had been occupied in succession by the Hiongnu, the Juan Juan, the Northern Turks, and the eastern Turkish successors of the united Turkish steppe-empire of the sixth and seventh centuries of the Christian Era. The eighth-century Turkish masters of the Orkhon Basin had left there a memorial of themselves in their celebrated inscriptions. It was not an accident that the seat of government of a latter-day Soviet Socialist Republic of Outer Mongolia was located in the same neighbourhood, at Urga.

⁴ See III. iii. 397 and V. v. 312-15.

⁵ See Olschki, L.: *Guillaume Boucher, A French Artist at the Court of the Khans* (Baltimore 1946, The Johns Hopkins Press).

⁶ The Kin themselves had taken the site over from their own predecessors the Khitan, who had laid the foundations of Peking's political fortunes by choosing this hitherto obscure spot for the location, not of their central seat of government, but of their southern residence.

⁷ See II. ii. 121, n. 3.

Mongol statesman indulged his unregenerate Nomad feelings by building himself a subsidiary residence at Chung-tu, a point on the south-eastern rim of the Mongolian Plateau where the Steppe approached nearest to the new imperial city.¹ But Qubilāy's 'Xanadu' was a 'pleasure dome' and no more; his serious business of state was transacted at Peking. The requirements of a conquered world had won a pacific victory over the inclinations of its conqueror which was to have a more lasting effect than the Mongols' mere military victory over the Empire of the Sung.

When the Manchus followed in the Mongols' footsteps by conquering the whole of China and reconstituting a Far Eastern universal state in the seventeenth century of the Christian Era after an interlude of some two centuries during which China had managed to keep herself free from barbarian rule, history duly repeated itself in the location of the imperial capital. Before the Manchus set about the conquest of China within the Wall, they had already made a new capital for themselves at Mukden,² the South Manchurian meeting-point of the Manchus' native forests, the Mongols' pastures, and the arable land, beyond the shelter of the Wall, which had been won for the plough by Chinese peasant pioneers in the course of ages. The Manchus were more firmly planted at Mukden than the Mongols had been at Qāraqorum. Their leaders, at any rate, were already half Sinified before they crossed the Great Wall, and Mukden had become a seat not merely of Manchu government but of Chinese culture. Yet the Manchu conquerors of China took the same decision as the Mongol Qubilāy. The guardians of the Manchu boy-king Shun Chih (*imperabat* A.D. 1644-61), when they proclaimed him Emperor, transferred the Manchu seat of government to Peking³ and allowed Mukden—which had been 'the education of' the Manchus—to sink to a subordinate status.⁴ The Manchu rulers of China made the same concession to their own home-sickness as their Mongol forerunners. They built for themselves a counterpart of Qubilāy's Chung-tu in the shape of a magnificent holiday resort at Jehol, a highland paradise on the road back from Peking to the dynasty's original home in the hill-country of North-Eastern Manchuria. Yet, in spite of this backward gesture, the requirements of a conquered China had overcome the inclinations of her conquerors once again.⁵

¹ See vol. cit., loc. cit.

² Mukden was founded by the second prince of the Manchu Dynasty, T'ai Tsung (*extra Murum regnabat* A.D. 1625-43).

³ See II. ii. 123.

⁴ Mukden (*Sinicè Shēngking*) did retain some vestiges of its former status. For instance, the Manchu Emperor Ch'ien Lung (*imperabat* A.D. 1736-96) directed in A.D. 1782 that one of four fair copies of the manuscript of his Ssu-k'u Ch'üan Shu ('The Four Treasuries') which were designed for official use was to be lodged at Mukden in a building specially erected to hold it (see Mayers, W. F.: 'Bibliography of the Chinese Imperial Collections of Literature', in the *China Review*, vol. vi (1877-8), No. 5, p. 295). The writer of this Study had the privilege of being taken to see this building, the Wen So K'o, with Ch'ien Lung's immense *corpus scriptorum Sinarum* still safely housed in it, on the 17th November, 1929. The corresponding buildings for housing the other three official fair copies were located respectively in the precincts of the Imperial Palace at Peking, at Yüan-ming Yüan, and at Jehol (see further X. ix. 56).

⁵ When the gravitational pull of a united China had drawn the Mongols' capital to Peking from Qāraqorum and the Manchus' capital to Peking from Mukden, why, in both cases, did the change of location go thus far and no farther? Why did the seat of imperial

We may conclude this survey of the histories of the capital cities of alien empire-builders by considering one of those exceptions that sometimes prove a rule.

When the successors of Alexander were contending for the spoils of the Achaemenian Empire, Seleucus Nicator made his fortune by concentrating his efforts on gaining possession of the vast interior. There was less keen competition for this prize than for provinces with seaboard on the Mediterranean that offered their Macedonian holders an easy access to the heart of the Hellenic World round the shores of the Aegean Sea; yet the prize on which Seleucus had set his heart was attractive for an empire-builder with the vision to divine its possibilities. Babylonia, which Seleucus had selected for his base of operations, had been both the granary and the industrial workshop of the Achaemenian Empire,¹ and, apart from its economic value, it was the strategic key to the political control of all the ex-Achaemenian provinces to the north-east of it, up to the southern borders of Nomads' Land in Central Asia and the western borders of Chandragupta's Indic Empire in Eastern Iran.² Seleucus saw this prize, won it, and made statesmanlike provision for retaining it by laying out, and stamping with his own name, a new metropolis in Babylonia on the right bank of the Tigris at the point where Tigris and Euphrates approached nearest to one another. Seleucia-on-Tigris was a better site than Babylon both for the administration of Babylonia itself and for the command of the great North-East Road linking the Lower Tigris-Euphrates Basin with the Upper Oxus-Jaxartes Basin over the crown of the Iranian Plateau. Thanks to the skill which Seleucus displayed in its location,³ Seleucia-on-Tigris remained an important city and a flourishing centre of Hellenic life and culture for more than five centuries after its foundation towards the end of the fourth century B.C.⁴ But it missed its political destiny through an error of political judgement committed by the founder himself.

The sagacity of Seleucus's original design for constructing a successor-state of the Achaemenian Empire out of its dominions east of Euphrates was conclusively demonstrated after the Seleucid Dynasty's demise by

government come to rest at Peking, instead of travelling on to Loyang on the Yellow River or to Nanking on the Yangtse? Loyang and Nanking had been historic imperial capitals in the past. Why did History fail to repeat itself to this extent on these two occasions? And why did it eventually repeat itself to this extent in A.D. 1928? An attempt to find the answers to these questions has been made in II. ii. 121-7.

¹ According to Herodotus, Book I, chap. 192, Babylonia supplied the Achaemenian court's and mobile army's requirements in kind for four months out of every twelve (cp. p. 205, n. 4, below).

² For the analogy between the Seleucid and the Umayyad control over the Iranian Plateau from a base on the plains of the Land of Shinar (*alias* Babylonia, *alias* 'Irāq 'Arabi), see p. 137, n. 4, above. This portion of the former Achaemenian Empire lying east of Euphrates, which Seleucus marked out for his own share, was the portion which the last Darius had proposed to retain for himself when, during the interval between the battles of Issus and Arbela, he had offered to divide the Empire with Alexander.

³ Whereas Seleucia was an artificial foundation deliberately located with an eye to its possibilities as an oecumenical capital, Babylon had become an oecumenical capital through the accident that the Amorite marchmen of the Sumeric World, who had established themselves there on the borders between the Desert and the Sown, had eventually played the part of restorers of a Sumeric universal state (see II ii. 133, and pp. 226-8, below).

⁴ The exact date of the foundation of Seleucia-on-Tigris is not known (see Bouché-Leclercq, A.: *Histoire des Séleucides* (Paris 1913-14, Leroux, 2 vols.), vol. ii, pp. 524-5.

the histories of the Arsacid and Sasanian Powers, each of which lasted for some four hundred years within these limits, whereas the Sasanian Empire came to grief still more quickly than its Seleucid predecessor when it seriously attempted, under the misguided impulsion of Khusrū Parwīz, to extend its dominions westward to the shores of the Mediterranean and the Bosphorus. Seleucus was enticed to his own death and his dynasty's eventual undoing by the completeness of the triumph of two successive coalitions of Macedonian war-lords in which Seleucus found himself each time on the winning side. In 301 B.C. at the Battle of Ipsus, Seleucus of Babylonia, in alliance with Ptolemy of Egypt and Lysimachus of Thrace, succeeded in overthrowing their common adversary Antigonus, who, from his commanding central position in Syria and Anatolia, had aspired to reassemble all the fragments of the Achaemenian Empire under his own rule at the expense of his fellow successors. Thereafter, in 281 B.C., at the Battle of Corupedium, Lysimachus, in his turn, was overthrown by Seleucus and Ptolemy. The cumulative effect of these two decisive successes was to give Seleucus Nicator, who had originally made his way without access to the western seas, both a Syrian seaboard on the Mediterranean and an Ionian seaboard on the Aegean; and this westward expansion of his empire exposed Nicator and his successors to temptations which they failed to resist.

Nicator himself took over Antigonus's half-built capital city Antigoneia-on-Orontes, within one short day's march from the north-east corner of the Mediterranean, and removed it to a more commanding adjacent site to become the capital of his own monarchy under the name of Antioch,¹ and he met his death on his road to Macedon by way of his newly acquired and precariously far-flung dominions in Western Anatolia and Thrace.² In the sequel, Seleucus's successors drained away the resources of Babylonia and the Iranian provinces on the farther side of Babylonia in an inconclusive struggle with a mobile and elusive Ptolemaic sea-power for the command of the coasts of the Levant all the way round from Gaza to the Hellespont;³ and even the ultimate success of the Seleucidae in this warfare between the elephant and the whale was fraught with disaster. When, in 200-198 B.C., Antiochus the Great conquered Coele Syria from Ptolemy Eurgetes' feeble successor Ptolemy Epiphanes, he was bequeathing to his successors the insoluble problem of dealing with the Jewish temple-state in the hill-country between the two branches of 'the King's Highway';⁴

¹ See p. 94, above.

² See p. 94, above.

³ One object of this misguided Seleucid policy was to keep open an overland pipe-line through which soldiers and settlers from the heart of the Hellenic World round the shores of the Aegean could be pumped into the interior of the Seleucid dominions; but these reinforcements of Greek manpower could assuredly have been obtained even if the Seleucid Monarchy had not spent its resources in trying to maintain a maritime frontage. The dominant consideration was the prestige attaching to suzerainty over historic Greek city-states, however insignificant. We may recall the equally misguided Hapsburg policy of spending the resources of the Danubian Monarchy during the eighteenth century of the Christian Era in efforts to retain possession of Silesia, the Southern Netherlands and the Breisgau, at the cost of letting slip a golden opportunity for wresting from the Ottoman Empire the whole of South-Eastern Europe between Vienna and Constantinople (see II. ii. 180-6 and cp. III. iii. 301-6).

and, when he proceeded to reassert the claim of his house to Seleucus Nicator's acquisitions on both sides of the Hellespont, the result was an irretrievably disastrous collision with the overwhelmingly superior power of Rome.

While the Seleucidae were absorbed in gaining or losing some canton, city-state, or islet on the western fringes of their expanded dominions, they were losing one province after another in the neglected, exploited, but indispensable East. By 248-247 B.C., fifty-four years after Seleucus Nicator's ill-omened victory at Ipsus, the Parnian Nomads had established themselves in the Seleucid province of Parthia astride the Great North-East Road at the point where it descended from the Iranian Plateau towards the Oxus, and the consequent insulation of the Oxus-Jaxartes Basin from the main body of the Seleucid Monarchy quickly resulted in the establishment of an independent state by the Greek 'ascendancy' there.¹ When the Arsacid war-lords of the Parni went on to occupy Media, where the Great North-East Road² made its way through the western mountain ramparts of the Iranian Plateau, and when they proceeded, through this open gate, to descend upon Babylonia itself in 142 B.C., they were tearing out the Seleucid Monarchy's heart; and, after Demetrius Nicator's and Antiochus Sîdêtês' successive attempts in 140 and 130 B.C. to reconquer Babylonia and Media had ended in repeated disaster, the remnant of the Seleucid Empire in Syria was doomed to extinction at an early date. The Seleucid Monarchy met its ignominious end when Tigranes King of Armenia—a hitherto obscure non-Hellenic successor-state of the shattered empire of Antiochus the Great³—unconsciously avenged the overthrow of Antigonus Monophthalmus by occupying Antioch-on-Orontes in 83 B.C.

Such was the nemesis of Seleucus Nicator's momentous decision to establish the seat of his central government on a site adjoining his defeated rival Antigonus's abortive capital at Antigoneia-on-Orontes instead of establishing it in a metropolis of his own creation at Seleucia-on-Tigris.⁴ Nicator could not conjure away inexorable geographical facts which had once been apparent to him by disguising a virtual reconstruction of Antigoneia under a family name of his own;⁵ for a site command-

¹ See II. ii. 143-4. This Greek Power in Bactria seems to have established its independence gradually between 246 and 228 B.C. (see Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), pp. 72-74).

² See xi, map 20.

³ The creation of the Kingdom of Armenia Major by the House of Artaxias—a former lieutenant of Antiochus the Great's who declared his independence after his suzerain's disastrous defeat by the Romans in 190 B.C.—is touched upon on p. 626, below.

⁴ It is worth noticing that the corresponding false step was avoided by both the Arsacid and the Sasanian successor-states of the Seleucid Monarchy, each of which lasted nearly twice as long as the Seleucid Monarchy itself. The Arsacidae, and the Sasanidae after them, unhesitatingly established their seat of government at Ctesiphon, a suburb of Seleucia-on-Tigris which was presumably called after the name of the Greek who had originally laid it out, and which was situated on the farther side of the river, on its Iranian bank. The Arsacidae did not attempt to govern Babylonia from Hecatompylos, their previous capital at the north-eastern exit of the Caspian Gates between the central desert of Iran and the Elburz Range; and the Sasanidae did not attempt to govern it from Istakhr, their previous capital in Fars. Istakhr and Hecatompylos both gave way to Ctesiphon, as, in the Far Eastern World, Mukden gave way to Peking after the Manchu conquest of China (see p. 199, above).

⁵ Seleucus named his new capital in the neighbourhood of Antigoneia 'Antiocheia' after his own father Antiochus.

ing the landward end of the gorge down which the River Orontes forced its way through a coastal range of mountains to the Mediterranean was as unsuitable for the capital of an empire whose heart lay in Babylonia and whose eastern provinces extended across the Iranian Plateau into the Oxus-Jaxartes Basin as it had been felicitous for the capital of an empire which, like Antigonos's empire in its last phase, had been virtually confined to Anatolia and Syria and had not extended farther into the interior of Asia than the western bank of the Euphrates in the section of the river's course in which it approached nearest to the Mediterranean. When eventually the founder's descendants Demetrius Nicator (*imperabat primum* 145-139 B.C.) and Antiochus Sidëtês (*imperabat* 139/8-129 B.C.) were made keenly aware of the indispensability of Babylonia by the painful experience of the consequences of its loss, the elder brother forfeited his liberty and the younger his life in vainly seeking to undo the untoward effects of the century and a half that had elapsed between the establishment of the capital at Antioch by their ancestor the first Seleucus in 300 B.C. and their own ill-fated expeditions on the forlorn hope of recovering Seleucia. If the change made by Seleucus I in his focus of geographical interest had been the other way about—from the banks of the Orontes, on the western edge of the Achaemenian dominions, to the banks of the Tigris in their heart—the Seleucid Monarchy might have had a longer and a happier history.

Migrations of the Capital Cities of Barbarian Empire-builders

Having now surveyed the shifts in the seats of administration of universal states founded or captured by aliens, we may turn to a consideration of the cases in which the empire-builders were barbarians or marchmen.¹ We may begin with the Persian barbaro-marchmen who gave the Syriac World its universal state, and the Arab barbarians who reconstituted the Empire of the Achaemenidae after a thousand-years-long interlude of Hellenic intrusion.

'The homeland of the Persians lies out of the way of the theatres of historical life. The great highroad that links the West with the Eastern World² runs, from Babylon towards the interior, up the valley of the Gyndes [Diyālah] and out of it into the valley of the Upper Choaspes [Karkhah], past the rock of Behistan [*alias* Bisitun], to Ecbatana [Hama-dan], and from here it proceeds along the northern rim of the Iranian Plateau. And so we find that, although the Persians, like the Arabs, have repeatedly launched far-sweeping movements, their country has never been able to become the permanent centre of a great state. As soon as the reaction sets in, Persis [Pārsa, Fars] once more disappears, for centuries on end, from the stage of historic life.'³

According to a story with which Herodotus concludes his work,⁴ Cyrus the Great deprecated a suggestion that the Persian people, now

¹ The Manchu Empire, whose founders were barbaro-marchmen, has been considered already, by anticipation, in connexion with the Mongol Empire in China, whose founders were barbarians with a tincture of alien culture; and the Inca Empire, whose founders were marchmen, in connexion with the Spanish Empire by which it was supplanted.

⁴ The passage has been quoted in the present Study in II. ii. 21.

that they had become masters of the World, should evacuate their bleak highland homeland and settle in one of the many more agreeable countries that were now at their disposal. But, whether or not it was the Achaemenian Government's policy to discourage the Persian people as a whole from migrating to more genial tracts of their newly acquired empire, it is an historical fact that, more than a hundred years before the Empire was established through Cyrus II's overthrow of his Median suzerain Cyaxares, the Achaemenian Dynasty had transferred its own seat of government from its ancestral highlands—which stood not in Fars (Pārsa) but in Lūristān (Parsuwaš)—to the first piece of lowland territory of which it had gained possession. King Teispes of Parsuwaš (*regnabat circa 675–640 B.C.*), the son and first successor of Achaemenes the dynasty's founder and eponym, figures in the Assyrian records as 'King of the city of Anšan';¹ and Anšan was believed by twentieth-century Western scholars to have lain somewhere in the neighbourhood of both the Babylonian district of Der and the city of Susa, the capital of Elam—perhaps at some point where a fortress would command the corridor of lowland territory linking the plains of Elam with the plains of Babylonia between the south-eastern extremity of the Kabīr Kuh Range's Pusht-i-Kuh foothills and the northern extremity of the swamps through which, in that age, the rivers Kārūn, Tigris, and Euphrates made their separate exits into the Persian Gulf.² The importance attached to this earliest acquisition of the Achaemenids in the lowlands is attested in the retention of the title 'King of Anšan' by Teispes himself and by his first three successors in the elder branch of his house—Cyrus I, Cambyses I, and Cyrus II the Great³—even after Teispes had taken the opportunity to make himself master of Pārsa, on the far side of Elam, while Elam and Assyria were engaged in the last and most exhausting of the Assyro-Elamite wars (*gerebatur circa 663–638 B.C.*), and even after the reunion of the two portions of Teispes' dominions in the hands of the elder branch of Teispes' line—which seems to have come to pass, in or shortly before the year 547 B.C., through the deposition of King Arsāmēs (Aršāma), the son of Cyrus I's younger brother Ariaramnes (Ariyāramna) and the heir of Ariaramnes' appanage Pārsa, by Cambyses I's son and Cyrus I's grandson Cyrus II the Great.⁴

For more than a hundred years after the Achaemenidae had acquired their footing in the lowlands of Anšan, just to the west of Susa, and for not much less than a hundred years after they had gone on to acquire the highlands of Pārsa, to the south-east of Elam, Susa remained in non-Achaemenian hands. The former capital of Elam was annexed by Assyria after she had erased Elam from the political map⁵ and was inherited

⁵ See Cameron, op. cit., p. 211.

from Assyria by Assyria's Neo-Babylonian successor-state. There was archaeological evidence that Susa was included in the Neo-Babylonian Empire in Nebuchadnezzar's day (*imperabat* 605-562 B.C.);¹ and it was not till after his death² that the Achaemenian Kingdom managed to gain possession of a city which, ever since Teispes' acquisition of Pārsa, had insulated the dynasty's major new dominion from its minor original patrimony as awkwardly as, from A.D. 1466 to A.D. 1772, the two sections of the Hohenzollern dominions were insulated from one another by a city-state of Danzig under Polish suzerainty marching with a corridor of Polish territory extending to the shore of the Baltic Sea and thereby cutting East Prussia off from Prussian Pomerania and Brandenburg.

After Susa had at last fallen into Achaemenian hands, it was as inevitable that the capital of the Achaemenian Empire should be transferred to Susa from Anšan as it was that the capital of the Ottoman Empire should be transferred to Constantinople from Adrianople after Sultan Mehmed II's capture of the Second Rome in A.D. 1453; and this step was duly taken by Darius I before the end of the year 521 B.C.³ It will be seen that the geographical situation of Susa *vis-à-vis* the highlands of Fars, the highlands of Lūristān, and the great plain of Shinar was comparable to the position of Peking *vis-à-vis* the highlands of Eastern Manchuria, the Orkhon High Steppe and the great plain of Northern China. The site lay between the semi-barbarian empire-builders' two main reservoirs of military man-power in a corner of the lowlands that were the Empire's main granary and workshop; and the site's proximity to the military reservoirs was the reason for its selection and retention notwithstanding the inconvenience of its location for the purpose of administering the Empire as a whole.

In Darius's reorganization of the Achaemenian Empire it proved not impossible to lead into Susa both the Great North-East Road and the Great North-West Road; yet this achievement of the Achaemenian ministry of works remained something of a *tour de force*, and the awkwardness, even of Susa, as a seat of government for an empire extending to the Jaxartes, Indus, Nile, and Danube, is attested by the fact that the Achaemenian Imperial Court did not reside in the official capital of the Achaemenian Empire year in and year out, but moved round in an annual migration between Susa and two other imperial residences.⁴ The winter residence was Babylon, which was far better placed than Susa, though not quite so well placed as the future Seleucia-

¹ 'Bricks [identical in make with bricks of Nebuchadnezzar's found at Babylon, and stamped] with his name were used to erect buildings in that city, while an alabaster vase with his inscription and a weight with his legend are further witnesses of his control' (Cameron, *op. cit.*, pp. 219-20).

² According to Cameron, *op. cit.*, p. 221, Susa, together with the rest of the lowlands of Elam, was lost by the Neo-Babylonian Empire to the Achaemenidae before Nabonidus's accession in 556 B.C. According to Olmstead, *op. cit.*, p. 43, it was lost when, in 546 B.C., the Neo-Babylonian Government's commandant of the citadel of Susa, Gobryas, turned traitor and joined forces with Cyrus II.

³ See Olmstead, *op. cit.*, p. 119.

⁴ According to Xenophon: *Expeditio Cyri*, Book III, chap. v, § 15, and *Cyropaedia*, Book VIII, chap. vi, § 22, the Achaemenian Court used to spend seven winter months in Babylon, two summer months in Ecbatana, and only three spring months out of every twelve at Susa (*cp.* p. 200, n. 1, above).

on-Tigris, for serving as the point of junction of the two main imperial highways.¹ The summer residence was Ecbatana (Hamadan), the former capital of the Median Power, which lay at the strategically important point on the Great North-East Road where this highway dropped down to the level of the Iranian Plateau after surmounting the Zagros Range that wallled in the plateau on the west.²

The significant point here for the purpose of our present investigation is that the Achaemenian Court's fixed annual time-table of circulation from one imperial residence to another does not appear to have allowed for any regular annual residence at any site in the Persian homeland of the imperial people. The Achaemenian emperors showed their reverence for Pārsa by being crowned there and their affection for it by being buried there. Cyrus built for himself a tomb (still standing at the time of writing) in the Persian canton of Clan Pasargadae,³ near the latter-day village of Murghāb; and, lower down the course of the little River Pulvār, Darius and his successors hewed out their sepulchres in the face of a cliff at the point latterly known as Naqsh-i-Rustam.⁴ Cyrus is said also to have built for Clan Pasargadae in the course of the years 559-550 B.C. a city called by the clan name;⁵ and between 512 and 494 B.C.⁶ Darius I

¹ Seleucia-on-Tigris was skilfully sited by its Macedonian founder to serve as the point of junction not only between the Great North-East Road and the Great North-West Road, but also between the two alignments of the latter. The north-eastern alignment of the Great North-West Road, as described by Herodotus (Book V, chaps. 52-3), ran from Susa to Ephesus to the east of the middle course of the Tigris and to the north of the central desert of Anatolia. The south-eastern alignment ran from Susa to Ephesus via Babylon and the east bank of the middle course of the Euphrates through the Cilician Gates. The north-eastern alignment traversed the derelict capitals of both Assyria and the Hittite Power. The south-western alignment was followed by Cyrus the Younger in 401 B.C. and by Alexander in 434-433 B.C., and it became the life-line of Seleucus Nicator's dominions after he had extended them to the shores of the Mediterranean and the Aegean, since the more southerly of the two Iranian successor-states of the Achaemenian Empire in Cappadocia succeeded in maintaining itself astride of the north-eastern branch.

² The choice of Ecbatana for the summer residence of the Achaemenian Court was doubtless partly due to the coolness of its climate and partly to its historic prestige as the former capital of the Median Power which the Achaemenian Empire had supplanted. Under the Achaemenian régime, even after its reorganization by Darius I on a narrower political basis, the Medes were second only to the Persians in the hierarchy of imperial peoples. At the same time the selection of this site at a key-point on the Great North-East Road is also evidence of the high priority of the North-East Frontier among Achaemenian cares of state.

³ According to Herodotus, Book I, chap. 125, the House of Achaemenes was one of the septes of this Clan Pasargadae. Are we to infer that the Pasargadae had migrated from Lūristān to Fars either at the time of the acquisition of Fars by the Achaemenid king of Parsuwaš-and-Anšan, Teispes, or else at the time of its acquisition by Teispes' great-grandson the Cyran Achaemenid King of Parsuwaš-and-Anšan, Cyrus II?

⁴ The shock administered to the Persian people by their sudden overthrow from their high estate through the prowess of their Macedonian conquerors was so severe that it broke the continuity of their folk-memory; and, after forgetting that these sepulchres had been hewn and occupied by the greatest potentates of their own race, they expressed their continuing sense of wonder at the mightiness of these ancient monuments by naming the locality after a parvenu hero of an epic cycle which was perhaps of Saka origin (see V. v. 602-4). Even the crushing experience of 334-330 B.C. could hardly have produced so extreme a lapse of memory as this if the association of the Persian people in their homeland with the universal state which Persian hands had built had not been rather tenuous.

⁵ For a description see Herzfeld, E. E.: *Archaeological History of Iran* (London 1934, Milford), pp. 27-28. 'Such a plan cannot be called exactly a town. It looks more like the first settlement of nomads, and such in fact was the case.'

⁶ The imperial archives disinterred at Persepolis by twentieth-century Western archaeologists indicated that Persepolis had been built between these dates, and that the

constructed at the point where the gorge of the Pulvār opens out into the plain of Marv-Dasht¹ an imperial centre for the Persian people as a whole which, like the civic centres of the cantons of Gaul under the Roman Empire, came to be known by the name of the nation itself² and not of the locality in which it happened to have been laid out. The layout of this artificial capital was dominated by a magnificent audience hall,³ but the visits paid by Achaemenian emperors to Persepolis and Pasargadae were as rare and brief as those paid by Hapsburg king-emperors to their royal palace at Buda or by sovereigns of the United Kingdom to their royal palace at Holyrood. The unusualness of the spectacle of an Achaemenian emperor giving audience in the stupendous *apadāna* looking out on to the plain of Marv-Dasht is attested by the handsomeness of the rare imperial visitor's customary atonement for his necessary misdemeanour of being a chronic absentee. Whenever an emperor did, for once, set foot on Persian ground, he used to give a gold piece to every woman of Pasargadae⁴ or, as some Greek men of letters reported,⁵ to every man and woman in the whole of Fars.

The munificence of this largesse could be afforded thanks to its infrequency. Persepolis remained unknown to the Hellenes before Alexander fought his way to the spot through a barrage of brigand tribesmen. Its name is not mentioned in the Babylonian, Jewish, Phoenician, or Egyptian records either;⁶ and the only indication that Persepolis may after all have been of some political importance is the fact that Alexander felt it worth while to burn the place down. If the intention of this unworthy act of vandalism was to break the prestige and efface the memory of the imperial dynasty that Alexander was aspiring to supplant, he would have employed his destructive energies to better effect on the more arduous task of defacing the gigantic bas-relief and trilingual inscription, recording the mighty deeds of Darius the Great, which the second founder of the Achaemenian Empire had graven on the face of a precipitous cliff far up above the reach of any ordinary saboteur. But, if the Macedonian usurper had set out to destroy this all but impregnable monument, he would not have found it in Fars, but on a crag overhang-

work of construction had been most actively pressed forward between the years 503 and 497 B.C. (see Olmstead, *op. cit.*, p. 176).

¹ Olmstead (*in op. cit.*, p. 172) conjectures that Darius's reason for abandoning Pasargadae was its association with the rival Cyran branch of the Imperial House.

² 'Pārsa-tyā', in an inscription of Xerxes'. From this usage the Greeks coined the word 'Persepolis', but, in current Greek parlance, to go to this imperial centre of the Persian people was expressed simply as going *és Ilépas* (as a Gallo-Roman would say 'Parisios' instead of 'Lutetiam'). On this point see Meyer, E.: *Geschichte des Altertums*, vol. iii, 1st ed. (Stuttgart 1901, Cotta), pp. 31-32.

³ The Sasanidae followed the policy of the Achaemenidae in adorning their native Fars with magnificent monuments as a compensation for the removal of their seat of imperial government to a more convenient site. Eighteen out of twenty surviving Sasanian rock-sculptures were in Fars (Herzfeld, E.: *Archaeological History of Iran* (London 1935, Milford), p. 79).

⁴ 'Whenever the Emperor of the Persians visits Pasargadae, he distributes a largesse of gold to the Persian women. The value of this donative amounts to twenty Attic drachmae per head' (Ctesias: *Persica*, Books IV-VI, p. 116 in J. Gilmore's edition (London 1888, Macmillan). Cp. Nicolaus of Damascus, fr. 65, in *Historici Graeci Minores*, ed. by Dindorf, L., vol. i (Leipzig 1870, Teubner), p. 63).

⁵ Xenophon: *Cyropaedia*, Book VIII, chap. v, § 21, and chap. vii, § 1; cp. Plato: *Leges*, Book III, 695 D, and Plutarch: *Life of Alexander*, chap. 69.

⁶ See Olmstead, *op. cit.*, p. 162.

ing one of the stations on the Great North-East Road in the section where the imperial highway climbed the Zagros Range *en route* from Babylon to Ecbatana. In choosing a site for his own sepulchre, Darius might indulge his personal sentiment for the Persian crownland of his Ariaramnan Achaemenid ancestors, and in deciding where to lay out an imperial palace he might feel it politic to flatter the vanity of the imperial people on whose loyalty to his throne and house the stability of his empire and dynasty depended. But, in the location of a monument that was to serve neither piety nor policy but publicity, Darius showed the shrewdness of his judgement by putting his finger on the rock of Behistan, where his record would force itself on the attention of the maximum number of his subjects as they travelled on their lawful occasions along the busiest thoroughfare in his empire.

When the universal state that had been originally provided for the Syriac World by Persian empire-builders from the south-west corner of the Iranian Plateau was eventually reconstituted by Hijāzī empire-builders from the western rim of the Arabian Plateau, history repeated itself with emphasis. Thanks to the intuition of the discordant oligarchs of an oasis-state in the Hijāz, who had invited the rejected prophet of a rival community to make himself at home with them and try his hand at being their ruler, in the hope that he would bring them the concord which they had failed to attain by themselves, Yathrib became, within thirty years of the Hijrah, the capital of an empire embracing not only the former Roman dominions in Syria and Egypt but the entire domain of the former Sasanian Empire.¹ Yathrib's title to remain the seat of government for this vast realm was indisputable on its juridical merits. This remote oasis-state was the territorial nucleus out of which the Muslim Arab world-empire had burgeoned in its miraculously rapid growth, and it was now also hallowed as *Madinat-an-Nabī*, the City of the Prophet which had recognized his mission and had furnished him with home, throne, and sepulchre. This title was so impressive that *de jure* Medina remained the capital of the Caliphate—at any rate until the foundation of Baghdad by the 'Abbasid Caliph Mansūr in A.D. 762.² Yet *de facto* the swiftly expanding dominions of the Prophet Muhammad and his successors were governed from Medina for no longer than thirty-four years; for the fact was that this oasis hidden away in the interior of the Arabian Plateau—a vaster, wilder, barer, emptier counterpart of the Plateau of Iran—had condemned itself to political nullity by the immensity of its political success.

It would have been still less practicable to rule 'the Fertile Crescent' and the Lower Nile Valley and the Upper Basin of the Oxus and Jaxartes from Medina than to rule them from Istakhr or Persepolis or Pasargadae. The last event in Medina's brief career as an operative

¹ Ibn Khaldūn suggests that the Primitive Muslim Arabs' success in conquering the whole of the Sasanian Empire was a consequence of their conquest of the Sasanian imperial capital Ctesiphon, and that their contemporary failure to conquer more than a portion of the Roman Empire was a consequence of their inability to conquer the Roman imperial capital Constantinople (see the *Muqaddamāt*, translated by de Slane, Baron McG. (Paris 1863-8, Imprimerie Impériale, 3 vols.), vol. i, p. 333).

² See pp. 148-50, above.

imperial capital was the assassination there of Muhammad's third Caliph Uthmān in A.D. 656. Thereafter, 'Alī (*imperabat* A.D. 656–61) tried to rule the Caliphate from Kūfah, one of the cantonments of Arab tribal troops on the borderline between the Arabian Steppe and 'Irāq, and Mu'āwīyah (*imperabat* A.D. 661–80) succeeded in ruling it from Damascus, on the borderline between the Arabian Steppe and Syria. Under the Umayyad régime Medina was never the *de facto* seat of government; it was the academic fastness of embittered orthodox exponents of the Islamic Law; and the usurping dynasty, in its wary handling of this impeccable hornet's nest, seldom allowed itself to be provoked into committing invidious acts of repression; it was usually able to dispose of the fulminations of the Medinese doctors of theology by the more elegant and baffling riposte of a mock-respectful disregard.

When the Umayyad usurpers were supplanted by the semi-legitimate 'Abbasids, orthodox Medina's situation did not improve but deteriorated, for the road (if it could be called a road) from this West Arabian oasis to the 'Abbasids' metropolitan territory in 'Irāq was longer and more arduous than the road from Medina to Damascus. Moreover, the downfall of the Umayyads had put an end to that Arab hegemony in the Caliphate which, under the Umayyad régime, had been a link between the Desert and the Sown. The change of dynasty in the Caliphate was accompanied by a virtual secession of the badu of the Arabian Steppes;¹ and, though this break-away was less overt than the insurrection which had broken out after the death of the Prophet Muhammad, it was, unlike the *Riddah*, enduring in its effects. Medina was insulated from Baghdad by a Nomad no-man's-land; and, while the 'Abbasid Caliphs might occasionally advertise their piety by visiting the Haramayn as pilgrims,² these imperial pilgrimages to a couple of oases at World's End, where a Commander of the Faithful had no political business to transact, were as infrequent as they were hazardous.

To judge by the experience of later, less august and, by the same token, less opulent Muslim pilgrims to the two principal holy cities of Islam, we may assume that the badu made Hārūn-ar-Rashīd and his ever more degenerate successors pay toll for the right of way across their steppes. Recalcitrant tribesmen are no respecters of persons; and we know for a fact that, when the Achaemenian emperors paid their occasional visits of family piety to Persepolis and Pasargadae from Susa, they had to pay toll to the wild highlanders commanding the mountain passes on their route for the privilege of travelling through to scatter their largesse among their own Persian kinsfolk in Fars. When these impudent Uxii³ imprudently notified Alexander, on his arrival at their borders in

¹ See p. 149, n. 3, above.

² The stations on the two pilgrimage routes of the 'Abbasid Age from 'Irāq to the Hijāz—one route taking off into the Arabian steppe from Kūfah and the other from Basrah—are plotted out in Spruner-Menke: *Hand-Atlas für die Geschichte des Mittelalters und der Neuere Zeit*, 3rd. ed. (Gotha 1880, Perthes), Map 81.

³ This was a Greek version of the name of a people which appears as Ūvijyā (standing for Hūjiyā) in Old Persian. In the Achaemenian official lists of *dahyāva*, the land name Ūvja or Ūja (standing for Hūja) denotes Elam in the widest sense, including the Susian lowland as well as its highland hinterland. In a later age the same country continued to be known by the same name in the form Hūzistān (or Khūzistān), while its latter-day

331 B.C., that they would not let him pass either unless he paid them their customary fee, the conqueror gave the blackmailers the surprise of their lives;¹ and thereafter, in the winter of 324-323 B.C., he diverted himself by conducting a miniature lightning campaign against the Uxians' north-western neighbours and fellow brigands the Kassites,² who had likewise acquired a customary right of levying blackmail—presumably also, like the Uxii, from the Achaemenian Emperor himself, since the Kassites' highland fastness lay astride the direct road from Susa to Ecbatana.³

Migrations of the Capital Cities of Marchmen Empire-builders

We may now pass from empires founded by barbarians like the Primitive Muslim Arabs, or by barbaro-marchmen like the Persian henchmen of the Achaemenidae and the Manchu conquerors of China, to empires

capital (the provincial successor of an imperial Susa) was called Ahwāz, the Arabic plural of Hūz, which was the singular of an ethnicon corresponding to the old Persian Hūjiyā.

¹ See Arrian: *Expediitio Alexandri*, Book III, chap. xvii. If these uncouth brigands of the Southern Zagros had been as ready-witted as the accomplished Tyrrhenian pirate, they might have taken a verbal revenge for their military discomfiture by pointing out to Alexander that he was engaged in a larger way in the same trade that they were practising on a petty scale (see the story as told by Saint Augustine: *De Civitate Dei*, Book IV, chap. 4, and translated in XI. ix. 223, n. 1).

² See Arrian: *Expediitio Alexandri*, Book VII, chap. xv, §§ 1-3.

³ The Kassites' customary right to take toll from august travellers seeking passage through their country was flouted in 317 B.C. by Antigonos, as the Uxians' had been by Alexander in 331 B.C., but the sequel was not the same, for this time it was the Macedonian war-lord who was given the surprise of his life by the Iranian mountaineers. Antigonos, confronted with the problem of rapidly extricating his troops from a precarious military situation and a formidably high summer temperature in the lowlands of Elam, had decided to evacuate them to Media—the nearest quarter of the Iranian Plateau—to recuperate and refit. For reaching this destination, he had a choice of two alternative routes: a detour, estimated to involve a forty days' march, for the most part through sultry lowlands, or a short cut, amounting to no more than a nine days' march, through the cool highlands of the Kassite country. The detour would have taken him from Susa along the north-east alignment of the Great North-West Road to a point where this road crossed the Babylon-Ecbatana section of the Great North-East Road, and from there he would have marched to Ecbatana, past the rock of Behistan, along the main highway of the Achaemenian Empire. Diodorus Siculus's source rightly characterizes the detour as being *καλή καὶ βασιλική*. The short cut through the Kassite country was presumably the Ecbatana-Susa diversion of the Great North-East Road of which the proper south-western terminus was not Susa but Babylon. Against advice, Antigonos insisted both on taking the short cut through the Kassites' country and on trying to force his passage without purchasing the tribesmen's acquiescence. The Kassites did not get their money, but they made their redoubtable visitor pay dear in soldiers' lives (Diodorus Siculus: Book XIX, chap. 19). So much for the effect of Alexander's flamboyant chastisement of the Kassites only five and a half years before! It is easier to chastise wild tribesmen than to break their spirit or change their habits, as empire-builders have discovered in many different areas and ages. Tribesmen, like bayonets, are awkward to sit on.

When the Uvjiyā and the Kassites felt the disconcerting weight of Alexander's arm, they could hearten themselves by recalling that they and their ancestors had survived many previous punitive expeditions of the kind (ignorant though they were of Naramsin's stele portraying him chastising the Gutaeans). The Kassites had, indeed, been sitting, unscotched, in their local fastness in the Zagros since at least as early as the eighteenth century B.C., and a detachment of their braves had made history by descending on a Land of Shinar which Hammurabi had just exhausted in the act of re-establishing the Empire of Sumer and Akkad by main force. This momentarily resuscitated Sumeric universal state had come and gone, but the Kassites had battened on their Babylonian prey for five or six hundred years (see I. i. 111). At the time of writing the social condition of this corner of Iran was much like what it had been in the eighteenth century B.C. and in the fourth. In the twentieth century of the Christian Era the Kassites called themselves 'Lūrs' and the Uxii 'Bakhtiyāris'.

founded by marchmen who were genuine, though rustic, members of the society which they furnished with a universal state. In such cases likewise the normal tendency, as we have noted by anticipation,¹ is for the seat of imperial government to travel from the site of the former parochial capital of the empire-building march-state to some new site nearer the heart of the civilization whose whole domain has now been united politically. A classical illustration of this tendency is afforded by the course of Sinic history.

The cradle of the Sinic Civilization had been the great plain which lay between 'the Country within the Passes' on the west and the hill-country of Shantung on the east, and which was inundated by the waters of the Yellow River in the lower part of its course;² but, at an early date, a secondary centre had arisen in the little plain watered by the lower course of the River Wei,³ the principal right-bank tributary of the Yellow River, which joins the main stream just at the point where the Yellow River bends, in an acute angle, from a south-by-westerly to an east-by-northerly course and forces its way through the mountain barrier that separates the little western plain 'within the passes' from the Great Eastern Plain which was the heart of the Sinic World.

The empire-building march-state Ts'in had started its career as a western outpost of the Sinic World far up the Wei Valley, but, after centuries of progressive expansion, its capital had come—by the time when Ts'in She Hwang-ti united the Sinic World politically by conquering and annexing Ts'in's six rivals⁴—to be located at Hsien Yang, on the left bank of the Lower Wei near the western end of the little western plain 'within the passes'; and Ts'in She Hwang-ti retained this existing capital of his hereditary kingdom as the seat of government for his newly established universal state.⁵ Upon the overthrow of the Ts'in régime after Ts'in She Hwang-ti's death and the capture of Hsien Yang by Liu Pang,⁶ the former capital of the Ts'in Power was laid waste in cold blood by the arch-rebel Hsiang-yü.⁷ This aristocrat had inherited an implacable hatred of Ts'in and all its works from forebears who had been hereditary dignitaries of the state of Ch'u, Ts'in's principal rival.⁸ The peasant-born founder of the Han Dynasty had no such vested interest in the vendettas of a dead feudal past. When he had occupied Hsien Yang in 207 B.C. and thereby brought the Ts'in régime to an end, he had achieved this *coup* by the combination of a politic clemency with military force, and had been content to spare the stones and timbers of the city as well as the life of the last Ts'in emperor, when once the latter had resigned the insignia of the imperial office.⁹ When, after his successful issue from his inevitable settlement of accounts with Hsiang-yü, Han Liu Pang found himself sole master of the Sinic World, he followed in the footsteps of his Ts'in forerunners, not only in keeping the whole of 'the Country within the Passes' under his own direct administration,¹⁰

but in locating his seat of government at the western end of the little plain of the Lower Wei. Ch'ang Ngan, where Han Liu Pang laid out his new capital, lay near the right bank of the Wei just opposite the devastated site of Hsien Yang on the farther side of the river.

This avatar of the capital of Ts'in remained the capital of the Han Empire for the duration of the Prior Han Dynasty (*imperabant* 202 B.C.–A.D. 9). When, however, after the interregnum arising from the usurpation of Wang Mang (*dominabatur* A.D. 9–23),¹ the Empire was reinstated by the Posterior Han Dynasty (*imperabant* A.D. 25–221), the seat of government was transferred by them from Ch'ang Ngan in the Lower Wei Valley, just 'within the passes', to Loyang, just outside the passes, on the western verge of the Great Eastern Plain, in the lower valley of the River Lo, which was the next right-bank tributary of the Yellow River below the Wei.²

This site, just within the plain that was the heart of the Sinic World, was already historic ground by the time when the Posterior Han decided to plant their capital there. The transfer of the seat of government of the Han régime that was made in A.D. 25 had been anticipated in 770 B.C.,³ when the Chóu Dynasty had evacuated their previous capital 'within the passes' at Tsung Chóu (a few miles to the south-west of the subsequent site of Ch'ang Ngan) after it had been sacked in 771 B.C. by barbarian raiders from the west, and had taken refuge at Loyang, which had previously been no more than a secondary seat of theirs.⁴ Moreover, before the Chóu had established this at first subsidiary

¹ See V. vi. 295.

² See II. ii. 119.

³ See Hirth, F.: *The Ancient History of China* (New York 1908, Columbia University Press), p. 176.

⁴ The political sequels of these two coincident shifts in the location of the seat of government of the Sinic World were not the same. When made in A.D. 25, the transfer of the capital gave the Han régime a new lease of life; when made in 770 B.C., it resulted in the Chóu Dynasty's becoming *rois fainéants* who lingered on, in a miniature imperial domain and with merely ceremonial functions, till they were snuffed out by Ts'in She Hwang-ti's grandfather Kung Chao Hsiang of Ts'in in 256–249 B.C. The histories of the Chóu and Ts'in dynasties had, however, run almost exactly parallel in an earlier chapter, and, even in the last chapter, the two denouements resembled one another in being, both of them, ironic.

Either dynasty had started its career as a western outpost of the Sinic World in the upper reaches of the Wei Basin. Both of them had subsequently moved their seat of government down into the little plain of the Lower Wei (Chóu perhaps in 1150 B.C., Ts'in after 770 B.C.). Both had then broken out of their western march-state 'within the passes' and had conquered the heart of the Sinic World on the Great Eastern Plain: Ts'in She Hwang-ti's overthrow of Ts'in's six eastern rivals in 230–221 B.C. had its precedent in Chóu Wu Wang's overthrow of the Shang (*alias* Yin) Power on the Great Eastern Plain at some date, not precisely determinable, between 1122 B.C. (the traditional dating) and about 1050 B.C. In the next chapter the two histories diverged. The Chóu Dynasty attempted to organize the government of its eastern conquests by devolution on feudal lines, and thereby reduced itself, by stages, to impotence: the first shock was suffered by the Chóu Power in 841 B.C., the second in 771–770 B.C., and the end came in 249 B.C. Warned (we may guess) by the miscarriage of the Chóu Dynasty's policy, Ts'in She Hwang-ti sought to confirm his hold on his eastern conquests by a policy of extreme *Gleichschaltung* and centralization, and thereby defeated his own personal and dynastic ends by provoking a violent reaction which extinguished the Ts'in Power for ever within three years of the First Ts'in Emperor's death. Thanks, however, to the genius of Han Liu Pang and to the hardly less notable statesmanship of the founder of the Posterior Han Dynasty, Kwang Wuti, Ts'in She Hwang-ti's empire and system of government lasted, in a modified and on that account more practically effective form, for nearly four hundred years—from Ts'in She Hwang-ti's death in 210 B.C. to the decay of the Posterior Han Power towards the close of the second century of the Christian Era (see II. ii. 118–19).

western seat of theirs at Loyang, the neighbourhood had already been a focus of political power. A site a few miles farther down the course of the Lo River, not far from its junction with the Yellow River, had been one of the successive capitals of the Shang (*alias* Yin) Dynasty, which had ruled in the Great Eastern Plain before the Chóu had descended from 'the Country within the Passes' and had brought this Shang régime to an end.¹

In the history of the main body of the Far Eastern Society that was affiliated to the Sinic Civilization, this episode of the transfer of a seat of government from the little western plain in the Wei Basin to the Great Eastern Plain repeated itself after the evocation of a ghost of the Sinic universal state by the Sui Dynasty.² The Sui, and the T'ang after them, located the capital of a politically united China at Si Ngan (the latter-day Sian-fu),³ on a site adjoining that of Ch'ang Ngan; and the capital of this resuscitation of the Ts'in and Han Empire remained at this spot as long as the Sui and T'ang dynasties endured (*imperabant* A.D. 589-907). But, after an interregnum following the decay of the T'ang Power that had set in before the close of the ninth century of the Christian Era, the reunion of all but a fraction of the former dominions of the T'ang⁴ by the Sung Dynasty in A.D. 960 was accompanied by an eastward shift in the seat of government⁵ along the historic west-east axis. This time, Loyang was not the beneficiary; under the Sung régime she did not re-emerge from the secondary position that she had occupied under the T'ang.⁶ The Sung laid out their capital more than a hundred miles farther to the east, at Kaifêng, in the middle of the Great Eastern Plain, and not on its western verge.

The course of empire in the Yellow River Basin had had a parallel in

¹ By the time of writing, archaeological discoveries had confirmed the Sinic literary tradition by producing independent evidence for the existence of the Shang culture (see xi, map 25) on the Great Eastern Plain in the second millennium B.C. (The authenticity of the Hsia Dynasty, which was the traditional precursor of the Shang, still remained to be proved.) The capital of the Shang Power was traditionally recorded to have lain in the Lower Lo Valley from 1386 to 1198 B.C. During the last phase of the Shang régime, traditionally dated 1198-1122 B.C., the seat of government was recorded to have lain farther to the north-east, at Mo (see xi, map 25), on the main northern arm of the Lower Yellow River itself. After the overthrow of the Shang Empire, the dynasty survived as hereditary princes of the parochial state of Sung (see xi, map 25) to the east of Loyang in the upper basin of the Huai River. During the Sinic Time of Troubles that resulted from the decay of the Chóu Power, Sung was one of those little states in the centre of the Sinic World which were the stakes in the contest for hegemony between the great states on the fringes.

² For this achievement of the Sui Dynasty, and its prolongation by their successors the T'ang, see II. ii. 120; pp. 19-21, above; and X. ix. 16.

³ See II. ii. 120.

⁴ Though inconsiderable in area compared with the total extent of the main body of the Far Eastern World, this fragment of former T'ang territory which the Sung failed to reincorporate into the reunited empire was strategically and historically important. The sixteen districts of which it consisted (see II. ii. 121) lay just within the Great Wall and included the site of the future imperial city of Peking at the northern extremity of the Great Eastern Plain. The Khitan Nomad barbarians, to whom this fragment of territory had been ceded, *circa* A.D. 927-37, during the post-T'ang interregnum, chose this site for their southern residence and thus prepared the way for it to become the capital of their successors the Kin, after these had shifted the centre of gravity of their dominions southward by conquering the Yellow River Basin from the Sung in A.D. 1124-42 (see V. vi. 307).

⁵ See II. ii. loc. cit.

⁶ At the time of writing, Loyang was serving, under the name of Honan-fu, as the local centre of administration of the central province of Northern China.

the Nile Valley below the First Cataract.¹ In Egyptiac as in Sinic and Far Eastern history, political unity was conferred—or imposed—on the society no less than three times over by a march-state starting from a base of operations up-river;² and in Egyptiac history likewise the aggrandisement of a march into a universal state was followed on each occasion by a shift in the location of the seat of government from the former parochial capital of the empire-building marchmen to a new site nearer to the heart of the domain of the politically unified society.

The foundation, *circa* 3100 B.C., of a united kingdom of Upper and Lower Egypt was achieved by empire-builders from the extreme south of the Egyptiac World of the day, in the neighbourhood of the modern Al-Kāb,³ between Thebes and the First Cataract. The political union, from this base of operations, of the whole of the Lower Nile Basin between the First Cataract and the Mediterranean was immediately followed by a northward shift of the seat of power. The Hieraconpolite empire-builders established their imperial residence at Thinis, and their necropolis at Abydos on the opposite bank of the Nile, down-stream from their ancestral canton; and the *de facto* centre of imperial administration seems soon to have moved on still farther down-stream to Memphis.⁴ Thereafter, this ideally convenient site, at the point of junction between the mouth of the Nile Valley and the head of the Delta, remained the seat of government of 'the Old Kingdom' to the end. The *de facto* capital of its spring-time became the *de jure* capital of its summer, when the Thinites were followed by the pyramid-builders of the Third and Fourth Dynasties;⁵ and, when summer passed over into autumn, Memphis was still the place from which the demonic pyramid-builders' pious Heliopolitan successors attempted to exert their gradually diminishing authority.⁶

After the Time of Troubles following 'the Old Kingdom's' collapse, the establishment, *circa* 2052 B.C., of an Egyptiac universal state by a prince of the southern march-state of Thebes was similarly followed, in the reign of the Emperor Amenemhat I (*imperabat circa* 1991-1962 B.C.), by a transfer of the capital of 'the Middle Empire' from Thebes to a site, only a few miles up-stream from Memphis, which its founder named 'the Conqueror of the Two Lands' (*Egyptiacè* 'Iz-Tau').⁷ Though Thebes was slightly less remote than Al-Kāb had been

¹ This parallel has been pointed out, in another connexion, in II. ii. 118.

² See I. i. 140, n. 2, and II. ii. 112-13.

³ The nucleus of the 'nome' (canton) which was the original domain of these Horus-worshipping empire-builders consisted of a pair of cities facing one another across the Nile: Necheb (*Graecè* 'Eileithuia') on the site of the modern Al-Kāb on the east bank of the Nile, and Nechen (*Graecè* 'Hieracônpolis', in allusion to the hawk ('hierax') which was both the heraldic emblem of the city and the symbol of its god Horus) on the west bank. (See Hall, H. R.: *The Ancient History of the Near East* (London 1913, Methuen), pp. 93-94; Meyer, E.: *Geschichte des Altertums*, vol. i, Part II, 3rd ed. (Stuttgart and Berlin 1913, Cotta), pp. 80 and 111).

⁴ See Hall, *op. cit.*, pp. 108-9; Meyer, *op. cit.*, vol. cit., ed. cit., p. 134.

⁵ See Meyer, *ibid.*, p. 169.

⁶ It is significant that, whereas the Thinites were buried at Abydos, far up the Nile Valley though not so far as Al-Kāb, the Heliopolitans as well as the pyramid-builders chose the neighbourhood of Memphis for the site of their sepulchres (see *ibid.* pp. 132 and 202-3).

⁷ See *ibid.*, p. 267.

from the heart of the Egyptiac World, the gravitational pull of the body social which Theban prowess had reunited proved once again so strong that Thebes on this occasion, like Al-Kāb before her, had to pay for her political achievement by ceasing to be the seat of government of the oecumenical polity which she had called into existence. When, however, after an abortive interregnum,¹ the Egyptiac universal state was restored *circa* 1570 B.C. by another prince of Thebes, as a result of his triumph in a holy war of liberation against the hated alien Hyksos conquerors of Lower Egypt, the power and prestige of Thebes stood so high that this time she was able to resist successfully, for more than two hundred years,² the gravitational pull which made itself felt again now that the Egyptiac World was for the third time politically united.

'[The] structure of "the New Empire" presents a very peculiar picture: the seat of government lies far away from the geographical centre in the southernmost part of the [Egyptiac] Civilization's domain, 700 kilometres above Memphis and only 200 kilometres below the frontier at the First Cataract, as the Nile flows [and not as the crow flies]. This makes the impression of a defiance of the conditions set by Nature. . . . In terms of the Kingdom of Prussia,³ it is as though the seat of government had lain at Königsberg [instead of at Berlin]. . . . The distortion is not appreciably abated by the fact that Nubia has now once again been incorporated into the permanent domain of the empire. This unnaturalness of "the New Empire's" structure bears striking testimony to the truth that the [Eighteenth] Dynasty's hereditary dominions were, and continued to be, the source of the dynasty's strength.'⁴

In this instance, Nature proved unable to reassert herself till a man of genius came to her aid. Applying his revolutionary philosophy consistently, as he did, to every side of life, the Emperor Ikhnaton (*imperabat circa* 1380-1362 B.C.)⁵ not only deposed the god Amon-Re of Thebes from his established primacy in the Egyptiac pantheon in favour of an etherialized sun-disk; he also transferred his capital from Thebes to Tall-al-'Amarnah, about half-way, as the Nile flows, from Thebes to Memphis. Ikhnaton, like Ts'in She Hwang-ti and Akbar, defeated his own ends by going to extremes that provoked an overwhelming reaction.⁶ What can a solitary philosopher-king achieve against the cumulative momentum of a cultural tradition? Ikhnaton's Tell-el-Amarna suffered the fate of Akbar's Fātiḥpūr Sikrī. Yet Ikhnaton's discomfiture did not enable Thebes to recapture her geographically unnatural prerogative of serving as the seat of imperial government for a united Egyptiac World. Under Horemheb (*imperabat de facto circa* 1349-1319 B.C.) a still united Egyptiac World was ruled once again from its geographical centre at

¹ See I. i. 137-9.

² See p. 176, above. It is worth noticing that this was about the length of time for which, in a Sinitic World politically united under the Han régime, Ch'ang Ngan 'within the passes' succeeded in resisting the gravitational pull on the seat of government which eventually caused the capital to travel to Loyang, on the verge of the Great Eastern Plain.

³ Presumably the writer is thinking of Prussia within the frontiers of A.D. 1866-1918.—A.J.T.

⁴ Meyer, E.: *Geschichte des Altertums*, vol. ii, Part I, 2nd ed. (Stuttgart and Berlin 1928, Cotta), p. 60.

⁵ Or, on another reckoning, *circa* 1370-1352 B.C.

⁶ See I. i. 145-6 and V. v. 695-6.

Memphis; but this time the victory of the interior over the marches was as short-lived as it had been long-delayed. In the next chapter of Egyptiac history the seat of imperial government was prised out, split, and polarized by pressures of unequal magnitude from beyond the frontiers. Two major pressures from the north-east and the north-west drew the principal capital away into the Delta, while a secondary capital arose at Napata, near the foot of the Fourth Cataract, which, under 'the New Empire', had superseded Thebes and Al-Kāb as the southern bulwark of an Egyptiac World that had now expanded southward to take in Nubia.¹

In Hellenic history the fortunes of Rome are reminiscent of those of Egyptiac Thebes. Rome had won her spurs by taking over from the Etruscans the wardenship of the Italian marches of the Hellenic World over against the Gauls,² as Thebes had won hers by taking over from Al-Kāb the wardenship of the First Cataract of the Nile over against the barbarians of Nubia. Like Thebes, again, Rome had afterwards turned her arms inwards and imposed political unity on the society of which she was a member. At the same time the geographical location of Rome in the empire which she eventually gathered round her was so much more central than that of Thebes in either 'the Middle Empire' or 'the New Empire' that Rome might have been expected to remain the seat of the Roman imperial government as long as the Roman Empire lasted. The Roman Empire was, in geographical terms, a Pan-Mediterranean 'thalassocracy', and Rome's own situation at the mid-point of the west coast of Italy, on the banks of a river which was navigable up to Rome by the sea-going vessels of the day, was not far from being the geographically ideal site for the capital of an empire embracing all the shores of the Mediterranean and holding this ring of continental provinces together by a network of maritime communications.³ As a Greek man of letters, writing in the age of the Antonines, expressed it in an invocation to Rome and the Romans,

'The sea stretches in a belt across the middle of the Inhabited World and across the middle of your empire; and round the sea the continents extend "grand and grandly"—continually supplying your needs with consignments of their products.'⁴

Nevertheless, Rome, like Thebes, did eventually lose her imperial pre-

¹ See II. ii. 113-15.

² See II. ii. 161.

³ In a Pan-Mediterranean 'thalassocracy' the ideal seat of imperial government, corresponding to Memphis in the fluvial Egyptiac World, would be one or other of two sites in Sicily—Messina and Marsala—which command respectively the narrower and the wider of the two straits through which the south-eastern and the north-western basins of the Mediterranean communicate with one another. The despots who imposed an imperfect and precarious political unity on the Greek city-states in Sicily and the toe of Italy in the fifth and fourth centuries B.C. (see III. iii. 357, n. 1) had never possessed a sufficient surplus of power to enable them to unite the whole Hellenic World, not to speak of the whole circumference of the Mediterranean, round a Sicilian political centre. Syracuse was the capital of a Mediterranean thalassocracy for the first and last time during the residence there of the Roman Emperor Constans II in the years A.D. 663/4-8 (see IV. iv. 330-1 and 589-91).

⁴ Aristeides, P. Aelius: *In Romam*, §§ 10-11 (*Aelii Aristidis Quae Supersunt Omnia*, edidit B. Keil (Berlin 1898, Weidmann, 2 vols.), vol. ii, p. 94), quoted on p. 81, n. 2, above.

rogative of serving as the seat of government for an empire which she herself had created.

While Rome lay not far from the centre of the Mediterranean Basin, she was by no means so centrally situated from the standpoint of an Hellenic World of which she was ostensibly the mistress but in the last resort the servant. The Hellenic Civilization had grown up round the shores, not of the Mediterranean, but of the Aegean, which was a north-eastern bay of the larger sea that, for the Romans, was *mare nostrum*; and, though, by the time when the Roman Empire was established, Continental European Greece had lost its former military, political, and economic pre-eminence, the Hellenic and Hellenized provinces of the Empire in Anatolia and Syria were gaining steadily in population and wealth, while Italy, which had conquered the Mediterranean Basin largely in virtue of her then abundant man-power, began, under the *Pax Augusta*, to fall into the same decline as Greece.¹ Accordingly, under the Roman Empire, though Greek influence continued to radiate into Italy, and Rome herself became for a time a predominantly Greek-speaking city,² the centre of gravity of the Hellenic World travelled away from the Aegean Basin, not north-westward towards Rome, but south-eastward towards Antioch and Alexandria. At the same time the centre of gravity of the Empire—which was a hollow ring of land encircling the Mediterranean—was travelling northwards owing to the doubling of the thickness of this ring on its northern side through the annexation of Britain, Gallia Comata, the Danubian provinces, and Cappadocia between the years 58 B.C. and A.D. 84.

These two gradual but persistent displacements of the Empire's economic and social centre of gravity were already exerting a gravitational pull upon the imperial seat of government when, in the third century of the Christian Era, their effect was suddenly and violently accentuated by pressures from beyond the frontiers: a pressure on the Euphrates from the aggressive Sasanian Power that had replaced the lethargic Arsacidae; a pressure on the Lower Danube from semi-nomadized North European barbarian intruders on the Great Western Bay of the Eurasian Steppe;³ and a pressure on the Rhine and on the Rhine-Danube *limes* from local sedentary barbarians who had made themselves more formidable neighbours by learning something of the Roman arts of war and of state-building. Through the play of these divers social forces the seat of government of the Roman Empire, like that of the Egyptian 'New Empire', was prised up, split, and polarized.

¹ This decay of Italy can be traced back to the social effects of the devastation produced by the Hannibalic War (see I. i. 40), and, in Italy south of the Appennines, these effects had already become alarming by the generation of Tiberius Gracchus (*tribunatum plebis gerebat* 131 B.C.). The depopulation of Peninsular Italy was, however, counterbalanced at that stage by the colonization of the Po Basin, and, largely on this account, the relative decline of Italy as a whole, within the Alpine boundaries conferred on her by Augustus, did not begin to become pronounced until about the second century of the Roman Empire's existence, during 'the Indian Summer' of the Antonine Age.

² 'Non possum ferre, Quirites, Graecam urbem' (Juvenal: *Satires*, No. III, ll. 60-61, quoted already in V. v. 67) is merely an exaggeration of a truth which is attested, for example, by the extant works of the Christian Father Hippolytus, who lived in Rome and wrote in Greek in the third century of the Christian Era.

³ See III. iii. 399 and 426-8.

In this case the principal capital was drawn away eastward from the banks of the Tiber to the shores of the Bosphorus. Diocletian was governing the Empire from Nicomedia, at the point where the road from the Asiatic shore of the Bosphorus leaves the sea behind and plunges into the interior of Anatolia, when he gave the signal, in A.D. 303, for the launching of an oecumenical campaign to extirpate the Christian Church. Constantine laid out his New Rome on the European shore of the Bosphorus, on the site of the Greek city of Byzantium,¹ in A.D. 324. Simultaneously a secondary capital likewise detached itself from Rome and then travelled, not eastward, but north-westward—lingering at Milan and coming to a halt at Trier.²

Of all the sites open for consideration by any ruler of the Roman Empire who had once shaken himself free from a traditional inhibition against moving the capital from Rome herself, a site on or near the Bosphorus offered the greatest combination of political advantages in the social and strategic circumstances of Diocletian's and Constantine's day. In a city with a harbour opening on to the narrow seas through which the Black Sea communicated with the Aegean, the imperial government would find itself within easier reach of the original heart of a maritime Hellenic World. At the same time it would find itself posted midway between the two frontiers—the Lower Danube and the Middle Euphrates—which in that age headed the list of its military anxieties, while at its doors, in Thrace and Illyricum, would lie the main reservoir of military man-power from which the Empire was now recruiting its armies. The cumulative weight of these considerations was decisive, and a secondary capital in the basin of the Po or the Moselle was necessary merely for looking after those economically backward ex-barbarian provinces in the far west, from Britain to Morocco inclusive, which could not be directly controlled by way of either the sea-routes or the land-routes that radiated out from Constantinople.

At the turn of the third and fourth centuries of the Christian Era the transfer of the principal capital of the Roman Empire from Rome to Constantinople or to some maritime city in that neighbourhood was, in fact, inevitable. But it is remarkable to find evidence that, more than three hundred years earlier, when Rome was towering at the zenith of her power under the auspices of Julius Caesar and Augustus, the Romans were already anxiously foreboding a shift in the seat of the imperial government, and were expecting that the Roman dictator with whom the decision of Rome's destinies now lay would choose his new site in that very region—on or near the shores of the waterway between the Aegean and the Black Sea—which did in fact eventually attract the choice of Diocletian and Constantine.

One of the causes of the unpopularity that gave Julius Caesar's enemies at Rome their opportunity for compassing his death was said to have been a rumour that he was proposing 'to migrate to Alexandria [Troas] or Ilium and at the same time to transfer thither the empire's

¹ The navigational advantages which had previously made Byzantium a key-point in the Hellenic system of maritime communications have been examined in II. ii. 43-48.

² See II. ii. 164.

resources after exhausting Italy by levies of man-power and leaving friends of his own as his agents for administering the city of Rome'.¹ This anecdote might have been discounted as an echo of a malicious propaganda campaign were it not for a revelation of the same anxiety in a celebrated passage in one of Horace's odes.² The Augustan poet must have written these lines not many years after the Battle of Actium had disposed of the Egyptian Alexandria's attempt to challenge, with Roman arms, Rome's title to be the imperial capital of a politically unified Hellenic World. At that moment³ Rome stood in solitary omnipotence without any rival to dispute her primacy; and Augustus, who had at last succeeded in winning the support of a *consensus Italiae* by defeating Mark Antony's attempt to transfer the seat of government of the Mediterranean World to the Levant, could not readily be suspected, without substantial evidence, of planning to make on his own initiative a move which had proved a fatal false step for his rival and a damaging insinuation against his predecessor. One of the fundamental principles of Augustus's policy was to steer clear of his adoptive father's fate by eschewing provocatively revolutionary acts and pursuing Caesarean aims by Fabian tactics. Yet it is plain that Horace, writing when and as he did, believed a transfer of the capital of the Roman Empire from Rome to some site on the Asiatic shore of the Hellespont to be both a serious possibility and a dangerous subject. Horace tactfully misrepresents a cold-blooded 'geopolitical' calculation as a pious tribute to the legendary derivation of Rome from Troy, and, after cautiously expressing his disapproval in the form of a mythological conceit, he precipitately breaks off with an apology for trespassing on high matters of state in a mere poet's *jeu d'esprit*.

In the political geography of the Roman Empire,⁴ Troy or Alexandria Troas were the equivalents in Augustus's day of Nicomedia or Byzantium in Diocletian's and Constantine's;⁵ and the whimsical prophecy, put

¹ Or 'the cities of Italy' if the correct reading is not 'Urbis' but 'urbium'. This passage occurs in Suetonius Tranquillus, C. : *The Lives of the Caesars*, 'Divus Iulius', chap. 79.

² Horace: *Carmina*, Book III, Ode iii, ll. 57-72.

³ This challenge, and the abiding resentment of the Greek citizens of Alexandria Aegyptiaca at their city's defeat in her audacious trial of strength with her great Italian rival, have been touched upon in V. vi. 37, n. 1, and 217-19.

⁴ See xi, maps 28 and 29.

⁵ Before the addition to the Roman Empire of the continental northern tier of provinces from Britain to Cappadocia inclusive (see p. 217, above), the main route from the European to the Asiatic territories of the Empire had run from Rome via the Via Appia to Brundisium, had crossed the mouth of the Adriatic by a sea-passage to Dyrrhachium or Apollonia, and had then followed the Via Egnatia, via Thessalonica and Lysimacheia, to the Hellespont. By Diocletian's day the corresponding main route had come to be an unbroken overland highway running from Lyons via Milan and Aquileia (or even north of the Alps, from Trier via Augsburg and Vienna) to Belgrade, and thence south-eastwards, up the valley of the Morava and down the valley of the Maritsa, to the Bosphorus. As late as the year A.D. 360, when the Rhine-Danube *limes* had long since been submerged and when Swabia was in the hands of the independent and aggressive barbarian confederacy of the Alemanni, the Emperor Julian took the route north of the Alps in his march upon Constantinople from Northern Gaul. Yet, although by Constantine's day the Bosphorus had thus supplanted the Hellespont in the role of affording the most convenient passage across the narrow seas between Roman Europe and Roman Asia, Constantine is said to have started to build his new imperial capital on a site commanding the Asiatic shore of the Hellespont, at a point between Alexandria Troas and Ilium, before arriving at his eventual decision in favour of a site commanding the European shore of the Bosphorus (see Zosimus: *Historiae*, Book II, chap. xxx, §§ 2-3).

by Horace into the goddess Juno's mouth, that, if Troy were to be refounded by the Romans, she would infallibly be recaptured by the Greeks, did in fact come true of Byzantium after her refoundation as a New Rome by Constantine. Though the Latin-speaking Dardanian founder of Constantinople and his successors down to his Latin-speaking fellow countryman Justinian were resolved to make and keep their new Rome a Latin-speaking city,¹ the Greek language had captured the New Rome by the close of the sixth century of the Christian Era, as it had captured the Old Rome in Juvenal's time, some four hundred years earlier; and at Constantinople, with its Greek-speaking hinterland, the Latin language had no chance of repeating the victorious counter-attack by which at Rome it eventually overwhelmed what had never been more than a Greek-speaking enclave in an elsewhere Latin-speaking Italy.

Unlike Rome and Thebes, both Moscow and Yedo successfully avoided the fate of seeing the imperial throne removed from their precincts and permanently transferred to another site, and in both cases this difference of fortune was due to the same cause. Though Moscow and Yedo were on a par with Rome and Thebes in starting their careers as capitals of march-states which became the nuclei of universal states, and, though again, in both pairs of cases alike, the former march was afterwards relegated to the interior in consequence of a victorious expansion of the society into what had previously been barbarian territory beyond the pale, the eventual sequel was not the same. After Moscow and Yedo had thus changed their relative positions in their respective worlds from a former situation near the edge to a latter-day situation much nearer the centre, the advantage of this change for the purpose of serving as the seat of an oecumenical government was not counteracted in either case by the pressure of hostile forces from beyond the new frontiers which the expansion of the society had called into existence. Neither the Japanese World in its northward expansion up the Main Island of Japan and over the Tsugaru Straits into Hokkaido nor the Russian World in its eastward expansion across the Ural Mountains into Siberia ran into such formidable military commitments as those which Rome, for example, eventually incurred as a result of having expanded her dominions from the line of the Appennines to the line of the Rhine and the Danube.

For this reason the locus, half-way up the eastern seaboard of the Main Island of Japan, which became a seat of abortive oecumenical government at the site named Kamakura during the Japanese Time of Troubles and a seat of effective oecumenical government at the site named Yedo after the foundation of the Tokugawa Shogunate, succeeded in retaining its prerogative for the duration of the Tokugawa régime; and, thanks to Japan's being an archipelago in which Yedo, like every other important centre of population, lay almost within a stone's throw of the sea, the site which had proved itself a convenient seat of government for an insulated Japanese universal state did not forfeit its prerogative when Commodore Perry's expedition, by demonstrating that Japan no longer had it in her power to go on living in isolation as

¹ See V. vi. 224.

a self-contained social universe, precipitated a revolution which sought to transform Japan into a parochial state member of a world-wide society within a Western framework. Yokohama, the port of Yedo, was as handy for sea communications with North America or Western Europe as Kobe or Nagasaki; and therefore Japan's decision to open her doors to the West did not confront her with a geographical as well as a cultural problem. The cultural volte-face of the Meiji Revolution did not require any change in the existing capital except a ceremonial change of name from Yedo to Tokyo to signify the inauguration of a new era.

On the other hand in a land-locked Russia the desirability of providing the seat of government of a Westernizing régime with easy access to a maritime Western World raised a geographical problem for which it was difficult to find a satisfactory solution; and, unlike Yedo, Moscow was temporarily deprived of her prerogative as a result of her rulers' decision to open their doors to the West. So far from being able to retain her historic status at the cheap price of a change of name, Moscow was compelled, for more than two hundred years, to see her empire governed from a capital which was not only given a new name but was planted on virgin soil on a far-distant site.¹

When Seleucus Nicator chose for the capital of his newly carved-out successor-state of the Achaemenian Empire an Antioch-on-Orontes within a stone's throw of the Mediterranean in preference to a Seleucia-on-Tigris in the heart of South-Western Asia, he was acting in accordance with the feelings of the Hellenic ruling element in his dominions and was ignoring the feelings of a subject population which in his day was politically impotent. The transfer of the capital of the Russian Empire by Peter the Great from Moscow in the heart of Holy Russia to Saint Petersburg on the banks of the Neva, within a stone's throw of the Baltic, is comparable to Nicator's choice in its cultural and geographical aspects.² In this case, as in that, the seat of government of a land-locked empire was planted in a remote corner of the empire's domain in order to provide the capital with easy access by sea to the sources of an alien civilization which the imperial government was eager to introduce into its dominions. In its political aspect, however, Peter's act was much more audacious than Nicator's; for, in seeking to supplant Moscow by Saint Petersburg, Peter was ignoring the feelings of the Orthodox Christian ruling element in Muscovy with a brusqueness reminiscent of the revolutionary acts of Julius Caesar and Ts'in She Hwang-ti. The Russians whose capital Peter uprooted and transplanted were not a defeated people; on the contrary, they were at that time in process of defeating their Swedish Western enemy under Peter's own auspices; and the site of the new capital which Peter laid out to take the place of Moscow and to serve as a window for letting in Western cultural influence lay in territory wrested from a Western Sweden by Russian force of arms. In the light of this political situation it is astonishing that Saint Petersburg should have remained the capital of the Russian

¹ See pp. 690-1, below.

² This comparison has been suggested already in II. ii. 157.

Empire for more than two hundred years (A.D. 1712¹–1918²). The length of this interlude in Moscow's reign is a testimony both to the force of Peter's personality and to the potency of the alien Western Civilization of which Peter had constituted himself a missionary.³

Yet even this combination of forces in Saint Petersburg's favour could not avail either to maintain the seat of government there permanently or to avert the untoward effects of its remaining there as long as it did. In the Russian Empire under the Petrine régime the location of the capital at the extreme north-western corner accentuated the tendency, inherent in the imperial government's Westernizing policy, for a Westernized official class to become alienated, like the Hellenic and Hellenized ruling element in the Seleucid Monarchy, from the unassimilated mass of the population. This social schism was the price paid by the Russian Empire for a reception of the alien civilization of the West which never went far enough on the technological plane to achieve Peter the Great's ambition of making Russia capable of holding her own in war against the strongest Western antagonist who might enter the field

¹ This was the date on which Saint Petersburg officially became the capital of the Russian Empire; but the site of the new city had already been the seat of government *de facto* since May 1703, when Peter the Great had started work on the building of Saint Petersburg; for, though the task of conjuring a great city out of a wilderness of waterway and marsh was naturally a labour of many years, the Tsar had at once planted himself on the spot to direct the work in person; and the Tsar, wherever resident, was the Imperial Government incarnate.

² The seat of government was moved back from Saint Petersburg to Moscow in A.D. 1728, but was retransferred to St. Petersburg in A.D. 1732 (see Sumner, B. H.: *Peter the Great and the Reformation of Russia* (London 1950, English Universities Press), p. 199).

³ There is no doubt that the past domestic history of Russian Orthodox Christendom which may have helped Saint Petersburg to maintain itself as the capital of the Russian Empire for as long as it did. The Empire had been brought into existence through the imposition of the rule of the Grand Duchy of Muscovy upon the city-state of Novgorod between A.D. 1471 and 1479. At that date Novgorod represented one half of Russian Orthodox Christendom, and this not merely in the extent of her territory but also in the complexion and orientation of her culture. The Russian state which had been converted to Eastern Orthodox Christianity by the cultural influence of the East Roman Empire at the close of the tenth century of the Christian Era had been founded by pagan seafarers who had made their way into Russia at her opposite extremity, from Scandinavia. Their port of entry had been Novgorod, on the River Volkhov, which the sea-going ships of the Vikings were able to ascend via the River Neva and Lake Ladoga. When the Scandinavians in their homelands were converted to Western Catholic Christianity—a conversion which was simultaneous with that of the Russians to Eastern Orthodoxy—Novgorod became a point of contact between Russia and Western Christendom, and it continued to perform this function till its subjugation by Muscovy. The heavy hand of Muscovite autocracy extinguished both Novgorod's overseas trade with the West and the self-governing institutions that were her heritage from the pagan Viking Age and that had been favoured by the cultural effects of Novgorod's subsequent commercial intercourse with the Hansa towns. In crushing Novgorod and what she stood for, the Muscovite empire-builder Ivan III and his successors were depriving Russian Orthodox Christendom of a valuable cultural asset, and conversely Peter the Great, in founding Saint Petersburg, was in a sense merely restoring to Russia this treasure of which his predecessors had robbed her. In purely geographical terms, Saint Petersburg was the eighteenth-century counterpart of a medieval Novgorod, taking into account the increase in the size and draught of sea-going ships that had taken place in the meantime. In cultural terms the effect of the removal of the capital of the Russian Empire to Saint Petersburg from Moscow was to create at that stage the situation which would have been created in the fourteen-eighties if at that date the political unification of Russia had been brought about through the city-state of Novgorod's conquering the Grand Duchy of Moscow instead of through Moscow's conquering Novgorod. In the light of this historical background, Peter the Great's act of transferring his capital from Moscow to Saint Petersburg appears somewhat less perverse than Seleucus Nicator's act of transferring his from a site in Babylonia to Antioch.

against her. Peter's successors thus fell between two stools; and this was one of the causes of the progressive decay of an always unsound Petrine régime after the assassination of the Tsar Alexander II in A.D. 1881.

In the War of A.D. 1914-18 the Russian Empire narrowly escaped the fate of the Seleucid Monarchy in 83 B.C. Indeed, Saint Petersburg had come near to proving as fatal to the Russian Empire as Antioch proved to be to the Seleucid Monarchy before the empire-building work of Tsar Ivan III and Tsar Ivan IV was salvaged at the eleventh hour by the Bolsheviks. The Bolsheviks snatched the Russian Empire out of the jaws of destruction in order to transform it into a Union of Soviet Socialist Republics, and the general tendency of the Russian Communist Revolution was to carry the process of Westernization, initiated by Peter the Great, a long stage farther, albeit, at this stage, along a line which was heretical from the orthodox Western standpoint of the day. But in one vital point the Bolsheviks made a change which was unquestionably a return to the Pre-Petrine Muscovite tradition. They retransferred the seat of government from Saint Petersburg to Moscow;¹ and this was perhaps the most effective single step that they could have taken to ensure that the results of their salvaging work should be lasting.

As for the capitals of the Danubian Hapsburg Monarchy and the Napoleonic Empire, we can do no more than speculate about the changes of location that might have taken place if the Napoleonic Empire had been less short-lived and if the Danubian Monarchy had either made good its academic pretensions or seized its golden opportunity. If in the eighteenth century of the Christian Era the Hapsburg Power had not allowed itself to be diverted, by inconclusive contests with rival Western Powers for the possession of relatively small and unimportant morsels of territory, from achieving its manifest destiny of entering into the heritage of the Ottoman Empire in the whole of South-Eastern Europe from the eastern outworks of Vienna to Adrianople and Yannina,² it is conceivable that in such circumstances the seat of government might have travelled down the Danube from Vienna to Budapest, or even as far as Belgrade. On the other hand, if by some miracle the Hapsburg Monarchy had succeeded in becoming in reality the oecumenical power, embracing the whole of Western Christendom in a single polity, which it purported to be in its style and title and which it was pictured as being in the imaginations of its own Catholic subjects and of its Orthodox Christian and Muslim neighbours and adversaries on the south-east³, it is conceivable that in such circumstances the capital might have travelled in the opposite direction—up the Danube from Vienna to Ratisbon or Ulm, or even farther afield to either Milan or Frankfurt. It is likewise conceivable that one or other of the two last-mentioned cities might have eventually superseded Paris as the capital of the Napoleonic Empire if the French empire-builders had known how to perpetuate their momentary success in achieving their own less impracticable task of

¹ Petrograd, as Saint Petersburg had been rechristened in a fit of Slavophil fervour after the outbreak of war between Russia and Germany in A.D. 1914, was poorly compensated for ceasing to be the seat of government by having its name changed once again—this time from Petrograd to Leningrad.

unifying politically the debris of an abortive medieval cosmos of city-states in Northern Italy, Flanders, and Western Germany.

Migrations of the Capital Cities of Metropolitan Empire-builders

If we take, in conclusion, a glance at those universal states that had been founded neither by aliens nor by barbarians nor by marchmen but by some metropolitan power, we shall observe here a general tendency for the seat of government to start in a central position and subsequently to travel towards the frontiers of a politically unified world.

The classical example of this tendency is afforded by the history of the Indic universal state, which was both originally founded and subsequently re-established by dynasties whose ancestral domain was the centrally situated state of Magadha. The Mauryas and the Guptas alike retained their seat of government at Pataliputra (the latter-day Patna), which had previously been Magadha's parochial capital. Standing, as it did, at the junction of the Ganges with the Jumna and with two other tributaries, Pataliputra was the natural administrative centre for the Ganges Basin;¹ yet, in spite of the practical advantageousness of the site, which worked together with the imponderable forces of tradition and prestige to preserve Pataliputra's prerogative, the seat of government eventually travelled north-westward in both these two parallel chapters of Indic history, and in both cases alike it was drawn in that direction by politico-military pressures from beyond the frontier in that quarter.

After the derelict domain of an enfeebled Mauryan Empire had been overrun by the Euthydemid Bactrian Greek prince Demetrius in the second decade of the second century B.C., the conqueror transferred the seat of government from Pataliputra to a new site far along the Great North-West Road² connecting the former Mauryan capital with Demetrius's own former capital at Bactra (Balkh) on the Central Asian side of the Hindu Kush.³ Demetrius's New Taxila⁴ lay near the old city of the same name, in the neighbourhood of the latter-day Rawalpindi, which, before the foundation of the Mauryan Empire, had been the capital of a parochial Indian state; and it commanded the approaches, on the Indian side, to the difficult section of the highway in which a traveller had to negotiate the three successive obstacles of the River Indus, the Khyber Pass, and the main chain of the Hindu Kush.

This neighbourhood was the natural location for the capital of a Power which was seeking to 'abolish the Hindu Kush' by uniting the Ganges-Jumna Basin with the Oxus-Jaxartes Basin.⁵ The Greek war-lord Demetrius's pioneering essay in this audacious defiance of physical

¹ See II. ii. 130.

³ For this road, which ran into the Great North-East Road of the Achaemenian Empire on the steppe of Türkmenistan, between the left bank of the Oxus and the north-eastern edge of the Iranian Plateau, see Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), pp. 61-62.

⁴ See Tarn, op. cit., p. 179.

⁵ This 'geopolitical' *tour de force* which was achieved by the Bactrian Greek prince Demetrius and was repeated by his Kushan barbarian successors had its counterpart in Western history in the long-continuing political union of Piedmont with Savoy in defiance of the intervening physical barrier of the Alps (see IV. iv. 285-6). In this miniature Western reproduction of the mountain-bestrident realm of Demetrius and Kanishka, Turin corresponded in location to Taxila (Rawalpindi), Vercelli to Sāgala (Sialkot), Susa to Peshāwar, and Chambéry to Bactra (Balkh).

geography proved ephemeral. The Bactrian Greek Power had no sooner overrun the Mauryan Empire than it was broken up by fratricidal warfare which opened the way for Nomad invasions of its dominions on the Indian as well as the Central Asian side of the Hindu Kush;¹ but, when, after more than two centuries of kaleidoscopic political changes,² the momentary achievement of the Greek empire-builder Demetrius was repeated in the first century of the Christian Era by the Kushan empire-builder Kadphises I and was perpetuated by Kadphises' successors, the seat of government of this reconstituted political union of North-Western India with Central Asia came to rest not far from the spot originally selected for it by Demetrius. The capital of the Kushan Empire was planted at Peshāwar, on the Great North-West Road between the Indus and the Khyber Pass.³

After the Mauryan Empire had been re-established by the Guptas, history repeated itself. The Guptas, like their predecessors, ruled the Indic World from Pataliputra; but, when the Guptan Empire collapsed in its turn and was momentarily restored by the Emperor Harsha (*imperabat* A.D. 606-47),⁴ this last of all the rulers of an Indic universal state placed his seat of government, not at Pataliputra, but at Sthaneshvara on the banks of the Upper Jumna, above the site of Delhi, covering the north-western approaches to the Ganges Basin from the quarter from which Hun and Gurjara Nomad invaders had swept down on the Guptan Empire from the Eurasian Steppe in the preceding chapter of Indic history.⁵

Like the Mauryan and Guptan empires, 'the Empire of the Four Quarters', which was the Sumeric universal state, was founded by a power situated in the heart of the world on which it conferred political unity. The founder, Ur-Engur, *alias* Ur-Nammu (*imperabat circa* 2143-2126 or 2079-2062 B.C.), was the ruler of Ur, one of the oldest of the Sumerian city-states in the Tigris-Euphrates Delta; and Ur remained the capital till 'the Empire of the Four Quarters', 118 years after its foundation, was broken up by an Elamite revolt. After an interlude of more than two hundred years, the empire of Ur-Engur was at length partially restored by Hammurabi (*imperabat circa* 1792-1750 or 1728-1686 B.C.);⁶ but this Amorite saviour of the Sumeric Society did not

¹ During the brief period about half-way through the second century B.C. when Demetrius's dominions were partitioned between one Greek Power in the Oxus-Jaxartes Basin and another in North-Western India, the Greek ruler in India, Menander, placed his capital at Sāgala (Sialkot) on the Great North-West Road a few stages nearer than New Taxila to Pataliputra (see Tarn, *op. cit.*, pp. 247-8).

² For this obscure passage in the history of the contact of the Indic, Hellenic, Syriac, and Nomadic civilizations, see V. v. 133, n. 1, following Tarn, W. W., *op. cit.*

³ See Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), pp. 261-2. On the political map of the World in A.D. 1952 the role of Taxila (Rawalpindi) in Demetrius's realm and of Peshāwar in Kanishka's was being played by Kābul as the capital of a Kingdom of Afghanistan which had reproduced the structure of the Bactrian Greek and the Kushan Empire by uniting territories lying on opposite sides of the Hindu Kush. The domain of this twentieth-century kingdom of Afghanistan was, of course, much less extensive than those of either of its forerunners. On the north-west it did not extend beyond the left bank of the Upper Oxus, while on the south-east it did not now touch the right bank of the Indus at any point.

⁴ See V. vi. 209, n. 3.

⁵ See II. ii. 130.

⁶ For this chapter of Sumeric history see V. vi. 297-8. For the chronology see the Note in vol. x, pp. 167-212.

reinstate Ur in her former role of serving as the imperial seat of government. Hammurabi governed the empire which he had partially re-established from his own ancestral capital at Babylon—a city which was ‘the gate’, not only of the Gods, but also of the Amorite barbarians who, during the anarchy following the collapse of the dominion of Ur, had found in Babylon their port of entry from the North Arabian Steppe into the north-west corner of the Land of Shinar.

Regarded from the standpoint of Sumer—the cradle of the Sumeric Civilization in the south-eastern quarter of the Tigris–Euphrates Delta—or even from the wider standpoint of the combined domains of Sumer and its Semitic neighbour and pupil Akkad, Babylon lay on the north-western fringe of the Sumeric World; but the geographical situation had been transformed to Sumer’s own detriment, and to Babylon’s ultimate profit, by the very success of the Sumeric empire-builder Ur-Engur. The universal state which Ur-Engur had founded and which Hammurabi had partially re-established was not confined to Sumer and Akkad; in its original avatar, at any rate, it embraced the whole of ‘the Fertile Crescent’, girdling the northern bay of the North Arabian Steppe from the Land of Shinar through Assyria and Mesopotamia as far as Syria and Palestine, which had been opened up during a preceding Time of Troubles by Assyrian traders and Akkadian war-lords; and, in establishing an empire of this extent, Ur had deprived herself and the other cities of Sumer once for all of the central position which they had originally occupied. The expansion of the Sumeric World up-river, north-westward, by commerce and conquest had been an incomparably quicker process than its expansion down-river, south-eastward, by the gradual silting-up of the head of the Persian Gulf.

Thus Ur’s empire-building work made Babylon’s fortune; and, though Babylon’s first innings as the capital of a universal state did not outlast the final collapse of ‘the Empire of the Four Quarters’ which followed Hammurabi’s death, the parvenu Amorite imperial city lived on to enjoy a second innings and a third. After she had recovered her prestige and renewed her youth by bringing the ancient sedentary population of the Land of Shinar into a fraternal union with the interloping Chaldaean tribesmen in an heroic resistance to Assyrian militarism,¹ Babylon was the inevitable capital of Nabopolassar’s and Nebuchadnezzar’s Neo-Babylonian Empire, which provided a universal state for the Sumeric Civilization’s Babylonian successor. And, after the life of this Neo-Babylonian Empire had been cut short by an Achaemenian conquest, the city of Babylon once again survived a political catastrophe to become, as we have seen,² the principal capital, *de facto*, of its alien conquerors.

This virtual retention of an onerous imperial status never reconciled Babylon to Achaemenian rule. No doubt the Babylonians were aware that they owed their dubious good fortune, not to their alien masters’ goodwill, but to the felicitousness of their city’s geographical position, which constrained the Achaemenidae to use her as a political centre, however much political trouble she might give them. No doubt the Babylonian priesthood were quick to regret their folly in having facilitated

¹ See IV. iv. 477–9.

² On p. 200, n. 1, and on p. 205, n. 4, above.

Cyrus's task by turning against their own emperor Nabonidus; and indeed it is remarkable that Nabonidus's unpopularity should have been so extreme as to inveigle the opposition in his own household into cutting off its nose to spite its face. One cause of this unpopularity was the archaeologist-emperor's tactlessly pedantic religious policy;¹ another cause may have been a fear that his penchant towards awkward innovations might inspire him to transfer the capital from Babylon to some other site. Nabonidus showed a marked interest in the North-West Mesopotamian city of Harrān, which not only happened to be his own home town (if this inference from the evidence is correct),² but was well placed for serving as a northern bulwark for the Neo-Babylonian Empire against the Achaemenian successor-state of an expansive Median highland Power which had been encircling 'the Fertile Crescent' from the Zagros to the Antitaurus.³ Was Nabonidus planning to move the seat of government of his threatened empire to this distant outpost?⁴ Or was he perhaps planning to move it to his yet more distant asylum at Taymā in the Hijāz?⁵ Nabonidus's hostile Babylonian contemporaries may have had no better intelligence than twentieth-century Western scholars had about what was really brewing in their cranky emperor's mind; but we may guess that their conjectures and anxieties on this score played some part in the prompting of their suicidal policy.

In the event, Babylon succeeded in preserving her imperial prerogative in despite of Nabonidus's caprice as well as the Achaemenids' hostility, and the blow which was to deprive her not only of her status but of her existence was dealt her by her Macedonian deliverers from Achaemenian domination. Seleucus Nicator put Babylon out of court by planting his new foundations of Seleucia-on-Tigris⁶ on a site still more convenient than the site of Babylon itself for the oecumenical purpose that Babylon had been serving since the days of Hammurabi. The location of Seleucia-on-Tigris was indeed so well chosen that, as we have seen,⁷ the Seleucids' barbarian Arsacid successors and the Arsacids' militantly anti-Hellenic Sasanid supplanters made Ctesiphon, the east-bank suburb of Seleucia, into the seat of government of their dominions; and, under the 'Abbasid Caliphs, Ctesiphon had an avatar in the shape of Baghdad.⁸ As for Babylon herself, she had dwindled to vanishing-point by the first century of the Christian Era. Yet, after she had forfeited to Seleucia-Ctesiphon the imperial role which Hammurabi had first conferred on her, her site once more demonstrated its felicity by reverting

¹ See V. vi. 30 and 94-95.

³ The political fortunes of Harrān during the seventy years between the fall of the Assyrian Empire in 610-609 B.C. and the fall of the Neo-Babylonian Empire in 538 B.C. are discussed further on pp. 655-6, below.

⁴ After having served as an outpost of the Babylonian Society, Harran became a fastness in which a fossil of the Babylonian Civilization survived the fall of the Neo-Babylonian Empire for some fourteen hundred years (see IV. iv. 101, n. 1, and IX. viii. 408, n. 5).

⁵ For the road to Taymā, see p. 101, above. The Neo-Babylonian Emperor Nabonidus's 'funk-hole' at Taymā had its counterpart in the Roman Emperor Honorius's at Ravenna.

⁷ See p. 202, n. 4, above.

⁸ See p. 150, with n. 3, above.

to the part which it had played under Hammurabi's own ex-Arabian Amorite ancestors. Both Hīrah, the capital of the Lakhmid Arab principality that stood on guard over the Arabian marches of the Sasanian Empire, and Kūfah, the cantonment of the Primitive Muslim Arab conquerors of 'Irāq and Iran,¹ were virtually west-bank suburbs of Babylon-on-Euphrates.²

As a final example of the tendency for the capital of a universal state to travel from the centre towards the fringes when the empire-building Power has been a metropolitan community, we may observe how in Minoan history the imperial sceptre passed from Cnossos to Mycenae. Cnossos was the natural capital for a 'thalassocracy of Minos' ruling the waves of the Aegean from a Cretan base of operations; but, in extending her dominion to the coasts of Continental Greece, Cnossos paved the way for Mycenae to supersede her.

Who are the Beneficiaries?

Having now cursorily surveyed the histories of the capitals of universal states, we may go on to inquire who were the beneficiaries of the insight and will-power that called these capitals into existence. These seats of imperial governments served the divers purposes of both violent and gentle interlopers. Barbarians swooped down on them in quest of mere plunder. Conquerors bred in an alien culture occupied them as a step towards reigning in the stead of a legitimate régime whose inheritance they aspired to usurp. Restorers of dilapidated empires, and revivers of empires that had completely disintegrated, were aided in their reconstruction work by the lingering prestige of the ancient seat of imperial government. Alien cultures, either forcibly imposed by conquerors or voluntarily imported by native 'Herodians',³ found the capitals of universal states convenient stations for the radiation of their influence. Higher religions found them equally convenient for their own more audacious missionary enterprise of seeking to convert, not merely a cultural *élite*, but Mankind in the mass. During the Babylonish captivity of Nebuchadnezzar's deportees from Judah the capital city of a secular oecumenical empire actually served an embryonic higher religion as the incubator in which it found its soul by exchanging a parochial for an oecumenical outlook.

The seat of government of a universal state is indeed good ground for

¹ See p. 131, above.

² If the Primitive Muslim Arab cantonment at Kūfah may be regarded as an avatar of an earlier Amorite cantonment at Babylon, Kūfah's sister foundation at Basrah may similarly be regarded as an avatar of Obolla (*Latīnē* Apologus). Obolla had been one of the cities of Mesēnē, a successor-state of the Seleucid Monarchy in the extreme south-east of Babylonia, skirting the head of the Persian Gulf; and this Mesēnē was an avatar of the Sea Land which had been a successor-state of the Empire of Sumer and Akkad. The political secession of the Sea Land from the rest of the Land of Shinar after the death of the Emperor Hammurabi may be interpreted as a political expression of a Sumerian national consciousness which had survived the replacement of the Sumerian by the Akkadian language as the living speech of the population of the former territory of Sumer. The special function of the city of Obolla—if its name is derived from the Sumerian word for 'door'—was to serve the Sea Land, as Babylon, 'the Gate', served Akkad, by providing a port of entry from 'the Desert' into 'the Sown'.

³ The contrast between alternative 'Herodian' and 'Zealot' reactions to the impact of an alien civilization is discussed in IX. viii. 580-623.

spiritual seeds to fall into;¹ for a city that is performing this oecumenical function is the epitome of a wide world in small compass. Its walls enfold, at close quarters, representatives of all nations and classes, speakers of all languages, and adherents of all religious connexions and persuasions, while its gates lead out on to highways running in all directions to the World's end. The same missionary can preach on the same day to the populace in the slums and to the Emperor in his palace; and, if, in the power of the spirit, he does gain the Emperor's ear, he may hope to see the mighty machine of imperial administration set in motion in the cause of the Church. Nehemiah's key-position in the Achaemenian imperial household at Susa gave him his opportunity for enlisting the effective patronage of the Emperor Artaxerxes I for a temple-state at Jerusalem which was still the emotional focus of a world religion in the making; and the Jesuit Fathers who sought and won a footing in the imperial court at Agra and the imperial court at Peking in the sixteenth and seventeenth centuries of the Christian Era dreamed of winning India and China for Catholicism by the Nehemian strategy of converting the Great Mogul and the Son of Heaven. Had not the Mongol Khāqān Qubilāy been half-converted by Tibetan missionaries of the Tantric Mahāyāna?

The Pillage of Capital Cities by Barbarians

The barbarian's appetite for plunder was sated in the looting of Delhi by the Marāthās; of Tenochtitlan and Cuzco by the Spaniards; of Susa, Persepolis, and Ecbatana by the Macedonians; of Ctesiphon by the Primitive Muslim Arabs; of Baghdad by the Mongols; of Loyang by the Hiongnu; of Kaifêng by the Kin; of Thebes by the Assyrians; of Rome by the Visigoths and Vandals; of Babylon by the Hittites; of Cnossos by her Mycenaean marchmen; and of Mycenae, in her turn, by her continental backwoodsmen. An imperial capital in which the tribute of a subject world has silted up for centuries is an irresistibly tempting material prize for invaders who have no subtler or more abiding objective; but the seed sown by covetousness so crude as this bears a vindictive karma. The unsophisticated barbarian squanders his ill-gotten gains as quickly as he snatches them; the more cultivated alien conqueror who, in behaving as a barbarian, is sinning against the light of his own higher moral law, brings a more ironic retribution on the society that has bred him. The ill-gotten gains of the Macedonian and Spanish *conquistadores* slipped through their fingers no less quickly than those of the Vandals and the Mongols; but in these two heinous cases the barren harvest was followed by a calamitous aftermath. The Hellenic Society of the fourth century B.C. and the Western Society of the sixteenth century of the Christian Era were not only put to shame by the barbarism into which their militant apostles had relapsed; they were also devastated by it. For a crime which primitive barbarians can commit with economic impunity does not go unpunished in societies that have risen to a money economy. The rifling of the treasure-houses of the Americas and South-Western Asia put into sudden circulation an

¹ Matt. xiii. 8.

avalanche of bullion which produced a catastrophic inflation, and the sins of Spanish plunderers at Cuzco and Macedonian plunderers at Persepolis were expiated by German peasants in Swabia and by Ionian artisans in the Cyclades.¹

The Exploitation of the Prestige of Capital Cities by Empire-builders

A less barbarous use has been made of imperial capitals by conquerors or successors who have looked beyond the immediate indulgence of crude appetites towards the more constructive aim of supplanting, re-conditioning, or reviving the régimes into whose heritage they have entered. Thanks to the camouflaging mirage of immortality that is apt to glimmer round the grave of even a long since defunct universal state,² a *ci-devant* imperial capital may retain its prestige long after it has ceased to perform its function; and this prestige may stand an interloping empire-builder in good stead if he inherits or adopts the hallowed site as his own seat of government.

When a usurper takes over his victim's former capital as a going concern, the effect is to lighten his task of hoisting himself into the saddle and keeping himself there. Though Peking was first promoted to be a seat of imperial government by the intruding barbarian Khitan, and not by any thoroughbred Chinese dynasty whose choice of the site might have stamped it with the hall-mark of legitimacy in Chinese eyes, the subsequent domination of the Chinese people by the Kin in place of the Khitan and by the Mongols in place of the Kin was undoubtedly facilitated by the retention, under each of these successive barbarian régimes, of a capital from which a subject Chinese population had gradually grown accustomed to receiving a barbarian master's word of command. *A fortiori*, in a later passage of Far Eastern history, the retention of Peking as the seat of imperial government must have facilitated the usurpation of the Manchu barbarians when they took the imperial city over, not from barbarian predecessors, but from the thoroughbred Chinese dynasty of the Ming.

A similar advantage was secured by the Spaniards when they established the seat of government of the universal state which they imposed on the Central American World on the site of Tenochtitlan, which had been the capital of the Spaniards' Aztec forerunners. The political value of the accumulated prestige of an existing imperial capital was rated so high by the Japanese statesmen who engineered the Meiji Revolution that they kept the seat of government at Yedo and induced the Imperial House to migrate thither from Kyoto, although Yedo was the seat of a 'forced power'³ which had been in the saddle for not much longer than a quarter of a millennium, while Kyoto had been for more than ten centuries (A.D. 795-1869) the seat of the legitimate dynasty which was now being rehabilitated. The decisive consideration in the sagacious revolutionaries' minds was no doubt the hard fact that the Japanese

¹ For the inflation of prices that was inflicted on the Hellenic World by the Macedonians' looting of the Achaemenian treasures, see Tarn, W. W.: 'The Social Question in the Third Century', in *The Hellenistic Age* (Cambridge 1923, University Press).

² See pp. 7-46, above.

³ Marvell, Andrew: *An Horatian Ode upon Cromwell's Return from Ireland*.

people had by that time become accustomed to being governed from Yedo *de facto*, whereas Kyoto, for the greater part of its long and venerable history, had been an historical museum and political lumber-room.

The restorer of a universal state likewise finds his task eased if his own initial seat of government happens to be the former capital of the prostrate empire which he is seeking to re-erect. When Amosis successfully repeated the achievement of a Mentuhotep by restoring 'the Middle Empire' of Egypt in the form of 'the New Empire', the founder of the Eighteenth Dynasty was assuredly assisted, and conceivably inspired, by the fact that, like his Eleventh-Dynasty predecessor, he had started his career as prince of Thebes. In the history of the Indic Society a corresponding service was rendered by Pataliputra to the Guptas when they set out from the Mauryas' historic capital to restore the Mauryas' imperial régime.

Dethroned imperial capitals have sometimes been deliberately reinstated by empire-builders who have not had the good fortune either to find these seats of imperial government still at their disposal as going concerns or to inherit them as the local capitals of parochial successor-states of ruined universal states which they have set out to restore.

We have seen¹ that, when Han Liu Pang had made himself sole master of the Sinic World, he laid out a new oecumenical capital in the immediate neighbourhood of the Ts'in Power's historic seat of government at Hsien Yang, which had been wantonly destroyed by Hsiang Yü after it had been carefully spared by Liu Pang himself. When, some eight hundred years later, Han Liu Pang's Ch'ang Ngan was reinstated by the Sui Dynasty, under the new name of Si Ngan, as the capital of an empire which was intended by its founders to be an avatar of the Empire of Ts'in and Han, this act of Sui statesmanship bore witness to the vitality of the prestige that clings to a site which has once been a seat of oecumenical dominion; for by that date nearly six hundred years had passed since Ch'ang Ngan had been dethroned. When the Posterior Han Dynasty had re-established the Han Power after its momentary collapse in A.D. 9, they had not reinstated the Prior Han Dynasty's capital. They found Ch'ang Ngan in ruins; for in the anarchy of A.D. 9-25 the city laid out by Liu Pang had suffered the fate of Hsien Yang in the anarchy after the death of Ts'in She Hwang-ti; but in choosing a new site the second founder of the Han Power, Kwang Wuti, did not overlook the value of historic associations. His substitute for Ch'ang Ngan was Loyang, which had been the last seat of the Ts'in Power's predecessors the Chóu. The Chóu, as we have seen,² had been extinguished by Ts'in She Hwang-ti's grandfather in 249 B.C.; and, for more than five centuries before that, their authority had been as shadowy as was that of the Japanese Imperial House during the ten centuries preceding the Meiji Restoration. In the tiny enclave round Loyang which was all that then remained of their once extensive patrimony within as well as outside 'the passes', the Chóu had continued to perform certain customary ritual functions without retaining a shred of practical power.

¹ On p. 212, above.

² On p. 212, n. 4, above.

It is remarkable that this simulacrum of an imperial past should have invested Loyang with a prestige so abiding as to make its fortune more than 250 years after even a nominal primacy had been taken from it. Yet this Sinic case, though extreme, is not unique.

The prestige of Delhi, for example, survived the decline and fall of the Mughal Empire after the death of Awrangzib so triumphantly that, more than two hundred years later, she compelled the British to transfer the seat of government of a rāj which had been rebuilt on a basis of British sea-power to the inland site of the capital of their Mughal predecessors from the maritime site of their own original capital at Calcutta. Moscow, too, possessed sufficient prestige to allow her to wait, as Delhi waited, for more than two hundred years for her eventual triumph over a parvenu competitor. Saint Petersburg was Calcutta's twin in her fate, as well as in her location.

As for Babylon, it was inevitable¹ that she should be the capital of a Neo-Babylonian Empire that was a political embodiment of Babylon's genius, but it is remarkable that her situation and prestige should have compelled her Achaemenian conquerors to perpetuate Babylon's imperial prerogative by making her one of the seats of government of their own dominions in preference to a loyal though unpractical Persepolis. It is even more remarkable that the situation and prestige of Peking should have compelled the Ming Dynasty to reverse a deliberate break with an odious past. When the Ming had succeeded in expelling the Mongols from Intramural China, they had transferred the seat of government to Nanking from a city whose only role in Far Eastern history till then had been to serve as the capital of successive barbarian conquerors. Peking was obnoxious to Chinese sentiment for the reason that had rendered her attractive to the Mongol successors of the Kin and to the Kin successors of the Khitan. Yet she was able to compel the Ming to reinstate her at the risk of stultifying themselves in the eyes of their own militantly anti-barbarian Chinese supporters.²

In a Medieval Western World the 'Roman Emperors' of the German nation could not acquire a perfect title to legitimate investiture with their purple shirt of Nessus without paying at least one visit to the ruins of Rome in order to be crowned in the midst of them by the Pope and acclaimed by 'a Roman People' who in their day were, not the *faex*, but the *faex faecis Romuli*.³ For German potentates whose strength was derived from hereditary dominions lying north of the Alps, this Italian expedition was always as costly and perilous as it was frequently barren and humiliating. Yet the prestige of a dead Rome's shadow was still so great that, for the sake of it, these moth-kings sacrificed a living Germany's substance; and, though the medieval German Kingdom eventually came to grief through a persistent pursuit of this Roman will-o'-the-wisp, Napoleon's subsequent experience was to indicate retrospectively the difficulties in which the medieval Western Emperors might have involved themselves if they had refused to pay their personal homage to the ex-imperial city's imponderable power.

¹ The reason has been indicated on p. 226, above.

² See II. ii. 121-2.

³ See Cicero: *Ad Atticum*, II. i, § 8.

When Napoleon set to work to build the débris of a cosmos of medieval Western city-states into an empire founded on the might of the most populous and powerful Western national state of his day, he signalized his intention of providing an effective substitute for 'the Holy Roman Empire' by pointedly breaking with the traditional procedure for investiture with the imperial office. Instead of making a pilgrimage to Rome in the wake of an Austrasian Charlemagne and his Saxon and Franconian successors, Napoleon summoned the Pope from Rome to Paris and required him to assist at his coronation in his own imperial capital. Though 'the Corsican usurper' himself was neither Roman nor French, Napoleonic Paris might well feel that she could look contemporary Rome in the face. Had not Paris been the intellectual centre of the Western World since the twelfth century and its cultural centre as well since the seventeenth? And was not her new imperial master now doing for Paris what Augustus had done for Rome when—finding her a city of brick and leaving her a city of marble¹—he gave her the physical presence that befitted the capital of the World? For the drily rational intelligence of a Napoleon, such considerations might be conclusive; yet the event was to prove that, in the Year Thirteen of the New Era of the French Revolution, Napoleon had under-estimated the longevity of traditional pieties. By flouting Rome and bullying her sovereign pontiff, he won, not respect for his own political power, but sympathy for the helplessness of his venerable victim.

While the Old Rome in the days of her physical impotence thus compelled a series of Western war-lords to reckon with her during a thousand years running from the date of Charlemagne's coronation to the date of Napoleon's, the New Rome gave proof of a comparable power by hypnotizing first the Palaiológhi and then the 'Osmanlis.

When Michael Palaiológhos took Constantinople from its unhappy Western occupants in A.D. 1261, he was relieving them of an untenable position at the cost of creating one for himself and his heirs. In concentrating his efforts on the capture of the ex-imperial city he had let slip through his fingers the best part of his dominions in Anatolia;² and, in thus exchanging a countryside that had been the source of his strength for a city that was a liability, he found himself constrained to seek support against the Turkish enemy whom he had neglected from the Latin enemy whom he had affronted. An Eastern Orthodox Christian principality in these straits could not hope to buy military assistance from Western Catholic Christendom except at the price of ecclesiastical submission to the Papacy; and this payment was repeatedly offered by the Palaiológhi, to be invariably rejected by a fanatically Orthodox Greek clergy and people.³ This insoluble problem of reconciling incompatible terms of appeasement was the rock on which the Palaeologan ship of state eventually foundered:

Und das hat mit ihrem Singen
Die Lorelei getan.

¹ Suetonius Tranquillus, C.: *The Lives of the Caesars*, 'Divus Augustus', chap. xxviii, § 3

² See V. vi. 298, n. 7, and p. 30, above.

³ See IV. iv. 615-19.

The Palaiológhi obtained a posthumous revenge; for, in attracting the 'Osmanlis into their wake and drawing them out of Asia into Europe,¹ they exposed these conquerors and supplanters of theirs to the lure of the siren-city by whom they themselves had been brought to shipwreck. The 'Osmanlis could not resist the temptation of seizing a prize that had twice eluded the grasp of their Arab co-religionists and ensamples. They were beckoned forward by the legendary figure of the martyr Seyyid Battāl.² Yet, when in A.D. 1453 Mehmed 'Osmanli the Conqueror repeated Michael Palaiológhos's feat, he too was yielding to the magic of the imperial city against the dictates of a sober *raison d'état*. In impelling Sultan Mehmed to conquer her, Constantinople succeeded at last in retrieving her own long-adverse fortunes. By the time of the Conqueror's descendant Suleymān the Magnificent's death in A.D. 1566, Constantinople found herself the capital of a larger empire than she had been ruling in A.D. 565, at the death of Justinian the Prodigal. Yet, by the same token, the commonwealth of which she was the ornament and incubus was by that time once more on the verge of a calamitous decline; and in Ottoman history this decline was to be consummated by a fall before the revolutionary architects of the Ottoman Empire's Turkish successor-state could summon up the courage to transfer the seat of government from Constantinople to Ankara.

This defiance of Constantinople's magic power was indeed the Turkish nationalists' only alternative to committing national suicide; yet even then they could not bring themselves to throw away the millstone that the Ottoman Conqueror of Constantinople had hung about the Turkish nation's neck.³ Though Atatürk and his fellow revolutionaries dethroned Constantinople, they insisted on retaining possession of her; and in getting their way on this point they did their worst to defeat the governing purpose of all their policy. This governing purpose was to nurse their new-born national state into a vigorous and healthy maturity. The reformers realized in principle that, if they were to give this delicate infant a fair chance of survival, they must allow it to start life free from the grievous burdens that had broken the back of the old Ottoman Empire; and in two cases in point they did not flinch from putting this principle into practice. They renounced bona fide all ambition to re-impose Turkish rule on either the Arabs or the Balkan Christians. Yet, when they had to take their decision about the most formidable burden of all, they opted for clinging to Constantinople and thereby stultified the rest of their acts; for, in burdening the Turkish Republic with Constantinople, they were condemning her, sooner or later, to fall foul of the Soviet Union for the same ineluctable reasons of strategic and commercial geography that had brought the old Ottoman Empire into collision with the old Russia. At the time of writing, it seemed not impossible that Constantinople might once again play her sinister role of luring to destruction a state which had failed to resist the temptation of possessing her.

The Use of Capital Cities as Transmitting-stations for the Radiation of Cultures

Having now examined certain passages of history in which an ex-imperial city has enchanted some empire-builder into purchasing the asset of her prestige at a prohibitive price, we may go on to consider cases in which an imperial capital has served as a transmitting-station for the diffusion of an alien culture. This was the role of Vienna in the Danubian Hapsburg Monarchy,¹ of Saint Petersburg in the Petrine Russian Empire, of Antioch-on-Orontes and Seleucia-on-Tigris in the Seleucid Monarchy, of Calcutta in the British Indian Empire, of Mexico City in the Spanish Viceroyalty of New Spain, and of Lima in the Spanish Viceroyalty of Peru.

It will be seen that in most of these instances the imperial 'radio city' was a new foundation planted on virgin soil; and in the founding of Seleucia and Antioch and Saint Petersburg this geographical breach with the past was certainly deliberate. Peter the Great realized that the most effective installation for radiating Western culture into Russia would be a seat of Russian government that had no pre-Western associations, and he rejected Moscow, as Seleucus Nicator rejected Babylon, because she was a citadel of the culture which he was planning to replace. Yet this cultural missionary's rule of thumb was broken with impunity by the Spanish foundation of Mexico City and by the Seleucid

¹ Vienna served as a station for the transmission of the Western culture to sub-Western and non-Western receivers, though the province of Lower Austria, in which Vienna lay, was, like the city itself, an integral part of the Western World. Vienna was situated just to the west of the cultural boundary between the heart of Western Christendom and its eastern marches—the lands of the Crown of the Hungarian King Saint Stephen and the United Kingdom of Poland-Lithuania—in which the Western Christian culture was diluted with a tincture of the Nomad culture of the Eurasian Steppe. Vienna's cultural function was to radiate an authentic Western culture, native to Vienna itself and to its western hinterland, into the imperfectly Westernized eastern marches of the Western World and, beyond these again, into Eastern Orthodox Christendom and Dār-al-Islām. Vienna's performance of this cultural task was facilitated by her geographical location; for, while she lay just to the west of the cultural frontier along the line of the River Leitha (where 'the East begins' according to an illuminating Viennese *bon mot*), she lay just to the east of the Austrian Alps, which constituted 'the natural frontier' of Western Christendom in this quarter. Standing, as she thus stood, with her back to the eastern foothills of the Alps, and looking down the course of the River Danube from a point where, after having threaded its way through the Alps, it is heading for the Hungarian Alföld, *en route* for the Iron Gates and for the western tip of the Eurasian Steppe's Great Western Bay, Vienna could not fail to find her missionary field in the sub-Western and non-Western worlds to the east and south-east of her.

Though the writer of this Study did not pay his first visit to Vienna till the summer of A.D. 1929, at a date more than ten years after she had been reduced politically from being the imperial capital of a cosmopolitan empire to being the national capital of an Austrian Republic whose narrow bounds embraced none of the sub-Western or non-Western territories of a now defunct Danubian Monarchy, he found the evidences of Vienna's historic cultural mission still impressively prominent. In A.D. 1929 the names of the subscribers to the Vienna telephone service, as recorded in the book, testified that this city was a melting-pot in which Rumans, Serbs, and Bulgars, as well as Poles, Magyars, and Croats, were being reminted into pure Westerners (see IX. viii. 530); and, when the observer travelled on eastwards to the 'Saxon' cities of Transylvania, which had been under Rumanian rule since the dissolution of the Danubian Hapsburg Monarchy in A.D. 1918, he found these outposts of a Western Civilization, which were now marooned and in peril of being submerged under the resurgent flood of an alien culture, desperately clinging to a traditional link with Vienna which was their cultural lifeline—as the marooned outposts of Hellenism in Western Iran still clung to their traditional link with Antioch-on-Orontes after the military occupation of Media and Babylonia by the Arsacid Power in the sixth decade of the second century B.C.

foundation of Seleucia-on-Eulaeus. Mexico City was not prevented from fulfilling her revolutionary cultural task by any lingering ghost of an Aztec Tenochtitlan; nor was the Seleucid avatar of Susa inhibited from being an active and long-lived focus of Greek life and letters by the more formidable legacy of a site which had been the national capital of Elam before rising to its political apogee as the imperial capital of the Achaemenidae.

The success of this subsidiary transmitting station for the diffusion of Hellenism on an historic site, which, under the Seleucid régime, had ceased to be a capital city, brings out another prevalent feature in the policy of alien empire-builders who use their seats of government for the diffusion of their culture. The Seleucidae were not content to provide for the radiation of Hellenism from a single centre only. When Seleucus Nicator rejected Seleucia-on-Tigris in favour of Antioch-on-Orontes in choosing the location for his imperial capital,¹ he did not deprive the abortive Tigrine seat of government of its cultural role. Seleucia-on-Tigris 'made history' as the local transmitting-station for Hellenism in Babylonia for the next five centuries, and it was the glory of the Seleucidae that, not only on the banks of the Orontes and the Tigris, but throughout their dominions, from Seleucia-on-Eulaeus to Laodicea-on-Lycus, they sowed with a generous hand a star-dust of Greek city-states which continued, long after the disappearance of the missionary dynasty that had called them into being, to shine like a Milky Way across the face of South-Western Asia.²

The Spaniards likewise were not content to confine themselves to the use of Mexico City in Central America, or of Lima in the Andean World, as stations for the radiation of the culture that they had brought with them across the Atlantic from Western Europe. As we have already noticed,³ the Spanish Crown planted its vast new dominions overseas with settlements of Spanish colonists, organized in self-governing municipalities, who, like the Greek colonists in the Seleucid dominions, were to propagate their distinctive way of life by the display of a living example; and, in rural tracts which the radiation of these scattered Spanish municipalities could not reach, the conversion of the subject population was catered for by the Achaemenian expedient of conferring feudal appanages on grantees of the ruling race. In the Spanish Empire such *encomiendas*⁴ were granted to their recipients on the condition that, in return for the economic privilege of being furnished by the Crown with a supply of native labour, they must provide for the instruction of their serfs in the Catholic version of the Christian Faith. In the British Empire in India, Madras and Bombay played their part, side by side

¹ See p. 201, above.

² The cultural idealism of the Seleucidae is thrown into relief by the sharpness of its difference from the narrow-hearted cultural policy of the Seleucids' neighbours and rivals the Ptolemies, whose objective was, not to Hellenize their Egyptian subjects, but to exploit them. On Egyptian ground the Ptolemies added only the single Greek community of Ptolemais in Upper Egypt to Alexandria and to the pre-Alexandrine Greek settlement at Naukratis. Yet even the Ptolemies emulated the Hellenizing policy of the Seleucidae in their non-Egyptian dominions—as is witnessed by the names of the Greek cities in Transjordan and along the Palestinian section of the shores of the Mediterranean.

³ See pp. 135-6, above.

⁴ See p. 145, above.

with Calcutta, in the dissemination of an inflowing alien culture, as the provincial centres in Spanish America and Seleucid Asia played theirs side by side with Lima and Mexico City and Antioch and Seleucia; and Saint Petersburg was singular in serving as the sole centre for the diffusion of Western culture, as well as the sole political capital, in the structure of the Petrine Russian Empire.

The Use of Capital Cities as Seminaries for Higher Religions

We have now made some survey of the divers services that imperial capitals perform for alien cultures, for alien or indigenous empire-builders, and for predatory barbarians; but their historic mission lies in the religious field.

The potent effect on the destinies of Mankind which the Sinic imperial city of Loyang was still exercising at the time when these lines were being written was not a consequence of her former political role as the seat of the Eastern Ch'ou Dynasty and subsequently of the Posterior Han; she was exercising it in virtue of having been the nursery in which the seeds of the Mahāyāna—wafted by the winds of History from India to China over the Eurasian Steppe—were acclimatized to a Sinic cultural environment and were thus enabled to resow themselves broadcast over the face of the Sinic World. It is true that this historic religious mission would not have fallen to Loyang if the Emperor Kwang Wuti had not previously chosen her for the service of a political purpose; but it was the unforeseen religious consequence of the Posterior Han statesman's political choice that gave Loyang her opportunity to make a lasting mark on history.

The abiding significance of other seats of a transitory political power was likewise due to their religious associations. Si Ngan, for example, was still influencing the life of Mankind in the twentieth century of the Christian Era not because, from A.D. 589 to A.D. 907, she had been the political capital of the Empire of the Sui and T'ang but because, under the T'ang régime, she had become a centre for the diffusion of the Mahāyāna, Manichaeism, and the Nestorian form of Christianity. The desolate site of Qāraqorum was still invisibly alive because, as an undesigned effect of this ephemeral steppe-city's meteoric political career in the thirteenth century of the Christian Era, she had brought missionaries of the Roman Catholic Christianity of the West face to face with Central Asian exponents of Nestorianism and Tibetan exponents of Lamaism. Peking, in her turn, had won immortality when, as the political capital of successive Mongol, Ming, and Manchu régimes, she had fallen heir to Qāraqorum's role as a disseminator of higher religions. In A.D. 1928 the city from which a large portion of the Human Race had been governed in succession by Qubilāy and Yung Lo and Ch'ien Lung was at last deprived for a season by a victorious Kuomintang of the political prerogative which she had so long enjoyed; yet, twenty years later, before she had yet found her opportunity of constraining the Kuomintang's Communist successors to serve her purpose by making her the political capital of China once again, she was still making her mark in the life of the contemporary world as an intellectual centre under the

non-committal new name of Peiping;¹ and this cultural role, which had thus survived Peking's fall from her imperial estate, had been conferred on her by a succession of religious missionaries who had preached and practised within her gates: the Tibetan Lamas who had gained the ear of Qubilāy; the emissaries of the Roman Church who, twice over,² had won a footing in this distant base of operations; and the Protestant educator-evangelists who had followed in the Jesuits' footsteps and had prepared the way for Peiping to fulfil her latter-day function.

In the year A.D. 1952 it was manifest that Peter and Paul, not Romulus or Augustus, had been the true authors of the immortality of Rome. By that date, more than sixteen centuries had run their course since Rome had forfeited to Constantinople and Trèves the prerogative of serving as the political capital of a united Hellenic World; and the paltry political consolation prize which the former imperial city had tardily received when, in A.D. 1870, she had been turned into the national capital of a Modern Western parochial state had been written down to its true value by the humiliation of the Kingdom of Italy in the world war of A.D. 1939-45. The world-wide influence which Rome was nevertheless still exercising—unaffected by political vicissitudes—was a consequence of the work and death, in Rome, of the two Apostles nineteen hundred years before. It was also a consequence of Christianity's subsequently displayed genius for assimilating and transmuting vital elements of other alien religions which had made themselves at home in Rome before the seeds of Christianity had been sown there. The Great Mother who was to play so distinctive a part in the Roman version of Christianity had been escorted in pomp by the Roman Senate and People from Tiber-side to the Palatine³ 265 years before Paul, after landing at Puteoli, had slipped unnoticed into Rome in the company of the little party that had gone out along the Appian Way to meet him at the Three Taverns.⁴

As for Constantinople, her religious mission was manifest from the moment of her birth; for this New Rome was founded by Constantine the Great, as Saint Petersburg was founded by Peter the Great, with a spiritual as well as a 'geopolitical' purpose.⁵ When the first Christian Emperor laid out his new capital on ground that had been cleared by his pagan predecessor Septimius's vindictive erasure of Byzantium, he was founding a city that was to be Christian from the start; and in A.D. 1952 it was apparent that this religious function was of more lasting significance than the superb geographical location⁶ that had prompted Constantine to plant his new Christian capital on that particular site. In the course of the following sixteen hundred years, Constantinople had lost and won and lost again the political prerogative of serving as an imperial capital for the Roman Empire, the East Roman Empire, and the Ottoman Empire in turn; and, at the time of writing, such influence

¹ Pei-ping meant merely 'northern city', in contrast to Pei-king, which meant 'northern capital'.

² In the fourteenth century of the Christian Era and again in the sixteenth.

⁴ See Acts xxviii. 15.

⁵ This comparison had been suggested, by anticipation, in V. vi. 343.

⁶ See p. 218, above.

as she was still exercising in the World of the day was due to her being the seat of a Patriarch who was still recognized by the ecclesiastical heads of the other Eastern Orthodox churches—including the mighty Church of Russia—as *primus inter pares*.

(d) THE SERVICEABILITY OF IMPERIAL CURRENCIES

1. *Official Languages and Scripts*

Alternative Possibilities

It can almost be taken for granted that a universal state will have provided itself with official media of mental communication, and that these will include not only one or more languages transmitted viva voce and received by ear, but also some system of visual records that can be preserved and be consulted by the eye after the passing of the minute span of time during which the ear is sensitive to vibrations set in motion by 'winged words'. In the apparatus of nearly all the universal states whose history was within the ken of twentieth-century students, the official system of visual records had taken the form of a visual notation of the meaning of some oral and auditory official language; and, though the Incas had succeeded in creating and maintaining an almost totalitarian régime without the aid of any notational system beyond the wordless semantics of their *quipus*,¹ this *tour de force* was no more than an exception to a general rule that the written word had been an indispensable instrument of oecumenical government.²

There had been cases in which some single language and single script had previously driven all other possible competitors off the field throughout the area which the empire-builders had eventually brought under a single government, and in such cases History had virtually decided in advance what the official language and script of the new universal state were to be. In the Egyptian 'Middle Empire', for example, they were bound to be the Classical Egyptian language and the hieroglyphic characters; in Japan under the Tokugawa Shogunate they were bound to be the Japanese language and the particular selection and usage of Chinese characters that had been worked out already in Japan for conveying the Japanese language visually; in the Russian Empire they were virtually bound to be the Great Russian language and Great Russian variety of the Slavonic version of the Greek Alphabet.³ This simple situation had not, however, been the usual one; for, in a society that is a 'civilization', more than one language and more than one script are current as a rule, and we have also observed, in another context,⁴ that the dominions of universal states are apt to embrace territories of

¹ See V. v. 491.

² See Myres, J. L.: *The Dawn of History* (London, no date, Williams & Norgate), pp. 68-70.

³ It was, of course, conceivable that the Muscovite Government might have adopted for its own secular use the 'Church Slavonic', fashioned by the Greek Christian missionaries Cyril and Methodius out of the living Macedonian Slavonic dialect of the ninth century of the Christian Era, which had continued to be the ecclesiastical language of the Slavonic-speaking Orthodox Christian peoples. This would not have been so extreme a *tour de force* as the Guptas' adoption of Neo-Sanskrit (see p. 253, below).

⁴ See pp. 62-67, above.

alien culture in addition to the domain of the civilization on which the empire-builders have imposed political unity. More often, therefore, than not, when it comes to deciding what the official language and script of a universal state are to be, the empire-builders find themselves confronted, not with an accomplished fact to ratify, but with a difficult choice to make between a number of competing candidates.

In these circumstances, most empire-builders had given official currency to their own mother tongue, and, if this ancestral language of theirs had hitherto been unprovided with the visual form of presentation which is a necessity for any language that is to be used as an instrument of oecumenical government, they had borrowed or adapted or invented a script for their purpose. There had, indeed, been cases in which empire-builders had passed over their own mother tongue in favour of another language already current in their dominions as a *lingua franca*¹ or even in favour of a classical language which would have been extinct long since if it had not been artificially kept alive or resuscitated.² The most usual practice, however, had been for empire-builders to give official currency to their own national language and script without granting these a monopoly. Indeed, in the administration of universal states a plurality of official languages and scripts appears to be the rule; and a medium that enjoys a legal primacy may not in practice be the medium most in use. There may be secondary languages that reign supreme in particular regions of the empire or in particular imperial services; and these may be *lingue franche* that have won this position for themselves *de facto* without having been given recognition *de jure*. *Lingue franche* that are already going concerns may force their way into official or unofficial use in the service of a universal state that has come into existence after they have already won an established position for themselves; and, conversely, the use of a *lingua franca* in the service of a universal state may be a factor in the making of this language's fortune.

These general propositions may perhaps be usefully illustrated in an empirical survey.

A Monopoly for Some Single Language or Script

In the Sinic World the problem was solved in a characteristically drastic fashion by Ts'in She Hwang-ti.³ The founder of the Sinic universal state gave exclusive currency to the version of the Chinese characters that had been in official use in his own ancestral state of Ts'in⁴ and thereby succeeded in arresting the tendency, which had gone

¹ *Lingue franche* are products of social disintegration. A survey of them has been made in V. v. 483-527.

² A survey of instances of such archaism in language and literature has been made in V. vi. 62-83.

³ It would be interesting to know whether, in A.D. 1928, President Mustafâ Kemâl Atatürk was aware of this Sinic precedent for his own equally high-handed act of making the use of the Perso-Arabic Alphabet illegal, and the use of the Latin Alphabet obligatory, for conveying the Ottoman Turkish language within the frontiers of the Turkish Republic.

⁴ See Fitzgerald, C. P.: *China, A Short Cultural History* (London 1935, Cresset Press), p. 137; Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), pp. 233-40. Franke gives German translations of the relevant passages in the work of Sse-ma Ts'ien.

far by the end of the foregoing Time of Troubles, for each of the Contending States to develop a parochial script only partially intelligible to litterati outside those parochial limits. Since the Sinic characters were 'ideograms' conveying meanings, not 'phonemes' representing sounds,¹ the effect of Ts'in She Hwang-ti's act was to endow the Sinic Society with a uniform visual language, which would continue—even if the spoken language were to break up into mutually unintelligible dialects—to serve as a means of oecumenical communication by sleight of hand and skill of eye for the very small minority that could learn to read and write so complex a script—just as, in a Western World in A.D. 1952, the Arabic numerals conveyed identical meanings on paper to peoples who, *viva voce*, called the numbers by different names and wrote these names out in different alphabets.² Yet, as this parallel indicates, Ts'in She Hwang-ti's standardization of the Sinic characters would not, in itself, have availed to save the Sinic Society from the curse of a babel of tongues if in the Sinic World there had not been other forces working in favour of uniformity in speech as well as in script.

To begin with, the Sinic World, at the time when the first Ts'in Emperor united it politically under his own rule, happened still to be homogeneous in language to an unusual degree, though by that time it had expanded far and wide from its original nucleus. A great majority of the population even of this vastly extended area spoke some variety of the Chinese branch of the Chinese-Siamese group of the great Asian family of monosyllabic languages,³ and the heterophone minority largely consisted of speakers of some language of the kindred Tibeto-Burman group. Yet the unifying influence of this original linguistic homogeneity might have been more than counteracted by the combined effect of the geographical expansion and the political disruption of the Sinic Society during its Time of Troubles if Ts'in She Hwang-ti had not opened a new chapter of Sinic history by imposing political unity, and if his Han successors had not underpinned this edifice of oecumenical government by calling into existence, to administer it, the acceptable and therefore effective oecumenical civil service that Ts'in She Hwang-ti had failed to create.⁴ These professional civil servants, recruited from all quarters of the Empire and posted in any province except that of their birth, could not conduct their business with one another and with the public solely by brushwork. In addition to the common visual language, provided by Ts'in She Hwang-ti's fiat, which had become the silent shibboleth for admission into the service of the state, the new imperial governing class required a common means of communication *viva voce*; and it was a standardized official vocalization of a standardized official script that was to save the Sinic Society, and later on the main body of the succeeding Far Eastern Society, from being afflicted with that multiplicity of languages that was to make the Western World an easy prey for the malady of Nationalism.

Ts'in She Hwang-ti's standardization of the Sinic characters may have been anticipated by the founder of a Minoan universal state whose

¹ See V. v. 492.

³ See II. i. 318.

⁴ See pp. 169-73, above, and pp. 351 and 352, below.

name had not yet been discovered by Modern Western archaeologists in A.D. 1952. Though none of the scripts in use in the Minoan World at divers times and places had yet been deciphered, their sequence gave evidence of a reform in the art of writing that was still more revolutionary than Ts'in She Hwang-ti's. At the transition from 'Middle Minoan II' to 'Middle Minoan III',¹ two separate hieroglyphic scripts, which had made their appearance simultaneously at the beginning of the former period, were suddenly and completely superseded by a single new linear script which was not just one version of the form of writing previously in use, but which drew on its predecessors for the construction of a new form of a different and superior order.² In the history of the Syriac Society, we know³ that Ts'in She Hwang-ti did have a counterpart in the Umayyad Caliph 'Abd-al-Malik (*imperabat* A.D. 685-705), who substituted the Arabic language and script for the Greek in the ex-Roman provinces of the Arab Caliphate, and for the Pehlevi in the ex-Sasanian provinces, as the official vehicle for the public records, including the all-important registers of the inland revenue.⁴ When this change was put in hand, there was evidently some anxiety in official circles as to its possible effect on the efficiency of the public administration, particularly in the vital matter of the collection of the land-tax, and there was a corresponding relief when the transition was achieved without the awkward consequences that had been foreboded.

In the Spanish Empire in the Americas, Spanish became both the official language and the unofficial *lingua franca* of the Viceroyalty of New Spain, which provided the Central American World with its universal state, and it was given the same official status in the Andean universal state which the *conquistadores* had converted into the Spanish Viceroyalty of Peru. In the Andean World, however, the Spanish Crown demonstrated the sincerity of its profession to be a devoted secular agent for the propagation of the Catholic Christian Faith by allowing and encouraging the Roman Church to utilize and develop for its own purposes the Quichuan *lingua franca* to which the Spaniards' Inca predecessors had given an oecumenical currency⁵ by making its acquisition compulsory for all their subjects.⁶

¹ The possibility that the break between 'Middle Minoan II' and 'Middle Minoan III' might be the mark left on the archaeological record by the foundation of a Minoan universal state has been suggested in I. i. 92-93; IV. iv. 64-65; V. v. 236; and V. vi. 312.

² See V. v. 491, n. 3.

³ From the testimony of Ahmad Al-Balādhuri (*Kitāb Futūh al-Buldān*, pp. 300-1 and 465-6 in the English translation by Hitti, P. K., vol. i (New York 1916, Columbia University Press)); Tabarī (2, 1034); and Theophanes (*Chronographia*, ed. by de Boor, C. (Leipzig 1883-5, Teubner, 2 vols.), vol. i, p. 376, *sub Anno Mundi* 6199). Theophanes ascribes the innovation, not to 'Abd-al-Malik, but to his successor Walīd I (*imperabat* A.D. 705-15). Walīd I appears to have completed 'Abd-al-Malik's work by substituting the Arabic language and script for the Coptic in Egypt, where the Coptic had formerly been used side by side with the Greek. This local change in Egypt, which was carried out in A.H. 87 according to Makrizi, *Khitāt*, i. 98, cited by Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), p. 137, n. 1, seems to have been confused by Theophanes with the previous displacement of Greek throughout the ex-Roman provinces of the Caliphate. In the present Study, V. v. 501, n. 3, Theophanes' error has been carelessly reproduced, notwithstanding Wellhausen's elucidation.

⁶ See V. v. 523-4, and p. 251, below.

A Partnership between Several Different Languages or Scripts

We may now pass on to consider some instances of the more frequent practice of providing a universal state with several official languages and scripts, including the empire-builders' own.

In the British Rāj in India the English mother tongue of the rebuilders of a Mughal Rāj was, for certain purposes, substituted for Persian, the official language that had been bequeathed by the Mughals to their British and other successors. In A.D. 1829, for instance, the British Indian Government made English the medium for its diplomatic correspondence, and in A.D. 1835 the medium for higher education in its dominions. But when in A.D. 1837 the final step was taken in the deposition of Persian from its official status in British India, the British Indian Government did not introduce the use of English for all the other purposes that Persian had previously served. In the conduct of judicial and fiscal proceedings, which were provinces of public administration that personally concerned all Indians of every nationality, caste, and class, the British Indian Government replaced Persian, not by English, but by the local vernaculars;¹ and the Sanskritized Hindī vernacular known as Hindustānī was actually manufactured by British Protestant missionaries to provide the Hindu population of Northern India with a counterpart of the Persianized Hindī vernacular, known as Urdu, which the Indian Muslims had already manufactured for themselves.² This humane and politic decision to forbear from misusing political power by giving exclusive official currency to the alien empire-builders' own mother tongue perhaps partially accounts for the remarkable fact that when, 110 years later, their descendants voluntarily handed over their rāj to the descendants of their Indian subjects, it was taken as a matter of course, in both of the British Indian Empire's polyglot Indian successor-states, that the English language would remain at least provisionally in use *de facto* for the purposes which it had served under the British régime.

In the Napoleonic Empire in Western and Central Europe, the local vernaculars—Italian, German, and Dutch—which had previously been in use as official languages in parochial states, were allowed to retain their official status side by side with French. In earlier chapters of Western history the French language had made pacific conquests at the expense of Flemish in the Southern Netherlands and of a local High German dialect in Alsace. In both these countries, French had not only become a *lingua franca* but had been accepted as the medium for literature and administration. The Napoleonic Empire had too short a life to furnish any indication whether, if it had endured, its builders' language would have been likely by the same process of peaceful penetration to win for itself over a wider area the position which it had already attained in Alsace and Flanders. The nationalism which the French Revolution had begotten in France, and of which the Napoleonic Empire was inevitably a 'carrier',³ would in any case have militated against the prestige which the French language and culture had

¹ See V. v. 516, n. 1.

² See V. v. 518, n. 2.

³ See V. v. 503-4.

acquired in Central Europe under the *ancien régime*.¹ One thing of which we can be certain is that the French language's prospects, whatever they might otherwise have been, would have been blighted if the Napoleonic régime had attempted, in the manner of the Caliph 'Abd-al-Malik, to impose the use of the empire-builders' own mother tongue on their non-French-speaking subjects.

We can assert this with confidence in the light of the then recent failure of the Emperor-King Joseph II (*res gerebat solus* A.D. 1780-90)² to impose the use of German on the non-German-speaking peoples of the Danubian Hapsburg Monarchy. Though economic utility and cultural amenity alike told in favour of this attempted *Diktat* of political authority, Joseph's linguistic policy was a disastrous failure. It not only met with prompt defeat in the territories of the Crown of Saint Stephen, where the vigorous survival of medieval constitutional rights had kept a Magyar and a Croat national consciousness alive, and where the diaspora of German urban and agricultural settlers was very thinly sown; it also evoked the first new stirrings of the long since dormant national consciousness of the Czechs and the Slovenes, who by Joseph's time had been so deeply submerged by a flowing tide of Germanization that, in the judgement of even the sharpest-sighted contemporary observer, their complete assimilation at no distant date might have been taken as a foregone conclusion. The only substantial success which the Josephian policy secured was the retention of German, until the break-up of the Monarchy in A.D. 1918, as the universal language of command in a unitary Imperial-Royal Army. In the Imperial-Royal Navy the language of command had been Italian;³ and the fact that this Hapsburg fighting service continued during the nineteenth century to employ for this purpose the mother tongue of its principal adversaries in that chapter of its history testifies both to the placidity of the Hapsburg ethos and to the vitality of the Italian language as a maritime *lingua franca* in the Mediterranean.

The Turkish masters of the Ottoman Empire never embarked on the policy which was successfully applied in the Arab Caliphate and unsuccessfully in the Danubian Hapsburg Monarchy. The founders' native Turkish was the official language of imperial administration; but in the heyday of the Ottoman Power in the sixteenth and seventeenth centuries of the Christian Era the *lingua franca* of the Pādīshāh's slave-household was Serbo-Croat⁴ and the *lingua franca* of the Ottoman Navy Italian⁵—for the same reason that prevailed upon the Hapsburg Navy to employ the same language. Moreover, on the civil side the Ottoman Government, like the British Indian Government, followed a policy of allowing its subjects as far as possible to use languages of their own choice in public affairs that were of personal concern to the individual—though it approached this same statesmanlike objective along a different consti-

¹ See V. v. 503, n. 3.

² Joseph was Holy Roman Emperor from A.D. 1765 onwards, and from the same date he was also associated with his mother Maria Theresa in the government of the hereditary dominions of the House of Hapsburg; but it was not till after her death in A.D. 1780 that he had a free hand to pursue a policy of his own.

⁵ See V. v. 502.

tutional avenue. Whereas the British Government in India boldly set aside the previously established Muslim ecclesiastical courts and succeeded in providing an acceptable alternative for its Muslim subjects by applying the Muslim *Shari'* Law in British courts and by conducting the judicial proceedings in the local vernaculars, the Ottoman Government delegated this great province of public administration to autonomous communal authorities, officially recognized and supported by the Sublime Porte, which conducted their judicial business in languages traditionally employed by them for public purposes.¹ Since these communal authorities were ecclesiastical, the languages which they used for civil as well as for religious affairs were the sacred languages of their respective religions. The law administered in the communal courts of the Muslim community throughout the Ottoman Empire was written in Arabic,² the law of the communal courts of the Orthodox Christian community throughout the Empire in Greek, the law of the Gregorian Monophysite community in Armenian, and so on. It will be seen that the 'Osmanlis in the Orthodox Christian and Arabic worlds showed the same restraint as the British in India in limiting the scope of the official currency which they gave to their own mother tongue.

A similar restraint was shown by the Romans in the imposition of Latin as an official language in provinces of their empire in which Greek was either the mother tongue or the established *lingua franca*. They contented themselves with making Latin the exclusive language of military command for units of the Imperial Army, wherever recruited and wherever stationed,³ and the principal language of municipal administration for colonies of Italian origin on Greek or Oriental ground. For

¹ See IX. viii. 184-6. The non-Muslim autonomous communities were known by the name of *millet*—a word of Arabic origin with a meaning betwixt and between the connotations of the Western words 'nation' and 'church'. Though the dominant Muslim community was not called a *millet*, its constitution and status were in essence the same as those of the Jewish *millet* and of the several Christian *millets* of different denominations. Indeed, the *millet* system, which confounded the traditional Christian distinction between Church and State, was an expression of the Islamic conception of Society which could hardly have taken shape in a predominantly Christian political milieu. In the Ottoman Empire there were two privileged groups within the Muslim community—the kinsfolk of the Prophet Muhammad (*Seyyids*) and the members of the Pādishāh's slave-household (*qullar*)—each of which enjoyed a communal autonomy of its own in the judicial sphere (see Lybyer, A. H.: *The Government of the Ottoman Empire in the Time of Suleiman the Magnificent* (Cambridge, Mass. 1913, Harvard University Press), pp. 116 and 216).

² In addition to the *Shari'ah* the Ottoman ecclesiastical courts did, however, also administer the *qānūns* (imperial rescripts of the Ottoman *pādishāhs*) and '*ādet* (local customary law). The *qānūns* were written in Ottoman Turkish, while '*ādet*, if written at all, was not necessarily written in either Turkish or Arabic (see Lybyer, A. H.: *op. cit.*, pp. 152 and 223).

³ The two policies of giving Latin a monopoly in the Army and paying deference to Greek ran counter to one another in Thrace. In another context (pp. 133-4 and 134-5 above) we have noticed that, when the Romans annexed the client kingdom of the Odrysae, they carried their respect for the Greek language to the point of making Greek, and not Latin, the *lingua franca* and official language of this new Roman province. At the same time Thrace became as prolific a source of recruitment for the Roman Army as the adjoining provinces along the right bank of the Danube. In consequence, Thrace, as well as Moesia and Pannonia, came to be Latinized to a large extent, though in Thrace, unlike the Danubian provinces, the Latinization was not deliberate. For the penetration of Thracians into the Praetorian cohorts from the Severan revolution of A.D. 193 onwards until the disbandment of these units in A.D. 312 by Constantine the Great, see Durry, M.: *Les Cohortes Prétorienes* (Paris 1938, Boccard), pp. 248 and 255.

other purposes they continued to employ the Attic *koinê*¹ wherever they found it already in official use;² and they made its official status in their own empire conspicuous by giving it a place, side by side with Latin, in the central administration as well. At Rome under the Principate the Imperial Chancery was organized in duplicate, with a Greek as well as a Latin side, so that correspondents using either of 'the two languages' (as Latin and Greek were styled *sans phrase*) could be sure of being able to transact their business with the imperial authorities in the language of their choice.

This Roman forbearance towards the Greek language was something more than a tribute to the pre-eminence of Greek over Latin as a medium of culture; it represented a signal victory of statesmanship over *hybris* in Roman souls; for in those far-flung territories of the Empire, extending from Moesia to Mauretania and from Bruttium to Britain, in which Greek was not in competition with Latin on the morrow of the Roman conquest, the triumph of Latin was so sensational that it might have turned the heads of any but the most sober-minded empire-builders. So far from having to impose the use of Latin upon their subjects and allies in territories outside the Greek language's range, the Romans were in the happy position of being able to enhance its attractiveness by treating the use of it as a privilege that had to be sued for.³ Nor did Latin win its peaceful victories solely at the expense of languages that had never been reduced to writing or enshrined in a literature. In Italy it had to contend with sister Italic dialects like Oscan and Umbrian, and with Illyrian dialects like Messapian and Venetian, which had once been on a cultural par with Latin—not to speak of Etruscan, which was freighted with the cultural heritage of its Anatolian homeland. In Africa, again, Latin had to contend with Punic. Yet, in these contests with non-Greek 'culture languages' already in the field, Latin was invariably victorious; and, although in Africa the wave of Punic speech continued under Roman rule to advance from the coast into the interior, and to penetrate from the upper to the lower strata of society, at the expense of Berber, it now lost ground to a Latin wave, following hard in its wake, as fast as it gained it from a Berber sump. This triumphal progress of the Latin language west of Syrtis and north of Haemus is the setting in which we have to regard the Romans' deference towards the Greek language in order to appreciate this attitude at its full worth.

An even more remarkable restraint was shown by the Sumerian

¹ See V. v. 494-5.

² In Egypt the Romans continued the Ptolemies' practice of employing, side by side with the Greek language and alphabet, the New Egyptian language and the hieroglyphic and demotic scripts for inscriptions addressed to the native Egyptian population. This practice had been copied by the Ptolemies from the Achaemenidae, who, in Egypt, had employed the Egyptian language and scripts side by side with the Aramaic (see p. 248, below).

³ For example, in 180 B.C. the municipality of Cumae, whose citizens had possessed the passive rights of Roman citizenship (the Roman *civitas sine suffragio*) since 338 B.C., was allowed, in response to a petition from the municipal authorities themselves, to substitute Latin for the community's native Oscan as its official language ('*Cumanis eo anno petentibus permissum ut publice Latine loquerentur et praeconibus Latine vendendi ius esset*,'—Livy, Book XL, chap. 42).

founders of 'the Realm of the Four Quarters' when they put the upstart Akkadian language officially on a par with a Sumerian which was not only the empire-builders' mother tongue but was the historic vehicle of the Sumerian culture. This large-minded policy was no doubt inspired by the practical consideration that in Ur-Engur's (Ur-Nammu's) day (*imperabat circa* 2143-2126 or 2079-2062 B.C.) Akkadian was gaining ground¹ while Sumerian was on the ebb; and, in the event, Sumerian had become almost a dead language by the time when a universal state which Sumerian-speaking empire-builders had inaugurated reached the end of its chequered career after the death of Hammurabi (*imperabat circa* 1792-1750 or 1728-1686 B.C.).² The Amorite restorer of a Sumerian political edifice did 'not strive officiously to keep alive' the moribund mother tongue of his predecessor Ur-Engur; but it is significant that he also appears to have made no attempt to fill the Sumerian language's now all but vacant place with his own ancestral Canaanite dialect, but to have allowed Akkadian—which in his time stood at its zenith—to enjoy, unchallenged, the virtual monopoly which by then it had won for itself *de facto*.

The Achaemenidae gave as modest a place in the government of their empire to their Persian mother tongue as to their Persian mother country.³ Darius the Great's account of his own acts on the rock of Behistan, overhanging the Great North-East Road, was inscribed in triplicate in three different adaptations of the cuneiform script conveying the divers languages of the three imperial capitals: Elamite for Susa, Medo-Persian for Ecbatana,⁴ and Akkadian for Babylon. The same three languages and scripts were likewise employed in the inscription on Darius's own tomb at Naqsh-i-Rustam in Fars,⁵ and in official inscriptions on imperial buildings in all parts of the Empire.⁶ It is to the credit of the Achaemenidae that they should thus have placed two other languages officially on a par with their own mother tongue, but this conscientious even-handedness was too pedantic and too clumsy to meet the practical needs of current imperial administration. The Elamite tongue, for example, though it did happen to be the language of Susa, was not a *lingua franca* and was already moribund even in its own parochial domain;⁷ and the version of the cuneiform script that had been specially devised for the conveyance of the Medo-Persian language failed—in spite of its technical excellence—to win its way into general use, and consequently failed to perpetuate itself. The increasing inaccuracy of its use in the inscriptions of Artaxerxes II (*imperabat* 404-358 B.C.) and Artaxerxes III (*imperabat* 358-338 B.C.) betrays the truth that its proper usage was

¹ See V. v. 496-9.

² See V. v. 485.

³ For the location of the several cities that divided between them the function of serving as capitals of the Achaemenian Empire, see pp. 203-8, above.

⁴ For Ecbatana, the former capital of the Median Monarchy and the actual summer residence of the Achaemenian Court, see p. 206, above. This Medo-Persian was, of course, also the language of the Persian imperial people's homeland in Fars, but, at the date when the Behistan Inscription was carved, the building of Persepolis was certainly not finished and may not even yet have begun.

⁵ See pp. 206-7, above.

⁶ See V. v. 499, n. 3, following Meyer, E.: *Geschichte des Altertums*, vol. iii, 1st ed. (Stuttgart 1901, Cotta), p. 28.

⁷ See Meyer, op. cit., vol. cit., p. 29.

being forgotten within perhaps less than two hundred years of its invention.¹

This infelicity in the Achaemenids' original choice of official scripts and languages was only partially offset by their liberality in the use of unofficial languages and scripts which had a regional currency—for example, the Greek language and alphabet in the neighbourhood of the Aegean, and in Egypt the New Egyptian language conveyed alternatively, for different purposes, in the hieroglyphic and in the demotic form of the Egyptiac characters.² It seems, indeed, to have been their regular practice to provide translations, in the local vernaculars, of official documents addressed to their subjects.³ But the stroke of statesmanship by which they saved a situation which their own pedantry had created was their act of giving official currency to the Aramaic alphabet and language—side by side with the three hyper-official languages and scripts—in all provinces of the Empire to the west of Babylonia.⁴

The sequel showed that commerce and culture may be more potent instruments than politics for making a language's fortune. In the Achaemenian Empire the speakers of Aramaic were politically of no account,⁵ whereas the speakers of Medo-Persian were politically dominant; and, apart from this political 'pull', the Medo-Persian language was by no means at a disadvantage in other respects. The area over which it was spoken as a mother tongue was probably not less extensive,⁶ though it was of course much less populous, than the area over which Aramaic was current at the time not merely as a *lingua franca* but as the language of daily life. Moreover, the unknown man of genius who had adapted the cuneiform characters for the conveyance of the Medo-Persian language had endowed it with a script that was almost as convenient as the Aramaic Alphabet. Taking his cue, we may suppose, from the Alphabet itself, he had achieved with the cuneiform characters what had never been achieved with them by their Sumerian inventors or their Akkadian, Elamite, and Hittite users: he had contrived to convey visually all the sounds of the Medo-Persian language in an all but alphabetic syllabary

T.: *A History of the Persian Empire* (Chicago 1948, Chicago University Press), pp. 116-17, 178, 480-1.

⁵ Any prospects of political greatness that the Aramaean peoples might ever have been able to look forward to had been blighted when they had lost their long-drawn-out battle with Assyria in the eleventh and tenth centuries B.C. (see II. ii. 134), and the final blow had been the destruction of the south-westernmost of the Aramaean states, the Kingdom of Damascus, in 732 B.C. (see IV. iv. 476). But, at every stage of their military martyrdom, the Aramaeans had snatched cultural victories out of political reverses (see I. i. 79-80).

⁶ We do not know the geographical boundaries of the Medo-Persian dialect of the Iranian language in the Achaemenian Age. The dialect of the Oxus-Jaxartes Basin, known in a later form as 'Sogdian', may already have become differentiated from the dialect or dialects of the Iranian Plateau, and we cannot identify the homeland of the Avestan dialect in which Zoroaster composed his *Gathas*.

of not more than thirty-six characters.¹ Yet in the competition between the Medo-Persian and the Aramaic scripts and languages it was the Aramaic that won.

It was not so surprising that the Aramaic language should have beaten the Medo-Persian in a competition for capturing the domain of a faltering Akkadian tongue, for here Aramaic had been the first in the field,² and it enjoyed, in addition, the overwhelming advantage of being a sister Semitic language which an Akkadian-speaker might substitute for his own mother tongue without having to make that conscious and laborious effort to speak an utterly alien language which would be required of him if he were to try to make himself at home with an Indo-European dialect. The really remarkable triumph was achieved by the Aramaic script, which succeeded in replacing the cuneiform as the medium for conveying the Medo-Persian language in its post-Achaemenian phase. This victory must appear the more extraordinary considering that it was accompanied by a lamentably perverse retrogression in the art of writing. Whereas the forgotten inventor of the Achaemenian script for the conveyance of the Medo-Persian language had shown his originality by making an exclusively phonetic use of cuneiform characters that had originated as ideograms, the inventors of the Pehlevi script for the conveyance of the same language in its next phase mishandled a ready-made phonetic Alphabet by coining ideograms out of it. Instead of consistently conveying Persian words by spelling them out in Aramaic letters used phonetically, they lapsed into conveying them by writing Aramaic words that were their equivalents in meaning but were, of course, entirely unrelated to them in sound.³ This ability of the Aramaic Alphabet to capture the Persian language even in a usage that stultified the Alphabet's own distinctive technical excellence gives some measure of the prestige which it must have acquired, by then, in Persian minds; and one source of this prestige was undoubtedly the official status that had been given to the Aramaic Alphabet and language by Achaemenian Emperors whose mother tongue was not Semitic but Indo-European.

The Manchu restorers of a Far Eastern universal state showed the same liberality, and same touch of pedantry, as the Achaemenidae in placing their own mother tongue and the languages of their Mongol allies and Chinese subjects on a footing of official parity. The Manchus, like the Achaemenidae, inscribed their public records in triplicate: the Chinese text in Sinic characters, the Mongol text in an adaptation of a Uighur version of a Sogdian variant of the Aramaic Alphabet,⁴ and the Manchu text in an adaptation of the Mongol Alphabet.⁵ In the Manchu, as in the Achaemenian, Empire, two out of the three languages and scripts that had thus been made official on rather formal grounds failed to qualify for this privileged position on the strength of their actual or

¹ The inventor of the Medo-Persian cuneiform Alphabet had been anticipated by the inventor of the Phoenician cuneiform Alphabet used at Ras ash-Shamrah on the coast of Northern Syria about a thousand years earlier. But the Ras ash-Shamrah Alphabet had long since fallen into disuse and oblivion, and the inventor of the Behistan Alphabet must have made the same invention independently.

prospective currency. The habitat of the Manchus' Mongol-speaking allies was confined to an outlying and sparsely populated glacis of the Manchu Empire; and the northern and north-eastern parts of Manchuria, where, if anywhere, the Manchus' mother tongue had some prospect of surviving, were almost equally remote from the heart of the imperial people's now far extended dominions. In Southern Manchuria the Manchus had entered into a symbiosis with a local Chinese population, and the ruling element among the Manchus had already become half-Sinified before their entry into Intramural China in A.D. 1644. The complete Sinification of the Manchu civil and military 'Bannermen' inside the Wall¹ was manifestly only a matter of time. In fact, the successful achievement of the Manchus' political ambitions had condemned the Manchus' mother tongue to sink *de facto*, whatever its status *de jure*, to the level of a local patois spoken only by the imperial Manchus' country cousins in a 'reservoir' of man-power in the north-eastern marches.²

Fortunately for the Manchu Imperial Government, however, the uselessness, for most practical purposes, of two out of the three official languages and scripts of their choice was fully counterbalanced by the all but universal currency, throughout their dominions, of the Sinic characters and the 'mandarin' *lingua franca* of the Chinese civil service.³ In Eastern Asia in the Manchu Dynasty's day, these two media of visual and oral communication held the field as ubiquitously as the Akkadian language and Akkadian adaptation of the cuneiform characters in South-West Asia in the days of Ur-Engur (Ur-Nammu) and Hammurabi. As compared with the Manchus, the Achaemenidae were unlucky in their generation; for by their time the Akkadian language had lost its former monopoly of serving as a South-West Asian *lingua franca* and was giving way to Aramaic even as the parochial speech of the single province of Babylonia. From Babylon westwards a babel of tongues confronted the Achaemenidae with an administrative problem from which the Manchu rulers of Eastern Asia were exempted by a lucky accident of local linguistic history; and, thanks to this, the Manchus never found themselves compelled like their Achaemenid counterparts to institute a fourth official language in order to redress the inadequacy of three.

In the Mauryan Empire the philosopher-emperor Açoka (*imperabat* 273-232 B.C.) succeeded in reconciling the demands of impartial justice with those of practical convenience by employing a number of different local living vernaculars conveyed in two different scripts, the Brahmi and the Kharoshthi.⁴ This happy catholicity in Açoka's choice of media

'Two recensions of the Fourteen Rock Edicts, inscribed on rocks at places near the North-West Frontier of India, were executed in . . . Kharoshthi. . . All the other inscriptions [about thirty-two in number] are incised in one or other variety of the early Brahmi Alphabet' (Smith, op. cit., pp. 166-7).

for communication with his subjects was prompted by the single-minded purpose of acquainting them with the way of salvation revealed to Mankind by Açoka's master Gautama,¹ as the Spanish successors of the Incas were moved by their eagerness for the propagation of the Roman Catholic form of Christianity to allow the Gospel to be preached in the Andean World in a Quichuan *lingua franca*.² This Quichuan had gained the wide currency that it enjoyed at the time of the Spanish conquest because the Spaniards' Inca predecessors had made the learning of Quichuan compulsory³ and had imposed this intellectual corvée on themselves as well as on their subjects—if it is a fact that the Incas had an esoteric language of their own which they did not choose to vulgarize.⁴

Empire-builders who have refrained from giving Official Currency to their own Mother Tongue

This Incan self-denying ordinance might have been dismissed as a peculiar product of the Incas' ultra-totalitarian ethos if there were not other examples of imperial peoples refraining from giving any official status to their own mother tongue.

The Mongols, for instance, did not take advantage of their immense conquests in order to propagate the Mongol language from the Pacific to the Euphrates and the Carpathians. The Mongol Khāqāns employed the Sinic characters and the 'mandarin' dialect for the government of China, and the Mongol Il-Khans the New Persian language and the Perso-Arabic Alphabet for the government of Iran and 'Irāq. Even the Khans of Chaghatāy's and Bātū's appanages, who did not transfer their headquarters from 'the Desert' to 'the Sown', nevertheless abandoned the use of their Mongol mother tongue in favour of a Turkish that was current among a majority of their Nomad subjects.

The Turkī dialect that was adopted by the Mongol Chaghatāy Khan's successors from the local Nomads of whom they had taken command in Zungaria had also become the current language of their sedentary subjects in Transoxania; and, when, under the leadership of Timur Lenk (*imperabat* A.D. 1369-1405), the Transoxanians reversed the Mongol political order by force of arms and asserted their own mastery over the Eurasian Nomads,⁵ their Turkī tongue was fashioned into a literary language on a Persian model by the Timurid Sultan Husayn's minister Mir 'Alī Shīr Nawā'ī (*decessit* A.D. 1501).⁶ In the next generation Bābur (*vivebat* A.D. 1483-1530)—a scion of the House of Timur who retrieved his family's fortunes by laying the foundations of a new Timurid Empire on the Indian side of the Hindu Kush—made a brilliant use of the vehicle for literary expression that Nawā'ī had provided for him in his own Turkī mother tongue by writing in Turkī his celebrated memoirs.

In the light of these antecedents, it might have been expected that, when Bābur's pioneer empire-building work in India was followed up and completed by his grandson Akbar (*imperabat* A.D. 1556-1605), the Timurid Mughal Dynasty's now literate mother tongue would have

⁶ See I. i. 351 and II. ii. 149.

become one of the official languages of the universal state which these Turkī-speaking empire-builders from Central Asia had imposed on the Hindu World. The architects of the Mughal Rāj in India did indeed select for the official language of their empire one of the established literary languages of the Iranic Muslim Society of which they themselves were members, but the language of their choice was not Turkī but Persian;¹ and, in the unofficial hybrid *lingua franca* that was begotten of the social intercourse between a Mughal Court and Army and a Hindu subject population, it was Persian again, and not Turkī, that was infused into Hindustānī.² Even in their own household the Mughal Dynasty in India eventually took to speaking Persian instead of their mother tongue. This defeat of Turkī by Persian on all fronts was the more remarkable considering that the discomfited language was the ancestral speech not only of the Timurids themselves but of the most martial contingent of their polyglot henchmen, and also considering that the Emperor Bābur's literary gift reappeared among his descendants. Bābur's daughter Gulbadan Bēgum wrote a history of her brother Humāyūn, and Humāyūn's grandson Jahāngīr emulated his great-grandfather's literary achievement by writing memoirs of his own life and reign;³ but Gulbadan's *Humāyūn Nāma* and Jahāngīr's *Tuzūk* were written, not in Turkī, but in Persian. When Bābur's pen as well as Bābur's sword had been thrown into the Turkī scale, the balance would hardly have inclined on the Persian side, as it did, if the prestige of the victorious language had not been allowed to pull its weight by a deliberate forbearance on the part of the gifted Turkī-speaking princes with whom the last word lay.

A similar forbearance was shown by the Emperor Hammurabi (*imperabat circa 1792-1750 or 1728-1686 B.C.*) when he refrained⁴ from attempting to substitute his living Canaanite mother tongue for a moribund Sumerian as one of the official languages of a momentarily restored Empire of Sumer and Akkad, and thereby left the way open for the Aramaic dialect of a later wave of Semitic-speaking interlopers from the Arabian Steppe eventually to supersede Akkadian as the *lingua franca* of South-Western Asia. It was even more remarkable that in the eighth and seventh centuries B.C., in the hour of the Aramaic language's triumph, when the Akkadian language was manifestly on the wane, as the Sumerian had been in Hammurabi's day, the Chaldaean leaders of an anti-Assyrian resistance movement and founders of a Neo-Babylonian Empire should have followed Hammurabi in making the Akkadian language and Akkadian version of the cuneiform script their official media of communication. The Chaldaeans had been carried into the marshlands of South-Western Babylonia in the same Völkerwanderung that had swept the Hebrews⁵ into Southern Syria and the Aramaeans into Damascus and Mesopotamia, and we may infer that, at the time when these three Semitic peoples simultaneously broke out of Arabia, they were all speaking some variety of a common ancestral Aramaic.⁶ If there

¹ See V. v. 515.

³ See II. ii. 149.

⁵ Including under this term Moab and Ammon and Edom and Judah as well as Israel.

⁶ On this hypothesis, both the Chaldaeans and the Hebrews were originally Aramaic-speaking peoples who eventually readopted their ancestral speech after an interval during

² See V. v. 517-18.

⁴ See p. 247, above.

is substance in this conjecture, it speaks volumes for the prestige of Babylon that the Chaldaeans should have been moved to discard an ancestral Aramaic dialect in favour of the Akkadian speech of their Assyrian oppressors because this Akkadian was also the traditional language of an imperial city and treasure-house of culture which Nabopolassar's Chaldaean followers longed to make their own¹ as eagerly as Mehmed the Conqueror's Turkish followers desired to possess 'the Abode of Felicity' on the shores of the Bosphorus.

The adoption of Akkadian by the Chaldaeans as the official language of the Neo-Babylonian Empire may have prolonged the currency of Akkadian as a living language for perhaps five hundred years. Sanskrit was adopted by the Guptas as the official language of a restored Indic universal state perhaps a thousand years after it had died a natural death.² It is one of the curiosities of history that the rebuilders of Açoka's Empire should have chosen for their official medium of communication a language which had been passed over, as obsolete, by Açoka himself some seven hundred years earlier.

Who are the Beneficiaries?

If we now pass from our survey of official languages in universal states to a review of the beneficiaries, we shall find that official languages had been turned to account by restorers of the empires in which these languages had enjoyed official currency; by other latter-day secular agencies, both public and private, political and economic; and by the propagators of higher religions and organizers of universal churches.

Akkadian, for example, as we have seen, was taken over from Ur-Engur's 'Realm of the Four Quarters' by Hammurabi, and again from the Neo-Babylonian Empire by the Achaemenidae. Classical Egyptian was taken over by 'the New Empire' from 'the Middle Empire'; Greek by the Umayyad Caliphate from the Roman Empire; and Persian by the British from the Mughal Rāj in India. It may be observed, however, that in a majority of these cases the inherited official language was not permanently retained. The British Indian Empire discarded Persian in favour of English employed in combination with local Indian vernaculars; the Umayyad Caliphs discarded Greek—and likewise Coptic and Pehlevi—in favour of Arabic; the archaistic-minded 'New Empire' of Egypt acquiesced in Ikhnaton's iconoclasm in the one point of sub-

which—unlike their Aramaean kinsmen and northern neighbours—they had succumbed to the languages of the sedentary peoples among whom they had settled—to Akkadian, that is, in the Chaldaeans' case and to Canaanite (hence miscalled 'Hebrew') in the Hebrews'. In both cases this adoption of the established language of the occupied country was to be expected; for the penetration of the Chaldaeans into Babylonia and of the Hebrews into Palestine was, as we know, a gradual process, and in each case the interlopers were mingling with a sedentary population that was more numerous and more cultivated than they were. On the other hand, it is not surprising that the Aramaean conquerors of the desert-port of Damascus and of the sparsely inhabited Mesopotamian Steppe should have preserved their ancestral language and should have been able, in a key-position at the mid-point of 'the Fertile Crescent', to convert an unextinguished local dialect into an oecumenical *lingua franca*.

¹ The relations between the Chaldaean tribesmen and the citizens of Babylon in the eighth and seventh centuries B.C. have been touched upon in IV. iv. 476-80.

² For the artificial revival of Sanskrit which culminated under the Gupta régime, see V. vi. 75-77.

stituting the living Egyptian speech of the day for the now dead classical language; the Achaemenidae found themselves constrained to supplement a waning Akkadian language and script by giving a supernumerary official status to a waxing Aramaic.
